Hamburg, Saturday.—Market animated, there being a good demand for all descriptions of grain. Spot wheat is taken by our millers and for export to northern countries at full prices. Hard Winter No. 2 is selling at 29s, Azima at 28s to 28s 6d per 480lb, Walla Walla at 29s 6d to 29s 9d per 500lb. Northern Spring No. 2 Duluth, April-May shipment, is held at 28s 6d, North Manitoba No. 2 at 28s 3d per 480lb. So far, the heavy arrivals from America have met with quick disposal. Rye in better demand 9 15-20. South Russian April-May shipment is selling at 22s 9d to 23s per 480lb. Malting barley meets no attention. There is still a good stock in the growing district of Pomerania and Eastern Russia, fair middling quality being offered at 25s to 27s per 448lb. Bohemian and Saale is held at 28s 6d to 32s per 448lb. Feeding barley in demand at rather higher prices. South Russian and Danubian prompt shipment, 18s to 18s 6d; Sept.-Oct.-Nov. shipment, 16s 9d to 17s per 400lb. c.i.f. Hamburg. Maize firm. Danubian and Odessa prompt, 20s 9d to 21s; May-June shipment, 20s 3d; mixed prompt, 24s 9d to 25s per 480lb.—JOHN TATLOCK.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter—There is a good consumptive demand for New Zealand butter, and prices have advanced 2s on the week. Choicest brands are now making 106s to 108s, while finest realise 102s to 104s. Stocks are practically exhausted, and current arrivals are quickly bought up. Milled butter is arriving in an unsatisfactory condition; a good deal of it has felt the heat, and but for the very great shortage of secondary butters it would sell at a low price. The better qualities are selling from 96s to 98s. The intrinsic value is 30s per cwt. below choicest, and yet 10s to 12s is all the market value difference. The Copenhagen official quotation remains unchanged at 96 kroner, and is higher at this date than it has been for the last 18 years. All varieties of butter, Colonial and foreign, are making higher prices than they have done since 1885. This extraordinary state of things is due to the greatly diminished Australian supplies during February and their total absence in March. Russian is arriving in increased quantities, the import last week reaching 16,368 cwts., while that of the present week is very large. This great increase has not been sufficient to meet the demand. Notwithstanding the increase in Russian, prices have risen 2s on the week, and choicest brands are making 102s to 104s. Increasing quantities of Irish and augmenting supplies of Dutch are indications that the present high values will not be maintained for more than two or three weeks. Cheese—There is a good steady consumptive demand for Canadian and New Zealand cheese, and prices may be quoted both for coloured and white at a shilling advance on the week. The stocks in Commercial Road depot, London, were reduced last week by 12,000 boxes, and then stood at only 41,000 boxes. Stocks are running parallel to those of the year before last, but prices are four shillings per cwt. below that period.—W. WEDDEL AND CO.

THE BALTIC.

Prices for cargoes include cost freight and insurance, but not duty, except where specially stated. The duty, of course, only becomes chargeable when the grain is taken for actual delivery. The buyer will find it troublesome to allow for the duty, as the cargo trade never deals by the cwt., but by the quarter of varying weight, and by the cental (100, not 112lb.). The cargo trade, however, deals by the ton, which is 20 cwt., and on which the duty will be 5s. Sales of the week include—Californian wheat at 30s.; Australian at 29s. 9d.; No 1 Northern at 29s., and Argentine at 28s. 9d.; also Odessa maize at 21s. 3d.; Californian brewing barley at 23s. 6d.; white Konisgsberg oats at 20s. 9d., and Saida at 29s.. per quarter.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 10 wheat (1 Adelaide, 3 Portland, O., 4 San Francisco, 2 Tacoma); 4 barley and wheat (San Francisco); 1 flour (Portland, O.); 1 beans (Saffi); 1 canaryseed (Larache); total, 17.

The sailings of grain and seed-laden vessels from ports-of-call for the week were 9 wheat (3 Antwerp, 1 Cardiff, 1 Dublin, 2 Hamburg, 1 London, 1 Tyne Dock); 2 barley and wheat (1 Grimsby, 1 Ipswich); 1 flour (London); 1 Barley (Ipswich); total, 13.

Since 1st January, 1902, the total arrivals have been 93 wheat, 2 flour, 17 barley and wheat, 3 maize, 7 barley, 2 beans, 2 linseed, 3 canaryseed; total, 129.

Last year during the same time the arrivals were 83 wheat, 2 flour, 6 barley and wheat, 11 barley, 3 beans, 4 pease, 1 pease and beans, 2 locust beans, 3 canaryseed, 2 Valonea; total, 117.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The colour of the wheat fields is not at all promising, and the growth of the pastures is backward. There is now decidedly below an average promise on the wheat in both the United Kingdom and the United States, but advices from France, Germany, Austria-Hungary, Roumania, Russia, Italy, and Spain are favourable, and along the North African Coast from Morocco to Tripoli inclusive an over-average yield of cereals is expected next month. The Indian harvest is now over in all the chief regions except the Punjab, where it is in progress. The yield is put by good judges at 20 per cent. under average, and there is a deficiency of oilseeds and pulse, as well as of wheat.

The markets of the past week have advanced 1s. 6d. per qr. for both English and foreign wheat. The rise in English has been mainly due to scarcity, but foreign would not have advanced more than 6d. in the absence of the new duty, which was approved by the House of Commons on the night of the 14th. It is not known if it will be charged from the date of the vote passing report, or from that of the whole Budget receiving the Royal Assent.

The imports of the past week thus compare with the corresponding week of last season:—

	1902.	1901.
Wheat, qrs.	456,113 ..	299,300
Flour, sks.	106,000 ..	140,000
Maize, qrs.	134,000 ..	184,000
Barley, qrs.	135,000 ..	54,180
Oats, qrs.	80,880 ..	125,605
Beans, qrs.	1,727 ..	4,060
Peas, qrs	5,290 ..	9,000

The prices which we give in this review and elsewhere in the journal will from the present date (that is from the 21st April) include the payment of duty where leviable. The clauses of two Acts which govern the charging of the duty may usefully be given here:—Section 20 of the Customs Consolidation Act, 1876 (39 and 40 Vic., cap. 36), runs as follows: "In the event of any increase of duties or customs chargeable upon any goods or commodities after the making of any contract or agreement for the sale or delivery of such goods duty paid, it shall be lawful for the seller in case such increase shall accrue before the clearance and delivery from the warehouse of such goods at such increased duty and after payment thereof to add so much money to the contract price as will be equivalent to such increase of duty, and he shall be entitled to be paid and to sue for and recover the same; and Section 8 of the Finance Act, 1900, provides: "Section 20 of the Consolidation Act, 1876 (which has reference to the effect of changes of duty on existing contracts), shall apply to the imposition of new duties as well as increases, decreases or repeals, and as so amended shall apply to duties of excise as well as to duties of customs."

No duties will be levied on oil seeds, seed oils, or oil cake. These useful fatteners for live stock may therefore be expected to increase in demand. Unfortunately there is but a poor new crop of oil seeds in India, and Egyptian cotton seed is also in decreased supply.

The Custom House authorities have supplied us with the following list of articles on which the registration duty will fall:—

Class 1.—3d. per cwt.—Corn or grain not milled or ground, including wheat, barley, oats, rye, maize, buckwheat, bere or bigg, peas and Dholl (other than green whether fresh or preserved), beans (not kidney or French), haricot beans, locust beans, lentils, rice, millet, dari.

Class 2.—5d. per cwt.—Flour, malt, groats, barleymeal, pearled barley, oatmeal, ryemeal and flour, pea meal, bean meal, maize or Indian cornmeal, buckwheat meal, ricemeal, ricedust, bread and biscuits, shredded wheat, semolina, macaroni and macaroni paste, vermicelli (including Feddini), starch, farina and dextrine, arrowroot, cassava powder, manna croup, Mandicca flour, potato flour, tapioca, sago, and sago meal; preparations containing any of the above-mentioned articles, bran, pollard.

Sorghum is not mentioned, but as it is botanically a species of millet, the Chancellor will probably charge it with the 3d. duty.

The prevailing opinion at Mark Lane at the crowded market of Friday was that while 1s 6d. rise will be maintained so long as crop influences are small, the paramount importance of the latter will assert itself by July. In the flour trade grave questions arise on the mixture of English and foreign flour in the "patents" now sold by various leading firms.

The one serious argument for the repeal of the Registration Duty in 1869 was that in the words of Robert Lowe, "it will result in England becoming the centre of a vast entrepôt trade" (Hansard, April 8th, 1869). England was to receive the grain of the New World and distribute it to the Old. This has not resulted. The French, Belgian, and Dutch ports have more than held their own. Easier navigation, lower dues at docks, prompter service of lightermen, and lower wages generally have robbed us of the opportunity then afforded. To-day, we return to the Registration Duty and return with it to the old 112lb. weight. Threepence per cwt. means 1s. 1½d. per quarter on the full, or 504lb. "quarter" of wheat. Barley will pay an exact 1s per quarter on malting kinds, but a fraction less on grinding. Oats will pay 9d. per quarter on Swedish and other heavy sorts; rather less on Russian, American, and Canadian. On maize the duty will be 1s. 0½d. per quarter, and this will be the duty on the lighter sorts of wheat, beans, and peas, weighing, like maize, only 480lb. to the quarter. A uniform threepence per cental or true hundredweight of 100lb. would have been more convenient to the trade and given the Chancellor an extra £300,000. But in following the exact precedent of 1869 political considerations and a wish not to break with the great Free Trade Settlement of 1846 doubtless had overwhelming weight.

The Chancellor puts the new duty at £2,665,000, but a good market authority has estimated that it will bring in as much as £3,038,000. If meat keep dear, more bread will be eaten this year, and we should in such an event be prepared to find the duty run up to £3,250,000. The American flour firms do not anticipate any falling off in flour receipts from abroad, but seeing there is some preferential duty (though slight), this view may prove to be somewhat mistaken. English millers with 2d. per cwt. in their favour will have a chance of improving their position.

The effect of the repeal of the duty (now re-imposed) in 1869 was as follows, the prices being the wheat averages for that year:—

1869, April, 46s. 4d.; registration duty repealed from the end of April, 1869.

1869.		
April	46s 4d	Registration duty repealed from the end of April, 1869.
May	44s 9d	1s 1½d repeal. 1s 7d fall.
June	45s 11d	1s 2d recovery.
July	49s 10d	Poor harvest prospects.

It will be seen that the fall was at first exaggerated by 5½d. on the quarter, but that within a month value had returned to within 5d. of its old level. When a consideration of harvest prospects became permanent the whole question of the duty faded out of sight.

The quantity of grain on passage to the United Kingdom thus compares with a year ago:—

	1902.	1901.
Wheat, qrs.	3,900,000 ..	3,560,000
Flour, sks.	320,000 ..	485,000
Maize, qrs.	405,000 ..	560,000
Barley, qrs.	340,000 ..	410,000
Beans, qrs.	8,000 ..	16,000
Linseed, qrs.	240,000 ..	95,000
Rapeseed, qrs.	16,000 ..	7,000
Cottonseed, qrs.	49,000 ..	45,000

The American visible supplies are cabled at 9,364,000qrs. of wheat, 1,447,000qrs. of maize, and 808,000qrs. of oats, against 9,450,000qrs. of wheat, 3,347,000qrs. of maize, and 1,987,000qrs. of oats on April 19th last year. The cable makes for higher prices in oats and maize in England, apart from the new duty, and the supplies on passage keep the upward tendency in barley, maize, and beans. Spring corn is irregular at the present moment, but an advance of 1s. per quarter may be quoted on barley, oats, maize, and pulse, whilst meal is held for a rise of at least 5s. on the ton.

FEEDING STUFFS.

London, Monday.—Linseed Cake:—The Budget resolutions have favourably affected this article, and Americans, both spot and forward, are slightly dearer. London cake is unchanged. Decorticated cotton cake and meal as before; undecorticated strong; 5s dearer. Linseed, no change.

English Linseed Cake	ex mill	8 0 0	
American Calcutta Linseed Cake	ex quay		
American Western ,,	ex quay	7 0 0	to 7 2 6
,, ,,	ex quay	7 0 0	to 7 2 6

ROBERT AND JOHN HEWETSON.

SEEDS.

London, Monday.—We have a moderate retail demand for all farm seeds at to-day's market at full prices. It is becoming increasingly evident that very light stocks will remain over this season. Spring tares are nearly exhausted. Bird seeds are dull. Haricots are more inquired for in consequence of the new import duty.—JOHN PICARD AND CO.

THIS DAY'S MARKETS.

MARK LANE, MONDAY.

[FIRST REPORT.]

English wheat was scarce to-day, and 32s. 6d. was paid for 504lb. samples. The price of foreign wheat is affected 1s. 3d. by the duty, and about 9d. by the firmer advices from America, and the news of serious crop deficiency in India. On the whole value averages 2s. above the prices of this day week. Maize continues dear for flat corn, but on yellow and round kinds the bare duty rise is all that can be made. Barley is dearer by 1s. 1d. to 1s. 6d. per qr. Californian on spot made 26s. to 26s. 6d. Split Egyptian beans were in fair request at 24s. per 320lb., but the demand for feeding stuffs generally lagged behind what might have been expected, seeing the backward state of the pastures. Oats were a dull trade; 1s. more money was asked, 9d. of which was the duty rise. Peas and rye at 1s. advance were not easy to sell.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITHOUT VERY MUCH DOING. THE DUTY IS PAID WITH CHEERFULNESS ON THE WHOLE, BUT BUYERS DECLINE TO PAY MORE THAN THE EXACT DUTY RISE IN SO MANY CASES THAT THE VOLUME OF BUSINESS WAS SENSIBLY REDU-

THE FLOUR TRADE.

MARK LANE, MONDAY.

The top price of flour is up one shilling, but London town whites and also households are held for eighteenpence more money. As they are supposed to contain about a moiety of British wheat flour, sixpence would satisfy the new duty, and bakers are indignant. However, the reduced holdings and the real spot scarcity of finest American and Hungarian give millers the best of the situation, and the advanced price has to be paid. On American flour the full extent of the duty, 1s. 0½d. per sack is naturally admitted. Country flour is 1s. up, owing to the scarcity of English wheat. Mixtures of English and foreign flour, owned as "patents" by various firms, are very irregular; a shilling rise is generally obtainable, but 1s. 6d. to 2s. more money is often asked, and this is resisted. Bakers bought a fair quantity of American and a fair quantity of country flour; an increasing number will probably find it pay to do their own "mixing."

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	A. June. s. d.	A. Aug't. s. d.	B Oct. s. d.
April 14 noon.	6 0 ... 6 1	... 6 1	
,, 4 p.m.	6 0 ... 6 1	... 6 1	
April 15 11 a.m.	6 0 ... 6 1	... 6 2	
,, 4 p.m.	6 0 ... 6 1	... 6 2	
April 16 11 a.m.	6 0 ... 6 1	... 6 2	
,, 4 p.m.	6 0 ... 6 1	... 6 2

,, 4 p.m.	6 0 ... 6 1	... 6 3	
April 19 noon.	6 0 ... 6 1	... 6 3	
To-day noon.	6 1 ... 6 1	... 6 4	

Maize was offered at 4s. 5d (A) and 4s. 8d. (B) terms. The former were for May-Aug., the latter for Sept.-Nov. delivery.

A signifies duty to be paid by *buyer*, B the duty to be paid by *seller*. On the 18th the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Since the announcement in the Budget of 5d. per cwt. duty, all classes of flour have been advanced 1s. per sack. Trade generally quiet; buyers not disposed to operate except for immediate requirements. Values on spot are as follows: — 1st Spring Patents, 25s. to 26s.; 2nd Spring Patents, 24s. to 24s. 6d.; American Winter Patents, 24s. 6d. to 25s.; Extra Fancies, 23s. to 23s. 6d.

Offals.—An advance of 5s. per ton on bran and pollards in virtue of the Budget is being quoted by sellers; so far, however, it has not met with much response on the part of buyers.—GREENHILL BROTHERS (Belfast).

Flour.—We have to report an advance of 1s. 6d. to 2s. per sack on flour this week, which, of course, includes the Registration Duty imposed.

Grain.—Flat corn is 6d. dearer. Round maize is 10½d. to 1s. up. Beans and pease practically exhausted on the spot. Barley 9d. higher. Oats in good demand at 6d. to 9d. per boll advance. Oatmeal held for 1s. per sack more money.

Mill Stuffs.—Bran in brisk demand. Thirds also firm.

The duty on grain has naturally been the whole topic of conversation this week, and many difficulties between buyer and seller remain to be settled. —MCKINNON AND MCDONALD (Glasgow).

Small arrivals of wheat and flour. A moderate demand. Wheat, 1s. 6d. per quarter, and flour 1s. 6d. to 2s. per sack dearer. Maize 1s. 3d., barley 1s. and 1s. 3d., and oats 9d. per quarter dearer.—COVENTRY AND CO.

Milling Offals.—After a week of excitement milling offals must be written 7s. 6d. per ton up all round.—J. BAWCOMB AND CO. (16, Mark Lane, E.C.).

Flour.—A fair trade at an advance of 1s. 6d. to 2s. on the week.—T. S. MEDILL AND SONS.

POTATOES.

Borough, Saturday.—Supplies good, and met with fair request; moderate business being passed. Scotch Maincrops, 80s to 90s; Blackland Up-to-Dates, 45s; Lincoln Siltlands, 55s to 60s; Kentish Up-to-Dates, 50s per ton.

Great Northern, Saturday.—Lighter supplies met subdued demand. Scotch Maincrops, 80s to 90s; Imperators, 40s; Reading Giants, 40s to 45s; Blacklands Dates, 45s to 50s; Lincoln Maincrops, 80s to 85s; Lincoln Up-to-Dates, 50s to 60s; New Jersey, 4½d per lb; Teneriffe, 14s; Maltese, 10s per cwt.

Spitalfields, Saturday.—Large supplies met with dull demand. Best Lincoln Up-to-Dates, 60s to 65s; Blackland ditto, 40s to 45s; Wisbech ditto, 50s to 55s; Scotch ditto, 60s to 65s; Scotch Maincrops (grey soil), 60s to 70s; Lincoln Maincrops, 75s to 85s; Reading Giants, 40s; Blackland Cartons, 30s to 35s per ton; New, Kidney, Algeria, 12s 6d to 13s; Canary and Teneriffe, No. 2, 15s; and Maltese Rounds, No. 3, 13s per cwt.

MANURES.

Liverpool, Friday.—Brilliant sunshine, accompanied by a warmer temperature, has been experienced the last few days, and has assisted farming operations upon the land. Nitrate of soda is in seasonable demand, and best quality on the spot commands £10 15s per ton owing to the limited offerings, but for ex shipments due in May there are sellers at lower prices. Sulphate of ammonia of 24 per cent. test realises £12 2s 6d to £12 5s per ton. Kainit and superphosphate of lime unchanged in value and in seasonable request, whilst bone meal commands an advance of fully 5s per ton. The trade all round in feeding stuffs is a quiet one, and English makes of linseed cake are 2s 6d per ton easier, but on meal and corn affected by the new Budget taxes an equivalent advance is demanded. At auction 143 bags Peruvian cotton cake sold ex quay at £6 15s per ton. Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £10 15s per ton; East India Bone Meal, fair to prime, in bags, £4 10s to £4 15s per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, nominal; Linseed Cake, American thin oblong, prime, in bags, £7 to £7 3s 9d per ton; Linseed Cake, English, prime, in bulk, £8 2s 6d to £8 10s per ton; Linseed Cake, foreign, round, prime, soft and oily, in bags, £8 2s 6d per ton; Cottonseed Cake, N.A., decorticated, prime, new, in bags, £7 1s 3d to £7 5s per ton; Cottonseed Cake, English, decorticated, prime, soft, £7 2s 6d to £7 7s 6d per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 5s to £4 15s per ton; Cottonseed Cake (crushed), 20/25 per cent. oil, prime, in bags, £7 2s 6d per ton; Maize Germ Meal, prime, in bags, £5 12s 6d to £5 17s 6d per ton; Rice Meal, Rangoon, as imported, in bags, nominal; Indian Meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb.; Linseed, fine bold feeding, in bags, £3 2s to £3 5s per qr., 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s; Superphosphate of Lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton—at super. depot; Basic Slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, nominal.—H. JONES LANGAR AND CO.

HOPS.

London, Monday.—W. H. and H. Le May report:—There has been some business passing in the best hops during the past week, prices for which continue very firm indeed. Medium and low qualities are in demand at current rates.

CATTLE.

Metropolitan Market, Islington.

Monday, April 21st, 1902.

	British.	Total.	April 22, 1901.
Beasts	1,230	1,230	1,020
Sheep and Lambs	8,760	8,760	9,330
Calves	10	10	30
Pigs	5	5	20
Milch Cows	40	40	50

Quotations per 8lbs. (sinking the offal).

ENGLISH.	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 0 ..	4 2 ..	4 10
Sheep	3 10 ..	5 0 ..	5 8
Lambs	5 8 ..	5 4 ..	7 0

Milch cows, per head, £15 to £22.

British arrivals include as follows:—Scotland, 7; Eastern Counties, 919; Midland, Home and Western Counties, 221; Devon, 20; Ireland, 63.

In the beast market to-day, compared with Monday last, there was a decrease of 210 head, arrivals both from Ireland and the Eastern counties being shorter. Trade was, however, extremely dull, rates having to be lowered fully 2d to 3d per 8lb. Even at this decline a clearance is doubtful unless there is more demand later by carcase butchers. Fat bulls and cows were also easier in price.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	April 22, 1901.
Devons	4s 6d to 4s 8d	4s 4d to 4s 5d
Norfolks	4s 8d to 4s 9d	4s 3d to 4s 5d
Lincolns	4s 4d to 4s 6d	4s 0d to 4s 2d
Irish	4s 6d to 4s 8d	4s 0d to 4s 2d
Fat cows	4s 0d to 4s 2d	3s 8d to 3s 8d

In the sheep market, compared with Monday last, there was a decrease in the number penned. For wether sheep trade was firm at late rates. Ewes were slower of sale, a reduction of 2d per 8lb having to be made. For lambs there was less demand even for choice small Downs, a reduction of 4d per 8lb having to be accepted. The supply included 290 Scotch, 2,970 from the Eastern counties, and 500 from Yorkshire.

Undermentioned quotations are at per 8lb. (sinking the offal) and are for the best of each class penned.

7½ to 8-st Downs	5s 7d to 5s 8d	5s 6d to 5s 8d	
9-st Downs	5s 4d to 5s 6d	5s 4d to 5s 6d	
10-st half-breds	4s 11d to 5s 0d	5s 0d to 5s 2d	
9-st Yorkshires (clipped)	4s 6d to 4s 8d	4s 6d to 4s 8d	
12-st Lincolns	4s 8d to 4s 10d	4s 8d to 4s 10d	
10-st Down ewes	4s 6d to 4s 8d	4s 6d to 4s 8d	
11-st half-bred do	4s 4d to 4s 6d	4s 4d to 4s 6d	
5-st Down lambs	6s 10d to 7s 0d	6s 10d to 7s 0d	
6-st half-bred do	6s 4d to 6s 6d	6s 6d to 6s 8d	

Calf and pig trade not worth noting.

London (Central), Monday.—Good supplies; trade slow. Beef carcases, 4s 2d to 4s 4d; hind quarters, 4s 8d to 5s; roastings, 5s 8d to 6s. Sheep: Ewe, 3s 2d to 3s 6d; wether, 4s to 4s 2d; hind quarters, ewe 4s 4d to 4s 8d; wether, 5s to 5s 4d. Pigs: Large, 3s 4d to 3s 8d; small, 4s to 4s 6d.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 751. To-day's supply, compared with Monday last, showed an increase of 327, and consisted of 711 from the United States and 40 from Canada, these latter having been held back from Saturday. Trade was of a very slow nature, at a slight decline in value, with a difficulty in clearing; the best on offer 4s 9d, and occasionally 4s 10d per 8lb, offal given in, to dress about 680lbs; seconds were quoted at 4s 7d; Canadians, 4s 6d to 4s 7d. Sheep, 794, consisting of shipments from the United States, trade for which was very slow, so few buyers being present. Best pens of sheep in the wool to dress about 56lbs made from 4s 10d to 5s per 8lb; clipped ditto, 4s 6d to 4s 8d. On Saturday 1,092 States' beasts and 222 from Canada were on sale, trade for which was steady; the best of the former made 4s 10d per 8lbs, the latter being quoted at from 4s 6d to 4s 8d. The following were the numbers on offer on the corresponding day last year, with the current top rates:—

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat is rising; 3d. more money from Saturday is made. Maize, barley, oats, and beans are a slow trade.

BUSINESS DONE.

WHEAT.—Californian, 30s 3d, prompt shipment; Walla Walla, 29s 9d, prompt shipment; Argentine, 23s 3d, on passage; No. 1 Northern, 28s 9d, on passage.

BARLEY.—Odessa, 19s, prompt shipment; Roumanian, 18s 6d, prompt shipment.

OATS.—White Libau, 18s, prompt shipment; Canadian, 19s 9d, prompt shipment.

BEANS.—Egyptian, 28s 9d, May shipment.

MAIZE.—Argentine, 20s 6d, May shipment; Caucasian, 21s 3d, May shipment; Galatz, 21s 3d, May shipment; Cinquantina, 22s 9d, May shipment.

LINSEED.—Calcutta, 50s 9d, May shipment; Argentine, 49s 6d, May shipment.

COTTONSEED.—Egyptian, £7 6s 3d, arrived; Bombay, £4 17s 6d, May shipment.

WOOL.

Canterbury, Saturday.—Business still very dull, but some trade is now doing in locks at 2d per lb.

London, Friday.—English—per pk. of 240 lb:—Fleeces S.Dn. Hggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6 South Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s. Colonial, per lb.—Vic.—Fleece, super, 1s 7d to 1s 9d; scoured good, 1s 7½d to 1s 8½d; scoured average, 1s 6½d to 1s 7½d; greasy, average to fair, 10½d to 11½d; N.S.W. scoured average, 1s 4d to s1 4½d; greasy average, 8½d to 9½d; S. Aus., greasy average, 6½d to 7d; N.Z.—Scoured average, 1s 5d to 1s 6d; grease average, 8½d to 9½d; Cape scred .sup., 1s 5d to 1s 6d; fleece average, 7d to 7½d; greasy average, 6½d to 7d; Natal—scoured; 1s to 1s 1d; greasy average, 6½d to 7½d; cross-breds—grs.—Vic. to good supr., 11d to 11½d; New Zealand fine, 8½d to 9½d; New Zealand medium, 5½d to 6d; New Zealand coarse, 4½d to 4½d.

HAY AND STRAW.

London, Monday.—Hay is 5s per ton dearer on the week. Straw is 1s per ton dearer. Moss litter is 4s dearer on four-ton lots, which are quoted at 32s per ton nett. (Special).

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The trade for fat beasts at Islington, both as regards prime and second quality, has recovered from the stagnation so noticeable during the past few months. The supply was a fair average one both in regard to number and quality, higher rates by fully 2d. per 8lb. being both asked and obtained; this being due to the firm tone of the dead meat market at the start of the week, and secondly the attendance of several carcass butchers, there being so few arrivals at Deptford, especially on Monday, when only 424 beasts were on sale. For fat butchering cows and bulls there was a steady inquiry and a ready sale, at a similar advance, with an early clearance. Included in Monday's numbers were 95 Irish stores, which were quoted as follows:—Three-year-old steers, £12 10s. to £13 per head; two-and-a-half-year-old heifers, £10 to £11. At the foreign cattle market, Deptford, with a shorter supply than last week, trade was brisk at an advance of from 2d. to 3d. on Monday, but ruled rather slower on Saturday; no market being held on Wednesday. The total number offered for sale on both markets was 3,278, as against 3,571 last week. The supply consisted of 1,540 British and 1,738 foreign, these latter comprising 1,516 from the United States (decrease 335) and 222 from Canada. The following were the top rates paid per 8lb., sinking the offal:—85-stone Scotch, 5s. 1d.; 90-stone polled Norfolks, 5s.; 100-stone Shorthorn ditto, 4s. 10d.; 100-stone Lincolns, 4s. 8d. to 4s. 9d.; 90-stone Irish, 4s. 8d. to 4s. 9d.; 85-stone States, 5s., and occasionally 5s. 1d.; 90-stone fat cows, 4s. 2d. to 4s. 4d.; 100-stone fat bulls, 3s. 8d. to 3s. 10d.

The sheep trade, which was practically confined to the Islington Market, was of a slower nature so far as wethers were concerned, a tendency in regard to value in favour of buyer; ewes being short in number, maintained late rates; there being too many lambs on offer, trade not only proved dull and dragging, but lower rates by from 4d. to 6d. per 8lb. had to be accepted; best pens made per 8lb. as follows, sinking the offal:—7½ to 8-stone Downs, 5s. 8d.; 8-stone Scotch, 5s. 8d.; 9-stone Downs, 5s. 6d.; 10-stone Downs, 5s. 4d.; 10-stone half-breds, 5s.; 11-stone Hampshires, 5s. 6d.; 12-stone Lincolns, 4s. 10d. to 5s.; 9-stone Yorkshires (clipped), 4s. 8d.; 10-stone ewes, 4s. 10d.; 5-stone fat Down lambs, 7s. 2d. to 7s. 4d.; 6-stone half-bred ditto, 6s. 8d. Total number penned was 10,870, as against 13,655 during the previous week.

The few calves on offer met a slow sale at less money; the best were quoted at 5s. 8d. per 8lb.

Trade in the West.

The phenomenally cold weather experienced for some weeks past has been succeeded by a nice genial rain, under the influence of which the temperature has gone up considerably, and the pastures are already beginning to assume a very altered appearance, under the more seasonable meteorological conditions now prevailing grass being very plentiful in those districts, where, happily, there has been no lack of moisture, as in the case of less favoured localities. The effect of this, in conjunction with the shortened supplies of foreign beef coming to hand, has been to give a very marked stimulus to the grazing industry, some of the more forward consignments of grazing bullocks now being marketed, selling up to as high as £40 per pair for exceptionally heavily-fleshed beasts, the more ordinary runs selling from £24 to £36, and plainer £20 to £22, only the very roughest class of aged barreners selling below these quotations. With beef still going up, barreners are bound to be very dear, especially as there seems, from what we can gather, only to be very moderate quantities of beasts for delivery at the leading provincial centres. Beef is quite 1s. to 1s. 6d. dearer than it was, ripe steers of medium weights now bringing up to £24 or £25 apiece (or 11s. 6d. to 12s. 6d. per score), and heifers from £17 to £22 or £23 (or about the same price); whilst cows make 11s. per score (or £18 to £22). There is also a quick sale for decent quality bulls at 9s. 6d. to 10s. 6d. Dairy beasts continue to meet a phenomenally brisk sale, the range now for good milches being £17 to £22 each. The transactions in sheep are principally restricted to those for butchering purposes, though should keep prove to be plentiful later on, it cannot fail influencing prices very materially at the great spring sales next month in most sheep-breeding districts, the more especially as there is known to be a shortage in the numbers now kept in the country. The best types or well finished sell from 28s. to 34s. or 35s. apiece (or about 8½d. per lb.), ewes being correspondingly dear, some of the best making 50s. (or 7½d. per lb.). Lambs are likewise going much stronger for slaughter, some of the ripest in Downs touching 42s. at the Dorset markets (or 10d. to 11d. per lb.); whilst those not so choice or well furnished sell from 28s. to 34s., or 35s. each, and there is but very little difficulty now in clearing stocks, so eager being the demand to buy, rising markets having but little effect in checking the demand. Calves, dear as they have been for some time, are undoubtedly becoming even dearer, some of the best now realising over 8½d., whilst very little worthy of the name of the veal can be bought under 8d., anything very plain, indeed, making 7d. to 7½d. All the better-most grades of calves make from about £5 up to £7 apiece, and there is an equally good inquiry for all at all suitable for rearing purposes. The pig trade is equally fast, light weight porkers making 10s. 6d. to 11s. per score (or 46s. to 60s. each), and baconers 10s. (or about 67s. to 90s.). Sows bring from £5 to £8, and stores have a wide range according to size, 22s. up to 40s. There is a distinct improvement in the trade all round—both fat and store—and should the falling off in the deliveries continue in foreign supplies, there is undoubtedly the prospect of things becoming all round even dearer than they are now quoted.

Trade in Scotland.

John Swan and Sons, Ltd., give the following as their report on above for the current week:—The number of fat cattle on offer this week has been rather under an average, and with a large attendance of buyers an active trade has been experienced, and the highest prices of the season realised. Fat cows have also participated in the advance. The supply of sheep has been fairly good with the exceedingly bad returns from London. The worst has to be reported, and prices have suffered a decline of 2s. a head on an average. Fat lambs, if of good quality, selling dear, but some too early drawn have made disappointing prices. Fat calves and pigs just the turn cheaper. There was a very large supply of store sheep; anything of a good class met a fair inquiry at prices the turn lower, but second-class sheep have been very difficult to sell, and prices 2s. down, with a considerable number left unsold. There was a large supply of store cattle, principally Irish. The high cost price in Ireland causes trade to be very slow, and while those sold made a fair price a large number were left over. Milch cows met a good demand, at rather more money than last week.

Quotations:—Top-price best beef, 8s. 6d. per stone; mutton from 7½d. to 8d. per lb.

Trade in Ireland.

A shorter supply of cattle and an improved attendance of buyers gave considerable firmness to trade at last Thursday's Dublin market, with the consequence that there was a sharp rise of about 20s. per head all round, and more than that in the case of best beef. A good clearance of everything useful was easily effected. Trade opened actively in the morning early, but sellers were stiff, and buyers had to raise their terms before any business could be done. Even cows, and rough coarse cattle which have been a perfect drug of late, came in for a good share of attention, and were taken at prices which quite cheered up the hearts of the despondent ones, who had almost given up hope of being able to part with them. Best beef sold at from 60s. to 65s. per cwt.; good second at from 57s. 6d to 59s., and inferior from 46s. to 50s. There was a slight increase in the number of sheep in market, and business ran in a somewhat quiet and discouraging groove; but, on the whole, no perceptible difference was to be noted in prices as compared with the previous Thursday. There was some slight improvement in the shipping inquiry, but not enough to affect values. Altogether, trade in the mutton department was slow, and a considerable number of sheep were left over unsold. Best wether mutton was worth (in wool), 7½d. to 7¾d. per lb; and 8d. for light-weight Cheviots; ewe, 6d. to 7d.; small to medium hoggets, from 27s. to 35s. each; heavy from 42s. to 55s. Lambs met with a poor trade at from 18s. to 25s. for the smaller ones, and 27s. to 35s. for large fat. Veal was scarce, and best calves tending to a rise in price, making from 8d. to 9½d. readily; coarse calves from 4½d. up. Moderate show of milch cattle; first-class springers rated from £18 to £23 each, other sorts from £9 upwards. Store cattle in more demand, some graziers being on the look out for forward stockers in view of a rise in the price of beef. Average supply of pigs, and buyers in good attendance, but trade very quiet, and business tedious at prices from 1s. to 2s. under last week's rates. Choice light-weight pigs from 46s. 6d. to 48s. per cwt., coarse from 40s. to 44s., inferior from 38s. to 40s. At the fairs in the South of Ireland have been very active during the past week, at improved prices for all young stock.

LONDON.

Islington, Thursday.—A fair supply of beasts available for a Thursday's market, and, as customary on this day, the bulk consisted of fat bulls and rough cattle. The demand proved generally quiet, but prices showed little or no alteration. Fat bulls quoted 3s 6d to 3s 8d. A fairly good supply of sheep was penned, but with very quiet support at about late rates; 7½ to 8-stone Down wethers, 5s 4d to 5s 8d; 9-stone, 5s 2d to 5s 4d; 10-stone half-breds, 5s; 10-stone Down ewes, 4s 6d to 4s 8d; 11-stone half-breds, 4s 4d to 4s 6d. Lambs met a rather better demand at steady rates; 4½ to 5-stone Downs, 7s 2d to 7s 4d; 6-stone half-bred ditto, 6s 8d. Calves in fair supply met a moderate demand, but prices ruled easier, the best on offer making 5s 8d to 5s 10d per 8lb. to sink the offal. Pig trade nominal. Total supplies, 100 beasts, 1,210 sheep, 60 calves, 5 cows, and 5 pigs.

COUNTRY.

Basingstoke, Wednesday.—At Raynbird and Son's sale yard there was a fair attendance of buyers to meet a supply of 47 fat beasts, 41 calves, 722 fat sheep and lambs, and 72 head of dairy and store cattle, which realised the following prices:—Shorthorn steers up to £23 5s; shorthorn heifers, £17 5s; cows up to £19 5s; polled Aberdeen heifers, from Steventon, £19; cows up to £13 10s; young Devon steers reached £33 10s the pair; prime wethers and young ewes made from 42s to 53s 6d; old ewes, 34s to 36s; three-months-old sucking lambs, 32s to 40s; fat calves, 60s to £6 7s 6d; small, 20s to 50s; dairy cows, £9 to £18 5s. The larger supply of fat beasts met an active trade, with all-round higher prices. A clearance made, with the exception of a few inferior lots held beyond the ideas of the buyers. Fat sheep and fat lambs were in good supply; the choice fat lambs sold readily, and a clearance made at an advance on last week. Prime sheep of handy weights were sold without much change in value, but to sell heavy sheep less money had to be taken, and a clearance could not be made. Dairy cows realised higher prices, with a better demand. Store cattle met with more inquiry, prices showing a marked improvement upon late markets. Fat calves were in short supply and very dear. Ruling values:—Best quality fat beasts, 7¼d to 7¾d; second ditto, 6¼d to 7d; bulls, cows, and inferior beasts, 5½d to 6d per lb; best quality fat sheep, 7½d to 8d; second ditto, 6¾d to 7d; old ewes, rams, and inferior, 5½d to 6d; choice fat lambs, 10d to 11d per lb; fat calves, 7½d to 9½d per lb.

Bristol, Thursday.—Fair supply of fat cattle. Steady demand for best qualities at 64s per cwt.; secondary animals, 58s. Moderate numbers of sheep in the market. Light wethers made 7½d to 7¾d per lb.; heavy wethers, 7d; ewes, 5½d; best lambs, 10d to 11d. Four hundred store cattle offered, and, notwithstanding high prices, most lots were cleared.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart there was a rather short supply of fat cattle for the time of year, and the quality was hardly up to the average. A sharp trade prevailed for all descriptions of fat beasts, at rather more money. Fat cows and bulls were also dearer. Good supply of store beasts, which also met a capital demand at more money. Short number of fat sheep for the time of year, the supply being insufficient for the demand, and prices consequently ruled dearer. Suffolk hoggets made up to 64s 6d per head. Half-bred hoggets went up to 60s per head. Fat ewes were also dearer. Better trade for store sheep. About an average supply of fat pigs, for which there was a sharp trade at a trifle higher rates for all descriptions.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2¾ n. ...	9 6
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in. ...	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ltd.

Cambridge, Monday.—Beef, 7s 3d to 8s 3d; mutton, 4s 8d to 5s 8d; lamb, 10d to 11½d. Some good lots store beasts to hand, and nearly all cleared. Fat beasts again show but very little alteration in prices. Fat sheep a good, brisk trade at more money. Lambs a fair number shown, but trade not quite so good. Stores not quite so many to hand, and all cleared. Hay, straw and roots, short supplies.

Canterbury, Saturday.—There has been a further modification of the foot-and-mouth disease restrictions, and movement of stock is now possible by licence outside the immediate neighbourhood of the affected parish. The market at Canterbury remains closed.

ADD WOOL

Carlisle, Saturday.—There was again a large show of Irish store cattle, about 900 beasts being offered. The bulk of the animals were heifers, of which there were some grand specimens, the number of stripping cows being on the decline. In spite of the backwardness of grass owing to the night frosts, the demand was fairly strong. Young and small heifers realised £6 10s to £8 10s; best sorts up to £16; stripping cows, £8 10s to £11 10s.

Dorchester, Wednesday.—There was again a very full market, both as to supply and attendance, at Messrs. Enson's and Mr Sampson's sales, and trade generally compared very favourably with that of previous markets. Fat bullocks maintain their firmness, especially the better grades, which meet a steady sale at 11s to 11s 6d per score, and secondary qualities 10s to 10s 6d. Calves also meet a quick sale at prices ranging from £4 to about £6 5s for the best (or 8d to 8½d per lb); seconds, 48s to 72s (or 7½d); and rearers, 23s to 35s. Mutton also sold well, both ewes and wethers meeting a good sale, the latter at 40s to 52s, and wethers 45s to 55s (or 7½d to 8d); lambs, 30s to 38s 6d (or 9d to 9½d). Pigs also found a ready sale at 40s to 58s for porkers (or 10s 6d per score); baconers, 68s to 96s (or 10s); stores, 20s to 38s.

Dublin, Thursday.—Numbers in market:—Beasts, 1,254; decrease, 195; sheep, 5,083; increase, 113; calves, 37; decrease, 2. Choice cattle scarce and dear. Rough sorts and dairy cows made higher prices. Some choicely-finished Aberdeen Angus bullocks, the property of the Countess of Kingston, purchased by Mr. Nolan, of Terenure, brought top quotation. Sheep in better demand at last week's prices. Cattle, live-weight (best), 35s to 38s 6d per cwt. Others, 30s to 34s per cwt. Mutton, dead weight, 6¾d to 8d per lb.—GANLY, SONS AND CO.

Hereford, Wednesday.—Bullocks and cows, 707; calves, 193; sheep and lambs, 1,695; pigs (fat and sows), 22; sucking pigs, 47; pigs (stores, not more than ten), 222; pigs (stores, more than ten), 26; horses, 6. Prices:—Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½d per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb; lambs, 11d to 1s per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a heavy supply of fat cattle of excellent quality and a large attendance of distant and local buyers. Trade was sharp, and prices ranged from 8s to 8s 9d per stone. Fat sheep met a firm trade on the lines of last week, not being quite so numerous. Suffolk hoggets from 62s 6d to 44s. Fat lambs scarce, and not first quality. There was a fair inquiry for grazing hoggets, and a better tone in the trade. Several weaning calves were penned, and the best were dear. Fat calves sold well at from £5 downwards. A good entry of fat and store swine; prices

firm for all descriptions, well-bred stores being particularly in request. This being the annual sale of pedigree red-poll cattle, about 50 animals were catalogued, including an exceptionally nice lot of young heifers, several of which were purchased for America. A good entry of grazing cattle, including some nice lots of North Country steers. Prices for the best were rather high. Good cows sold well, but ordinary animals were not much wanted. Numbers at sales and market:—Cattle, 963; calves, 47; sheep, 2,369; swine, 1,630; horses, 30.

Leicester, Wednesday.—Very large deliveries of Norfolk and Lincolnshire fed bullocks. Buyers and dealers were well represented, and trade ruled active at 10s. to 20s. per head advance. Choice bullocks 7d to 7¼d; secondary, 6¼d to 6¾d; cows, 5¾d to 6¼d; heifers, 6¾d to 7¼d per lb. There were large consignments of sheep, which sold freely at 7¾d to 8d for choice qualities; large sheep, 6¼d to 7d, ewes, 5¼d to 6d; shorn sheep, 6d to 7¼d; lambs in request at 11d; calves, best, 9d; secondary, 8d per lb.

Newport, Wednesday.—Yesterday there was a good supply of stock and a large attendance of buyers. Trade was brisk for best quality stock. The quotations were:—Beef, best, 7d to 7½d per lb; secondary, 6½d to 6¾d; cows, 6d to 6¾d; mutton, best wether, 8d to 8½d; show wether, 8d; ewes, 7d to 7½d; lamb, 1s; veal, 8d to 9d; porker pigs, 10s 3d to 10s 9d per score.

Norwich, Saturday.—There was some increase in the number of store beasts on offer here to-day; the best lots sold readily, but the demand was dull for secondary descriptions. Fat beasts, which were in reduced supply, were firm at 8s to 8s 6d per 14lb. Store sheep were not offered very freely, but the demand was inactive in consequence of indifferent keep prospects; hoggets were quoted at 32s to 44s per head. Fat sheep made 8s to 8s 6d and 9s per 14lb. The higher prices current for fat beasts and sheep have improved grazing prospects in Norfolk, but more rain is required to increase the keep.

Salford, Tuesday.—The supply of cattle was smaller. There was a better trade than last Tuesday, and sellers obtained an advance. There was a decrease in the number of sheep and lambs penned. A better trade was experienced for sheep, and prices were in favour of the seller. The lamb trade was rather dull, and prices lower. A large show of calves, and a slow sale at lower prices. Quotations:—Cattle, 5¼d to 7d; sheep in wool, 7d to 9¼d; ditto clipped, 6d to 8d; calves, 5d to 8¼d per lb; lambs, 25s to 48s each. At market:—Cattle, 2,365; sheep and lambs, 9,381; calves, 223.

Sheffield, Tuesday.—Cattle were in scant supply owing to heavy downpour of rain. Best milch beasts, £18 to £20; secondary sorts were almost untouched at £12 to £15.

Spalding, Tuesday.—Good show of cattle. Beef made 8s to 8s 6d per stone for prime quality. Large number of store cattle, which found a ready sale. The show of sheep and lambs was small, and full prices were realised, mutton making 8d per lb.

Stockton, Wednesday.—There were on offer 132 cattle, 20 calves, 370 sheep, 25 lambs, and 184 pigs. The show of best cattle was small, and quotations ranged from 8s to 8s 6d; rougher kinds, 6s 6d to 7s 6d per stone. Calves met with a quiet demand at 6d to 8d per lb. A slow trade in sheep; young ones, 8¼; ewes, 7d; tups, 5d per lb; lambs, 30s to 40s each.

Thame, Tuesday.—A heavy downpour of rain prevented stock coming into the market, consequently the small supply was not equal to the demand. Beef made extreme prices, ruling as high as 5s 6d per stone. Good mutton was scarce and dear. Mr. Bond's sale comprised 41 fat beasts, 252 fat and store sheep, 47 fat and weaning calves, and 50 pigs. Fat bullocks made £18 to £23 10s; fat heifers, £17 to £23 5s; fat ewes, 50s to 65s; fat tegs, 53s to 63s; fat lambs, 34s to 36s; fat calves, £4 to £4 18s; weaning cow calves, 30s to 45s; bull calves, 17s to 43s; fat pigs, 10s per score; stores dearer.

Wakefield, Wednesday.—Good show all round, and plenty of buyers. Choice young sheep made ½d a pound less all round; best quality beef, 7d per lb; inferior sorts from 5½d to 6¾d. Number of sheep, 4,926; beasts, 1,274.

Wolverhampton, Wednesday.—Beasts a moderate supply; fair trade. Sheep fair supply, moderate trade. Calves moderate supply; fair demand. Beef, 6d to 7½d per lb; mutton, 6½d to 8¾d per lb; veal, 7½d to 9d per lb; pigs, bacon, 10s to 10s 3d per score; porkets, 10s to 10s per score; sows, 8s per score.

Worksop, Wednesday.—Fair supply and good trade. Best beef, 7s to 7s 6d; secondary, 6s to 7s per stone; best wethers, clipped and in wool, 7d to 7½d; ewes and other sorts, 5d to 6d; lamb, 10d to 11d; veal, 10d per lb.

FOREIGN.

Yorkhill, Monday. — At the weekly sale of United States and Canadian cattle, there were in the lairages 110 cattle landed by the Norwegian (s.), from Portland (Me.), 115 by the Indrani (s.), from St. John, N.B., and 136 by the Corean (s.), from Philadelphia, or a total offering of 359 cattle. All the cattle were up to the average in quality, and many of the bullocks and heifers prime beasts very suitable for the trade. There was a good attendance of buyers. Small, neat, well-fed beasts secured the best inquiry, and sold dear; secondary and heavier animals met a good trade, and changed hands smartly at the currencies ruling. Bulls and heifers met a good trade and sold very dear. Cows met a fair trade. The deadweight quotations may be given as follow:—States bullocks, best class, 60s to 62s per cwt., and for really choice up to 64s; secondary and heavier, 58s to 60s; bulls, 54s to 56s, according to quality and finish. Canadian bullocks, best quality, medium weight, to 60s per cwt., and really choice up to 62s; secondary and heavier animals, 56s to 58s; heifers, 60s to 62s; cows, 47s to 56s; bulls, best class, 52s to 54s; and in one or two instances up to 56s; and secondary and heavier, down to 50s per cwt.

Yorkhill, Monday.—A sale of American sheep was held in the morning, 906 animals being offered, but were not all sold. They consisted principally of young sheep and ewes, but there were also a number of lambs and tups. Taken all round, the sheep, as regards quality, were of a very good class, and were very suitable for the requirements of the market, all being shown in good condition. The majority of the sheep were clipped, and in consequence scarcely made so much money as the rough. There was a good attendance of buyers, and trade was fairly good throughout, lambs and hoggets securing the best inquiry. Other lots met a fair price. The deadweight quotations were as follow:—Young sheep (clipped), best class, to 7¾d per lb.; secondary and heavier, 7½d; and rough to 8d. Lambs realised 7¾d per lb.; ewes, best class, to 6d.; secondary and heavier, 5½d; tups, best class, light weights, to 5d; and fat and heavy, 4d to 4½d.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 7d to 7¾d; clover, 7¾d to 8d; clover (Canadian), 7d; straw (wheat), 6½d; straw (oat), 6d to 6½ per stone.

Whitechapel, Saturday.—Supplies short; sustained demand; fair business at steady rates. Best clover, 95s to 110s; inferior, 80s to 90s; specially picked hay, 115s; good, 108s; inferior, 80s to 90s; mixture and sainfoin, 90s to 100s; straw, 28s to 40s per load.

EGGS.

Tuesday.—Bedale: 18 for 1s. Gainsborough: 16 and 17 for 1s. Leeds: 7s to 8s per 120. Settle: 18 or 19 for 1s. Spalding: 18 for 1s.

Wednesday.—Barnsley: 13 or 14 for 1s. Colne: 1s 3d per score. Goole: 16 for 1s. Keighley: Wholesale, 15; retail, 14 for 1s. Kirbymoorside: 19 or 20 for 1s. Knaresborough: 16 or 17 for 1s. Louth: 18 for 1s. Masham: 18 or 19 for 1s. Northallerton: 17 for 1s. Stockton: 14 or 15 for 1s. Worksop: 1s 4d to 1s 6d per score. Hereford: 18 for 1s; wholesale, 20. Market Drayton: 16 to 17 for 1s. Uttoxeter: 1s 3d to 1s 4d per score.

Thursday.—Brigg: 17 or 18 for 1s. Penistone: 16 for 1s. Ripon: 17 or 18 for 1s. Scarborough: 14 for 1s. Wetherby: 15 or 16 for 1s. Kidderminster: 17 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Grimsby: Austrian, 5s 2d to 5s 5d per 120; Egyptian, 4s 6d to 4s 8d; Danish, 6s 6d to 7s 6d. Helmsley: 18 or 19 for 1s. Leeds: Yorkshire, 7s 3d to 8s 3d per 120; Irish, 6s 8d to 7s; Danish, 6s to 6s 9d; Austrian blues, 5s 1d to 5s 4d; ditto reds, 4s 7d to 4s 10d. Leyburn: 18, 19 for 1s. Lincoln: 16 to 17 for 1s. Otley: 16 to 17 for 1s.

Saturday.—Appleby: 16 to 18 for 1s. Berwick: 8d. to 9d per doz. Carlisle: 16 or 17 for 1s. Doncaster: 14 or 15 for 1s. Grantham: 16 or 17 for 1s. Howden: 18 for 1s. Lancaster: 11 to 16 for 1s. Malton: 18 to 20 for 1s. Pontefract: 15 and 16 for 1s. Retford: 1s 4d to 1s 5d per score. Richmond: 17 for 1s. Skipton: 16 or 17 for 1s. Stokesley: 15 or 16 for 1s. Whitby: 16 and 17 for 1s. York: 16 for 1s.

BUTTER.

Tuesday.—Bedale: 1s to 1s 2d per 24oz roll. Gainsborough: 1s 2d per lb. Leeds: 1s 3d to 1s 4d per lb. Settle: 1s 1d to 1s 2d per lb. Spalding: 10d per lb.

Wednesday.—Barnsley: 1s 2d to 1s 3d per lb. Colne: 1s 2d per lb. Goole: 1s per lb. Keighley: Wholesale, 1s 1d; retail, 1s 2d per lb. Kirbymoorside: 12s to 13s per stone; 1s per lb, Knaresborough: Wholesale, 1s 6d; retail, 1s 7d to 1s 8d per 24oz roll. Louth: Wholesale, 10d per lb. Masham: 1s 2d to 1s 4d per roll, 24oz. Northallerton: 1s 7d to 1s 9d per 24oz. Stockton: 1s to 1s 3d per lb. Worksop: 1s 3d to 1s 4d per lb. Hereford: 1s 4d to 1s 5d per lb. Market Drayton: Best 1s 1d to 1s 2d per lb, seconds 1s to 1s 1d per lb. Uttoxeter: 1s 1d to 1s 2d per lb.

ABD FEEDING STUFFS

Thursday.—Brigg: 1s to 1s 1d per lb. Penistone: 1s 3d per lb. Ripon: 1s 4d to 1s 8d per 24 oz. roll. Scarborough: 1s 3d per lb. Wetherby: 1s 2d to 1s 3d per lb. Kidderminster: 1s 3d per lb.

Friday.—Easingwold: 10d to 1s per lb. Grimsby: 114s to 116s per 112lb; Dutch, 106s to 110s; Colonial, 110s to 112s. Helmsley: 10d to 1s per lb. Leeds: Danish, 114s to 118s per 112lb; Irish creameries, 108s to 114s; Colonial, 108s to 114; York lump, 15s to 15s 6d per st; ditto, long rolls, 1½lb 1s 10d to 2s; fresh butter, in 1lb prints, 1s 3d to 1s 4d per lb. Leyburn: 1s to 1s 2d per roll of 24oz. Lincoln: 1s to 1s 2d per lb. Otley: 1s 5d to 1s 7d per roll of 24oz.

Saturday.—Appleby: 9½d to 1s per lb. Berwick: 8d to 9d per dozen. Carlisle: 1s to 1s 1d per lb. Doncaster: 1s 2d to 1s 3d per lb. Grantham: 1s 1d to 1s 3d per lb. Howden: 1s 1d per lb. Lancaster: 1s 3d to 1s 3½d per lb. Malton: 11d to 1s per lb. Pontefract: 1s 1d to 1s 2d per lb. Retford: 1s 2d to 1s 4d per lb. Richmond: 1s 1d to 1s 2d per lb. Skipton: 1s 1d to 1s 2d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 1d to 1s 2d per lb. York: 1s 1d per lb.

CHEESE.

Chester, Wednesday.—There was a large attendance of buyers from the Midlands and Northern counties. Farmers brought in 30 tons of cheese, and, with an active demand, a speedy clearance was made. Specially fine cheese realised 65s to 70s, and medium 58s to 63s per cwt. These quotations are about the same as those of the corresponding market last year.

Glasgow, Wednesday.—The market is in rather a listless state. Old cheese practically over for the season. Quotations for those remaining are nominally from 56s to 62s per cwt. There have been one or two lots of new Dunlops forward. They were somewhat green, and were met with a quiet demand. The new cheese is on the market a fortnight earlier this year. The trade are turning their attention to New Zealands and Canadians, which fetch late values.

Newport, Wednesday.—Good supply and a fair attendance of buyers. Prices: Caerphillies, 52s to 56s; fancy dairies, 58s to 60s; Cheddars, 63s to 65s; truckles, 68s to 70.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Supplies fair; a good supply of vegetables in fair request. English apples, 6s to 10s 6d per bushel; Tasmanian, 8s to 16s per case; English grapes, 3s 6d to 4s; French, 2s 6d to 3s 6d per lb; Almeria, 5s to 9s per dozen lb; Valencia oranges, 8s to 14s; Murcia, 7s to 10s per case; pineapples, 1s 6d to 4s 6d each; Canary tomatoes, 4s to 4s 6d per case; bananas, 7s 6d to 12s 6d per bunch; lemons, 6s 6d to 18s per case; cauliflowers, 10s to 12s per tally; parsnips, 3s; turnips, 3s per bag; parsley, 4s per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; forced rhubarb, 10d to 1s; field, 2s per dozen bundles; English onions, 7s; Valencia, 6s per case; potatoes, 35s to 80s per ton.

GAME AND POULTRY.

Smithfield. Saturday.—Larger supplies met better sale. Fowls: Yorkshire, 3s to 3s 6d; Essex, 3s 3d to 3s 9d; Boston, 2s 9d to 3s; Surrey, 4s to 5s 6d; Sussex, 3s to 3s 3d; Welsh, 2s 6d to 2s 9d; Irish, 2s 3d to 2s 9d; turkeys, cocks, 8s to 11s; hen, 4s to 5s; country ducklings, 4s to 4s 6d; Aylesbury, 4s 6d to 6s; quail, 8d to 1s; wild rabbits, 6d to 8d; tame, 10d to 1s each; Australian, 8s 6d to 9s 6d per dozen; Russian game, partridges, 1s to 1s 2d; ptarmigan, 9d to 11d; blackgame, 10d to 11d; brown hares, 1s 6d to 1s 8d; white, 1s to 1s 3d each.

HOPS.

Canterbury, Saturday.—Prices continue very firm, with a tendency to advance in the case of really fine samples. There is not, however, a great deal of trade doing.

Worcester, Saturday.—There is no change to note on our market this week, prices continue firm for all good samples, and in some instances more money has been paid, but for low qualities there is very little demand.—PERCY AND CO.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 6,963qrs from Buenos Ayres, 130qrs Harlingen, 12,580qrs Rosario, 8,860qrs San Nicholas, 1,679qrs Villa Constitution; total, 30,112qrs. Linseed: The market since our last has been dull and inactive, though prices asked show a small advance. Calcutta: Re-sellers ask 51s 6d, but there are no buyers at over 51s 3d. River Plate: There are buyers of spot seed at the close at 47s 6d, while sellers ask 47s 9d; for April shipment, 49s is asked, but the price to sell would be nearer 48s. Cottonseed: With continued light arrivals and moderate shipments, the market has further improved. Up to close of last week Old Crop was selling at £7 spot and passage, but yesterday £7 1s 3d paid, and to-day business done at £7 5s. April-June sold at £6 18s 9d to £7, but to-day, in speculative orders to cover, up to £7 6s 3d has been made. A little November-January found buyers at £6 6s 3d to £6 7s 6d. Oils.—Exports for the week ending April 8, 1902—Linseed oil: 7 Germany, 2 Holland, 12 Norway, 11 Russia, 3 Turkey; total, 35 tons. Cotton oil: 151 Belgium, 6 France, 150 Germany, 183 Holland, 12 Sweden; total, 482 tons. Linseed oil: 28s 9d, spot; 28s 10½d, May-August. Cotton oil: 23s 7½d, spot; 23s 10½d, May-August. Crude: 22s 4½d, spot; 22s 6d, May-August. Rape oil: Jamba naked, 24s, spot; first quality, 24s 6d, spot. Oil seed sakes: A steady market, without material change in prices.—KEIGHLEY, MAXSTED, AND CO.

London, Thursday.—Linseed—Owing to more moderate shipments from the Plate and India, prices have improved. Calcutta to London spot passage 50s 9d, and April-June 50s 6d. La Plata on passage none Hull rather steadier. Calcutta, April-June, 51s 3d. La Plata, spot 48s, March-April 49s. To the Continent, Bombay April-May 53s 3d, June-July 53s 6d. Calcutta, April-June 51s 3d. La Plata afloat 48s, March-April 49s. Linseed oil—Firm for near positions, and quiet forward. We quote spot in pipes £30 5s to £30 10s, barrels £30 10s, May-August £29 15s, September-December, £28 15s. Hull naked spot £28 15s, which is also the quotation up to August. Linseed cakes are steady. We to-day quote London made £8 5s to £8 7s 6d ex mill, American Western £7 7s 6d to £7 10s, Russian £7 12s 6d to £8 2s 6d. Cotton cakes quiet, London made £4 6s 3d to £4 7s 6d. Rapeseed is steady, but not very active. Brown Cawnpore, April-May 37s; brown Calcutta, April-June 36s. To the Continent we quote yellow Guzerat 41s 6d, yellow Cawnpore April-May 39s 4½d, brown Cawnpore March-May 37s 3d, brown Calcutta April-June 36s 3d. Ferozepore February-March 37s 3d. Jamba, March-May to Hull 31s 6d. Cottonseed has been very excited, and prices have advanced considerably. Passage London £7 8s 9d, April-May £7 8s 9d. Hull spot £7 10s paid, April-June £7 8s 9d, November-January £6 8s 9d. Cargoes, May is held for £7 11s 3d. A November cargo has been sold at £6 11s 3d. Bombay to Hull—Considerable business continues to be done in April-May at £4 16s 3d, May-June £4 18s.—THE PRODUCE BROKERS COMPANY, LIMITED.

Mark Lane, Monday.—Linseed cakes.—The new impost on feeding stuffs has caused an increased demand for cakes, which remain exempt from duty, and while the market is almost bare of stocks, more particularly of foreign, values are firm, and shippers continue to ask a slight advance. Russians in mats may still be bought at last week's prices, but are 2s 6d per ton more money in bags. Americans to arrive in a few days offer at slightly firmer prices. Calcutta made in bags nearly due are obtainable at last Monday's quotations. London made do not find a ready sale, but are fully as dear as last week's quotations. Cotton cakes.—In sympathy with the higher price of seed, values have considerably hardened since last week, and best Egyptian in bags to-day make 2s 6d per ton more money, while English are firmly held at the same advance in price. Decorticated remain dull and without change, with meal the same price as last Monday. Rape cakes quiet; East India, £4 to £4 5s. Maize germ meal.—Arrived parcels of American are now held for £6, including the 8s 4d per ton duty, and English is also quoted at the same figure. Rice meal.—Landed lots of Rangoon find a ready sale at £5 per ton ex warehouse, while in forward positions £4 1s 3d to £4 2s 6d ex ship would be accepted.

SEEDS

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze, Pond, Borough, London, S.E., report a steady although now a naturally diminishing inquiry for field seeds generally. The stocks of clover seeds, &c., which will have to be carried over until next season will without doubt prove much lighter than usual. Meantime, as regards values, no change of importance can be noted. The scarcest and dearest articles at present are Lucerne and Timothy seeds. Koenigsberg tares seem likewise about used up. For Sanfoin late rates are realised. Meantime, mustard and rape-seed move off slowly; but there is a good inquiry for furze seed. With respect to canary seed, quotations owing to some arrivals favour buyers, whilst other kinds of bird-seeds are also in meagre request. Blue peas and haricot beans, although in moderate demand, exhibit, owing to the Budget, a strong undertone. Last month's imports into the United Kingdom of clover and grass-seeds were 39,331cwt, value £86,390, as against 45,516cwt, value £103,416, for March, 1901.

STOCK AND SHOW NOTES.

By Herdsman.

The London Cart Horse Parade Society are now arranging the details of the Seventeenth Annual Parade of London Cart Horses, which is to take place, as usual, in Regent's Park on Whit Monday next, May 19th. At last year's function 650 prizes were awarded, amounting to £320, the whole of the money being devoted to the encouragement of deserving drivers. Prizes are awarded for singles, pairs, and teams, the latter having this year been considerably augmented, whilst corporations, borough councils, etc., compete in a section by themselves. Additional premiums and medals are to be given by the Shire and Suffolk Horse Societies, and brasses and dilpomas by the R.S.P.C.A. The excellent competition for long service with the same employer will also be continued. Full particulars and forms can be obtained at the offices of the Society, at 12, Hanover Square, W.

The West Cumberland Agricultural Society have decided to dispense with their annual cattle show at Whitehaven this year, and to make a grant of £20 to the Royal Show at Carlisle.

I have received a copy of an artistic catalogue of the Beadlam Grange stud, the property of Mr. George Scoby, Beadlam Grange, Nawton, Yorkshire. As is generally known, Mr. Scoby breeds Cleveland Bays, Yorkshire coach horses, Shorthorns, Lincoln and Hampshire sheep, and Berkshire pigs; but the catalogue mentioned deals almost exclusively with the horses. Cleveland Bays and Yorkshire coach horses have been bred and worked at Beadlam Grange since, 1874, and Mr. Scoby first showed and won with a two-year-old filly at the Royal Show at Newcastle, in 1886, since which year the stud has been represented annually at both the Royal and Yorkshire Shows, and has nearly always been included in the prize list. In 1897, it may be mentioned, the stud won fifty prizes at the Royal, Great Yorkshire, Durham County, Crystal Palace, etc. All the animals in the stud are offered for private sale, full particulars of which can be had from Mr. Scoby.

The Country Gentlemen's Association has received instructions to sell Lord Hillingdon's well-known flock of Shropshire Sheep at the Wildernesse, Seal, Sevenoaks, on August 20th. Messrs. Mansell and Co., of Shrewsbury, will be the auctioneers.

The Prescot and District Agricultural Society has issued the schedule of prizes for the eighteenth annual show, which will take place on Thursday, May 15, in Knowsley Park, under the presidency of the Right Hon. the Earl of Derby. Various classes (a number of which are open to all-comers) are provided for cattle, horses, pigs, dogs, poultry, pigeons, rabbits, butter and eggs, etc., and in each first, second, and third prizes are offered, whilst there are several special awards, including the Shire and Hackney Horse Societies' silver medals. Entries close May 3, with the secretary, Mr. F. W. Halsall, 12, Church Street, Prescot.

Mr. R. Harvey Mason, of Necton Hall, Swaffham, Norfolk, having let his Sparham Hall farm from Michaelmas next, the entire herd of Red Polled cattle kept there is, together with a number of young bulls and heifers from the Necton Hall herd, to be sold by auction on Thursday, May 15, Messrs. J. Thornton and Co. being the auctioneers. It may be mentioned here that no public sale of the Necton Hall herd has taken place since the present owner succeeded to the estate, in 1879. Red Polled cattle have been reared on the Necton Estate for many generations, the Home Farm having been always kept in hand by the owners. As far back as 1849 the late Colonel Mason, who bred Red Polls here from 1835 to 1865, took a prize at the Royal Show at Norwich, and since that date animals from the herd have won a large number of prizes. The present herd have gained many honours in the show yards, bulls having principally been exhibited. Magician 5021, now in service at Necton, won first and Champion prize at the R.A.S.E. Show at Maidstone, 1899. Many animals have been sold to go abroad. The Ensign 3096, exported to Captain V. T. Hills, U.S.A., and subsequently sold by him at a large sum to Mr. H. Lee Borden, Illinois, won many first prizes in the United States of America. As to the sires, it may be mentioned that at the late Mr. J. J. Colman's sale, in 1899, the handsome bull, Crown Diamond 6104, a son of Red Prince 2902 (the champion bull at the R.A.S.E., Chester, in 1893), was purchased for 210gs., and has proved a successful sire. Milk records were commenced in 1884, and have been carefully kept. The milk is tested at regular intervals by means of the Babcock tester; the results show that the 21 cows included in the catalogue averaged the large percentage of 4.09 butter fat in 1901. In addition to this, a record is kept of the actual weight of butter sold from the herd, and this is found at the end of the year to come very near the result as given by the test.

A prize schedule has come to hand for the twenty-seventh annual show of the Shropshire and Westmoreland Agricultural Society, which will be held at Shrewsbury on Thursday, June 5, and following day. Classes, with liberal prizes have been provided for Shire horses, hunters, hackneys, polo, and Welsh ponies, Shorthorn and dairy cattle, Herefords, Jerseys, Shropshire, and Welsh sheep, pigs, dairy produce, whilst there will be leaping and turn-out competitions. The special and champion awards in the live stock section number close on thirty, and range in value up to £25. They include medals, presented by the Shire, Hunters' Improvement, Polo Pony, and Hackney Horse Societies, and the Shorthorn Societies' district prize of £10, whilst there are two challenge cups of the value of £25 each—one for the best hunter mare or gelding and the other for the best shire mare or filly. Altogether the prize list is a most liberal one, and should attract a very large entry. Entries close as follows:—Implements and miscellaneous stands, April 21st; horses, cattle, sheep pigs, butter, and cheese, Monday, April 28th. (Post entries, at double fees, close May 10th.) Leaping, Monday, June 2nd at 10 a.m. The secretary is Mr. Thomas Whitfield, Talbot Chambers, Shrewsbury.

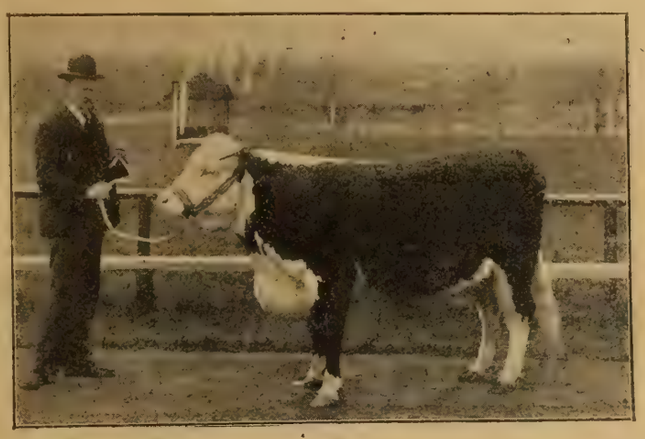
THE SHORTHORN BULL "LORD BRUCE" shown above is a Roan calved April 17, 1900, sire Chewton Oxford Cornelius 74,223, dam Evelyn, and was bred by Mr. G. F. King, Chewton Keynsham, Bristol. At the Royal Dublin Society's Show last week "Lord Bruce" won First Prize in the class for Shorthorn Bulls calved in 1900, on or before August 31, and was also winner of the Champion Silver Medal for the best Shorthorn Bull calved in 1900. In addition to these he won the Chaloner Plate for the best Shorthorn Bull calved in or prior to 1900.

The Royal Dublin Show.

The Spring Show of the Royal Dublin Society is always of great interest to English and Scotch breeders and exhibitors. The exhibition, which opened at Balls Bridge, Dublin, on Tuesday, and continued over the three following days, fully maintained the high average of merit reached in previous shows. The attendance during the show was of a satisfactory character, among the visitors being the Lord Lieutenant of Ireland, T.R.H. the Duke and Duchess of Connaught, and H.E. the Countess Cadogan.

The stock classes were well filled; Shorthorns especially were an excellent show, the number of yearling bulls being especially large. There was also a capital collection of Herefords, and the competition in nearly all the classes was strong. The headway made by the Aberdeen-Angus breed in Ireland of late years is very noticeable. This breed was well represented as regards numbers, but in the younger classes there was more than the usual proportion of second-rate animals. Hackney and agricultural horses were not extremely important sections. It seems pretty evident that the hackney is waning in popularity in the Green Isle, for the number of exhibitors seems to be fewer every year.

Shorthorns.



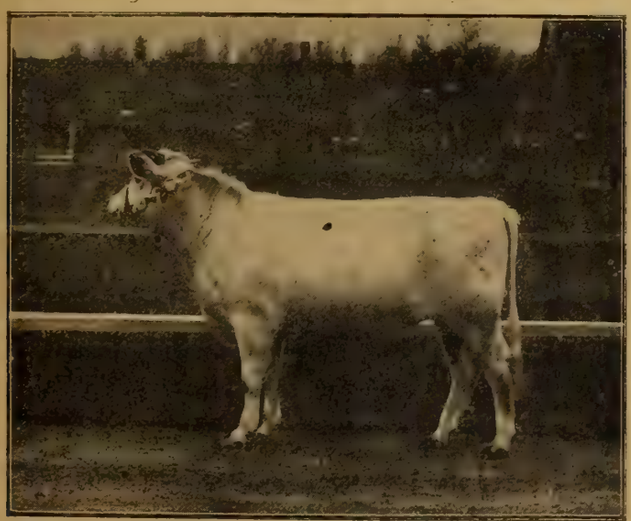
The yearling classes of Shorthorns were a decided improvement on those at the corresponding show last year, for not only were the entries larger, but the quality was much better, there being fewer of the weeds. Out of the big muster of 138 entries, a decided first was found in the Scotch bull, Viceroy, by Sovereign Star, bred by Lord Lovat, and shown by Mr. M. Marshall, of Stranraer. He is a grandly-substanced youngster, with plenty of depth, his only weakness being a bareness down the thighs. The next two were by English exhibitors, viz., Mr. Harrison's second winner, Star of Roses, an Uppermill bull, and Mr. Handley's third winner, named Ingram's Style. These were both well-substanced animals, though their positions were not so secure as that of the first. In the next class first honour was taken by Mr. Harrison's roan M.P., a Scotch-bred bull, sired by Halliday. He was a level, stylish enough looking youngster, but he did not finish so well over the tail-head, nor had the requisite substance that such a class of 143 animals could have furnished. Mr. Doyne had a nice, deep, level white for second winner in Prince Victor, which afterwards won for him the £20 Challenge Prize, and £70 Phœnix Cup. So pleased were the judges with the quality of the animals in this class that they awarded a very large number of highly-commended tickets.

The older class of two-year-olds made up an exceptionally fine one of 66 entries. There were a few weeds amongst thm, but the honour-bearers were an imposing group, and contained some of the plums of the showyard. Easily at the top were Lord Bruce, belonging to Mr. King, of Bristol, and Pearl King, shown by Mr. Handly, of Milnthorpe. The former, which, besides heading his class, afterwards bore off the championship of the breed in the Chaloner Plate, is a veteran English first prize winner. The second winner is a bull with a fine mossy coat that handles well, and is much more even than the other. Major Harman's third winner, Sovereign Star, which was first in his class here last year, was no mean rival. He was not in such good show condition, but he is a bull of exceptionally strong points that will likely wear his age well. Another well-known bull, about which a good deal was said last year, was Mr. M'Clure's Baron of Cluny. He was first in his class at the last Ball's Bridge Show, and entirely displaced at Belfast. On the present occasion he made a strong fourth winner in a strong class. The younger two-year-olds made up the poorest lot of bulls in this section, the first honour going to Mr. Crawford for an English-bred bull, named Master Stephen. An English competitor got the second prize, namely, Mr. C. F. King, of Bristol, with Chewton Brave Archer.

There was a very large muster of aged bulls, and, as last year, they were headed by Mr. Harrison's Inspector, a Scotch-bred bull, sired by Granite City. Inspector has a very imposing frontage, with great depth of shoulders and strength through the heart. He had to be content with reserve honours for the championship to Mr. King's two-year-old first-prize winner, Lord Bruce. The heifers are always a sweet lot at Ball's Bridge, and the plum of the two classes was Mr. Swann's Lady Flora, an exceptionally well-furnished heifer.

Herefords.

The prime English grazers are beginning—as they ought to do—to take a prominent place amongst the breeds of Ireland. During the past few years they have increased largely, both as regards numbers and quality. There was a specially fine lot of yearlings, the older class numbering 41 entries, but the first three prizes and reserve ticket come to this side of the Channel. Both the Earl of Coventry's first and Mr. Green's second and third winners were all fine, deep, level animals, with particularly good quarters for the breed, which is apt to be weak in that respect. Colonel Everard was the only Irish winner, and he got fourth prize for a bull named Admiral. The next class of yearlings, though mustering 34 entries, did not bring out such an array of merit as the former. Mr. Waller's Champion was placed first, but many thought the position should have been given to Major Hillas' second winner, Vandal. In the two-year-old class Mr. Purdon, of Killucan, succeeded in beating, with his Herefordshire-bred bull Gordon, the Earl of Coventry's Methodist. They are both remarkably fine level bulls, with great quarters, and good rib; but Mr. Purdon's winner had more ease and style, and showed his parts to better advantage. The class for aged bulls was much smaller, but contained very good winners shown by Messrs. Waller, Dann, and Boylan. There was a sweet-looking lot of yearling heifers, the first prize going to a pretty, symmetrical English exhibit in Ivy Lass, shown by Mr. Richard Green, Mrs. Madden and Colonel Everard carrying off the remaining honours. The next class, with only six entries, furnished the champion in Mrs. Madden's two-year-old heifer, Camellia; but it must be remembered that the English exhibits were debarred from this competition. She is, however, English bred, and on her merits would have stood a fair chance, even if her compatriots had entered the lists, for she handles beautifully.



THE HEREFORD HEIFER "CAMELLIA" shown above was bred by Mr. H. Russell, Westonbury, Pembridge, being by Peer 18,006 out of Charity 2nd. "Camellia" is the property of Mrs. Madden, Nutley, Booterstown, and at the Dublin Society's show last week was awarded the Hereford Challenge Cup for the best animal in the Hereford classes belonging to an Irish resident. "Camellia" also won First Prize in the class for heifers calved in 1900.

Aberdeen Angus.

The doddies were in some respects not up to the standard of former years; taken comparatively they did not compare in average merit with the Shorthorns, the younger classes containing a few more weeds than has been the case in former shows, but still the winners were well up to the usual standard. May Empress again came back amongst the aged females to add additional laurels to the long list of honours she won for her late owner, Mrs. Cambridge Grubb, and again appeared in capital bloom and won for Mr. Coey the red ticket in her class, with a strong bid for female championship. She is a female with a great deal of style and character, a grand rib and shoulders, though a trifle weak on the quarters. Amongst the heifers Mr. Coey got second and third in the yearling class with a pretty neat pair of youngsters by his famous sire, Baron Inca, running Mr. Bland's Queenly very close for first honours with Sunshine, a very compact gay little youngster. Mr. Owen's Melia Murdher appeared at the head of her class; she is a two-year-old, and won the female championship, as well as being reserved for the gold medal. This heifer won the first in her class as a yearling last year and championship at the Winter Show at Ball's Bridge, when she excited great admiration as one of the most symmetrical figures that has been seen at Ball's Bridge. The great feature in this section was the magnificent troop of aged bulls headed by the Scotch sire Ben Gloe, shown by Mr. M'Laren, of Perthshire. He is a bull with a grand broadside, fine level deep shoulders, good top and underline, and a dashing appearance, and was considered to be one of the most impressive looking Aberdeen-Angus sires that have been seen at Ball's Bridge for many years. He easily carried off the gold medal as the champion of the breed. The second and third winners were both Scotch bred. Mr. Turtle's Aghalee, bred by Mr. Wilken, was a fine compact little bull, but he was fairly beaten by Mr. M'Laren's more level and better substanced winner. Major Alexander's third winner was hardly so good over the thighs and quarters as the other two, and was a trifle plain about the head, but he possessed the best rib of the group; while as an instance of the close competition in this class, Lord Crofton's Jolly Benton, which was placed in the reserve, would have made a creditable first winner in former years.

In the younger two-year-old class there were several animals of very poor quality, but the Mar-

THE SHORTHORN BULL "PRINCE VICTOR" which forms the subject of the above illustration, is by Gipsey Prince out of Princess Victoria, and was exhibited by its breeder, Mr. C. M. Doyne, Wells, Gorey, at the Royal Dublin Society's Show last week. "Prince Victor" was winner of the Champion Prize of £20 presented by the Shorthorn Society for the best Yearling Shorthorn Bull bred in Ireland and eligible for entry in Coates' Herd Book; he also won the Phœnix Challenge Cup for the best Shorthorn Bull calved in 1901; the Special District Prize of £10 for the best Yearling Shorthorn Bull located in Leinster; and Second Prize in Class 2 for animals calved on or after April 1, 1901.

quis of Waterford had a very good first winner in Curraghmore Albert II., which afterwards won for him the Owen Cup, as the best male bred in Ireland. He is a lengthy, level bull, with strong points, showing nice shoulders and quarters and plenty of substance. The older two-year-old bulls formed a much better class, the first place being taken by Mr. Coey with Monitor, a son of Baron Inca's, a gay-looking bull, which shows much of the dash of his sire. Lord Dunleath took the second prize with a very taking bull, with a good deal of quality that improves with closer acquaintance.

Both classes of yearlings were hardly up to the standard of some former years, although the winners were all of very good type. In the younger class a Scotch exhibit carried off the first honour in Mr. M'Laren's Witanure, a prettily placed youngster, with a good deal of quality. In the older class many preferred Mr. M'Laren's second winner to Mr. Bland's Evasit, which was placed first. Mr. Bland's winner, which is English-bred, is a compact, well-substanced bull with plenty of depth, but a trifle nobby about the tail-head, and not so well furnished through the heart as might be. Mr. M'Laren's Annal has also a suspicion of the last fault, but he is better over the quarters than the first winner. The Queen's cup went to Mr. Ham Bland for a fine lot of three bulls, including his first and second prize yearlings, while the Leinster Cup was won by Mr. Owen with a group of four, including his third prize yearling bull, reserve yearling heifer, his reserve cow, and that handsome champion, Melia Murdher.

As in former years, a number of Government premiums for pure-bred bulls were offered, and were numerously competed for.

Agricultural Horses.

There was a fairly good muster of agricultural horses, Mr. O'Malley getting first place in both the stallion classes for Clydesdales. In the forage cass his old prize-winning stallion, Model, a massive, typical bay, excellently set on short flat bone, was beaten by his younger horse, Masterpiece, bred at Seaham Harbour. He does not look so compact or well-set as the other, but he is younger and will fill out a bit. He is, however, a better mover, the older horse not going so well with his hocks. The first honour for Shire stallions went to Messrs. W. and P. O'Neill for a very stylish, dashing-looking black, set on very strong bone. Major Lambart had the first honour for Clydesdale brood mares with a nice clean-boned dark bay named Jenny Geddes, Mr. O'Malley getting second with one of stronger type. For fillies there was only Mr. O'Malley's entry, and a second prize was awarded.

Hackneys.

The Hackneys do not seem destined to flourish in Ireland, for the number seem to be gradually decreasing, but although the classes were small, the exhibits were all very creditable. Amongst stallions, Mr. Wrench had the first prize and gold medal for Fitzrose, a tall, strong-boned three-year-old chestnut, with plenty of power over his hocks. He was followed by Mr. Martin's neat cobby, stylish-looking chestnut, Special Post. Mr. Wrench again had the first prize for mares with Bright Gartin Duchess, a five-year-old chestnut by Chocolate Junior, which afterwards won for him the Challenge cup and gold medal. This mare occupied the same position at Ball's last year. She is capitally set on the best of short strong bone, has nice deep well-laid shoulders, and plenty of strength over the knees and hocks. Mr. Morton's second winner, Smart Dunham, is also an old winner. She was bred by Sir Walter Gilbey, and stands on very good bone, but is not so well furnished over the hocks as the other. There were only three fillies present, Mr. Morton getting first place with a stylish well-filled youngster named Rosa Dear, own bred, and sired by Rosador. Mr. Wrench had the second and Mr. Smiley the third honour.

Harness Horses.

The harness horses formed one of the most attractive portions of the show, the adjudication in the different classes being keenly followed for the large company present. In the class for young horses, bred in Ireland, not over 4 years, 15 hands and up, the premier award went to Mr. Frederick Wrench's handsome chestnut gelding of taking appearance and splendid action. Mr. Morton, of Ballymena, came second with Brown Minnie, a very taking mare just gone three years, possessing plenty of quality and full of manners, whilst Mr. Wrench secured the third prize with Bay Derwent, a bay gelding, 4 years old, bred by himself. The first prize in the class for horses under 15 hands was awarded to Mr. H. H. Smiley, Larne, for Inver Prince, a really handsome chestnut gelding, with grand action and taking appearance. The judges had no hesitation in awarding second prize to Mr. Howard Waterhouse's Killiney Toff. In the next class, which was for horses 15 hands and upwards, there was a considerable entry, the premier honour going to Mr. William M'Bride's Sunshine, a cream gelding that has already won rosettes. Mr. Morton's Bonnie Madeline was placed next, the same owner's Gloria being placed third, whilst reserve was given to Mr. D. Byrne's Prospect, a dark bay gelding, with plenty of nice movement. The best of the animals in the class for horses and cobs under 15 hands, shown in single harness, was Mr. Morton's Black Jack, Mr. Smiley's Miss Doncaster obtaining the blue badge. The champion cup, value £10, for first prize winners, went to Mr. M'Bride's Sunshine, while Mr. Morton's Black Jack was reserved.

There were but few entries in the harness pony class under 14.3 hands, Mr. Miley's Doncaster taking first prize, the same exhibitor's Copely Flora taking second. In the succeeding class, however, that for ponies not exceeding 13.3 hands, there was considerable competition, but the judges had little difficulty in awarding first prize to Mr. Alfred G. Waller's Wager, a well-proportioned and beautifully-moving grey, a very handsome pony. Messrs. Evans's Majestic came second and the same firm's Oh! May third. In the double harness class there were few entries, but the quality was decidedly taking, and it was after no little pains on the part of the judges that Mr. M'Bride's pair, Sunbeam and Sunshine, were given first prize. They are a lovely moving pair, and admirably matched. In the tandem class Mr. N. Morton added to his list of successes by scoring with Bonnie Madeline and Gloria. They looked all over winners, and, admirably driven, behaved beautifully. The prize in the pony tandem class went to Messrs. Evan's Oh! May and Majestic.

Polo Ponies.

The importance of the polo pony was very clearly demonstrated by the marked interest that attended him. The number of the entries was large, and class was not wanting. In the class for "made" polo ponies there were 38 entries, but Mr. T. I. Roark, Park View, Carlow, fairly swept the boards, securing not only first and second prizes by the aid of Mayfly and Playtoy respectively, but also the gold medal presented by the Polo Pony Society for the best animal in the class. Mr. Roark's two handsome animals were certainly entitled to the honours awarded them by the judges. The third prize went to Granite, a grey gelding, owned by Captain Loftus, Moyle, Co. Carlow. Mr. Roark's Beetle came in for an highly-commended ticket, as did also Mr. R. B. Houston's Nellie, a commend falling to the lot of Mr. A. T. H. Hardy's Elastic and to Mr. Gill Eccles, Moneygold, Sligo, for Little Shot.

Judges.

CATTLE.—Shorthorns.—Mr. T. H. Hutchinson, the Manor House, Catterick, Yorkshire; Mr. J. L Deane Willis, Bapton Manor, Codford, St. Mary, Bath. Herefords: Mr. Francis Evans, Bredwardine, Hereford. Aberdeen Angus: Mr. George J. Walker, Portlethan, Aberdeen, N.B.; Mr. George Bruce, Tochineal Cullen N.B. Norfolk and Suffolk Red-Polled Ayrshire and Dairy Cattle and Extra Stock: Mr. Garrett Taylor, Trowse House, Norwich. Kerry and Dexter: Mr. R. Tait Robertson, Church Farm, Babraham, Combs. Channel Islands: Mr. Ernest Mathews, Chequers Mead, Potters Bar.

HORSES.—Agricultural: Mr. John Marr, Cairnrogie Old Meldrum; Mr. Garrett Taylor. Hackneys and Harness: Mr. C. Edward E. Cooke, Hinxton Grange, Saffron Walden. Polo Ponies and Bending Competition: Mr. Anthony F. Maude, Drumdravey, Irvinestown. Draught Horses and Vehicles, Mules, and Asses: Mr. John Marr; Mr. Garrett Taylor.

PIGS.—Breeding Swine: Mr. J. Henebery, Grace Dieu Cottage, Waterford.

Challenge Plates, Cups, Etc.

CATTLE.

Champion Silver Medal for best bull in classes 1 and 2: Mr. Mathew Marshall (Viceroy); r, Mr. George Harrison (M.P.).

Champion Silver Medal for the best bull in classes 3 and 4: Mr. G. F. King (Lord Bruce.

The Chaloner Plate, value £155, for the best shorthorn bull in classes 3, 4, and 5: Mr. G. F. King (Lord Bruce).

Champion Prize, value £20, awarded by the Shorthorn Society of Great Britain and Ireland, for the best yearling shorthorn bull bred in Ireland, and entered or eligible for entry in Coate's Herd Book: Mr. C. M. Doyne (Prince Victor).

Challenge Cup, value 70 guineas, for the best animal in the Shorthorn classes 1 and 2: Mr. C. M. Doyne (Prince Victor).

Shorthorn Society's Special District Prize of £10 for the best shorthorn bull entered in classes 1 or 2 (open to animals located in the province of Leinster): Mr. C. M. Doyne (Prince Victor).

Hereford Challenge Cup, presented by the Hereford Herd Book Society, value 20 guineas, for the best animal in the Hereford classes: Mrs. Madden (Camellia).

The Queen Victoria Cup, value £100, for the best group of three Aberdeen Angus bulls, and gold medal: Hum Bland; r and h c, Mr. A. J. Owen.

The Leinster Cup, value, £150, for the best group of Aberdeen Angus cattle, Mr. A. J. Owen; r and h c, Right Hon. Lord Crofton.

The Owen Aberdeen Angus Challenge Cup, value £50: Marquis of Waterford (Curraghmore Albert 2nd); r and h c, Mr. A. J Owen (Mellibus 5th).

Irish Aberdeen Angus Challenge Cup, value £50: Mr. A. J. Owen (Melia Murdher; r and h c, Hum Bland (Lincrusta).

Polled Cattle Society Aberdeen Angus Gold Medal: Mr. A. McLaren (Ben Gloe); r and h c, Mr. A. J. Owen (Melia Murdher).

Challenge Cup, value 70 guineas, for the best animal in the Kerry and Dexter classes: Earl of Shaftesbury (Ormeau Daisy); r and h c, Mr. R. Barter (Aicme Cuffe).

The "Blythswood" Challenge Bowl, for the best Kerry or Dexter cow or heifer in the Show: Earl of Shaftesbury (Ormeau Daisy); r and h c, Duke of Leinster (Orchid 2nd of Carton).

The Cedar Challenge Cup, value 20 guineas, for the best yearling Jersey bull: Mr. M. O'Neill (Jolly Rover); r and h c, Mr. W. Milward-Jones (Duke of Maloney 2nd).

HORSES.

Hackney Horse Society's Gold Medal, for the best hackney stallion or colt: Mr. F. Wrench (Fitz Rose); r and h c, Mr. N. Morton (Special Post).

Hackney Mare Challenge Cup, value 30 guineas, for the best hackney mare: Mr. F. Wrench (Bright Garton Duchess); r, Mr. N. Morton (Smart Dunham).

Hackney Horse Society's Gold Medal, for the best hackney mare or filly: Mr. F. Wrench (Bright Garton Duchess); r, Mr. N. Morton (Smart Dunham).

Irish Harness Horse Society's Challenge Cup, value 70 guineas, and silver medal, for the best young gelding or mare suitable for harness: Mr. F. Wrench (Bally Clovis); r, Mr. N. Morton (Brown Minnie).

Challenge Cup, value 25 guineas, for the best animal shown in hand in classes 78 and 79: Mr. R. Morton (Brown Minnie); r, Mr. F. Wrench (Derwent).

Challenge Cup, value 25 guineas, for the best animal shown in harness in classes 80, 81, and 82: Mr. R. Morton (Bonnie Madeline); r, Mr. N. Morton (Gloria).

Champion Cup, value £10, for the best harness horse in classes 78, 79, 80, 81: Mr. M.Bride (Sunshine); r, Mr. Morton (Black Jack).

POLO PONIES.

Polo Society's Gold Medal, for the best polo pony in class 88: Mr. T. J. Roark (Mayfly).

Add Dublin Show—Add Champion Awards Mach One

Polo Pony Society Gold Medal for best Pony in Class 89: Mr. T. I. Roark (Corner Lot).

Made Polo Ponies, under 14.2 hands high, to be shown in saddle: 1, T. I. Roark (Mayfly), chestnut mare; 2, T. I. Roark (Playtoy), chestnut gelding; 3, Captain S. J. Loftus (Granite), grey gelding; 4, W. E. Grogan (Pom-Pom), chestnut gelding, br. Mr. Cardwell, Enniscorthy; h.c., R. B. Houston, Charlesfort, Kells (Nellie 321), bay mare; T. I. Roark (Beetle), black mare; c., H. T. H. Hardy (Elastic), bay gelding; Thomas Anderson (Orphan 513), brown mare; G. M. Eccles (Little Shot 0848), brown mare, br. Colonel Kirkwood, Woodbrook, Boyle.

Ponies suitable for and likely to make polo ponies, under 14.2 hands, to be shown in saddle: 1, T. I. Roark (Corner Lot), brown gelding; 2, R. B. Houston (Free Wheel), brown mare; 3, Captain J. Gough, Salisbury House, Clonmel (Silverloil), bay roan gelding, br. ditto; 4, T. I. Roark (Sweets), bay mare; r., W. E. Grogan (Petrol), chestnut mare, br. H. Wilson, Castleknock Stud Farm; v.h.c., A. M. Caldecott-Smith (Lady Lena), brown mare; the Keynsham Stud Company (Game Chicken), chestnut gelding, br. J. H. Clifton, The Uplands, Keynsham, near Bristol; h.c., J. W. Nolans, V.S. (Queen), grey mare; Messrs. Slocock (Why Not), chestnut mare.

SHORTHORNS.

Shorthorn Bull, calved in 1901, on or before March 31st: 1, Matthew Marshall Budgebank, Stranraer (Viceroy), roan, br. the Right Hon. Lord Lovat, Beaufort; 2, George Harrison, Gainford Hall, Darlington (Star of Roses), roan, br. Mr. W. S. Marr, Uppermill, Tarves, N.B.; 3, John Handly, Green Head, Milnthorpe, Westmorland (Ingram's Style), roan, br. Wm. Forster, Bull's Hill, Allendale, Northumberland; 4, Mrs. E. Walsh, Island View, Cootehill, Co. Cavan (Master Stephen), roan, br. ditto; 5, John Handly (Pretender), roan, br. ditto; 6, Walter R. Crawford, The Priory, Tullyhogue, Co. Tyrone (Washington), roan, br. Mr. Merson, Craigwillie, Huntly, N.B.; r. and h.c., H. H. Smiley, Ardmore, Larne (Gallant Gordon), red, little white, br. ditto: h.c., Thomas L. Hodgins, Junr., Brookvale, Maryborough (Anno's Star), red, br. Thomas L Hodgins, Brookvale, Maryborough; George N. Jessop, Bank Place, Maryborough (Borris King), red, br. ditto; George N. Jessop (Borris Duke), white, br. ditto; Major R. W. Cradock, Derrycalaghan, Roscrea (Ben Duff), roan, br. ditto; R. N. Wilson, Broughadoey House, Moy, Co. Tyrone (Prince Dolly), red, and a little white, br. exhibitor; William Stoddart, Farmhill, Clones (Star of Promise), roan, br. ditto; Richard George Carden, Fishmoyne, Templemore (Stewart Jamieson), roan, br. Mr. Fergussen, Dalcapin, Ballinluig; A. M. Kirker, Craigavad House, Co. Down (Baliol) (twin), roan, br. Exhibitor; W. P. Cross, Dartan, Killylea, Co. Brinsley Marlay, Belvedere House, Mullingar (Lord Haddon), black, br. ditto; 2, Earl of Shaftesbury (Ormeau King Cup 2nd), black, br. ditto; r. and h.c., Richard Barter (Aicme King 494), black, br. Right Hon. Earl of Kenmare, Killarney; h.c., C. Brinsley Marlay (St. Patrick), black, br. ditto; Herbert Loftus Tottenham, Castleblayney (Black), br. ditto; the Right Hon. Viscount de Vesci, Abbeyleix House, Abbeyleix (Loarn), black, br. ditto; Duke of Leinster (Earl 4th of Carton), black, br. ditto; Duke of Leinster (Earl 3rd of Carton), black, br. ditto; c., Richard Williams (Ballyhegadon Jack 497), black; the Right Hon. Viscount de Vesci (Conall), black, br. ditto.

Kerry Bull, calved in 1900: 1, George Gun Mahony Gort Sheen), black, br. ditto; 2, Earl of Shfatesbury (Ormeau Dandelion, formerly Earl, 472), black, br. C. Brinsley Marlay, Belvidere House, Mullingar; r. and h.c., C. Brinsley Marlay (Marquis 2nd), black, br. ditto.

Kerry Bull, calved prior to 1900: 1, the Right Hon. Viscount de Vesci (Coomdhuv), black, br. ditto; r. and h.c., George Gun Mahony (Pride of Bishop's Court), black, br. Earl of Clonmell, Bishop's Court, Straffan.

Kerry Heifer, calved in 1900 or 1901: 1, Richard Barter (Aicme Part 2892), black; 2, Duke of Leinster (Ivy 7th of Carton), black, br. ditto; 3, Duke of Leinster (Flora 3rd of Carton), black, br. ditto; r. and h.c., C. Brinsley Marlay (Belvedere Saba 3rd), black, br. ditto; h.c., Duke of Leinster (Ivy 8th of Carton), black, br. ditto; Richard Barter (Aicme Casey 872), black; c., Marchioness Conyngham, Slane Castle, Slane, co. Meath (Jet of Slane 2923), black.

Kerry Heifer, calved in 1899: 1, Duke of Leinster (Daisy of Carton 2970), black; 2, Duke of Leinster (Cowslip of Carton 2968), black; 3, Richard Barter (Aicme Show 2898), black; r. and h.c., Richard Barter (Aicme Crack 2878), black.

Kerry Cow, calved prior to 1899: 1, Earl of Shaftesbury (Ormeau Daisy 2575), black; 2, Duke of Leinster (Orchid 2nd of Carton 2377), black, br. ditto; 3, Duke of Leinster (Daffodil of Carton 2969), black; r. and h.c., Richard Williams (Kenmare Bella 2476), black, br. Geo. Courtenay, Kenmare; h.c., Richard Barter (Aicme 0 0 0 2760), black; c., Duke of Leinster (Waterville Aster 2317), black; Richard Barter (Aicme Daisy 2697), black.

DEXTERS.

Dexter Bull, calved in 1901: 1, Dr. Henry J. Boyd (Little Dan Darling), black, br. ditto; 2, Howard Guinness (Lord Bobby), black, br. ditto: r. and h.c., Richard Williams (Ballyhegadon Bob 443), black.

Dexter Bull, calved in 1900: 1, the Duke of Abercorn, K.G. (Romeo), black, br. ditto; r. and h.c., M O'Neill (Aicme Caran), black, br. Richard Barter, St. Ann's Hill, Cork.

Dexter Bull, calved prior to 1900: 1, R. G. Nash (Lucan Rover 2nd 353), black, br. ditto; 2, Richard Barter (Aicme Negro 428), black; r. and h.c., Richard Williams (Ranger 430), black, br. John Gaine, Carhumeengar, Kenmare.

Dexter Heifer, calved in 1900 or 1901: 1, Richard Barter (Aicme Sheans 1806); 2, Richard O'Malley (Woodlawn Lady Roberts 1647), black, br. ditto; 3, Right Hon. the Earl of Kingston (Waterville Kitty), black, br. J. E. Butler, Waterville; r. and h.c., Richard O'Malley (Woodlawn Pretoria 1649), black, br. ditto; h.c., Marchioness Conyngham (Slane Kathleen 1738), red; Marchioness Conyngham (Slane Tee-Wee 1761), black; Marchioness Conyngham (Slane Briarbush 1715), black; c., Marchioness Conyngham (Slane Dotty 1726), red; Dr. Henry J. Boyd (Little Fairy 1694), red; Richard Barter (Aicme Many 1689), red.

Dexter Heifer, calved in 1899: 1, Richard Barter (Aicme Cuffe 1687), black; 2, Frank Robertson (Sprucefield Little Beauty), black, br. H. J. Scott, Ashfield House, Belfast; 3, Richard Barter (Aicme Big 1686), black; r. and h.c., Dr. Henry J. Boyd (Direen Maud 1617), black; h.c., Geo. J. Smith (Dark Damsel), black, br. Mrs. Briscoe, Bellinter, Navan.

Dexter Cow, calved prior to 1899: 1, Richard Barter (Aicme Spot 1448), black; 2, Richard Williams (Direen Aggie 1610), black; 3, Richard Williams (Woodlawn Honey Suckle 1506), black; r. and h.c., R. G. Nash (Lucan Beauty 1497), black, with little white; h.c., R. Williams (Kenmare Darling 1576), black; R. Williams (Woodlawn Acacia 1499), black.

JERSEYS.

Jersey Bull, calved in 1901: 1, M. O'Neill (Neminas Willow), dark grey, br. James Lebrocq, Jersey; M. O'Neill (Flora's Reminder), black, br. ditto; 2, M. O'Neill (Carlo), dark brown, br. Edward Le Ferriane, Jersey; r. and h.c., M. O'Neill (Vindicator), brown, br. ditto.

Jersey Bull, calved in 1900: 1, M. O'Neill (Jolly Rover), dark brown, br. Mrs. Madden, Nutley, Booterstown; 2, M. O'Neill (Surprise), black, br. Mrs. F. A. Perrie, St. Mary's, Jersey; r. and h.c., William Milward-Jones (Duke of Malony 2nd), dark fawn, br. late W. Hewat, Blackrock; c., Vere Ward Brown (North Pole), dark fawn, br. P. Le Brocy, Jersey.

Jersey Bull, calved prior to 1900: 1, M. O'Neill (Melvian's Reminder), dark brown, br. J. P. Falle, Ph. Lebury, Jersey; 2, W. R. Creswell (Brahmin 6796), fawn, br. J. Richard, St. Lawrence, Jersey.

Jersey Heifer, calved in 1901: 1, Vere Ward Brown (Daisy 2nd), fawn, br. C. D. Spinks, Highfield Road, Rathgar; 2, Vere Ward Brown (Lady of the Valley), fawn, br. ditto; 3, Vere Ward Brown (Belle Cherie), fawn, br. ditto; r. and h.c., M. O'Neill (Star of Antrim), fawn, br. Mrs. Hewat, The Elms, Blackrock; c., Vere Ward Brown (Lady of the Rhine), fawn, br. ditto; M. O'Neill (Hazleton Lass), fawn, br. ditto; M. O'Neill (Goldcharm), black, br. ditto; M. O'Neill (Fancey), fawn, br. ditto.

Jersey Heifer, calved in 1900: 1, Vere Ward Brown (Beauty of the Valley), fawn, br. ditto; 2, M. O'Neill (Victoria), fawn, little white, br. J. D. Tottenham, Ashfield, Rathfarnham; 3, M. O'Neill (Les Restless Rose 2nd), fawn, br. George Hoequard, Jersey; r. and h.c., W. R. Creswell (Etna Goldie), fawn, br. F. Le Leivre, Jersey; c., Mrs. Gerald Guinness (Starlet), brown, br. ditto; John L. Smallman (Polly), dark fawn, br. Mrs. Henshaw, Milltown.

Jersey Cow, calved prior to 1900: 1, Vere Ward Brown (Rhine 2nd), fawn, br. C. F. Renouf, Jersey; 2, M. O'Neill (Floro), fawn, br. ditto; 3, D. Collen (Angela), whole colour, fawn and dark shading, br. P. Godfrey, St. Peter's; r. and h.c., W. R. Creswell (Young Lady), fawn, br. J. F. Journeaux, St. Savour, Jersey.

AYRSHIRES.

Ayrshire Bull, of any age: 1, Mrs. R. Williams Barrington (Drommartin), white, dark brown marking on shoulder, br. ditto; 2, R. G. Nash (Lucan Chief), white and red, br. ditto; r. and h.c., R. G. Nash (Lucan Laddie 2nd), red and white, br. ditto.

Ayrshire Heifer, calved in 1899 or 1900: 2, R. G. Nash (Lucan Queen 3rd), red and white, br. ditto.

Ayrshire Cow, calved prior to 1899: 1, R. G. Nash (White Legs of Monkland 9603), red and white, br. T. Barn, Monkland, Kilmarnock; 2, W. R. Creswell (Highland Maid), red and white, br. ditto; r. and h.c., R. G. Nash (Beauty of Balnagowan), red and white, br. Vere Ward Brown.

DAIRY CATTLE.

Cow (in milk), any breed not included in any of the foregoing classes, suitable for dairy purposes. The judges to take the dairy qualities into consideration, irrespective of size or breeding: 1, William Newman, Curragh Farm, Kells, co. Meath (Queeney), roan; 2, James Tutty (Evening Dew), brown and brindled, br. ditto; 3, M. O'Neill (Lady May), red, br. ditto; r. and h.c., Edward Keegan (Doreen), red and white, br. ditto; c., James Tutty (Pride of the Dairy 2nd), roan, br. ditto; N. H. F. Verschoyle (Creamery), fawn, br. Tooke Luscombe, Dundrum.

EXTRA STOCK.

Bull of any other breed not in foregoing classes, full particulars of the breeding to be given in the entry form: 1, Bertram F. Barton (Punch), Dexter Shorthorn, red and white, br. ditto.

Cow or Heifer, of any other breed not in foregoing classes: 1, Bertram F. Barton (Little Pet), Dexter shorthorn, red and white, br. Major H. L. Barton, Straffan House, Straffan Station.

BREEDING SWINE.

WHITE BREED.

Boar, farrowed on or before Aug. 1, 1901: 1, W. Wilson, Ashfield, Lisbellaw (Hard Rocks 253), br. Miss Staples; 2, Lord Clonbrock, Clonbrock, Ahascragh (Benefactor 2nd of Clonbrock), br. ditto; 3, Lord Clonbrock, br. R. G. Nash, Finnstown House, Lucan; r. and h.c., R. G. Nash (Lucan Prince 291), br. Earl of Rosebery, Dalmeny Park; h.c., Lord Clonbrock (Curraghtown Benefactor 29), br. George J. Smith, Curraghtown, Navan; c., Richard Barter, br. ditto.

Three Boar Pigs of the same litter, bred by exhibitor, farrowed on or after August 1, 1901: 1, Hum Bland, br. ditto; 2, P. and G. Richardson, Mullacrew, Mount Bolus, Tullamore, King's County, br. ditto; 3, Right Hon. Viscount Duncannon, C.B., br. ditto; r. and h.c., A. S. Gresson, Roebuck Hall, Dundrum, br. ditto; h.c., A. S. Gresson, br. ditto.

Breeding Sow, farrowed on or before January 1, 1901: 1, R. G. Nash (Lucan Lady 166), br. Earl of Rosebery; 2, Richard Barter (Mrs. Firmstone 10th 124), br. ditto; 3, R. G. Nash (Lucan Wonder), br. Albert Model Farm, Glasnevin; r. and h.c., George J. Smith, br. ditto; h.c., Mrs. H. D'Esterre Strevens, Castle Coote, Roscommon (Prunus of Kilquade 516), br. Hum Bland.

Breeding Sow, farrowed after January 1, 1901: 1, Thomas Boylan, Hilltown House, Drogheda, br. ditto; 2, Richard Barter, br. ditto; 3, J. Willington, St. Kieran's, Rathcabbin, co. Tipperary, br. ditto; r. and h.c., Richard Barter, br. ditto.

Three Breeding Sow Pigs, of the same litter: bred by exhibitor; farrowed on or after August 1, 1901: 1, R. Barter, br. ditto; 2, Richard Barter, br. ditto; 3, Hum Bland, br. ditto; r. and h.c., P. and G. Richardson, br. ditto; h.c., Mrs. Cambridge Grubb, Suir Island House, Clonmel, br. ditto.

AGRICULTURAL HORSES.

Clydesdale Stallion, foaled in 1900: 1, Thomas O'Malley (Colt), brown, br. John Adam, Corskellie, Rothimay; 2, Thomas Boothman (Lord Edward), dark bay colt, br. ditto; r. and h.c., Major G. F. W. Lambart, Beau Parc, co. Meath (Provost of Ayr), bay, br. ditto; h.c., Wm. N. Waller, Allenstown, Kells, co. Meath (Lord Bobs), bay, white blaze, br. ditto.

Clydesdale Stallion, foaled prior to 1900: 1, Thomas O'Malley (Masterpiece), bay, br. Marquis of Londonderry, K.G., at Seaham Harbour; 2, Thomas O'Malley (Model), bay, br. Mr. Lane, Limavady, Ireland; 3, W. and P. O'Neill, Kinsealy House, Malahide (Fortune Teller), brown; r. and h.c., W. and P. O'Neill (Royal Lad 10435), brown, br. John Telfer, Kilmalcolm, Scotland.

Shire Stallion, foaled prior to 1900: 1, W. and P. O'Neill (Democrat 2nd 17930), black face and white legs, br. ditto; 2, Richard Good, Aherlow, Aherla, co. Cork Cannock Conqueror 4th 17231), dark brown, br. Cannock Agricultural Co., Limited; 3, Messrs. Slocock, Carlow (Walter, known in Shire Book as Ereclaud Walter), brown, br. unknown; r., Thos. Wilson, Drumagoland, Virginia, co. Cavan (Storm King 16991), chestnut, br. J. Shaw, The Island, Winmarleigh, Lancashire.

Clydesdale Brood Mare, in foal, or having produced a foal in 1901 or 1902: 1, Major G. F. W. Lambart (Jenny Geddes), dark bay, br. Countess of Carlisle, Castle Howard, Yorkshire; 2, Thomas O'Malley, bay, br. Jas. Picken, Torrs Farm, Kircudbright; 3, Right Hon. Viscount Duncannon C.B. (Susie of Bessborough 14200), bay, br. John M'Taggart, Culnaightry, Castle Douglas; h.c., Thomas O'Malley (Border Fancy 13662), bay, br. Lord Polworth.

Shire Brood Mare, in foal, or having produced a foal in 1901 or 1902: 2, Thomas O'Malley, filly, bay, br. Seaham Harbour Stud, Limited.

HACKNEYS.

Hackney Stallion, registered, 15 hands high and upwards, foaled prior to 1901: 1, Frederick Wrench, Killacoona, Ballybrack (FitzRose 7444), chestnut, br. ditto; 2, Nathaniel Morton, Brookville, Ballymena (Special Post 7627), chestnut, br. ditto; 3, Nathaniel Morton (Extra Stamp 5999), brown, br. ditto; 4, H. H. Smiley, Inver Stud, Larne (Inver British Ensign), bay, br. ditto.

Hackney Mare, registered, in foal, or with foal at foot: 1, Frederick Wrench (Bright Garton Duchess 11663), chestnut; 2, Nathaniel Morton (Smart Dunham 11477), chestnut, br. Sir Walter Gilbey, Bart., Elsenham Hall, Essex; 3, H. H. Smiley (Merry Mayflower), bay, br. ditto; r. and h.c., Thomas Talbot Power, Mount Merrion, Blackrock, co. Dublin (Moonlight 5890), black, br. W. S. Forster, Gore Court, Maidstone, Kent.

Hackney Filly, registered or eligible for registry in Hackney Stud Book, foaled in 1899 or 1900: 1, Nathaniel Morton (Rosa Dear), bay, with white feet, br. ditto; 2, Frederick Wrench (Colleen Rose), brown, br. ditto; r. and h.c., H. H. Smiley (Lady Betty), chestnut, br. ditto.

HARNESS PONIES.

To be driven in suitable carriages.

Ponies not exceeding 14.3 hands. Shown in single harness: 1, H. H. Smiley (Miss Doncaster); 2, H. H. Smiley (Copley Flora); 3, R. Anketell-Jones (Carabineer).

Ponies not exceeding 13.3 hands. Shown in single harness: 1, Alfred G. Waller (Wager), grey, pony gelding; 2, Evans and Co. (Majestic); 3, Evans and Co. (Oh May); r., Hampden Shaw (Torus), chestnut gelding; h.c., Howard Waterhouse (Killiney Toff).

DOUBLE HARNESS.

Pair of Horses, not less than 14.2 hands: 1, William M'Bride (Sunbeam), black mare, and (Sunshine), cream gelding; 2, N. Morton, bay mare, br. ditto, and (Black Jack), black gelding.

Ponies, driven tandem. Leader to be under 14.2 hands: 1, Evans and Co., Oh, May, dark brown mare, and Majestic, skewbald mare.

TANDEM.

Horses, driven tandem. Leader to be 14.2 hands or over: 1, N. Morton, Gloria and Bonnie Madeline, bay mare, br. ditto; r., William M'Bride, Sunbeam and Sunshine.

CATTLE.

Hereford Herd Book Society's Bull Sale.

A capital entry of 128 was received for the Hereford Herd Book Society's April show and sale of bulls, which was held at Hereford on Wednesday. Quality, however, was not up to the level attained at the previous month's sale, and the attendance was not quite so good. The judging was carried out by Messrs. William Price and Wm. Terdge.

In the class for bulls, exceeding two years old on January 1, 1902, there were nine exhibits. Mr. T. S. Minton's Montford Kale, a three-year-old son of Statesman, was awarded the first prize, but failed to retain it through not getting sold. Mr. W. H. Davies's five-year-old Admiral, who was placed second, is one of the big old type so favoured in Breconshire. Mr. T. Nott bought him for the Buckton Park herd. Mr. J. B. Dowding's Touchstone, bred by Mr. Arkwright, was reserved number; Lord Coventry's Home Office, another bull bred by Mr. Arkwright, was placed fourth, and has now gone to the Showle Court herd. Mr. S. H. Armitage's Lyddite was fifth.

There were not quite a couple of dozen two-year-olds present, and, taking them as a class, they were a middling lot. Lord Coventry's Fatalist, bred by Mr. Olver, of Cornwall, took premier honours, and there was not much to choose between him and Mr. J. R. Hill's Cadet. Fatalist, being purchased by Mr. Pryce Hughes, will probably go abroad, while Cadet, who realised within £2 of Fatalist's price, will go to Abcredw. Mr. J. R. Hill also exhibited the reserved number in Outlaw, but he was not sold. Mr. T. Morris's Unionist and Lord Coventry's Medallist were commended.

Yearlings numbered close upon a hundred, but except for those of a very promising character there was not much demand. Mr. E. Caddick's Khedive, a symmetrical yearling, was awarded the first prize of £10, but he did not get beyond 41gs. in the bidding, and that was not the reserved figure. Second prize of £5 was awarded to Mr. A. P. Turner's Luminary, one of two grandsons of Statesman that came from the Leen, and he realised 41gs. to go to Salop. Sir John Cotterell's Prism came in for the third prize, and goes to Mr. Minton's herd at Montford. Fourth prize fell to Mr. Allen Hughes's Parton, a splendidly-bred son of Perilla, and he ran up to 53gs., for which he goes to Birley Court. Mr. G. Butters exhibited several very handsome yearlings, one of whom,

named Rokeby, came in for fifth prize. Druid, bred at the Court House, was the reserved number. Mr. A. P. Turner's Acrobat, half-brother to the second prize bull, was h.c. Mr. Allan Hughes's Benson, a grandson of Albion, Mr. J. C. Jones's Lawyer, Mr. J. R. Hill's Greenhorn, were decorated with commended tickets. The average price obtained was £25 19s. for fifty-nine bulls.

Following is a list of the chief prices realised at the sale, the names in parentheses being those of the vendors:—

AGED BULLS.

	Gs.
Touchstone 21058 (Mr. J. B. Dowding, Fairfield Place, Leominster) ..... Mr. Isaac Morgan	30
Lyddite 20821 (Mr. S. H. Armitage) ..... Mr. Poulter	25
Home Office 20073 (Earl of Coventry, Croome Court, Worcester) ..... Mr. H. W. Taylor	28
Admiral 19183 (Mr. W. H. Davies) ..... Mr. T. Nott	30

TWO-YEAR-OLDS.

Blondin 21193 (executors of the late Mr. W. J. Smith, Gattertop) ..... Mr. Pryce E. Hughes	30
Meteor 21586 (Mr. S. H. Armitage) .... Mr. J. Edwards	21
Chairman 21275 (Mr. J. B. Parker, Stretford Court) Mr. Hodgetts	20
Fatalist 21383 (Earl of Coventry) Mr. Pryce E. Hughes	50
Medallist 21592 (Earl of Coventry) ..... Mr. Cooke	45
Redcap 21698 (Sir James Rankin, M.P.) .. Mr. Rosser	23
Contraband 21302 (Mr. H. W. Taylor, Showle Court) Mr. Edmonds	29
Cadet 21261 (Mr. J. R. Hill, Orleton) ..... Mr. Davies	48
Mystifier 21624 (Mr. N. F. Moore, Sutton) Mr. Venables-Llewelyn	21
Plumpton 21658 (executors of the late Mr. H. Haywood) ..... Edwards Bros.	25
Walton Prince (Mr. J. Harris, The Sheriffs, Kington) Mr. Arthur Dent	30
Alfred 21153 (Mr. T. Morris, Weston Court, Pembridge) Mr. Pryce E. Hughes	25
Jacob 9th 21470 (Mr. G. H. Green, Wigmore Grange) Mr. I. J. Fletcher	24

YEARLINGS.

Hero (Mr. W. H. B. Cave) ..... Mr. Williams	20
Acrobat (Mr. A. P. Turner, The Leen) .... Mr. Gwillim	31
Darius (Mr. A. P. Turner) ..... Mr. Lewis	21
Luminary (Mr. A. P. Turner) ..... Mr. Whitaker	41
Royal (Mr. A. P. Turner) ..... Mr. Owens	24
Prism (Sir John Cotterell, Garnons) ..... Mr. Minton	25
Gold Drop (Mr. G. Butter) ..... Mr. Thomas	25
Rokeby (Mr. Butters) ..... Mr. Powell	25
Marconi (Mr. R. Green, The Whittern) .... Mr. Oliver	26
Sinbad (Mr. R. Green) ..... Mr. Miller	21
D.S.O. (Capt. E. L. Heygate) .... Mr. A. T. Williams	21
Hope On (Mr. H. J. Bailey, Rowden Abbey) Mr. Edward Dawes	25
Hope Ever (Mr. H. J. Bailey) ..... Mr. Ridgeway	21
Longhope (Mr. H. J. Bailey) ..... Mr. Jones	20
Detective (Mr. J. R. Hill, Orleton) ..... Mr. Cooke	20
Greenhorn (Mr. J. R. Hill) ..... Mr. Young	20
Pioneer (Mr. J. R. Hill) ..... Mr. J. Young	21
Yeoman (Mr. E. Ockey, Thruxton) ..... Mr. Hemus	24
Druid (Mr. S. Robinson, Lynhales) ..... Mr. Thomas	25
King Henry (Mr. E. Caddick) ..... Mr. Taylor	20
Stars and Stripes (executors of the late Mr. H. Haywood) ..... Mr. J. T. Davies	20
Archduke (executors of the late Mr. H. Haywood) Mr. T. Price	20
Socrates (executors of the late Mr. H. Haywood) Mr. W. Brown	20
Bonanza (executors of the late Mr. W. J. Smith, Gattertop) ..... Mr. L. Lawton Moore	75
Dauphin (executors of the late Mr. W. J. Smith) Mr. F. H. Russell	25
Parton (Mr. A. E. Hughes) ..... Mr. Speakman	53

The Tuberculin Test.

It will be remembered by our readers that early in 1900 the agricultural department of the Aberdeen University undertook an investigation with regard to the value of tuberculin as a test of the presence of tuberculosis in cattle. This was undertaken in order to clear up the doubts remaining after a previous investigation, the results of which were very unsatisfactory and inconclusive. In this second experiment certain alterations on the first were introduced, some of these having been suggested by Professor Nocard in the MARK LANE EXPRESS.

The following is the substance of the report which has been issued. It is the work of Mr. J. M. Lauchlan Young, F.R.C.V.S., F.R.S.E., who had charge of the experiment. He says: In all 42 cows have been tested and carefully examined post-mortem, and inoculation was performed in the same manner and with the same precautions as in the previous investigation, but it is to be noted that in cow No. 15 and onwards a stronger tuberculin was used, namely, that prepared at the Jenner Institute, London, with a difference in the dose. In a few cases I gave beyond the recognised dose, and am inclined to the opinion that in some of these, notably Nos. 9, 12, and 29, a reaction was obtained which might otherwise not have been produced. Of the 42 cows tested, 21 were found on slaughter to be tuberculous, and of these 17 had reacted to the test. Thus four of the tuberculous cows failed to react, namely, Nos. 17, 25, 32, and 37. The only lesion found in No. 17 was one of old standing, which had become caseated and encysted, so that there was no longer active disease. It may be questioned whether an animal thus affected should be classed as tuberculous. Nos. 25, 32, and 37 were characterised by a graudal rise and fall of temperature which was suspicious. Possibly in this instance a larger dose of tuberculin would have produced reaction.

It may be noted that the proportion of the cows dealt with that were found to be tuberculous is 50 per cent., as compared with 54.5 per cent. in the former investigation (1899). The proportion of tuberculous udders is the same in both investigations, namely, almost 10 per cent.

In explanation of the tables which accompany this report, I may say that the age assigned to each animal is the best estimate I could form in the circumstances; that "previous temperature" means the temperature immediately before inoculation; and that in the column "Pharyngeal glands" are included affections of the tonsils. I may state further that the term "characteristic reaction" is used here, as in the Report of Investigation, 1899, in the generally accepted sense, as meaning a gradual rise of temperature to the extent of at least two degrees above the normal temperature of the animal.

From this investigation and previous experience, I am of opinion that, in using tuberculin as a diagnostic of the presence of tuberculosis in cattle, it is advisable to take the temperature four times after inoculation, namely, at 9, 12 ,15, and 18 hours after injection. In the event of the temperature gradually rising till the eighteenth hour, but not being sufficiently high to be deemed a reaction, I consider it advisable to take the temperature a fifth time, namely, at the twenty-first hour after inoculation.

Upon the whole, I arrive at the conclusion that, under ordinary circumstances, a characteristic reaction takes place between the ninth and eighteenth hours after inoculation with tuberculin.

RESULTS.

No.	Description.	Age.	Previous Temperature.	Dose.	Temperature Hours after Inoculation. 12	15	18	24	Post-Mortem Condition.

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

At the fair, held at Stokestown, Co. Roscommon, on Monday, a slow demand was experienced for cattle, and a good many remained unsold. The sheep supply consisted entirely of hoggets, of which first-class animals were saleable, unless a few small transactions; second class remained unsold. Prices: Calves, first class, £4 15s. to £5; second class, £3 15s. to £4 3s. 4d. Yearlings, first class, £7 10s. to £8; second class, £5 10s. to £6 5s. Two-year-olds, first class, £10 to £11 15s.; second class, £8 to £9 10s. Three-year-olds, first class, £14 to £15 2s. 6d.; second class, £11 to £12 17s. 6d. Springers, first class, £16 to £19; second class, £12 10s. to £14 10s. Lambs, first class, 10s.; second class, 8s. Over 12 and under 24 months' old, first class, £1 11s. to £1 16s. 6d.; second class, £1 5s. to £1 7s. Young pigs, 8 to 10 weeks old, sold at from 20s. to 26s. each.

The Fair at Coleraine, Co. Londonderry, on Tuesday was a small one. A good demand for cattle in forward condition. Prices:—Calves, 1st class, £4 13s. 4d. to £5 3s. 4d.; 2nd class, £3; 3rd class, £2 17s. 6d.; yearlings, 1st class, £7 12s. 6d. to £8; 2nd class £5 8s. to £6 15s.; 3rd class, £3 10s.; two-year-olds, 2nd class, £8 to £9 5s.; 3rd class, £6 7s. 6d.; springers, 2nd class, £11 10s. to £13; 3rd class, £7 to £8 15s.

Ennis Sheep Fair (Co. Clare) was held on Wednesday. There was an average supply of sheep, but a small attendance of buyers and demand quiet, especially for light hoggets, a large number of this class remaining unsold. Prices:—Over 12 and under 24 months old, 1st class, £1 14s. to £1 19s.; 2nd class, £1 7s. to £1 13s.

The Fair held at Lisnaskea (Co. Fermanagh) on Wednesday was a very large one, and was composed chiefly of one and two year-old cattle. Demand was good for any in fair condition, but a large number of thin yearlings failed to find purchasers. Prices: — Yearlings, 1st class, £7 7s. 6d. to £8 12s. 6d.; 2nd class, £5 5s. to £7 5s.; 3rd class, £4 5s. to £5; two-year-olds, 1st class, £10 10s. to £12 10s.; 2nd class, £7 15s. to £10; 3rd class, £6 5s. to £7 4s.; springers, 2nd class, £12 10s. to £13 10s.; 3rd class, £9 16s. 8d. to £10 5s.

Ennis Fair (Co. Clare) was held on Tuesday, when the supply of cattle was smaller than usual, a large number having been sold previous to the fair. A smart demand was experienced all round, and a good clearance was effected. There was a fair supply of springers, for which there was good demand. Prices:—Yearlings, 1st class, £6 to £6 17s. 6d.; 2nd class, £4 10s. to £5 10s.; two-year-olds, 1st class, £10 to £12; 2nd class, £7 10s. to £9 15s.; 3rd class, £6 7s. 6d. to £7; three-year-olds, 1st class, £14 15s. to £18 7s. 6d.; 2nd class, £11 10s. to £14; 3rd class, £7 10s. to £10 10s.; springers, 1st class, £14 10s. to £16; 2nd class, £11 10s. to £14.

At the Fair at Skibbereen (Co. Cork) on Tuesday there was an average supply of cattle, and a good demand prevailed for those in condition. Prices:—Calves, 2nd class, £3 5s. to £4; yearlings, 2nd class, £5 5s. to £6 15s.; 3rd class, £4 to £5; two-year-olds, 1st class, £10 to £10 5s.; 2nd class, £7 2s. 6d. to £9; 3rd class, £4 15s. to £7; springers, 2nd class, £11 to £11 10s.; 3rd class, £9 10s. to £10 5s.

"Mark Lane Express" Diary.

April.
22. Sale of Mrs. Perkin's Jerseys, at Oakdene, Holmwood, Surrey.
24. Lincolnshire Red Shorthorn Association's Bull Sale, at Lincoln April Fair.
24. Sale of Hackneys and Harness Horses, at York Horse Repository.
29. Sale of the Right Hon. Lord Sherborne's Shorthorns, at Sherborne, Glos.
29 and 30. Ayrshire Agricultural Association's Show of live stock and implements, at Ayr.
30. Sale of Mr. J. T. Hobb's Shorthorns, at Maiseyhampton, Fairford, Gloucestershire.
30, and May 1 and 2. North-East of Ireland Agricultural Association's Spring Show, at Belfast.
30, May 1 and 2. Sale of Horses, at North Wales Repository, Wrexham.

May.
1. Sale of Hackneys, Harness Horses, Cobs, and Ponies, the property of Mr. W. W. Rycroft, at Drake Hill, Bingley, Yorks.
1. Sale of Horses from the Gowanbank Stud, the property of Mr. Alex. Morton, at Gowanbank, Darvel, Ayrshire.
2 and 3. Wharfdale Agricultural Society's Show, at Otley, Yorks.
3. Dumbartonshire Agricultural Society's Show.
3. Rawtenstall Agricultural Society's Show.
3. Rochdale Horse and Turnout Show.
3. Sale of Jerseys, belonging to Mr. H. O. Smith and Mr. Cobb, at Mount Clare, Roehampton.

HORSES

The Chapel House Stud of Hackneys.

The late Mr. Edward Ostlere's Chapel House stud of pedigree Hackneys, show harness horses, ponies, etc., were disposed of at Chapel House, near Kirkcaldy, on Tuesday, and as it was one of the best studs of Hackneys ever sold in Scotland, the attendance of buyers was naturally very large. The stud was formed on the best of old-line breeding in the mares, and with a son of the well-known Agility and Brunette (both London winners) at their head—a horse of great size, good colour—beautiful harness stock has been produced. The harness, show gigs, and carriages were offered for sale first, and all realised good prices. The horses sold fairly well, the best price being 150 guineas, at which sum Mrs. Ostlere took out Starlight, a brown gelding foaled in 1893, sire Cadet, 1251. The next highest price was 130 guineas, and this was realised for the stallion Sportsman III., a 16 h. bay, foaled in 1897, and winner of second prize at the Highland Show last year. His purchaser was Mr. Johnstone, St. Andrews. A list of the other principal prices, purchasers, names, etc., is given below. The total sum obtained for the horses was £1,044 15s., or an average per head of £41 15s. 9d.:—

SOCIETIES.

Hunters' Improvement.

The April meeting of the Hunters' Improvement Society, held on Thursday, 10th inst., at 12, Hanover Square, London, W., marked the termination of Sir Nigel Kingscote's second term of office as President of the Society. He previously filled this position in 1887, and it will be remembered that Mr. Dunn, in moving the hearty vote of thanks accorded to him at the annual general meeting at the Agricultural Hall, recalled the many obligations under which the Society rested to Sir Nigel. From the Council's report it could be seen how the Society had increased in numbers and influence during the fourteen years since he was last President, and it could not be otherwise than gratifying to him to see the growth of the Society that he had taken so active a part in establishing.

In accordance with the articles of association, Sir Nigel Kingscote, as retiring President, occupied the chair.

The minutes of the Council meeting held at the Agricultural Hall having been read and confirmed, the Chairman moved that Captain H. Heywood-Lonsdale be President of the Society for the ensuing year. This resolution was unanimously carried; thereupon Sir Nigel Kingscote vacated the chair, which was then occupied by Captain H. Heywood-Lonsdale, who conducted the business of the meeting to its close.

On the motion of the President, seconded by Mr. J. B. Kingscote, Sir Walter Gilbey, Bart., was unanimously elected Vice-President of the Society for the ensuing year.

Mr. W. H. Dunn was elected Steward of the London Show for the next three years in the place of Captain G. Phipps Hornby, retiring by rotation.

Twenty-nine new members were then elected.

Finance Committee.

Lieut.-Col. Hon. W. H. Allsopp (Chairman), in presenting the report of the Finance Committee, stated that the balance on the current account at the bank was £1,705 15s. 3d.; receipts since the last meeting, £981 12s. 11d.; arrears of subscriptions (1901), one member; accounts, for payment, discharging the prize-money awarded at the recent show and other show accounts, £1,580 18s. 11d. This report having been adopted, Mr. E. T. Mashiter and Mr. J. L. Nickisson were added to the Committee.

Editing Committee.

The Hon. Alexander Parker (Chairman) reported that the Committee had that morning considered the photographs of the champion hunters at the recent show, and submitted their choice. Entry forms for the new volume of the Hunter Stud Book had been drawn up in accordance with the rules and conditions laid down by the annual general meeting, and they would be shortly issued to each member of the Society.

The entry of a hunter colt, John Peel, owned by Mr. B. G. H. Gee, having the necessary pedigree, and having been inspected and passed in accordance with the new rules, had been submitted and accepted. The Committee also had before them the specimen page for the proposed index to Volumes I. to IX. of the Record. This index would contain three sections:—(1) Stud Book, Stallions; (2) Stud Book, Mares; (3) Supplement, Mares.

The entries in the previous nine volumes of the Record would be analysed and distributed over these three sections under the new conditions of registration, so that a mare in the Stud Book portion would have two crosses of registered blood—sire and dam's sire, etc.—while prize-winners and inspected mares would be placed in the Supplement portion. The chief advantages claimed for this index was that an owner would be able to tell at a glance the section—Stud Book or Supplement—in which his mare entered in previous volumes of the Record had been placed under the new rules. The Secretary had been instructed to at once proceed with this index, which would entail long and careful preparation, but it was hoped to issue the volume during the summer months, and if purchased before the date of issue the price would be:—Members, 10s. 6d.; non-members, £1 1s. This report having been adopted, Mr. J. L. Nickisson and Mr. C. W. Tindall were added to the Committee.

Horse Show Committee.

The Hon. Alexander Parker (Vice-Chairman) submitted the approximate financial statement of the recent show, indicating a cost of £391, as compared with £396 and £395 in 1900 and 1901 respectively. The Committee considered that this statement was most satisfactory.

From the report of the Veterinary Surgeons 205 horses were examined, of which 185 were passed sound, twenty rejected for the following diseases:—Whistling, eight; ringbone, one; spavin, three; curbs, one; cataract and lame, one; sidebone, one; stringhalt, one; enlarged fetlock, one; contracted foot, one; brittle foot, one; lame, one.

The judges of the three sections—young stock, hunters, and chargers—had presented reports. The former were of opinion that it was an excellent show of young stock, while the riding classes, with one exception, were considered exceedingly good. The charger judges thought that these had greatly improved since first included in the show, as both the first prize winners in the three-year-old classes were exactly the right stamp of an officer's charger. The four classes were good, and if any fault was to be found, it was that the hunter element was rather too pronounced.

The report from the Stewards upon several matters arising out of the show was referred to the next meeting of the Committee when fully constituted, but the Committee recommended that in future the riding judges shoul dbe instructed to put aside in the ring any horses entered wrongly in the weight classes, telling the riders the reason, while the restriction as to weight shall be clearly inserted under each class, both in the prize-list and in the catalogue. The Secretary reported that he had received applications for twenty-nine gold medals for hunter brood mares, thirty-four silver medals for hunter fillies, twelve silver medals for hunter geldings and fillies at shows providing distinct classes for each sex. Forty-two applications for medals for hunter mares or geldings had also been made, while for the Society's new scheme for hunter colts fifteen applications had been received. This report having been adopted, Mr. J. P. Cross, Mr. J. P. Heywood-Lonsdale, Mr. O. N. Holt-Needham, and Mr. C. W. Tindall were added to the Committee, and the Society's seal was authorised to be affixed to the new agreement with the Agricultural Hall Company for the shows in 1903-1905.

Registration of Stallions Committee.

Mr. J. P. Cross (Chairman) reported that the Committee had granted the Society's certificates of soundness to the following stallions, accepted after proper inspection and examination:—Bird of Freedom, owned by Major-General Jago Trelawny; Highflyer, owned by Mr. Wharram Clarkson; Upwind, owned by Dr. W. J. Jolliffe. The Register will be sent out with the names of those stallions accepted for registration.

This report having been adopted, Mr. W. H. Dunn, Mr. C. W. Tindall, and Mr. Henry Withers were added to the Committee; and Mr. Trench desired to point out that the remarks that he had offered at the last meeting referred only to stallions and colts to be received for registration under the new rules in the Stud Book, and they did not apply to the thoroughbred stallions to which the Society was issuing its certificates of soundness under the scheme drafted by the Committee. What he desired to impress upon the Editing Committee was that horses admitted as registered hunter sires should comply with the description of a weight-carrier.

The Council then adjourned till the Monday in Derby week.

Polo Pony.

Sir Patteson Nickalls (President) occupied the chair at a meeting of the Council of this Society, held at 12, Hanover Square, W., on the 11th inst., when twenty-three new members were elected.

On the motion of Mr. G. Norris Midwood, Captain C. G. G. Hutchinson was elected a member of the Council, in the place of the Rev. D. B. Montefiore, elected Vice-President; and Captain E. D. Miller was elected a member of the Council, in the place of Mr. T. F. Dale, elected Steward of the London Show.

Finance Committee.

Mr. Tresham Gilbey (Chairman) presented the report of the Committee, showing a balance of £721 1s. 5d. on the current account at the bank; receipts since the last meeting £211 14s. 6d.; arrears of subscriptions (1902), £76; accounts for payment, £627 15s. 6d. No additions were proposed to the Committee. The report was adopted.

Editing Committee.

Rev. D. B. Montefiore reported that the Committee had that day chosen from the photographs submitted by Mr. Charles Reid portraits of Rose Bud, reserve for the challenge cup for the best stallion or colt, and Summer Lightning, the champion filly at the recent show. The Committee had also dealt with several entries submitted for the Stud Book, one of which they referred back for further consideration, and the second they had to refuse, as the pedigree was not in accordance with the conditions of the Stud Book. This report having been adopted, Captain Hutchinson was elected a member of the Committee.

Horse Show Committee.

Mr. G. Norris Midwood presented the report of this Committee, including the financial statement of the recent show, indicating an outlay of £268, as compared with £386 in 1901 and £306 in 1900. The report of the veterinary surgeons indicated that sixty-three ponies had been examined, of which fifty-seven had passed sound

and six had been rejected for the following diseases:—Cataract, five; stringhalt, one.

Reports had been handed in from the judges of each division. Those of the breeding classes (Sir Richard Green-Price and Mr. E. H. Barlow) were eulogistic, the excellence and quality in each class specially appealing to them. Mr. Barlow's report, as a hunter judge seeing the Polo breeding classes for the first time, was of special significance, as dealing exclusively with the stallions, mares, and young stock, he was struck by the extraordinary impression on the latter, showing what judgment, knowledge, and perseverance could do in making practically a new race of horse. The winners in the young class were animals of exceedingly beautiful type, length, quality, uniformity of character, with correct action, good joints and feet being invariably apparent. He congratulated the Society in bringing together such an exhibition of breeding and young stock, and the show might be described as a great and promising one. Captain Miller in his report offered some valuable suggestions for improving the riding classes, whereby the younger ponies had a better chance of success than that afforded by the present classes when brought into competition with the older ponies. Mr. Mucklow, in his report upon the group class organised by Lord Arthur Cecil, said that it was most interesting, the ponies being exhibited in natural breeding condition, direct from the moor and the forest, the different groups representing British breeds from which our hunters and riding ponies derived some of their best qualifications, namely, intelligence, soundness, and constitutional hardiness, and he recommended that the society's silver medal should be awarded to this group class.

The Committee recommended that these reports should be printed *in extenso*, after revision by their authors, and distributed in pamphlet form to the members of the Society. Various suggestions had also been submitted for improving the show, and the Council appointed the President, Lord Arthur Cecil, Mr. Tresham Gilbey, and the Rev. D. B. Montefiore as a sub-committee to wait upon the Hunters' Improvement Society and the Royal Agricultural Hall Company with a view to carrying out some of the propositions submitted to them.

In presenting the report, Mr. Midwood said that the Council would agree with him that the financial result of the show was extremely satisfactory, and it once more indicated the unqualified success they had scored with their 1902 show. He had heard nothing but satisfaction with their arrangements, and it was equally pleasing to be able to report that with an increased offer of £75 in prizes the show had cost the Society £120 less than last year.

Mr. A. L. Goodson, Mr. T. F. Dale, and Mr. Noel E. Price were appointed Stewards of the next London Show, and Mr. John Barker, Rev. A. E. Green-Price, Captain C. G. G. Hutchinson, Captain E. D. Miller, and Mr. J. Wilkinson were added to the Committee.

Medals at Associated Shows.

The Secretary reported that in addition to the prizes (amounting to £100 and two gold medals) for Polo ponies which the Society was offering at the Royal Agricultural Society's Show at Carlisle, and the two gold medals for Polo ponies at the Royal Dublin Spring Show, applications had been received from the following associated shows for silver medals under the schemes authorised by the Council:—

SCHEME A. (ONE MEDAL).—Bath Horse Show (September 3rd and 4th); Cardiff Horse Show (September 10th and 11th); East Kent (July 16th and 17th); Newchurch and District (May 26th); North-East Somerset (August 27th); Shropshire and West Midland (June 5th and 6th); Tavistock and District (May 19th).

SCHEME B. (TWO MEDALS).—Cheshire Agricultural Society (August 23rd); Holsworthy and District Agricultural Society (June 5th); Peterborough Agricultural Society (July 8th, 9th, and 10th).

SCHEME C. (THREE MEDALS).—Knowle Horse Show (July 14th); North-East of Ireland (July 23rd, 24th, and 25th); Radnorshire (August 29th); Tring (August 7th).

The Society's bronze medal, offered for the winner in bending competitions to be held under the Society's rules, had been claimed by the following associated shows:—Bath Horse Show, Cardiff Horse Show, Leicester Agricultural Society, North-East Somerset Farmers' Club, Radnorshire Agricultural Society, Shropshire and West Midland Agricultural Society, Tavistock and District Agricultural Society, Tring Agricultural Society.

The Society's medals offered for Mountain and Moorland Ponies recognised in their Stud Book had been claimed in the following instances:—

Breed.	Show.
Dartmoor	Brentor and Lydford.
Do.	Okehampton.
Do.	South Brent.
Fell	Royal Agricultural Society of England, Carlisle.
Highland	Highland and Agricultural.
Do.	Mull and Merven Agricultural Society.
New Forest	Association for the Improvement of New Forest Ponies.
Welsh	Llanfyllin.
Do.	Oswestry.
Do.	Shropshire.
Mountain and Moorland Ponies	Royal Agricultural Society, Carlisle.

Title of Society.

The consideration of this question, deferred from the February meeting of the Council, gave rise to a long discussion, which was eventually adjourned till May 9th, on which day a meeting of the Council would be summoned to specially consider and settle the whole subject. The proposals put forward during the initial discussion would be printed and distributed to each member of the Council.

Home Notes.

The Borough.

Considering the time of year, the market is fairly active, with increased firmness of prices. There is still constant inquiry for hops of good quality, and buyers would willingly pay more money for them. But dealers have very few on hand, and are not anxious to sell them, especially as it is now apparently impossible to obtain any further supplies from growers, who have long ago cleared out of all their best lots. In default of Kent Goldings and Fuggles, Sussex and Worcester hops are coming to the front, as at current rates they are most excellent value. There is good reason for improvement in the selling prices of these growths, if holders were determined to take advantage of their opportunity. Strength is the main feature of the market as a whole, being assisted in an upward tendency by the high quotations prevalent in all foreign centres, which make their movements quite independent of ours.

I wish I could congratulate our growers upon improved prospects, created by the recognition of their claims to protection. But

The Chancellor of the Exchequer.

declines to listen to us, chiefly, I think, for the reason that other sections of agriculture would attack him if he yielded to our wishes. His recent Budget gives us, however, some hope that the day is not far distant when the special circumstances of our position may be deemed worthy of his attention. A tax upon the staff of life, however small it may be, invades much more important prejudices and principles than an import duty on hops. The first having been conceded, the second may be reasonably anticipated. The Chancellor wants revenue; our proposal would provide it. He wishes to get his funds without undue expense, friction, or pressure upon the people. An import duty on hops would be collected in considerable sums, at little cost, and with the greatest simplicity. Not a single consumer of beer would be conscious of the payment, for the cost of the beverage would not be even fractionally advanced. The wealthy brewery companies would naturally object to the increased outlay, but they can well afford it, and should be prepared to make some little sacrifice for the sake of the prosperity of an industry, on which the quality and wholesomeness of their products so largely depend. If we contrast the advantages of the legalisation of such a duty with the annoyance and small yield of the irritating extra penny on cheques, we must be convinced that the Chancellor would have been well advised if he had adopted the proposal made to him by our Association. Hops would have given him the half-million or so which he hopes to raise, and I cannot believe that a hop duty would have met with nearly so much general opposition as appears to be directed against the two-penny cheque clause of his Budget. Let us hope that his eyes may be opened by the experience he is now passing through.

Foreign Notes.

Nuremberg.

With the advent of warmer weather, the consumption of beer is perceptibly increasing, and the demand for hops is gradually becoming more active. Actual business is, however, not very large at present in consequence of the limitation of stocks, and the average poor quality of available supplies. Values are generally well maintained, and the tendency with respect to the best samples is distinctly in favour of advancement. Dealers who are fortunate enough to be holders of hops having any claim to colour and super quality, being confident that higher prices will be obtainable as the season progresses, are very firm in their quotations, and seem to be indifferent to present business. They have complete control of the market, as there are no longer any important supplies to come forward from the country districts. But I regret to hear that an

Increase in the Hop Area

is not improbable. German planters, reckoning upon the imposition of higher import duties, which will especially affect the value of Bohemian growths, are making arrangements in many places for more extended production. Although brewers will be thereby benefited, the growers will doubtless regret the course they are taking, as with no increase of consumption, excessive supply will certainly be accompanied by unremunerative sales. It is reported that the plantations throughout the Continent have wintered satisfactorily, with but few exceptions, and the preliminary work is being actively proceeded with, being assisted by the favourable climatic conditions.

Belgium.

The firmness of quotations established since the holidays has been strongly upheld during the past week. Alost eight-mark hops have advanced in value by three to four francs, the active demand from the breweries, coupled with the diminution of stocks of native growth, making further improvement in values extremely probable. Speculative business in the 1902 crop is not very lively, but quotations are nominally as high as 58 to 60 francs, showing an advance upon recent figures.

Belgian growers are very desirous that an import duty should be imposed upon hops, and considering the large proportion of foreign growths consumed by the breweries of Belgium, the demand of planters for protection is not unreasonable, especially in view of the possibility of a tax of 60 marks being levied upon Belgian hops on their entry into Germany. It can easily be understood that such a proposition is not palatable to the brewers, and at a recent meeting of their Central Association, at Brussels, it was strongly opposed. M. Delbruyère, in the course of his address, predicted the collapse of the brewing industry if the proposed duties upon malt, barley, and hops were legalised.

America.

There is but little to be said about the hop markets either at New York or San Francisco beyond the fact that the recent firmness is not only maintained, but is daily increasing in strength. Buyers hold off as much as possible, but as holders of the small stocks are very conservative, there is no possibility of any change in quotations, except in an upward direction.

National Association of English Hop-growers.

A Council meeting, held at the Central Office, Hop Exchange, on Tuesday last, was attended by representative planters from Kent, Sussex, and Worcestershire. Herbert Leney, Esq., occupied the chair, in the absence of the President, Colonel Brookfield, M.P., who was engaged at the House of Commons on a Private Bill Committee. Captain A. G. Boscawen, M.P., was present, and apologies for absence were read from A. Baldwin, Esq., M.P., Mr. C. L. Liddell, Mr. J. Knight, Mr. G. Arnold, Mr. F. W. C. Shrivell, and others.

Proposed Import Duty.

The minutes of the last Council having been confirmed, the secretary read a letter from the Chancellor of the Exchequer, replying to a suggestion from the Council that an import duty of 40s. per cwt. should be imposed on foreign hops. The right hon. gentleman said that "he feared he could not hold out any hope of compliance with the request, and he desired to point out that the arguments urged in support of an import duty on hops might be urged with at least equal force in favour of similar protection to other industries." While admitting that the Chancellor's remark was true to a limited extent, the Council was of opinion that the hop industry occupied a peculiar position in that regard, and was especially worthy of attention, for the reasons that the cultivation of hops engaged more capital and labour per acre than any other section of agriculture, that the planters and labourers would be benefited by an import duty from which the general public would not suffer to the slightest extent, that a substantiol addition to the national revenue would be secured at small cost of collection, and that it would probably result in improvement in the quality of the national beverage. The secretary was instructed to lay these points before the Chancellor of the Exchequer, and to request his attention thereto

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interest and benefit to the member of the society.*

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

Factors, Commissions and Charges.

The secretary read a circular, issued in December last by the Borough hop factors, giving notice of revision of their system of commission, and of an increase in their charges for warehousing. The matter was fully discussed, the general consensus of opinion being distinctly in favour of further revision, on the basis of the payment of commission calculated by percentage on the actual business, to include all ordinary charges for handling hops consigned for sale. Mr. Partridge, of Tenbury, believed that such a system would be approved by all growers in his district, and that if it were established the consignment of hops from the midland counties for sale on the London market would be rapidly and materially increased. It was eventually resolved that Mr. Partridge be requested to ascertain the feeling of the growers in his locality, and to formulate a scheme for consideration at the next Council meeting.

The Beer Bill.

was discussed in detail, and unanimous satisfaction was expressed that the Bill definitely provided for the prohibition of the use of hop substitutes. Mr. Boscawen was of opinion that the definition of beer, which had been so long desired, was practically secured by the Bill, as it declared clearly that all beer brewed and offered for sale must derive at least 85 per cent. of its saccharine materials from barley-malt, and must be preserved and flavoured by the use of hops only. Brewers were permitted to use 15 per cent. of sugar, if they found it necessary to supplement the deficiencies of British-grown barley, as if sugar were prohibited they would be compelled to consume a larger proportion of foreign grain, to the detriment of the English farmer. On the whole, he was well satisfied with the Bill and trusted they would succeed in getting it placed upon the Statute Book.

A question arose as to the sufficiency of the hop substitutes prohibition clause to prevent the use of such chemicals as salicylic acid, the bisulphites, and other substances used as preservatives, and which therefore proportionately displaced hops. It was ultimately resolved: "That this association, while generally approving of the Bill to amend the law relating to the manufacture and sale of beer, is earnestly desirous that all chemical or other substances supplemental to hops, now used in brewing beer, as preservatives, anti-acids, or antiseptics, should be classed as substitutes for hops, and prohibited accordingly."

The secretary was instructed to forward copies of the resolution to all Members of Parliament representing hop-growing districts, and to request their support.

The Use of "Old Old" Hops.

Attention was called to the large quantities of these ancient growths which were annually sold to brewers, many of which were only fit to be returned to the soil for manure. As the use of such perished stuff might possibly be detrimental to health and had a certain influence upon the market values of newer hops, the secretary was instructed to obtain further information as to the extent of the business and the actual condition of the "old olds" thus consumed.

Cold Storage.

A conversation ensued concerning the probable influence of the increasing capacity of cold storage upon future hop markets. Several members, including the chairman, were inclined to think that the secretary had somewhat exaggerated the gravity of the position created by the introduction and expansion of this system, arguing from statements made by brewers that cold-stored hops did not retain their virtues beyond a very limited period, and that the practice would not be continued, especially as it was costly and to some extent inconvenient to brewers. The secretary, however, emphasised his previous remarks on the subject, warning the Council that in cold storage they had an element of great danger to the hop industry, inasmuch as brewers thereby would ultimately obtain absolute control of the market, and, replying to the suggestion that cold-stored hops were comparatively ineffective in the copper, referred to the experience of one of the largest merchant firms in the Borough, who experimented some years ago with storage for 250 pockets, and had gradually increased their premises until they were now storing 11,000 pockets for their customers, who thus clearly expressed their satisfaction with the process. Eventually it was considered advisable for the secretary to obtain exact details concerning the matter, and to report same at the next meeting.

Hereford and Worcester Hop Growers' Association.

The secretary reported correspondence which had passed between Mr. Sydney Myer, Hereford (organising secretary), Mr. J. W. Smith, Thinghill, Hereford, and himself, concerning the movement. Mr. Partridge gave some details of the objects of the organisation, stating that the local planters recognised the good work done by the National Association and desired to co-operate therewith. In his district they were combining to protect and promote their local interests, such combination having been found necessary in consequence of their comparative isolation from the other and greater hop-growing counties. But no antagonism was proposed or intended, and they trusted that the movement they were engaged in would assist the industry as a whole. After further discussion, it was resolved: "That the Council of the N.A.E.H.G. note with satisfaction the energy displayed by the Hereford and Worcester growers, in establishing a local association, and trust that their efforts, in co-operation with the National Association, will conduce to the general prosperity of the English industry."

A cordial vote of thanks to the chairman concluded the proceedings.

Howden April Cattle Fair was held on Tuesday, but there was a very limited supply of stock. There was a good demand for grazing stock, but not much trade done owing to the scarcity of grass. Store cattle made £8 to £12 10s.; heifers, in calf, £12; cows, in calf, £16; cows, in milk, £14.

Bad Meat: Butcher Sent to Prison.—At the Thames Police Court on Wednesday Daniel Benedict, butcher, of 159, White Horse Street Stepney, was charged, on a warrant, before Mr. Mead, for having in his possession meat which was bad and unfit for the food of man. Mr. Phelps, who prosecuted on behalf of the Stepney Borough Council, said that on the 31st January, 1901, Dr. D. L. Thomas, medical officer, in company with Mr. Pavitt, sanitary inspector, went to the prisoner's shop, and found in a storeroom at the back of the premises a fore-quarter of beef, four pieces of beef, and a head, all of which showed signs of advanced tuberculosis and dropsy, and was in an emaciated condition. The meat was seized, brought to that court, and condemned. A summons was granted against the prisoner, but he failed to answer, and a warrant was then granted for his apprehension. On Tuesday night the accused surrendered. Dr. Thomas, having given evidence bearing out the above, exhibited the chest of the carcass, which had been preserved in spirit, and on which were masses of tuberculosis. The effect of eating such meat would be most injurious. Its being dropsical would most likely cause ptomaine poisoning. He should say the cow died a natural death, and that would render the food unwholesome. The prisoner admitted that he had been fined £5 and £12 for a previous offence. He said he bought the carcass from Mr. Bull, of Woodhouse Street, Leytonstone, and should say it had been slaughtered. He paid at the rate of 4d. a pound, and that was a fair price. Afterwards finding that it was not sound he placed it at the back of his premises. He afterwards left London, and believed that Bull had since refunded the money to his wife. Mr Mead said he believed the prisoner intended to use the meat for purposes of food. The matter was an extremely serious one, and he would be sentenced to two months' hard labour.

By Hordeum.

The Budget.

The farming industry, as a whole, are much indebted to Sir Michael Hicks-Beach for his wise reimposition of the old registration duty on grain and flour. It seems difficult to understand how any thoughtful man can possibly object to this step, especially as the amount is so trifling. To make it the excuse for raising the price of bread is both absurd and wrong. Its effect is no more than any ordinary market fluctuation of like amount.

It is interesting to follow out the effects on barley, which will be directly influenced by both the 3d per cwt. on grain and 5d on flour and meal. It is not certain it will enhance the price of British grain, owing to the smallness of the amount, but assuming it may, it will certainly not put up prices more than a shilling per quarter for grain.

The Price of Meal.

may rise a little more, but excepting to stock-feeders who do not grow grain, no harm arises to anyone. It is not so generally known as it ought to be that a vast quantity of Indian corn or maize-grits is imported nominally for stock food, but in reality it is used by brewers for making beer.

As a fact, the competition of this material has of late done more to keep down the price of good malting barleys than almost anything else. An additional eighteenpence on the recent low quotations is a desirable thing, for it will still leave the brewers who use it power to get it at a very low price.

If also it adds to the cost of feeding stuffs it is not an undesirable thing. The essence of the whole position is we have reached a point where it is imperatively needed to broaden the base of taxation. A lot of nonsense is talked about this tax being paid by the foreigner. Nothing of the sort takes place. It is only a very convenient and equitable way of distributing the burden over the whole community. It is certainly unwise to have too few sources of indirect taxation, whilst it is as certainly

More Equitable

to tax corn than wine. We raise preposterous amounts from grain indirectly when it is distilled or brewed, and such burden falls upon a portion of the community only who elect to pay it when they drink beer or whiskey. But the new duty will be more equitably distributed, and if it has any effect in raising prices, the improvement will be felt by our own corn-growers, whose lives will certainly be none the worse for a little encouragement.

It is curious to note how few people seem to know that such a duty is not protection. Look at the excessive duties on wines. Whoever dreams of calling them protective? It is true we do not produce wines; yet the heavy protective duties have never bolstered up a native industry in British wines.

Duty-Free Cider

again makes but very slow headway against heavily taxed beer, and it is a home product we can turn out in full perfection, and is a pure natural drink that many people prefer. The supposed influences of taxes are often grossly exaggerated and misunderstood.

With regard to the grain tax, the brewer has an advantage over the baker in being able to recoup himself. A few more gallons of beer per quarter can speedily return the extra shilling the duty costs, and, as in the present state of the law, a brewer may dilute to any extent without let or hindrance, there should be no objection raised by brewers. Brewers' customers deliberately elect to have no voice in the matter. So long as they get beer, they are quite indifferent to the proportion of water in it.

But leaving minor details, we can look at this question broadly.

Is the Principle Right?

Taxation must be raised, and it is right to try to make it fall with equal justice upon all. Very

few can be found that can be distributed over all classes with absolute equality, but whilst so many things are taxed that are confined to relatively few, and in reality those who pay nearly the whole of the direct taxation, this is one which can reach many who escape all the others. It is a pity there are not more things of the kind to charge. The hard-working classes do not object. They admit the justice of their sharing in the legitimate burdens of the country, and, as many of them often say, they would rather pay a fair price for food and know that others can live. This tax is a clear proof of the return to sound views by our legislators, and it leaves hope in the no distant future that we may see our whole fiscal system put upon a sound commonsense basis, free from the malign influence and short-sighted views of generations long since buried.

Arsenic in Beer.

The Royal Commission on Arsenical Poisoning sat at the Westminster Palace Hotel, London, on the 11th and 17th inst. At the former sitting the evidence was confined to Halifax witnesses. Mr. Thomson, manager of Whittaker's Brewery, said that before the Manchester scare they had not had an analysis of their beer taken, but after that epidemic and before the Halifax outbreak, they had analyses made practically every week. Analyses were made by three analysts of the same beer, and the results of the reports as to the amount of arsenic present were very different. In one or two cases faint traces of arsenic were found —a faint trace in the malt, and a faint trace in the beer. The three analysts all differed with regard to the samples of finished beer. He believed it was on the lowest floor where the maximum of the arsenic got into the malt. In reply to a question by Sir W. Hart Dyke, as to whether he did not think it an important point that there should be one standard of analysis applied to all these cases, witness said that that was a very important point. The brewers are very dissatisfied with the present system. The results have rather shaken their faith.

Dr. Neech, Medical Officer of Health for Halifax, supplied further details concerning the thirteen cases of alleged arsenical poisoning there. He had no doubt whatever as to a number of them being arsenical cases.

Sir W. Hart Dyke asked him what he would define as a dangerous quantity of arsenic on analysis, either in malt or in the finished material, and in reply witness said he thought the amount ought not certainly to be more than one-fiftieth of a grain: when we come to that there would be danger. He was of opinion that no more than one-hundreth of a grain ought to be present.

Mr. Worsick, a maltster, of Elland, said since he had taken to the use of anthracite as fuel his malt had been practically clear of arsenic.

At Thursday's sitting Mr. Thompson, analytical chemist, of Manchester, gave evidence in reference to the analysis of beer, malt, etc., which he had forwarded to the Commission. It was of a highly technical nature. Mr. Fairley, public analyst, etc. of Leeds, gave evidence in reference to arsenic in Yorkshire malts, as to quantities of arsenic found by him in the various malt samples which were examined during 1901 and in the previous year, as to the relation of particular varieties of fuel and of particular kiln conditions, to the quantity of arsenic in malt, and facts as to the arsenic content of beer manufactured with malt contaminated in known degree with arsenic. Mr. Fairley said he had tested a large number of samples of malt and found arsenic in many of them, the largest proportions amounting to one-one-sixth grain per gallon of arsenic trioxide. He had also tested a large number of samples of beer, the largest amount of arsenic found being one-sixth grain per gallon of arsenic trnoxide. The arsenic in malt was generally due to the fuel used in the malt kilns, especially to gas coke made from the common gas coals in Yorkshire. In the dust deposited on the floors and walls of malt kilns he had found arsenic up to one per cent. of the weight of the dust. It was, therefore, necessary not only to use pure fuel, but to see that all dust, etc., charged with arsenic was removed. It was difficult to obtain ordinary glass free from arsenic so that acid liquids kept in bottles made of such glass might escape contamination. He had analysed a number of samples of glass for arsenic, and, so far, had not found any arsenic-free glass. The black dust deposited in large towns always contained more or less soot, and therefore a certain proportion of arsenic. During 1901 he obtained from farmers samples of phosphate manures used by them, also samples of the soils to which those manures were supplied, and of the grain crops grown on these soils. He was able to detect and estimate the arsenic in the manures and in the soils, but, so far, he had not found arsenic in the crops.

The inquiry was adjourned.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appoint ent to
H.M. THE KING

The CHAMPION INCUBATOR has now been before the world over **20 years**, and has achieved a reputation which eclipses all competitors.

The Largest Manufacturer of Incubators in the World.

Poultry Management on a Farm.

(*Continued from page 477*)

The subject of feeding is dealt with at considerable length, and the details are given under the respective heads of "Laying Hens," "Chickens," and "Table Birds." The following extracts from this section of the book may be quoted:—

"Feeding of Laying Hens.—Commencing with the autumn, the following is the routine generally followed. In the morning, when the hens are first of all liberated from their house, they are given warm, soft food, consisting of vegetables, corn, meat, and meals. The following is the exact quantity of food given to 70 hens in pens on one day during the last winter:—

	d.
1lb. Pea meal	1
3lb. Biscuit meal	2½
1lb. Maize, cracked	½
2lb. Swedes	½
1lb. Potatoes	½
1lb. Meat	½
Total	5

"In the afternoon they receive 10lb. of wheat (costing about 8d.), which is distributed on the grass, but during hard frosts or snow it is scattered on their straw and in any available suitable manure, the purpose of which is to warm the birds in their endeavour to find food.

"Our method of cooking is to put, first of all, the vegetables—that is, the potatoes and swedes —into the cooker; the potatoes are put in whole, but the swedes are cut into slices. When these are partly cooked, the joints of meat are added, and the whole is left to cook from 11 a.m. to 3 p.m., the day before it is required for use. At 3 p.m. the maize, which is found to answer best when cracked, is then added. We find that if the maize is placed in the cooker at the same time as the vegetables it adheres to them and prevents their becoming sufficiently cooked. The supply of meat is obtained from a horse knacker, but care is taken to see that no meat from a diseased animal of any kind is brought on to the premises.

"The price paid per carcase, which is delivered in joints, varies from 10s. to £1, and works out at about ½d. per lb. The bones can be parted from the meat when cooked, and the hard bones are placed in the fire for the purpose of charring, and are then broken by an iron bar, and, when cold, are given to the hens, who rapidly devour them. Softer bones, ground into small pieces, are fed to the younger birds. The pea and biscuit meal is mixed with the other cooked food just before feeding, which brings the mixture into a somewhat dry, crumbly condition. Warm food and a supply of meat are considered most essential, in order to keep up the supply of winter eggs. During the spring the pea and maize meal is lessened, and brewers' wet grains are used as a substitute, and in the place of swedes, mangels cut in half are given in a raw conditions.

"During the summer months the morning soft food is given cold, and the pea and maize meal altogether discontinued. The quantity of brewer's wet grains is increased, for we find that this is very suitable during the summer time, when a bulky food satisfies the birds, without, at the same time, making them too fat. Short, plump, white oats are occasionally given in the afternoon as a change from wheat, and in very hot weather the wheat is steeped—a change which satisfies the birds at a time when they are not able to find worms, and has also the further purpose of checking them from drinking too much water. During the last two very hot summers, when the birds have been unable to find worms, granulated meat has been given. For birds in pens a supply of sharp flint grit is given *ad libitum*, as only those birds which can wander round the homestead usually find sufficient from the constant wear and tear of the roads. Chalk, bone meal, or old mortar are provided in such a way that birds have always free access to shell-forming material, which is especially necessary at the time of the year when most eggs are laid.

"The soft food is served in wooden troughs, which have a bar across the top to prevent the hens from standing on the food.

"The rations of soft food and corn which we have given work out at about one penny farthing per bird per week, and adding to this another farthing for the grit and shell-forming materials, the cost per bird per week during the winter time amounts to about three-half-pence. The amount for summer foods works out at a rather less sum, as the hens during that time of the year require a smaller proportion of concentrated foods, and the worms which they find take the place of the meat diet. After the corn has been cut, the birds are placed upon the stubbles, and no food is given, as they entirely find their own.

"For birds in pens green food has, of course, to be supplied, but those at liberty naturally find sufficient for themselves."

In the section devoted to "Financial Results" full particulars are given of the expenditure and receipts, supplemented by complete balance-sheets for the three years. Incidentally, the manurial value of poultry manure is discussed, and it is considered that, in any case, it is a reasonable set-off for the rent of the 35 acres over which the poultry actually run. The amount of the valuation and the profit realised were as follow:—

	Valuation. £ s. d.	Profit. £ s. d.
1898-1899	236 2 10	33 17 6
1899-1900	399 12 10	68 5 6
1900-1901	647 1 0	83 12 9

The profit represents, it is pointed out, 14, 17, and 13 per cent. respectively on the capital employed.

In conclusion, Mr. Palmer discusses "the problem of marketing," and refers to the attempt which is now being made by the National Poultry Organisation Society to facilitate its solution.—"Journal of the Board of Agriculture."

LITERARY NOTICES.

There has now come to hand the twelfth volume of the Journal of the Bath and West of England Society and Southern Counties' Association. The contents of this number are of great and varied interest, the articles contained therein ranging over all branches of farm work, and being contributed by authorities in their various departments. First place is given to an excellent review of "Agricultural Progress in the 19th Century," in which Dr. Somerville has collected much information from contemporary sources of great economical and incidentally of historical interest. Mr. Primrose McConnell embodies the result of wide observation, combined with the knowledge of a specialist, in his able article on "American Farm Implements." Mr. Alfred Michelmore practises an unusual virtue in keeping his article on South Devon cattle within readable limits. This is done without any curtailment of interest, as the article deals fully with the history, characteristics, and the claims to the wider recognition of this breed. A long account of the proceedings of the British Congress on Tuberculosis is furnished by Professor Sir George T. Brown, C.B., including an admirable report of Professor Koch's memorable speech. Mr. J. Cooke Hurle gives "Some Lessons of the Weigh-Bridge," which could be studied with advantage to farmers. "English Wheats, 1875-1901," by Mr. W. R. Mallett, reviews some of the changes that have occurred in the types of English wheat during the past quarter of a century. Mr. W. R. Mallett says that the cause and decline in the price of English wheats is due to a variety of causes. One is the demand of the public for a larger, lighter, and, what is known, as a stronger loaf, and, furthermore, to a deterioration of the milling value of native wheats. Ten years or so ago, when the decline in the value of wheat was becoming serious, the attention of seed growers was directed to the production of a wheat that would give a larger yield with more valuable straw, and thus compensate for the loss in price. They succeeded in this, but unfortunately they lost sight of the fact that the wheat so produced, whilst productive and large-berried, was starchy and weak, resulting in the advantages gained on the one hand being almost lost on the other, and this is the primary cause of the situation to-day. Mr. J. Hughes has a contribution on basic superphosphate, while Mr. Eldred G. F. Walker provides an account of the prospects and condition of the small farmer at the opening of the century. Notes on the drying and evaporating of fruit and vegetables are provided by Messrs. F. G. Farwell, J. Harper, and T. Plowman. The rest of the book is filled with useful reports of the doings of the society, including accounts of the experiments conducted during the past year, the Croydon Show, and other more or less domestic matters. These are written by the Editor, Mr. T. F. Plowman; his assistant, Mr. F. C. Lloyd; Messrs. Farwell and Ashcroft, stewards; Mr. F. Rowbotham, botanist; Dr. J. Voelcker, chemist; and Mr. W. Carruthers, F.R.S., botanist.

One of the most prominent features in the new volume of "The Transactions of the Highland and Agricultural Society of Scotland," is the continuation of Professor J. Cossar Ewart's "Experimental Contributions to the Theory of Hereditary." The present instalment deals with telegony in the equidæ. With respect to telegony, Professor Ewart is slightly sceptical. With the reserve of a scientific man, he refuses to believe in telegony until it can be proved how it is brought about. One of the most tenable theories advanced is that of Mr. H. Spencer, who believes that germ-plasm passes from the developing embryo into the tissues of the parent, to be after incorporated in at least some of the germ cells as they reach maturity. On the other hand, Weisman suggests that some of the unused germ-plasm of the first mate penetrates the immature ova as well as the mature one, and, of course, ultimately has an effect on the offspring introduced from such infected ova by subsequent mates. However, none of the theories at present advanced can be proved, and we can only await the result of further experiments. In this issue of the Transactions is printed Mr. Baird's article on the overdressing of barley, while among other articles may be mentioned "Half a Century as a Border Farmer," by John Wilson; "On Lucern," by Bernard Dyer; "Effects of Soluble and Insoluble Phosphate on the Turnip Crop," by John Milne; and "Boning Seed Potatoes," by John Speir. Many other interesting and authoritative contributions are included, and also the usual reports and figures dealing with the Society's work during the year.

PARMITER'S CHARLOCK HARROW
PATENT FLEXIBLE FOR CHARLOCK & GENERAL PURPOSES
WRITE FOR REPORTS.
A FREE TRIAL, CARRIAGE PAID.

WILL CLEAR CHARLOCK or Red Weed from Barley, Oats, Peas, or Beans with more certainty and benefit to the corn crop than any form of spraying; used once or twice WHEN THE CORN SHOOTS CAN BE FIRST SEEN. The widest No. 1 or No. 2 Harrows are the best for this work. Pull the forward way on loose soil, the reverse way when consolidated by rain. Harrow hard enough to move all the surface; do not drive fast, as speed damages the crop more than the weight of the harrow. The crop will not be damaged if the harrow is used soon enough. Barley can be harrowed with advantage much later than oats. The 12 ft. No. 1 has 300 teeth, which move the whole surface with an even brushing action.

Avoid imitations, which, trading on our reputation, copy in the lists our sizes and prices and descriptions. See that our name is on the brass label on the whippletree. Write or wire to us if not stocked by your agent. Will send any harrow on trial. Cut this out and file for reference.

AUCTION SALES.

HEDON, NEAR HULL.
IMPORTANT SALE OF PEDIGREE HACKNEYS.

ROBT. R. LEONARD & SON are instructed by Mr. John Foster, late of the Limes, Saltend, Hedon, Hull (now of Hendon), to SELL by AUCTION, on THURSDAY, MAY 8th, 1902, his Stud of valuable Hackneys by the renowned sires Danegelt, Garton Duke of Connaught, Ganymede, Field Marshall, Matchless of Londesborough, Acid Drop, Gentleman John, &c. The sale is in consequence of Mr. Foster's ill health and giving up the Limes establishment. Catalogues, end of April, of the Auctioneers, Field House, Preston, Hull.

SPECIAL SALES AT IPSWICH.

ROBERT BOND & SONS will SELL by AUCTION, on TUESDAY, MAY 6, at ST. GEORGE'S FAIR:—

500 Superior SHORTHORN, POLLED, and RED POLL Steers and Heifers from various owners.

100 SUFFOLK, SHIRE, and HACKNEY Horses.

HANDFORD FAIR, TUESDAY, MAY 22nd.

260 Excellent SHORTHORN and POLLED Grazing Steers and Heifers from various owners.

Offices, Old Bank House, Ipswich (one hour and thirty-five minutes from London). Commissions executed.

AT THE AUCTION MART.

EDWIN FOX & BOUSFIELD. On WEDNESDAY, MAY 7th, at TWO o'clock, in lots. Samuel Kidd & Co., Ltd., Isleworth Mills, and 37, Mark Lane, E.C.—300 £5 ORDINARY SHARES (fully paid). Last year's dividend 5 per cent. The Company carries on the old-established businesses of Millers and Corn and Flour Merchants; is in a most prosperous condition, as the net profit for 1901 was nearly equivalent to paying a dividend on the Ordinary Shares of 9 per cent., and the Shares offer to investors a thoroughly sound investment, with every prospect of increased dividends in the near future.

Particulars at Messrs. EDWIN FOX AND BOUSFIELD's Office, 99, Gresham Street, Bank, E.C.

AUCTION SALES.

BEDFORDSHIRE.
THURLEIGH, RISELEY, AND BLETSOE, six miles from Bedford, whence London is reached in sixty minutes, and in the centre of the Oakley Hunt.

FREEHOLD ESTATE, almost entirely free from Land Tax and Tithe, with excellent FARM RESIDENCES, commodious HOMESTEADS, 5 LABOURERS' COTTAGES, together with the useful Arable and Pasture Land, the whole comprising **654 Acres,** intersected and bounded by good roads, and excellent supplies of capital water, in a particularly high state of cultivation.

Messrs. STAFFORD & ROGERS, Ltd., have received instructions from the Owner to offer for SALE by AUCTION, at the Lion Hotel, Bedford, on SATURDAY, MAY 17th, 1902, at FOUR o'clock in the afternoon punctually, the above Estate in one Lot, at an UPSET PRICE of **£10,000** (to include the Timber).

Further particulars of Messrs. Clarke, Son and Whittington, Solicitors, 3, Bank Street, Leeds, and of the Auctioneers, 83, High Street, Bedford.

One of the oldest Statute Fairs in England, granted by Royal Charter.

Contractors to His Majesty's Government.

THE CHEAPEST POWER FOR MILLERS AND AGRICULTURISTS.

WHAT USERS THINK AND SAY:—

"I cannot speak too highly of your Oil Engines, and consider them far the best Engines for Farmers' use."

"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cost of running, which latter bears no comparison to the cost of the steam engine which it replaced."

"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall,' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."

"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

MORE ABOUT THE CORN DUTY.

It has been an interesting week. The registration duty is not a large item in itself, but it has broken a spell. The farmer, whether at Mark Lane or in the country, is appreciably the happier for the Budget of 1902. It is not that a shilling per quarter will solve his difficulties, even if he gets the shilling, and that he knows only too well he probably will never handle. But he can probably remember that his father was called by smart men a fossil, because he believed in a duty, and he can possibly remember also hearing that his grandfather was burnt in effigy for voting—people did not hide their votes then—against the holy cause of Free Trade. And now the change has come. The Chancellor of the Exchequer has laid profane hands on the sacred ark, but no avenging stroke has fallen. On the contrary, the Government majority was maintained within three votes on the Budget, though it dropped by over fifty over a question of martial law in Cape Colony. The discovery that Free Trade was only a fetish after all, a mummy, and no living issue; that it is which pleases the farmer, not because he is a farmer, but because he is pre-eminently a sensible man.

The opinion of the Budget in milling circles is naturally favourable. Liverpool has protested against the preference shown to the home mills, and Glasgow, which also depends to a great extent on American flour, is more or less in the same predicament. But the general effect of the twopence per cwt. preference will undoubtedly be to encourage milling at home, and this will not only bring into full employment much machinery hitherto running half-time, but will retain at home the milling offals which stock-breeders need.

Bakers have occasionally put up the price of bread, but for the most part they have not taken this course. It is not the custom of the baking trade to advance prices to customers, except where wholesale prices rise two shilling per quarter on wheat, which is tantamount to a farthing on the loaf. Equally, of course, it is not the custom to reduce the price a farthing until the total ebb in wheat values equals two shillings per quarter. The baking trade is just now excited, not so much over the price of bread, as over the London Flour Millers' Association resolving to charge one shilling per sack for duty on all contracts made before April 15th, but unfilfilled at that date. Counsel's opinion has been taken, and the Law Courts apparently will have to decide the case. As the duty is not yet (28th inst.) in force, the Millers' Association are not in a very easy position, and they certainly have taken an unpopular step, calculated to increase bakers' dealings with the suave and tactful representatives of the American milling firms.

Corn chandlers are much worried over the mere retail sales under the new duty, but this, though in a merely technical sense of the last word, is also a question of "old men and new measures." The duty is 3d. per cwt., but then the cwt. is not a real hundredweight, but an arbitrary 112lb. We have already been asked questions which would puzzle a senior wrangler, and the small local grain factor can hardly be expected to keep a mathematical expert in the shop parlour. A fair rise is a farthing on 9lb. of barley, maize, or oats. What is the proper duty on a peck? The duty varies with every staple in the most perplexing way. A peck of English oats will generally weigh 10lb.; a peck of the best wheat as much as 16lb. But common Russian oats weigh only 9½lb. to the peck, and chicken wheat, as sold by chandlers, weighs only 15lb. or even a trifle less. None of these weights, 9½lb., 10lb., 15lb., 16lb., divide easily into the Government 112lb. Evidently, the new duty means a new Weights and Measures Bill, or else the old corn chandler will have to be replaced by a patent calculating machine.

What the week has shown is that old views of the Corn Duty are as dead as Queen Anne. Nobody really believes in the Protectionist bogey, which is not substantial enough to hide the somewhat massive proportions of Sir William Harcourt and Sir Henry Campbell-Bannerman. If bread ever becomes dear, it will not be because of the duty, because no Government will ever impose a high duty. But it will be because of war or other special emergency, and then the Government will meet that emergency by means of new measures. If bread went up during an European contest to 2d. per lb., the Government would raise thirty millions, and pay the extra penny, rather than have the rational issue disturbed by hungry crowds. The Twentieth Century means to "paddle its own canoe." Protection and Free Trade were the shibboleths of a dead era; they served their purpose, but are now recognised as matters of temporary expediency, not of eternal principle. Budgets in the future will be more commonsense and "tiding-over" arrangements than they were in the past; for the next few years we may expect to see a fairly close adhesion to the doctrine that the national taxation should be fifty per cent. direct and fifty per cent. indirect. But with the registration duty's return we have happily got rid of the ridiculous figment that the working man ate nothing but an unlimited succession of quartern loaves.

THE FUTURE OF AGRICULTURAL SHOWS.

In the present week we shall hail May Day, and although Maypole festivals have gone out of fashion, rural rambles in search of wayside flowers, pic-nics, cricket and football matches, and many other field sports and pastimes, offer themselves to afford rational pleasure.

The advent of May brings the fact to our remembrance that the agricultural show season is about to commence. To-morrow fortnight the Oxfordshire exhibition will open at Witney; on the following day, Wiveliscombe, on the borders of the Western Hill country, will welcome the Somerset show. Afterwards there will be an important agricultural exhibition held every week, and in some cases two or three shows a week, all through the season, which is all the more notable, as it will be the last of the Royal Agricultural Society's migratory visits to different parts of the kingdom.

To those who speculate on probabilities, the very fact of the Royal Agricultural Society's tents having no longer to be pitched here and there, as formerly, all over the country, will cause the great district societies to expand and flourish more. The Bath and West, Royal Counties, Royal Lancashire, Yorkshire, Lincolnshire, and those of the societies next to the Royal in magnitude, will be welcomed with greater ardour, and be supported all the better by the big towns and cities within their respective spheres, no doubt, now that it will be impossible for them to invite the great National Society, when they desire to hold agricultural festival. Another coming change which presents itself to view as highly probable is that other large district societies will be created, to represent those parts of the kingdom that at present have only small or moderate-size societies and exhibitions. An all-convincing incident proving that such will be the case has just occurred. At the annual meeting of the Cumberland Agricultural Society, the subject was seriously taken into consideration, whether there ought not to be a large North of England Society established, to cover the entire four northernmost English counties, and perhaps the Border ones of Scotland. The chief object in forming such a society was held to be that an annual show, corresponding in magnitude to the grand exhibitions of the societies above named, might be held every year, only on the migratory system, visiting Newcastle, Carlisle, Durham, Kendal, and other important towns in turn.

This subject was introduced and discussed solely on the ground that after this year, when the Royal will bid final adieu to the country, a gigantic North of England Show will become a want of the times. Mr. Jas. Watt, Mr. J. J. Bell, Mr. Tinniswood, and the Chairman, Col. Irwinall, spoke favourably of the object aimed at, expressing every desire to promote it, and a decision was come to that the other agricultural societies in the four counties of Northumberland, Durham, Westmoreland, and Cumberland should be communicated with, and that if sufficient support or sympathy with the object were elicited, a meeting should be held on the Royal Show ground at Carlisle, to further discuss and take steps in the matter.

If the existing leading agricultural societies of the four Northern counties can be induced to amalgamate they will not only be able to get up a grand exhibition every year, but they would find union to be strength for the promotion of other desirable objects. But, unfortunately, when the union of county societies in times past, has been sought to be accomplished, some difficulty or other has cropped up to defeat the scheme. Thus a proposition was made a few years since to amalgamate the three county show societies of Norfolk, Suffolk, and Essex into a gigantic East Anglian organisation. Matters, indeed, went so far that His Gracious Majesty, King Edward VII., when Prince of Wales, and presiding at the Essex Society's Show luncheon, eloquently advocated the scheme. Yet it was found to be an impossibility to accomplish the object. And not only do the three societies still keep apart, but this year, two of them are holding their shows at the same time, presumably to the injury of each other. Mr. Watt, in mooting the matter at the Cumberland Society's meeting, was reported as saying that "the local shows might be allowed to continue as at present," by which we should scarcely think he could mean that the largest county ones could be supported as well as the larger North of England one he is so anxious to have established. The belief that we at present have too many shows is widespread, and the argument has often been adduced that it would be much better if two or three of the smaller county societies would combine and organise a larger show between them. Even now, we believe, negotiations are on foot, either for amalgamating the Devon and Somerset County Agricultural Societies into one body, or so to arrange matters that the two societies shall hold one show between them every year, in Somerset and in Devon alternately. But it is just possible that the final negotiations may be as difficult to bring to a successful issue as they were in the Eastern Counties, when the Essex, Norfolk, and Suffolk shows were sought to be merged into an East Anglian one.

Agricultural shows are probably just now in a state of transition. The smaller ones have long been kept running by the leaping competitions, which usually form so prominent feature of their afternoon proceedings. These have proved so successful as an attraction to increase gate-money, that some of the larger societies have been only too glad to make use of the same agency. Seemingly, it is a great pity that the success of agricultural shows should so much depend on this and other attractions; but it is so, and we must combine amusement largely with utility in future to make any agricultural show, large or small, prosper.

SUBSCRIPTION ORDER FORM.

_____ 1902.

Please send me the "Mark Lane Express" until countermanded. I enclose _____ *for* _____ *months.*

Name _____

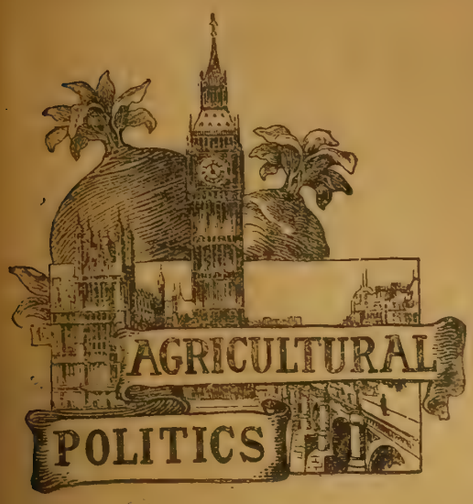
Address (in full) _____

Cheques and Post Office Orders payable to WILLIAM A. MAY, 1, Essex Street, Strand, London.

SUBSCRIPTION RATES:—United Kingdom, one year, 15s.; six months, 7s. 6d.; the Colonies and Abroad 17s. 6d. per annum.

By a Man of Mark Lane.

I am indebted to a valued correspondent for the following interesting announcement: "It is fully expected that the popular member for the Tiverton Division (Sir W. Walrond) will receive some recognition of his long services, at the Coronation of King Edward VII., and the farmers of the division have largely signed a requistion to E. H. Dunning, Esq., of Woodleigh Court, to allow himself to be nominated in case there is a vacancy. Mr. Dunning is an enthusiastic agriculturist, and has the means, as well as the inclination, to help farmers. He founded and is Chairman of and a large subscriber to the Tiverton Agricultural Association, one of the most successful in the county. He purchased a bull for the use of farmers in the district to improve their breed, and also formed a Shire Horse Society, providing the horses, and paying all the losses—which are considerable. He is a good sportsman, and his extensive coverts are well supplied with the wild red deer. His vast property and splendid mansion is beautifully situated, and the carriage drive through the grounds, over two miles in length, is one of the best in the county. He is a good landlord and a Devonshire man, who spent some time in South Africa which he made good use of. The farmers are practically unanimous in favour of him, and if elected, of which there is not the slightest doubt, the County of even, we think, would be able to boast of having the three best agricultural M.P.s in England, in Messrs. Spear, George Lambert, and E. H. Dunning. We heartily wish them success."



The receipts on account of revenue from April 1st, 1902, when there was a balance of £8,566,947, to April 19th, 1902, were —11,262,960, against £10,004,258 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £16,185,848, against £16,411,838 to the same date in the previous year. The Treasury balances on April 19th, 1902, amounted to £5,603,394, and at the same date in 1901 to £4,037,838.

A Kentish correspondent, writing to us re the corn tax, says:—"The duty on wheat and other feed material has stimulated the men of humour to more than a slight extent. Numerous comic journals inform us it will be 'against the grain!' The description of the impost on flour is to be desiribed as 'taxation of ground values,' as soon as arrangements can be made for publishing that gem of wit."

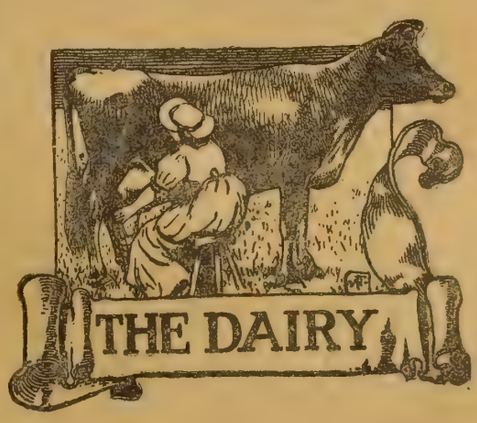
Russian Corn Mills Destroyed by Fire. — One of the largest mills at Graudenz, in West Russia, in which were stored 2,500cwt. of flour and 1,500 cwt. of corn, was completely destroyed by fire on Thursday, the damage done being estimated at the least £10,000.

Sad Death of a Somerset Farmer. — Mr. Keen, a farmer, was found dead in one of his cow sheds at Aldwick, Blagdon, on the evening of the 17th inst. Deceased had got up as usual and had gone about his work, but, not coming home, search was made, and his dead body discovered hanging to a beam, about about six in the evening. Deceased, who had only taken possession of the farm on Lady Day, was 35 years old.

Buried in Locust Beans.—On Thursday an extraordinary accident happened to Mr. Cundall, manager for Messrs. Paul, corn merchants, Ipswich. While he was on the top floor of the public warehouse standing on a heap of locust beans a trap door was opened, and he was carried down and completely buried beneath tons of beans. A rescue party went to work, but an hour and a half elapsed before Mr. Cundall could be got out. No one expected him to be rescued alive, but, after remaining unconscious for a time, he recovered sufficiently to be conveyed home.

By a Lobbyist.

Of course, the Radicals are making the best of the opportunities provided by the Budget. There is the one supreme fact in their favour—the price of bread has gone up. This has enabled a score of pretty defamations to be sounded with resounding force in the ear of the people. "The meanest of taxes," has said one. "The poor are taxed in order that the rich landlords may secure the advantage provided them under the Rating Act," quotes another. "Bread is the staple food of the people, and if taxed at all, it should be taxed last of all," has demanded a third. "You are broadening the basis of taxation," has averred a fourth; "but you are broadening it so that the taxable community only includes the working population." "The basis of taxation," has a little saponaciously reiterated a fifth, "should be equality of sacrifice. But how does this proposal place an equal tax upon the necessities of the rich?" These are the accusations, the assertions, the perfervour with which an attempt is being made to rouse passion, to creat venom, and to persuade people that the tax is an outrage against the common people. The fact that Lord Charles Beresford was returned unopposed as Conservative Member for Woolwich does not altogether bear out the contention that the people have been seriously affected by the tax. However, it must not be forgotten that Lord Charles Beresford is a breezy politician, whose very personality raises him beyond the ordinary issues of political rivalry. How the Tory candidate fares at Bury will provide a better indication of the extent to which the community has been moved by these appeals to old battle-cries. Bury has an historic association with the Free Trade controversy. It is in the very centre of that district through which the purpose of Cobden and of Bright ran like a quickening spirit. If Bury remain faithful to its Tory allegiance, then we may be certain that the revived Radical objurgations have failed of their purpose.



The chief significance of the debates, or, rather, of the discussions in the lobbies—for they have been the more important of the two—lies in the fact that it is being conceded that the tax will not have any immediately important economic value. If it is intended to preface a Tory return to the old historic Tory policy of Protection, then it is too mild a suggestion; and it has had associated with it too many Tory deprecations and half-apologies — even Sir Michael Hicks-Beach himself has been compelled to indulge in them—to have a practical or a valuable sequel. If it is simply intended as an encouragement to agriculture—as a sequel, in fact, to the policy of friendliness initiated by the Rating Act—then the antagonisms which have been aroused by the many appeals to old party memories will frustrate the excellent object. Finally, I heard not a few capable agrarian M.P.'s venture to predict that the increase in the price of foodstuffs will go into the hands of the bakers and the wholesale dealers, rather than into that of the farmers. It may be contended, for the purposes of argument, though only for the purposes of argument, that the enhanced price of Cereals in the Corn Law days went into the pockets of the landlords and the farmers. But in those days the traders of the country had no organised character. Now, they are among the most significant forces in the commercial world, and Ministers have often to heed their behests. They are not going to allow an opportunity of increased profit to lightly escape them.

One of the younger men in the House—and this week may be said to have seen the apotheosis of the younger debaters—told me on Tuesday night that he believed that eventually the significance of the tax would be found to lie in the warning which it conveys to the foreigner that our ports are not eternally to be opened free and unrestricted to the products of the foreigner, whilst their ports still retain the heavy barrier of an extravagant duty. Well, if this proves to be the case, the Bill will undoubtedly be an encouragement to agriculture. As a fact, I believe that consciously or unconsciously the desire to benefit the rural interest has ever been present in Sir Michael Hicks-Beach's mind. An evidence of this is provided, first of all, in the exceptions deliberately made in the imposition of the tax, and, next, in the definite inclusion, after careful consideration, of feeding offals in the 3d. rate rather than in the 5d. Of course, it may be urged that it would be well if all feeding offals were exempt from all duty. But the fact that Sir Michael, at once on its being pointed out that a 5d. tax would wreak an unnecessary injury upon the farmer, sought to moderate the danger is in itself an evidence that he at least does not desire to embarass the farmers when pointing out the way in which economic redemption lies. If Sir Edward Strachey be correct in his assertion that unless the farmers get their feeding-offals free they will be unduly handicapped in the race with the foreigner, then we have a renewed argument in favour of the entire removal of the taxes upon offals. But this assertion of Sir Edward's does not affect what I believe to have been the purpose of Sir Michael—the benefit of the rural interest. How far this desire will be realised is another matter.

I repeat that the Budget will not have the direct influence upon the economic fortunes of agriculturists which both its enemies and friends have anticipated. Indeed, it may be, after all, that with the increased price of feeding-offals and the manipulations of the middle-men—who, in these days of corners and trusts, never lose an opportunity for maintaining prices—the effect may be so inappreciable as to be unfelt. At all events, this matter will have to be most carefully watched. However, I am persuaded that the intention animating the Budget was a good and sympathetic one. It is in this light that it would be best to regard it. It is because of this, too, we may be persuaded that Mr. Chaplin so warmly welcomed it. I am a little inclined to quarrel with the right hon. gentleman's assertion that "this is no Protection." At least, the right honourable gentleman will confess that the Budget embodies a protective spirit. Its final value will be in the application and extension of that spirit. We must not anticipate an early development of it; and we must be careful as to how far the town traders, the men who really regulate the markets, will turn it to their sole advantage.

I declare that I do not know a Bill whose death has been so universally unregretted as the Pure Beer Bill. I doubt that even its advocates could have wished it to pass into law. Beyond the mere affirmation of a principle, it would really have accomplished nothing. As a fact, it was calculated to do more harm than good, inasmuch that, though it would have accomplished nothing, it would have prevented a more practical measure being passed into law. I hope the fate of the Bill will be a warning. It conveys the salutary lesson that in weakening your purpose in the hope of conciliating your enemies, you not only secure the scorn and contempt of those gentlemen, but you alienate your friends. My readers know that I am not surprised at the defeat of the Bill. What I am surprised at is the overwhelming character of that defeat. Here was a principle, which a year ago was accepted with enthusiasm, which now could secure no more than 140 friends to oppose to its 212 antagonists. I wonder who was really responsible for depriving the Bill of all that was most valuable in its original provisions.

I regard the association of Mr. Hanbury and Mr. Plunkett at the initiation of the Bishop's Stortford Agricultural and Poultry Association as a portent. I believe it means the harmonious co-operation of the English and the Irish Boards of Agriculture, and I also believe it means that Mr. Hanbury is seeking the sage advice of Mr. Plunkett in the reorganisation of the English Board. The conjunction of these two men is an admirable thing. In Mr. Hanbury we have a statesman of wise ideals and wisely-ambitious purpose. In Mr. Plunkett we have an excellent administrator, who has a clear grasp of the necessities of the interest he is called upon to administer, and who, in pursuing his task, is not afraid to depart from the ruts of conventionality. More than that, Mr. Plunkett is not afraid of applying the principle of co-operation—which, I believe, may yet provide a solution of many of the economic ills of agriculture—to the interest. It is, in all sooth, a promising association. The result should be the establishment of as practical a Board of Agriculture in England as there is in Ireland.

Water in Butter: Standard Fixed.

The following Order appeared in Tuesday's "London Gazette":—

"The Board of Agriculture, in exercise of the powers conferred on them by Section 4 of the Sale of Food and Drugs Act, 1899, do hereby make the following Regulations:—

"1. Where the proportion of water in a sample of butter exceeds 16 per cent. it shall be presumed for the purposes of the Sale of Food and Drugs Acts, 1875 to 1899, until the contrary is proved, that the butter is not genuine by reason of the excessive amount of water therein.

"2. These Regulations extend to Great Britain.

"3 These Regulations shall come into operation on the fifteenth day of May, one thousand nine hundred and two.

"4. These Regulations may be cited as the Sale of Butter Regulations, 1902."

Milk-Blended Butter.

Statement by Mr. Hanbury.

In the House of Commons, on Tuesday, Mr. Hanbury, in reply to a question by Mr. O'Shaughnessy, said, "The question whether the sale of the article called milk-blended butter is not contrary to the provision of the Margarine Act is now before the Law Courts, on appeal, and I cannot anticipate their decision. In any case, the practice of adding water to butter appears to me at least as objectionable as that of adding animal fat; and should the existing law be insufficient to deal with the practice, I shall, no doubt, have to consider whether fresh legislation is necessary."

More Appeals.

In the King's Bench, on Tuesday, a Divisional Court heard an appeal by an inspector under the Food and Drugs Act, against a decision of the Redditch justices, who dismissed two summonses against Pearks, Gunston, and Tee, Ltd., charging them with supplying to the appellant butter which was not of the nature and substance of the article demanded. The magistrates held that as a label was given with the article describing it as milk-blended butter and stating the percentage of water, respondents were not guilty under the Act. On Tuesday their Lordships held that the respondents

were protected by the label, and dismissed the appeal with costs.

On Wednesday, in the same court, there was a further appeal in regard to the sale of milk-blended butter, and this time an important and altogether different question to those previously dealt with was raised. It was an appeal by Messrs. Pearks, Gunston, and Tee, Ltd., against convictions under the Sale of Foods and Drugs Act, by the justices of Richmond, on three informations preferred by an agent of the Butter Association, charging them with having sold to the prejudice of the purchaser butter which was not of the nature, substance, and quality of the article demanded. The justices fined the appellants £25 in each case. It was stated that the case arose before the appellants had begun to put up notices in their shops to the effect that they supplied only "Pearks's Milk-Blended Butter," or to use their present label. The justices found as a fact that the purchaser did not know that the butter asked for contained such an excessive amount of moisture as was shown by analysis, that the purchaser received something different from that asked for, viz., butter plus something the nature of which was not disclosed at the time a sale. They were satisfied, therefore, that there was a sale to the prejudice of the purchaser within the meaning of Section 6 of the Sale of Foods and Drugs Act. The important question raised was whether the word "person" in Section 6 of the Act included any incorporated company so as to make the appellants liable to the penalty imposed upon a person offending against the Section. The Appellant Company contended that the Act did not apply to a company, and that, therefore, they could not be subject to penalties. For the respondent, however, it was contended that a company were liable to penalties under the Statute.

In giving judgment the Lord Chief Justice said that, as to whether or not this information or proceeding could be taken against a limited company, he could not see anything in the Act which prevented such a course being taken. He thought the point was really covered in principle by the decision, although it had never been raised in such a case as this, and although there had been many proceedings under this particular Act. The effective object of the Section and the necessary ingredients of the offence all seemed to point to putting a company or corporation in the same position as an individual, provided the sale was made on their behalf. There was nothing in the Act or the interpretation clause which pointed in a contrary direction. He was glad to come to this conclusion, as it appeared to him that very great difficulties would arise if the opposite view were taken. As he could see no reason for distinguishing a company from an individual in this regard, the appeal would be dismissed. The other judges concurred, and the appeal was dismissed, with costs.

Adulterated Margarine.

On Thursday, the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Channell, heard a case which raised the question whether margarine could be held to be adulterated because it contained an excessive quantity of water. It came before the Court on an appeal by Messrs. Burton and Son, of Rushden, against a conviction of the justices of the county sitting at Wellingborough, who had fined him £1 and costs.

The Lord Chief Justice, in giving judgment, said the magistrates had found that the water in the margarine was excessive, and that, therefore, the article sold was not of the nature, substance, and quality demanded, as it was adulterated with water. As he understood it, that meant that it was margarine and water and not margarine. They had been pressed to say that there could be no finding of that fact because there was no evidence on which the magistrates could find it. It was, in fact, contended that because it was prepared in imitation of butter and was called margarine, there could be practically no inquiry as to what its composition was. In his judgment, however, there was evidence on which the justices could come to the conclusion that it was not margarine, but margarine and water, or margarine adulterated with water. It seemed to them impossible to say that the magistrates were not justified in acting on the analyst's certificate, supplemented by the evidence of the analyst. He thought, therefore, the appeal should be dismissed. The other judges concurred, and the appeal was dismissed, with costs.

Clean Milk Cans.

"At the majority of factories and creameries visited since my appointment as Dairy Supervisor, I found a large percentage of cans in use totally unfit for dairy purposes," says Mr. P. J. Carroll, in the Victorian Journal of Agriculture. "In the interests of the suppliers as well as the industry, it would be a distinct gain if strict measures were adopted to prevent the use of those rusty, dented, and worn-out utensils.

"It must now be patent to every dairyman that milk is a most delicate and changeable article of food, and when exposed to such infective or contaminating influences the commercial value of such food, as well as its wholesomeness, is unmistakably reduced. Rusty cans are a constant menace to the industry and sonrce of daily anxiety to the factory and creamery manager, as it also ought to be to the supplier. Unfortunately the latter will not always recognise this. An examination of a rusty patch in a milk can discloses an unsavoury condition of affairs. Rust creates a spongelike or honecombed state in the texture of the iron. In the numerous interstices are lodged casein, which provides food for the growth of various families of objectionable and putrefactice organisms. From these emanate an infective or putrifying series of ferments, which are distributed throughout the milk or cream stored in the can. This rusty condition further provides a peculiar chalybeate or rusty-iron flavour in dairy products, whether it be milk, cream, cheese, or butter. The lactic acid generated in the milk attacks the iron, combines and dissolves it, thence the permanent flavour referred to.

"Here we have a double action: false flavours imparted by micro-organisms and the ferments resulting from their action, as well as the flavour imparted by a solution of the iron rust. It naturally follows that where the use of rusty cans is permitted, not only is the supply in the cans themselves affected adversely, but also the whole supply each morning in the general receiving vat. Again the question of detached particles of rust has to be considered, and whilst this does not occur frequently, yet we occasionally have evidence of such in the butter. It is a matter of urgency that all cans showing rust in the bottoms be sent to the tinsmith to have them renewed. Where the body of the can is also affected it is better to reject the can and provide a new one. The useful age of a can might be largely prolonged if ordinary precautions are adopted to prevent rust. No more effective means can be recommended than the use of a ½ per cent. of boiling solution of ordinary washing soda (1lb. of soda to 20 gallons of boiling water). Care must be observed to see that the solution is boiling. The use of this is beneficial in two ways: first by acting as a wholesome and innocuous germicide or microbe-killer, and next as a preventive of rust.

"Another objectionable and dirty practice that comes under our notice is the daily use of rags and cloths to secure the lids of the cans firmly. In a well-made can with sound lid there is no need for them.

"Further, should the lids become ill-fitting through careless use and other causes, the tinsmith would, at a very small cost, remodel the rims and render them serviceable. I am led to believe that such conditions could be remedied if a better system were permitted on the receiving platform, and the manager of either factory or creamery empowered by his board of directors or employers to reject milk brought in rusty cans, or where the lids are stuffed with ill-smelling rags. It may happen that the first supplier to be brought under the lash of such a regulation would be the chairman or a director, but it should be honestly remembered that the existence of co-operative effort depends on the wholesome principle that all must be treated alike, and the first to applaud the manager should be one who is placed under such circumstances and justly recognises the endeavours of the manager to apply this excellent principle. Delicate, doubtless, the duty is to the manager, but a tactful concern for the success of his company must pervade his actions throughout.

"When the cans return to the farm and the skim milk has been unloaded, the first duty of the dairyman is to promptly attend to the cleansing of these vessels. Milk contains a proportion of albumen (white of egg), and to throw in a bucket of hot water into the can, as it often happens, means attaching the albumen to the sides, there to remain and become a menace to the next can of milk. Cold water should be used first to rinse out the milk slops, followed by boiling water, or a boiling solution of washing soda made the strength recommended before. Great care should be observed in finally rinsing the cans with water that has been recently boiled. The water supplies at many farms are highly impregnated with hostile bacteria or organisms, and boiling destroys their vitality. Where steam is available, it is unquestionably a most valuable cleansing agent. The cans should be inverted on a raised platform, exposed to sunlight, away from smells, and where there is no floating dust.

"The interiors should be frequently examined to detect any flaws in the seams; these, with dents, are a constant source of false invasions in milk, and are equally as dangerous to the sound-keeping qualities of milk as rust or dirty rags around the lids. In cleansing a can, the objectionable practice of using cloths or rags ought to be avoided; only a sound good brush ought to be used in scrubbing a can, and with a liberal allwance of 'elbow grease.'"

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—**"Peck, Wigan."**

Compensation for Manurial Vales of Feeding Stuffs and Corn.

At a recent meeting of the Provincial Committee of the Surveyors' Institution for Bedfordshire, Essex, Herts, and Middlesex, Mr. H. Trustam Eve, F.S.I. (who is the secretary of the Beds Chamber of Agriculture and Farmers' Club), read a peper on the "Method of Valuing Manurial Residue of Feeding Stuffs and Corn." This has now been issued in pamphlet form, and in this shape will doubtless have the wide circulation it deserves. As it may prove of general interest, we reproduce the summary of Mr. Eve's paper, showing suggested scale of compensation for manurial values of feeding stuffs and corn.

The improvement by the consumption of feeding stuffs and corn on a holding shall, in the absence of any agreed substituted compensation, be on the basis of what the improvement is worth to an incoming tenant, as laid down in Section 1 of the Agricultural Holdings Act, 1900.

The amount shall be arrived at as nearly as possible by adopting as a basis the relative original manure values of feeding stuffs and corn as published by Lawes and Gilbert in the R. A. S. E. Journals of December, 1897, and March, 1898.

Seeing that in these original manure values no allowance is made for waste of nitrogen, phosphoric acid, and potash between the time of consumption, and when these constituents act upon the crop, it is advisable to make some deduction from these figures before arriving at the true compensation values.

It is considered that the suggested deduction of one-half, by Lawes and Gilbert, is too much (no reasons being assigned for the adoption of this figure), especially in the cases where feeding stuffs are fed directly on to the land.

It is recognised that nitrogen, phosphates, and potash act upon crops for some years, but it is not easy or advisable in practice to base compensation values upon more than the consumption during the last two years of the tenancy.

It is submitted that a large difference should be made in compensation values where feeding stuffs and corn have been regularly used, as against the sudden use during the last year or two of the tenancy.

Bearing in mind that the original manure value of a ton of linseed cake is, according to Lawes and Gilbert, £2 11s. 11d., and assuming the best conditions, and that feeding stuffs and corn have been regularly and well used on the holding, it may be fair to take £2 10s. per ton on the last year's consumption and two-thirds of that amount

£1 13s.) on the consumption of the previous year, as compensation for all the manurial residues left by the outgoer for the incomer by the use of linseed cake.

Where the conditions are bad and foods have only been used during the last two years, and little of it fed direct on to the land, £1 10s. might be taken for the last year, and £1 for the last year but one.

Average cases would be between £2 10s. and £1 10s., and between £1 10s. and £1, representing from 40s. to 42s. for the last year, and 25s. to 28s. for the previous year.

That the compensation for foods and corn other than linseed cake shall be as follows, in accordance with Lawes' and Gilbert's relative manure value tables:—Class I.: Decorticated cotton cake or meal, one and a-half times linseed cake. Class II.: Rape cake, malt culms, and undecorticated cotton cake, the same as linseed cake. Class III.: Beans, bran, coarse pollard, peas, and fine pollard at three-fourths of linseed cake. Class IV.: Clover hay at one-half of linseed cake. Class V.: Oats, wheat, meadow hay, barley, and Indian corn at one-third of linseed cake.

In fixing the rate per ton for linseed cake the circumstances of each case to be considered.

used the up-to-date methods they must fall behind their competitors, who were keenly alive to the advantages of science as applied to agriculture.

One matter which was causing the farmers anxiety was the drifting of the rural population into the towns. The difficulty of finding sufficient agricultural labour was very acute, and he was afraid that the monotonous and mechanical life of hedging, ditching, and ploughing had lost its attractions for those who possessed a certain amount of education and intelligence, and who thought they could do better in the towns. No doubt further attractions were necessary in the country and he thought it would be well if something could be done which would make life more interesting and endurable in the rural districts, and which would keep the people on the land. Apart from the question of pounds, shillings, and pence, no nation could afford to let its agricultural industry dwindle until it eventually became extinct; and, in his opinion, it was the duty of the Government to help agriculture as much as possible. He did not believe in indiscriminate legislation, and the question at issue ought not to be made a party question, for all classes ought to co-operate in improving the agricultural industry. The Agricultural Rating or cause any injustice to the working-man. (Applause.)

Sir James Rankin, M.P., said the raising of prices was all very well for the seller, but they could hardly expect the purchaser to look at the matter in the same light. There were not more than 200,000 persons in this country who grew wheat, but there was a population of 40 millions to be fed, and it was absurd, in the face of that to talk about protection with the view of raising the price of wheat. The tax ought not to be regarded as a measure of protection at all. The Government wanted the money, and, thrown over 40 millions of people, the burden would be very small. (Hear, hear.)

Two or three other members spoke on the subject, and it was then allowed to drop.

Cheese Prospects.

In an article dealing with the outlook of the trade in cheese for the coming year, "The Grocer" states that it is now recognised by the trade that supplies are now more in proportion with the demand, and that the "glut" that prevailed during the greater part of 1901 is now practically at an

The picture we show above represents the manner of using a very primitive implement. The breast plough, as it is called on the Cotswolds, resembles an immense shovel with a share turned up on one edge, and is worked in three successive movements; first, a thrust in from the breast; next, the cross-bar is dropped down to the thighs, which are protected by wooden guards called "bitters" or "betters" (*i.e.*, probably "beaters"), from which a further push is given; finally, the clod gathered on the blade is turned over with a quick movement to the right. The owner of the plough, now over eighty years of age, remembers as a familiar sight in his boyhood twenty men ploughing abreast in one field. Hardly anyone at work to-day can remember to have seen, much less knows how to use, one. There is no doubt that the labour necessary is very severe.

Agricultural Depression.

At the annual meeting of the Midland Union of Conservative Associations, held at Melton Mowbray, on Wednesday, a discussion took place upon the subject of agricultural depression. Lord Cecil Manners, M.P., who opened the discussion, said he did not believe the substitution of protection for free trade would bring about the necessary relief, although he agreed that a certain measure of protection was desirable. He was in favour of a moderate duty being placed on various imports, not only feeding-stuffs, but importations of all kinds. Among the reasons which had brought about depression in agriculture he mentioned unrestricted foreign competition and an enormous increase in the world's production. There were millions of acres more under cultivation now than twenty years ago, and when they considered in addition the enormously increased facilities of transport for bringing foreign productions into the British market they could see why the unprotected British farmer was unable to obtain a fair price for his produce, which would enable him to gain a living. Then they had to reckon with the scientific methods of agriculture, and unless the farmers kept abreast of the times and Act, the Animals Diseases Act, and the Light Railways Act had been very beneficial, and he thought the imposition of a duty on imported corn would be of considerable benefit. He did not regard that in any sense as a protective duty, but as a source of revenue he thought foreign corn was a commodity which might very fairly be taxed. He believed the burden would fall almost entirely on the foreigner, and that the advantage, if any—and he trusted there would be an advantage—would be realised by the British agriculturists—the landlord, the farmer, and the labourer. (Applause.)

Mr. Rouse Orlebar expressed the opinion that unless better prices were forthcoming for agricultural produce in this country, they could never expect to see a return to agricultural prosperity. They might do what they liked in the direction of cheapening transit and improving the markets, but better prices was the one thing necessary to restore prosperity to agriculture. With regard to the registration duty on corn, he could not conceive how anybody could seriously argue that a duty of a shilling a sack on flour could possibly raise the price of the last quartern loaf, when they remembered that 96 loaves were made from a sack of flour. A cheap loaf was essential to the prosperity of the country, and he did not think the registration duty would raise the price of the loaf end. As might reasonably be supposed, larger and constant purchases were soon followed by higher prices, and cheese which at the commencement of January realised 48s. to 50s. has recently been bought at 54s. to 56s. per cwt. on the spot. Meanwhile, so rapidly have the quantities of cheese in reserve or cold store, that were at first so excessive, been worked off, that it is said by some authorities that there are at present only about 20,000 boxes remaining uncleared at the Commercial Road depot, in London.

In April last the quotations for Canadian and American cheese of primest quality were 48s. to 50s. It will thus be seen that the value now, is 6s. per cwt. above what it was then, or almost back to the point where cheese ceases to be a popular article of food with the masses. By them anything above 6d. per lb. retail is considered too dear for common or everyday use, when animal food, more desirable and appetising in cold weather, can be bought at less money. Such being the case, premature engagements on an extensive scale at the moment are rather to be avoided than encouraged, until it is seen how far the increased demand that has latterly arisen for cheese is sustained and founded upon the actual needs of buyers for home consumption, who are, after all, the final arbitrators.

PRACTICE WITH SCIENCE.

Aspatria Agricultural College.

The annual distribution of prizes to the students of the Aspatria Agricultural College took place on the 15th inst., at Brayton Hall, kindly lent for the purpose by Sir Wilfrid and Lady Lawson. Sir Wilfrid Lawson, president of the college, presided, whilst the prizes were distributed by Mr. A. Hutcheson, of Beechwood, Perth, Vice-Convener of Perth County, Vice-president of the Highland and Agricultural Society of Scotland, and ex-President of the Scottish Chamber of Agriculture. The Principal of the College (Mr. J. Smith Hill, J.P.), presented a most satisfactory report.

The awards were as follows:—

NATIONAL AGRICULTURAL EXAMINATION BOARD.—Diploma Examination—Part I.: P. Fowlie, Bogfold Farm, New Pitsligo, Aberdeenshire. P. W. Goodwin, Heath Farm, Ansley, Atherstone. D. A. Lees, Slade House, Gravelly Hill, Birmingham (partly prepared).

EXAMINATIONS OF THE SURVEYORS' INSTITUTION.—Professional Associateship (Land Agency): A. Lindsay Watt, Muncaster Estate Office, Ravenglass.

SCIENCE EXAMINATIONS OF THE BOARD OF EDUCATION SECONDARY BRANCH (Science and Art Department).—E. H. Dodgson, Cockermouth.—Advanced Certificate in Agriculture; Certificate in Geology. J. N. Lyall, Auchtermuchty.—Advanced Certificate in Agriculture; Certificate in Theoretical Chemistry. H. N. Logan, Kelso, N.B.—First Class Certificate in Agriculture. J. H. Roberts, Liverpool.—First Class Certificate in Agriculture; Certificates in Theoretical Chemistry and Practical Chemistry. W. Adamson.—First Class Certificate in Agriculture; Certificates in Theoretical Chemistry and Practical Chemistry. C. W Oldroyd.—First Class Certificate in Agriculture. L. Carpenter, London.—Advanced Certificate in Agriculture. T. M. Glasson, Penrith.—First Class Certificate in Agriculture. H. J. Richardson, Newcastle-on-Tyne.—Advanced Certificate in Agriculture. H H. Stephenson, Uppingham.—Advanced Certificate in Agriculture; Certificate in Theoretical Chemistry. W. M. Dean, High Barnet.—Advanced First Class in Agriculture. T. Rule, Southport.—Advanced Certificate in Agriculture; Certificate in Geology; First Class in Botany. E. N M. Vernon, Shrewsbury.—Advanced Certificate in Agriculture; Certificate in Geology.

DIPLOMAS OF THE ASPATRIA AGRICULTURAL COLLEGE.—Lawrence Carpenter, care of Messrs. Curtis and Henson, 5, Mount Street, London, W. Eustace E. M. Vernon, Shawbury Vicarage, Shrewsbury. Edward H. Dodgson Derwent House, Cockermouth. Cecil W. Oldroyd, Haswell Vicarage, Sunderland.

CERTIFICATES OF THE ASPATRIA AGRICULTURAL COLLEGE.—W. Markham Dean, Arkley House, High Barnet. Heathfield H. Stephenson, Uppingham.

COLLEGE PRIZES AND CERTIFICATES.

(For second year students only): Agriculture and Agricultural Chemistry.—First, T. Glasson, Penrith; second, E. H. Dodgson, Cockermouth. Agricultural Botany.—J. H. Roberts, Liverpool. Theoretical and Practical Chemistry. — T. Rule, Southport. Land Surveying.—N L. Sparke, Deal. Engineering and Construction of Farm Buildings.—T. Glasson, Farm Book-keeping.—H. Linklater, Brechin, N.B. Forestry and Land Drainage.—E. H. Dodgson, Cockermouth. Agricultural Law (including Landlord and Tenant).—A. Park, Ulverston.

For first year students: Agriculture and Agricultural Chemistry.—First, J. T. Maxwell, Screel, N.B.; second, W. A. Metcalf, Whitehaven. Agricultural Botany.—H Ostlere, Kirkcaldy. Theoretical and Practical Chemistry.—H. Ostlere. Land Surveying.—J. T. Maxwell. Engineering and Building Construction.—J. H. Hughes, Manchester. Book-keeping.—J. T. Maxwell.

General Prizes.—Agricultural Entomology.—T. Rule. Geology.—N. L. Sparke, Deal. Best Plan.—A Park, Ulverston. Best Collection of Grasses.—T. Rule. Best Collection of Plants.—E. N. M. Vernon, Shrewsbury.

Aggregate Prizes (for second year students).—J. H. Roberts and T. Rule "Scholars of the College." For first year students.—J. T. Maxwell. For winter session students.—H. Ostlere.

Royal Agricultural College, Cirencester.

The spring term of this college closed on the 16th inst., when the Principal, the Rev. J. B. McClellan, M.A., conferred the diplomas, scholarships, and other awards on the successful students. A feature of the work of the term was the excellence of the essays sent in in competition for the Brown Scholarship, the subject being "Tuberculosis in Animals," Farwell getting the prize, and the good work done in connection with the recently established bacteriological department, under the charge of the veterinary professor. The chief awards of the class list follow:—

Honour Diploma of Membership (maximum marks 2,100, qualifying marks 1,400).—William Thompson, Inglewood, Penrith, 1,565; Francis Henry George Osmund-Smith, The Lawn, Westbourne, Emsworth, Sussex, 1,462.

Scholarships (maximum marks 3,300, qualifying marks 2,750).—First and Second Scholarship, £25 and £10.—Wilfrid Horsley Parker, Kynaston Lodge, Harrow Weald, Middlesex, 3,194; William Whyte Bell, Auchtertyre, Newtyle, Forfarshire, N.B., 3,176. Third Scholarship, £10.—Sheikh Makbul Husain, B.A., Gudia, District Bara Banki, Oudh, India, 3,118. Honourable Mention. — Highway, Browne, Brigstocke, Lambert, Sparrow, Morrison, Iredale, G. A. Smith, Farwell, Worsey.

The Middleton-in-Teesdale Spring Fair was held on the 18th inst., and was largely attended. There was a good show of horses, and the best classes of draught animals and strong ponies were inquired after, although sales were slow. Store cattle were very plentiful, and prices show a slight decline. Mountain sheep had also a downward tendency.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d. List of Game and Dairy Account Books post free of JARROLD, and SONS 10 and 11, Warwick Lane E.C.—[ADVT.]

LETTERS TO THE EDITOR

The Price of Poultry.

Sir,—"Good plump fowls at from a shilling to eighteenpence each." I am reading now from a letter which is in your last week's paper from Cheddar, in my own county of Somerset. All I can say is that he must take his poultry to a very bad market, for we have no difficulty in getting double these prices for all we have to sell; in fact, we had on offer from a person (who buys chickens for the fatting pens) to take hundreds under four months old at ninepence per pound live weight, but we did not accept, as we thought we could do better by killing them at home, and taking from 2s. 6d. to 3s. 6d. each, according to size and quality. We were lately favoured, through the local Technical Education Committee, with a free course of lectures on poultry-keeping, and there was discovered the great difference between the rights and wrongs of the subject. Therefore I would say to those grumblers who complain that there is no good in it, ask yourselves if your poultry get half the attention they deserve! Would you entrust your horses and cattle to the care of a boy or other person who has had no training in the matter, and who possibly feeds them when he can, and on what he can lay his hands on, or, more often, let them have nothing more than the grubs and seeds they can forage for themselves, while you either allow them to find their own roost on the nearest tree, or keep them in a draughty shed, which may be cleaned out once a year. Give fowls a healthy grass run and house and feed them properly, and they will pay more for the time and money invested in them than any other stock on the farm. This is our experience after keeping a hundred and more head, and keeping a correct account of income and expenditure. R. B.

April 25th.

Shire Horses in America.

Sir,—I notice in your issue of March 3rd, under the head of "Foreign and Colonial," some very sensible comments which are particularly interesting to me, as they touch on facts that I have been endeavouring to impress on breeders in England and America for over twenty-five years.

In 1874 I commenced the importation of Shire horses. I fixed upon them, after satisfying myself in a practical way that they were the best draft horses in the world, and just the sort to cross on our small native mares; knowing that the market for high-class draft horses in this country, if properly managed, would be practically unlimited.

At that time French and Belgian draft horses had gained a considerable footing, and their promoters naturally fought desperately against the introduction of Shires, well knowing the result would be another "Waterloo" if not checked, and their fears would surely have been realised had not the general depression in business during the nineties put a quietus on horse-breeding for nearly ten years.

During the years of prosperity the Shire had another and more dangerous enemy than the French and Belgian importer, viz., a set of unscrupulous men who, taking advantage of the low price at which unsound Shires could be bought, brought them here, and after fitting them up—concealing their blemishes as far as possible—sold them to unsuspecting, inexperienced patrons as typical high-class Shires. Of course, the defects were soon discovered, and the breed suffered as a consequence. Comparatively few of our farmers having had any experience with "side bones," "soarers," or "shiverers," they were easily imposed upon.

Our agricultural societies have not as strict rules as English and Scotch societies. No veterinary examination required. The judges are not always competent nor impartial, and as a result great injustice is often done in the awarding of valuable prizes.

It is impossible to estimate the injury resulting to American horse-breeding interests by the importation of unsound Shire stallions, and this loss has been shared also by English breeders, for, as your correspondent has correctly intimated, it has helped the French importers immensely, and proportionately retarded the sale of Shires.

Your correspondent suggests remedies that I have strongly urged, viz., the united efforts of reputable breeders to put an effectual bar to the exportation of animals for breeding purposes that are of inferior quality or having hereditary blemishes; this can be accomplished through the consular department.

The other suggestion is a good one that I have also proposed to several prominent breeders—that they combine and send over a consignment of desirable stallions and mares, and exhibit them at our leading shows.

It need not be done in a very expensive manner, and if borne by several public spirited breeders of means it would not be felt, and, if rightly managed, would result in big returns to them individually, and to English breeding interests generally.

It would not be necessary to bring what are recognised as the highest class in England. In fact, the greatest champions there would not be appreciated here, for they are not the best-suited to our needs.

There is a strong aversion in this country to the profuse "feather" that is so popular in England and Scotland; the main cause for this objection is found in the fact that in our best agricultural districts the soil is a rich black loam, which, when wet, is very sticky, adheres to the long hair, and is very difficult to remove. There being no gravel or stone procurable for road-makinfi purposes, the highways in those districts are liable to be very muddy several months in the year. In the far western ranch country, another pest exists in the form of a weed with an ugly burr, which, when ripe, easily detaches, and they collect in the long hair in perfect mats—of course, a great nuisance, which cannot be overcome while the long hair remains.

It is useless to explain to the farmers in those districts that the long hair is an indication of high breeding, for they answer at once, "We would rather have less breeding and less hair," and that preference accounts for so many patronising the Percherons and Belgians with their small, round, soft, meaty legs.

Successful merchants and manufacturers find that it pays to cater to the wishes or whims of their patrons, and to place their goods before the public in a way to force attention; the same course will pay in the world's horse markets.

If English breeders had been aware of the immense demand for draft stallions in America, and seen fit to cater to our needs at the start, they could have shut out all competition, for our people will have what they think the best for their purpose, regardless of cost.

Comparatively few American farmers have had the opportunity to study by observation the matter of horse-breeding that has been enjoyed by Englishmen for a century. It is only about thirty years since breeding of large horses began to attract much attention in the United States, shrewd men, with an eye only to their own profit, commenced importing heavy stallions from France and Belgium on a large scale. By subsidising the Press and rushing the business, they soon attracted general attention, and commenced the education of our farmers in horse-breeding on a *beef* basis.

Weight was made the chief consideration, and 2,000lbs. the standard, and as a consequence ninety per cent. of the inquiries for stallions commence, "I want one weighing a ton."

The Shire stallion that is most popular in the States is the smooth, round, compact sort, 16 to 16¾ hands, weighing 1,850 to 2,000lbs., with clean, flat, heavy bone, and as little feather as possible; bay, brown, or black colours, with little white; must be active, straight goers, and strictly sound. If a consignment of this stamp could be sent over, properly fitted, and shown at our leading agricultural exhibitions, it would result in great advancement of Shire interests on both sides of the water.

A mixed lot as to age and sex of, say, thirty to fifty head, would be a great attraction, and, if judiciously advertised, could be readily sold at remunerative prices at the close of the show season. Our show season commences about September 1st, and closes with the "International" at Chicago about December 1st.

GEO. E. BROWN.

Aurora, Illinois, April 12th, 1902.

"Prevention of White Scour in Calves."

Sir,—The Department of Agriculture and Technical Instruction for Ireland has issued and supplied me with a leaflet (No. 11) on the Prevention of White Scour in Calves, a copy of which I enclose.

Darwin, "Origin of Species," ch. 111, "Struggle for Existence" . . . "but in several parts of the world insects determine the existence of cattle. Perhaps Paraguay offers the most curious instance of this; for here neither cattle, horses, nor dogs

have ever run wild, though they swarm southward and northward in a feral state. And Agara and Renager have shown that this is caused by the greater number in Paraguay of a certain fly which lays its eggs in the navels of these animals when first born."

Professor Nocard in this leaflet (1) "That the disease is caused by a microbe which is discovered in diseased calves." (5) "The navel of nearly all the calves were affected by, or which have died of 'white scour' in County Limerick was found to be diseased." (8) "This supposition is completely confirmed by the fact that nearly all the calves that suffered from, or died of, 'White Scour' were, so far as they were examined found to have diseased navels. There remains no doubt therefore that the navel is the chief, if not the sole, seat of entry of the disease into the young calf." (9) "Professor Nocard states that the Lung Disease is associated with, and is but a sequel to 'White Scour.' Calves that have been affected with and have survived 'White Scour' are very likely to fall a prey to Lung Disease." While all will agree with Professor Nocard that Lung Disease would be a sequel to White Scour (provided that the animals live long enough), I cannot for one moment agree with Professor Nocard that diseased navel would be a precursor to White Scour. It is stated in the pamphlet that nineteen calves lived, although not treated according to the Professor's directions. If we interpret the pamphlet correctly, the writer knew not how, or by what process, the nineteen calves survived. The whole pamphlet, in fact, leads one to the conclusion that the treatment recommended in the pamphlet is in an inchoate state. It has been stated that there is no safer place for a cow to calve than in the grazing field. Darwin, "Voyage round the World," said he never saw a dead calf. I hold, however, there ought to be a separate house for cows to be placed in for calving, and also, if I might be allowed, cows ought to be milked in a separate house, and not in the stable, where the air is so polluted as to partially contaminate the milk.

From the disclosures in the leaflet one is inclined to ask how are we to be certain about sound lymph for vaccination purposes?

Recently my attention was arrested by the high rate of mortality in infants. After considerable thought and research, I came to the conclusion that the "retention of the Meconium" is the cause of much infantile mortality, and probably the parent of much consumption in the human family, and tuberculosis in cattle. In the year 1900 I proceeded to put my theory into practice, as follows: Practising on a newly-born calf, it was plain that if the Meconium was to be expelled from within, force was necessary which would be highly injurious to the life of the young animal, particularly as it appeared to me that the anus was, according to some law in the economy of nature, a sealed book. I therefore directed the byreman to put a greased finger into the rectum. The withdrawal of the finger was followed by the expulsion of the offending excrement. This was followed by his expressed surprise and my satisfaction. Thinking I had succeeded very well for a first attempt, I allowed the calf to exist on its own resources without any further interference from me. This calf did very well in rearing. The owner told me that when selling his young stock this heifer was the first animal picked on in his herd.

In 1901 I first heard of White Scour in calves in Munster. I advertised for a diseased calf, and exercised all the ingenuity possible to obtain one, without success. I have, however, a settled opinion that the retention of the Meconium is the origin of White Scour in calves, and without the removal of the meconium soon after birth and a separate existence obtained, in my opinion this is the cause and first step in the cure of White Scour in a nut-shell, and that it is futile to attempt to cure until my scheme as indicated is followed. The cheapest, most expeditious, and safest method of treating all young animals, and one which will recommend itself to the humblest individual in the cattle trade. The more fastidious might form a cane of tallow or soap dipped in a little hot water previous to insertion. Hoping you will find room for this letter in your influential paper, and thanking you in anticipation, yours truly.

JAMES WALLACE.

Mount Clifton, Belfast,
15th April, 1902.

P.S.—At the beginning of the present season a city dairyman, at my instigation, adopted my Hygenic Treatment with the greatest success. The calves that he sent to market were bright and lively, and he was thus enabled to effect a quicker and better sale. And while writing he has just called with the most favourable report, and he informs me that a Mr. B., a stock farmer, had purchased calves from him for several years, volunteered to state that this dairyman's calves had done better this year than any he had got from him before, or from any other person.—J. W.

Agriculture in Herts and Essex.

Speech by Mr. Hanbury.

For some time past there has been in existence at Bishop's Stortford a poultry, pigeon, rabbit, and cage bird society, founded primarily for the development of the poultry industry in Herts and Essex, but lately this has, at the request of several influential residents in those counties, changed its name to the Bishop's Stortford Farmers' Agricultural and Poultry Association, and will henceforth take an active part in the wide spreading movement for the amelioration of all branches of agriculture. Sir James Blyth, Bart., is president of the society, and Mr. Abel H. Smith, M.P., vice-president.

For the public inauguration of the association, and also to consider remedial measures in connection with the depressed condition of agriculture in the counties of Herts and Essex, an influential meeting was held at the Great Hall, Bishop's Stortford, on Thursday. The Countess of Warwick presided, and among others present were the Right Hon. R. W. Hanbury, M.P., President of the Board of Agriculture, Mrs. Hanbury, the Right Hon. Horace C. Plunket, President, of the Irish Board of Agriculture; Mr. Abel Henry Smith, M.P., Mr. G. B. Hudson, M.P., and Colonel G. B. Archer-Houblon, on Lady Warwick's right; and the Earl of Warwick, Sir James Blyth, Bart, Miss Blyth, Mr. J. A. Pease, M.P., Mr. C. T. Part, Mr. G. A. Lowndes, Mr. E. Pigg, Mr. and Mrs. E. B. Barnard, the Rev. H. M. Oswald, Admiral Vander Meulen, and others, on Lady Warwick's left. The Urban Council of Bishop's Stortford embraced the opportunity of presenting Mr. Hanbury with an address of welcome.

Mr. C. T. Park, chairman of the Agriculture Committee of the Herts County Council, explained their scheme of technical instruction in agricultural knowledge, which was to help farmers in experiments on their own farms, with scholarships at Cambridge for farmers and their sons, competitions for labourers, etc. Last year four farmers went through the course.

The Countess of Warwick, who presided, said she yielded to no one in her love for the land we lived upon. She was glad Bishop's Stortford was leading the way in a useful direction. Success went to those who had knowledge, and she hoped Mr. Hanbury would encourage their efforts. The motto of the Royal Agricultural Society was "Practice with Science," and in no other profession was science more hand in hand with practice than in agriculture. It was the fashion to run down the heavy lands of the eastern counties, but there was no land more fruitful if dealt with in the right way. She urged farmers not to set their faces against more knowledge.

Mr. E. B. Barnard, J.P., then presented the address of welcome to Mr. Hanbury. In the course of the address the Council said: "We appreciate the sympathetic tone of your public utterances and admire the feeling with which you approach the practical agriculturist in endeavouring to secure his confidence, without which no progress can be made." The address, which was artistically prepared, was signed by Mr. Herbert Sworder, the chairman of the Council.

Mr. Hanbury expressed his acknowledgments and said he welcomed the invitation to Bishop's Stortford, for the town not merely occupied an important position in the agricultural world, but had also given birth to the greatest Empire-builder that England had ever known. (Cheers.) He could not help remembering the marvellous generosity of Mr. Rhodes, whose wealth was going to many a land. In disposing of his English estate by his will, Mr. Rhodes provided that under no circumstances was that property to go to a mere loafer, and this showed that Mr. Rhodes considered that the country had still got a great part to play in English rural life. There was evidently an idea running in Mr. Rhodes's mind that it would be well if country gentlemen spent less time in London and the Riviera and more time among their tenants in the country rural districts. Another proof that this was one of Mr. Rhodes's ideas was shown by the fact that he insisted in the examinations for the scholarships which he had founded that consideration should be given, not to mere book learning alone, but also to athletic exercises and the building up of physique as well as brain. Mr. Rhodes was, in short, convinced that we must have men possessing the courage and self-reliance which were associated with a healthy, vigorous life.

He (Mr. Hanbury) had attended the present meeting because he felt that Government Departments were, after all, made for the people rather than that the people were made for them, and that it was accordingly desirable that Government officials should be brought into contact with the people. In agricultural matters, personal contact and personal communications were of vital importance. It was impossible for the President of the Board of Agriculture to administer that Board properly if he merely sat in his armchair in London, and he was accordingly going about the country and bringing himself into contact with those whose interests he felt it his duty to support. The styles of farming which prevailed in England were very varied, and it was impossible, therefore, to indulge in mere generalities. The Minister of Agriculture must go into each district, and ascertain the local needs in each particular district, and must not argue from the wants of one locality as to the wants of another.

He should like to see the land in more hands than it was at present. (Hear, hear.) The system of land transfer in this country was also too costly. The legal expenses attending the transfer of a small parcel of land were sometimes greater than the cost of the land itself, and this was a matter in which a change should be made. But he confessed that he had been disappointed with some of the remedies which had been proposed as universal panaceas for agricultural depression. For instance, the repeal of the malt tax had been strongly urged as a great panacea some years since, but it had not been attended with all the advantages which had been anticipated from it. Bimetallism was another nostrum which had been proposed, but we did not hear much of it now, and when the great gold fields of South Africa were fully reopened we should probably hear still less.

The Chambers of Agriculture had again been asking of late that the registration duty on corn should be restored. This had been done, but merely for revenue purposes, and he did not believe that it would raise the price of grain even in an infinitesimal degree. If a registration duty on grain did raise prices, the rise would probably do certain classes of farmers more harm than good, as they had to import feeding stuffs, but he believed that a mere revenue tax such as that which had been proposed by the Chancellor of the Exchequer would not affect prices. Cheap carriage by sea had been for many years the greatest enemy of agriculture, but farmers had also suffered from cheap competition by land. It was to be regretted that the railway companies did not study the interests of the British farmer more than they did. But the farmer was at a great disadvantage, in that he only forwarded small quantities of his produce at a time, and was charged accordingly. Where railway companies owned steamers in connection with their lines, they could charge pretty much as they pleased, as their steam shipping rates were under no control.

It was to be regretted that we were so much at the mercy of rings in a Protectionist country like the United States, which now regarded England as a dumping-ground for their cheaper agricultural produce. It was important that our food supplies should be placed upon a regular and stable basis. But 80 per cent. of the beef imported, and 50 per cent. of the grain imported came from the United States, and as the meat trade of America was in the hands of three or four great firms, the present position of affairs could not be regarded as satisfactory. We should produce more meat at home, then our food supplies would not only be cheap, but more continuous. Home-produced meat always commanded the best price, and there was certain to be a good demand for it, not only among the upper classes, but among the working classes of the country. Perhaps the automobile would yet bring the farmer into closer and readier touch with the consumer. With regard to education, it should be sensible, and be based upon the common-sense principle of retaining young people in the rural districts, rather than driving them into towns. The depopulation of the rural districts might also be arrested by removing some industries, and even some Government establishments from London to the country, where they could be carried on with better economic results. (Applause.)

Sir James Blyth, speaking as President, pointed out that between 1896 and 1901, the value of agricultural produce from abroad had increased twelve millions; poultry had decreased two millions, and he saw no reason why, with proper management, this two millions might not come into Herts and Essex.

Mr. Plunket said the success of English farmers would be a great encouragement to those across the Irish Channel.

Sir Thomas Fowell Buxton proposed a vote of thanks to the speakers, which was supported by Mr. Frank Ellis and Mr. Pease, M.P. After other votes of thanks had been passed the meeting closed.

Before attending the meeting, Mr. Hanbury paid a visit to Sir James Blyth's farms at Blythwood, Stansted, and inspected the Royal Commission Farms. Mr. Hanbury, who was met by Sir James Blyth and a number of distinguished visitors, including medical and other scientists, was greatly interested in all he heard and saw about the farms which, by Sir James Blyth's thoughtfulness and generosity, are being devoted to experiments, in the hope of finding out preventive and curative measures for tuberculosis. The party took luncheon at Blythwood, Sir James's residence.

THE WEATHER

MONDAY (April 21st).—Cloudy weather prevailed in most parts of the British Islands, and rain again fell at several places in the North and West. Rain was measured in the morning over nearly the entire country, as the result of the fall in the preceding twenty-four hours, but the amounts were mostly small. The winds were everywhere Southerly, and they were not generally as strong as on Sunday. Temperature was high during Sunday night, but the readings during the day were not generally much in excess of the average.

TUESDAY (April 22nd).—A large cyclonic disturbance had its centre in close proximity to our West coasts, and under its influence the wind had become Southerly or South-Easterly over the entire Kingdom, and had considerably increased in strength. Rain had fallen generally, and the amount measured in the morning for the preceding twenty-four hours was decidedly large in the South-West, the fall in the South of Ireland exceeding an inch. The temperature during the day was generally low for the time of year, especially in the North-East of England, where the highest readings were below 50deg. The morning was rainy in London, but the afternoon was fine, and the highest temperature was only 57deg.

WEDNESDAY (April 23rd).—Fine weather prevailed in most parts of our Islands, but the conditions were far from settled, and there was generally a good deal of cloud. The centre of a large cyclonic disturbance was still situated near our north-west coasts, and the winds continued strong from between south and south-west. Rain had fallen since Tuesday morning over the entire country, but the amounts measured were mostly small. The shade temperature nowhere fell below 40 degrees during Tuesday night, and in the south-west the lowest readings were about 50 degrees. The mid-day temperatures were not generally very different from the average, but they were higher than on the previous day in the south of England.

THURSDAY (April 24th).—The weather was fine over the greater portion of our Islands, but it was generally less settled in the North and West than in other districts. The winds continued Southerly over the entire Kingdom, although the force had decreased in most places. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, in the West and North-West, and the amounts were mostly small. Wednesday night was again warm, and it was only in the North of Scotland that the temperature fell below 40deg., while in many places the lowest readings were between 45deg. and 50deg. The mid-day temperatures exceeded 60deg. in many parts of England. The day was very fine in London, and in the afternoon the thermometer in the shade registered 64deg.

FRIDAY (April 25th).—The weather was fine over the whole of the British islands, but there was a good deal of cloud and mist in places on our Welsh coasts. The winds were mostly light, but they had become easterly in the south and west, and easterly winds were spreading over the whole country. Slight rain was measured in the morning as the result of the fall since the previous day at a few stations in the west. Thursday night was rather cold in the Midland and eastern districts, but the midday temperatures were fairly high.

SATURDAY and SUNDAY (April 26th and 27th).—Strong easterly winds were experienced over our islands during these two days, and on Sunday an easterly gale was blowing in the south of England and in the English Channel. The barometer continued high over the northern portion of the kingdom, and a region of relatively low barometer was situated to the south of us. Heavy rain was measured on Sunday morning in the south-west of England as the result of the fall in the preceding twenty-four hours, and rain again fell during the day on our south-west coasts. The temperature remained in fair agreement with the average, but there was a slight frost in parts of Scotland on Saturday night. The weather continued fine in London, and the wind was very strong from the east on Sunday, blowing with the full force of a gale at times in the gusts.

The Late Mr. George Ashburner.

It is with regret we have to announce the death after a very brief illness, of Mr. George Ashburner, of Low Hall, Kirkby-in-Furness, one of the most prominent and successful agriculturists in the North of England. He and his father farmed the Low Hall estate, which consists of 450 acres, under the late Duke of Devonshire, and Mr. Victor Cavendish, M.P., for the past fifty-one years. The deceased gentleman was a very successful breeder of shorthorns, and his stock had reached such a high standard of excellence that animals bred by him brought fancy prices from American and other buyers. He was also a successful breeder of Shire and Clydesdale horses,

THE LATE MR. GEORGE ASHBURNER.

while he also owned an excellent stock of sheep, which frequently won premier awards at leading shows. He was an ardent and enthusiastic member of local agricultural societies, and very frequently he acted as judge of shorthorns at the Royal and other shows, being regarded as one of the best experts in this department of agriculture. The cause of his fatal illness is attributed to a chill he contracted quite recently when travelling to Ireland to officiate as a judge at some show. He took a great interest in public affairs, an dhis demise is deeply regretted.

The Late Mr. David Buttar.

The loss of Mr. David Buttar will be keenly felt by agriculturists in the North. His death was not unexpected, as for some time past Mr. Buttar had been suffering from a weakness of the heart's action, ensuing on a heavy attack of pleurisy, to which was added symptoms of pneumonia. Mr. Buttar has for years been a most familiar figure in Strathmore and district, and his friendly advice and kindliness of manner will be much missed. It is as a breeder of Shropshire sheep that Mr. Buttar was most known. The formation of his famous herd was the deceased gentleman's chief interest in life for the past thirty-five years. At the beginning of that period he was a keeper of halfbreds, then, realising the great

THE LATE MR. DAVID BUTTAR.

qualities of the Shropshire, he purchased a ram of that breed to cross with his halfbred ewes. The excellence of the sheep thus produced being fully demonstrated, and having taken several prizes with them, Mr. Buttar turned his attention to breeding pure Shropshires. His success with these, owing to judicious selection and careful rearing, is well known. As an arable farmer Mr. Buttar also had great success. This was in no small measure due to the enlightened interest he took in scientific advances in the manner of working the soil. As a Director of the Highland and Agricultural Society, Mr. Buttar gave his talents freely to the service of the Society, and in devoting his attention to the practical part of the administration proved of great assistance. His specific position was that of steward to the forage department, and in this his energy was untiring.

FARM PROSPECTS

Bucks (Central).

We have had some nice showers, but generally a slight frost in the morning. Still, things have come on fairly well. Corn crops are mostly looking well, but pastures are rather bare where sheep have been in them. Beef has been scarce, and making a little more money, but this week is much lower. Trade for mutton is very slack; where it all comes from seems a puzzle, as roots have been scarce all through, and we thought there would be scarcely any mutton left by this time.

Wheat is making a little more, but there is very little left in the farmers' hands. It is simply ridiculous to think this shilling duty makes the difference. I don't know why the farmer is simply thought by the Radicals to be above their sympathy. If they look at the list of candidates for the Agricultural Benevolent Institution, I fancy they would see that farming is a not very profitable game; in fact, I know that very few farmers get any interest for the capital they employ, even if they can farm without losing capital, which I think not many can.—J. T. (April 25th).

Cornwall.

The season cannot be called at all forward. We had an extremely mild time in March, but through April it has been cold and dry, and the country is not looking nearly as fresh as it was four or five weeks since. The wheat is turning a poor colour, and in some cases the wire-worms are doing a lot of damage. It has been a good time for getting in the oats and barley; nearly all sown. A few more fine days, and all except those who are generally behind will have finished. In some cases, on the heavy soil, the land has only just got fit for working on.

Prices for cattle are very good. Good, fresh Devon steers and ripe, fat cattle are selling extremely well, but, unfortunately, very few in this part will benefit by the rise for some time to come. Winter provision has been so scarce that the cattle are in anything but good condition, and, as for fat ones, it is out of the question. If we are favoured with some mild showers shortly, things will look a bit more hopeful than they have done for some time past; it will be very welcome, and much needed.

Cumberland.

"Black" rain on 22nd nearly cleared our mountains of snow, and to-day real sun warmeth, makes grass, etc., etc., grow. Oats and seeds being down, potato planting is now well on. Grass "lettings" are over, and at increase of about 10 per cent. an acre on previous years. "Stints" do not come till middle of May. The Budget has caused here no increase in corn, but flour has gone up. Cumbrians are all good bakers, and every house, nearly, has an oven; so 4lb. loaf multiplication of the Hicks-Beach fraction of 1d. does not affect us. Let town and factory stupids, if they can screw up any courage, look after themselves. Agriculturists, however, are in the same boat, because feeding stuff for pigs and cattle is now dearer. The Vicar of Plumpton, under the heading, "Budget as Schoolmaster," is on the warpath in various British and Irish papers, and in the "Daily News" of 25th inst., suggests a source of revenue in a letter of which this is copy:—

"A TAX ON AMUSEMENTS?

"Sir,—Everyone must eat, but no one need buy a ticket for in or out door amusement places. My suggestion, made last week, is that a stamp duty commencing with a penny should be charged on all such tickets, including excursion tickets by land or sea.—Yours, etc.,

"H. M. Kennedy, Vicar of Plumpton.

"Cumberland, April 23."

—(April 25th.)

Derbyshire (West).

The weather up to last Tuesday was very cold and winterly, with very sharp night frosts, but on that day we had a good fall of rain.

Since that time quite a change into springlike weather, with just slight night frosts. The fields are now showing like spring; the wheat is looking fairly well, and spring corn is now coming up. Stock generally healthy, but stackyards are nearly all empty, and hay and straw is very short, but we hope to soon get a full bit of grass for the cattle and sheep. All feed prices kept up. There

seems a good promise of another good fruit year. The blossoms have been kept back, and now the leaves are getting ready to protect them.—C. M. (April 18th).

Devon.

The season has been favourable. Wheats look well, but are thin in the ground in some districts. Barley and oats have come up quickly, and have a healthy appearance. The catch fodder crops of rye trifolinm, and vetches are forward and abundant. Grass, both from rotation and permanent, is growing fast, and a moist May will secure good hay crops, which are wanted after such a season as last. All work well forward. Many mangolds tilled, and preparation for cabbage, kale, and swedes going on. Fat stock have risen £2 per head, and good stores selling well, and prospects at present decidedly promising. The blossom on the fruit-trees looks like a good season for that crop, but frosts may alter that. The welcome rain of the last few days has caused rapid vegetation, and the outlook is more cheering than for some years past at this date.—G. H. (April 24th).

East Suffolk.

Spring corn has come up well, and wheats look well and a good colour, but some pieces which went off in the winter recover slowly. Feed is beginning to grow now, and is badly wanted. There has been but little profit in the fattening of stock this winter, although prices—for pork especially—have been better, and now the higher prices for feeding stuffs make matters worse.

Looking at

The Tax on Corn,

from a national point of view, it is unsound in principle. It would be wrong to tax anything that affects trade. No matter what the thing is, where it can be produced or manufactured cheapest and best, there let it be done, and let free and fair competition all the world over rule it. Looking at the tax in an agricultural light, it is a tax on the producer of meat, milk, eggs, etc., and it comes at a time when the farmer has turned his attention considerably away from corn-production and adapted himself and farm more to the production of other things.—H. P. Y. (April 25th).

Leicester.

The prospects of a good season are at present perfect—grass, grain and fruit. But we are not out of the wood yet as to weather. Cattle that have laid out all winter without sheds look well, and have practically required no hay. A good crop of lambs. T. P. C. (April 25th).

Staffordshire (Mid).

Although vegetation, notwithstanding the favourable weather of the last few days, is still rather backward, the condition of the land, both arable and grass, is satisfactory. The surface soil is almost everywhere in good tilth on plough land, and to-day I notice that the mangolds are beginning to make an appearance above ground. Our pastures and meadows, although rather bare of grass, have a healthy sward, and live stock are doing well.

The Proposals in the Budget

of duties of 3d. per cwt. on corn and 5d. on flour and meal, if persisted in, will be looked upon as a tax on each head of live stock, from the hen to the horse. The milk-selling farmers of the Midlands have, during the past winter, as also during the drought of the preceding autumn and summer, bought very largely of corn and meal now made dutiable. Of course, the duties on corn and meal will have a corresponding effect on oil-cakes of all kinds, which will consequently be made dearer by the duties. It would be difficult to give a satisfactory reason for putting an import duty on corn and meal used for live stock and letting cakes come in free of duty. The effect on farmers is absolutely a discouragement in the use of foreign feeding-stuffs, inasmuch as the duties are an indirect tax on home-made meat and milk. Surely, if imposed at all, these duties will last only one year.—T. C. S. (April 25th).

Nottinghamshire.

The weather has been more genial during the past week, and some nice-growing showers have fallen, which has caused the crops and vegetation to make a manifest show in growth, more especially the pastures. The wheat plant has recovered from the severe check which it sustained by the late sharp frosts; many pieces are now beginning to tiller nicely. But as a rule, the plant is not too thick on the land. With regard to the acreage under wheat, there is about the same number as last year hereabouts; perhaps little more breadth under spring wheat. There is, however, only about 10 per cent. of the old stock of wheat left on the farmers' hands, and perhaps not that, for old stocks are remarkably scarce; the same remark applies to hay stocks, hence keep is very scarce and dear. At the late fairs held, beasts, although fetching good prices, dragged a little, for the pastures are bare. There is a deal of discussion anent the corn tax, and wheat has risen in price; but all right-thinking people have not much to say against it, and the stir will end in a fiasco. In many towns the butchers have risen the price of beef 1d. lb., owing to the scarcity of the article. The cereals have come out of ground well. Many farmers have begun to set potatoes, and prepare the land for mangels, etc.; this work being well forward. The store stock are generally healthy, but not in very high condition; the same may be said of the flocks. Taking all round the outlook at present in North Notts is not very roseate, but a little better than last spring, if anything, but there is room for improvement yet.—"Agrestic." (April 25th.)

Somerset (West.)

The season at this time of the year is pretty well all that could be desired for agricultural purposes. We have rubbed through the winter with our live stock almost better than was expected; the last ten days of showery weather has caused a great growth in vegetation. If straw and hay are nearly exhausted, we are able to turn our cattle in the pastures by night, which is better than keeping them in a dirty lair. We are not free from little frosts by night, tending to keep, no doubt, vegetation in health from making too rapid growth. I think we may say that Springtime is in good season, and altogether looks fruitful. We have had a good time for spring sowing and seeding, and that class of work is pretty well completed, and the corn visible above ground. Field work generally is forward.

The bulk of grass for hay will now be unfed. But although corn and grass now look and promise well, nothing can be advanced as to the results of crop. Live stock generally are in a healthy state, and, fortunate for the man who is well stocked, for both cattle and sheep grazing or fat are selling at an advanced price to what they were a month ago, and I trust that the year may finish up as well as the start gives hope.—A. B. (April 25th.)

Westmoreland.

Spring sowing, that is of grain, is now completed, and a most favourable season it has been all round; it is scarcely possible to conceive one more favourable; the land has been in the pink of condition, and its appearance when the labour is completed is more like a neatly finished garden than that of ordinary team-work, and the showery, genial weather since sowing was completed is pushing it rapidly forward. Many fields are already green when seen in the early morning, and as every seed can scarcely fail to vegetate there is an all-round favourable prospect for a bountiful harvest. With our capricious climate we can have many cheques and drawbacks; still, a good start is always important. The preparation of the land for roots was proceeding rapidly, and the land was in fine order, and here and there the planting of that most capricious crop (potato) had already commenced; but the appearance of the drills are somewhat rough and harmonise badly with the beautiful finish on the adjoining fields of corn; as the results of last year's crop (with the exception of those who were fortunate enough to dispose of them soon after lifting), they have in many cases proved of less value than even the short corn crop, as the latter has generally yielded better than it was expected, and the demand has been, and still continues, good, and the prices higher than for several years past.

We had a copious rain on Tuesday, which suspended team labour for two days on strong soils, but the ploughs are again at work, preparing for mangel and early turnips; the former proved a good crop, and they are coming out of the pits in splendid condition, and are proving a most valuable auxiliary to the deficient turnip crop. A much greater breadth of mangel is likely to be sown this year than in the past, as up to the present there has been no appearance of disease similar to what root crops of other descriptions are subject. Beef and store stock have sold well ever since the commencement of the year, and the former continues to rise; and Autumn-bought cattle have paid well for their keep. Sheep and mutton have, on the contrary, been very disappointing, and in the early winter left little or nothing for their expensive keep. The lambing season, both early and late, has been all that could be desired, and the crop of lambs abundant and the losses small.—T. B. (April 25th.)

Foreign Prospects.

FRANCE.—Putting aside some local complaints as to too much moisture, the wheat crop presents a fine appearance, and the latter remark is applicable to rye, barley, and oats.

HOLLAND.—The condition of the cereal crops is regarded as generally satisfactory, and weather favours the spring sowings.

GERMANY.—The condition of the crops in Prussia in mid-April compare very favourably with the returns at this time last year. Wheat and rye standing as "good" against "average" in 1901. Our Berlin correspondent says that this report, in conjunction with favourable weather, caused a weaker feeling in the market.

ITALY.—In the Northern districts weather favours wheat, but in the Centre and South more rain is desired.

SPAIN.—Owing to copious rains in most parts of the Peninsula, the outlook for the cereals harvest is very promising. In many provinces an abundant wheat yield is expected.

RUSSIA.—Mild rainy weather now prevalent over a large portion of the south and south-west is proving highly beneficial to cereal crops. Snow has not disappeared from Central and Eastern districts, and it is believed that the crops have escaped frost damage.

HUNGARY.—An official report states that cereal crops have wintered satisfactorily and plants are in fine form. Recent rains have benefited the spring sowings.

AUSTRIA.—Autumn sowings have come well through the winter, and the outlook is hopeful. Spring sowings are almost completed under fair conditions.

UNITED STATES.—The weather has been unfavourable for wheat, and there is a moderate decline in prospects, but the general average condition is fair. Oats have made a rather poor start. Maize is starting well in the South, and conditions are favourable for planting in the principal sections. There is an increased acreage in the North-West.—*Dornbusch.*

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended April 19, 1902, together with the quantities imported in the corresponding week of the previous year:—

Damages for the Poisoning of Agisted Bullocks.—At the Leyburn County Court recently before, his Honour Judge Templer, Francis Plews, farmer, Leyburn, claimed £24 from James Ake, Poal Park Farm, Constable Burton, for the loss of three bullocks which had been poisoned whilst under defendant's care for agistment. The claim was reduced by £4 16s. due for agistment. The case for the plaintiff was that he placed 11 bullocks with the defendant, and the three in question were poisoned by eating of a yew tree in a grotto adjoining the farm, which was not adequeately fenced. The plaintiff alleged that defendant had said he knew the grotto fencing was dangerous and bad, and that he had been at Mr. Rodwell, the estate agent, all the summer to have it repaired. James Ake, the defendant, said he saw the beasts every day they were with him. The fence, in his opinion, was a good one on the morning when the cattle were found dead, and he denied in toto the alleged conversation respecting his having asked Mr. Rodwell to repair it. His Honour held there was practically no defence, and gave judgment for the amount claimed, less 12s. received for the hides, with costs on scale A.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt.—We continue to have a limited enquiry at about late rates. Barley 9d to 1s per qr. dearer. Wheat advanced 1s 6d to 2s per qr. Oats and maize made 1s per qr. more money. Flour improved 1s 6d per sack.—NIXON, GOWER AND Co.

Mark Lane, Wednesday.—Although to-day's attendance was small, sustaining influences were again prominent in the general departments, but buying was off down in most cases since noon. With the supply of English wheat now exhausted here, and exceptionally scarce in the country districts, there is nothing to test the range of price, enhanced figures being, however, given when occasion arises. Foreign sorts of all descriptions are at a premium. There was no pressure whatever evinced in the flour market, with patents for immediate delivery very scarce, and American fancy brands almost unobtainable, as of late. Mayblossom, 25s 6d; of second patents, Guinea Gold, 23s 6d. Bakers' grades continue unrelieved in supply. Iron Duke, 20s to 20s 6d ex store, Cascadians, 23s. Country flour is still influenced by excessive scarcity of English wheat. Town households, 24s 6d, and whites, 3s per sack more. Town-made, No. 1 households, 22s 6d cash ex mill. Grinding barley remains in moderate supply on spot, and Odessa again rather dearer, ex quay at 20s 3d to 20s 6d, with 20s ex ship. Oats were again assisted by consumptive inquiries, although not to any extent, with sellers resisting lower offers in most cases. Maize unchanged.

Mark Lane, Friday.—Everything worked smoothly on the London Corn Exchange to-day. Wheat generally 6d firmer, and maize 3d to 6d dearer since last Friday. On the other hand, there was only a limited attendance, with buying of small dimensions. The English wheat trade may be considered now over, with farmers refusing to sell except at further enhanced prices, while busy on the land. Whites, 32s to 34s, and reds at 31s 6d to 33s per quarter, according to sample, showing a still higher range. In the country, 30s 6d to 31s, free on rail, would be the general figures named. With scarcity on spot, sellers of foreign descriptions find no difficulty in establishing late enhanced rates; but buyers abide events while working on present holdings. No. 1 Northern Duluth inspection quoted at 32s 3d landed, and 32s ex ship to arrive. No. 1 hard Manitoba, 33s 9d, in former position. Hard Kansas Winters, 32s ex ship to come up, and none on offer ex granary. Australian goes into consumption firmly up to 32s 6d and rather over, ex ship, 496lb. New Zealand Tuscan (duty free) ranges at 31s 6d to 32s 6d ex store. Both Russian and Indian remain above United Kingdom parity. River Plate nominal in absence of offers. There was nothing fresh in the flour market. Millers were asking high prices, and actual shortage becomes more felt respecting fancy patents. Mayblossom, 25s 6d; or second patents, Guinea Gold, 23s 6d; and bakers, Iron Duke, 20s to 20s 6d ex store; Cascadias, 23s ex store; town made, No. 1 household, cash, ex mill, 22s 6d. Grinding barley unaltered, and in moderate supply. Odessa, 20s 3d ex quay, with Danubian in same position at 20s. Fair poultry, 521b Danubian, 22s. Malting nominal for English, and the season for malt being over renders nothing fresh. Foreign steady. Oats were again selling at late rates, with no falling off in consumptive attention. Mixed Canadian maize continues out of the market, and nominal.

COUNTRY.

Ashford, Tuesday.—Wheat again dearer, but rather on account of the scarcity than through the duty. Other sorts of corn were also up in sympathy. White wheat, 31s to 33s; red ditto, 30s to 32s; black oats, 21s to 24s; white ditto, 23s to 26s; round maize 24s to 25s.

Banbury, Thursday.—Wheat, 27s to 28s per qr; do red, 30s 6d to 31s 6d per qr.; barley, 27s to 30s per qr.; beans, 34s to 35s per qr.; oats (black), 19s to 21s per qr.; peas, 32s per qr. Market 1s to 2s advance for wheat. Oats and other corn 6d to 1s.

Birmingham, Wednesday.—Trade was quiet, but prices generally continue to advance. Foreign wheats were 3d to 6d per qr. dearer. English wheats 11s to 11s 6d per bag; 6d per quarter more money was asked for grinding barley, quotations ranging from £1 3s to £1 6s per qr. Liverpool maize 3d per qr. higher, both Plate and round making 23s to 23s 3d sharpness.

Boston, Wednesday.—Wheat, 31s and 31s 6d; grinding barley, 23s 6d; beans, 35s and 37s; maize, 23s to 23s 6d

Braintree, Wednesday.—Wheat in small supply, and prices advanced from 1s to 2s per quarter. The trade was good. Red wheat made up to 32s per quarter, and white 33s.

Brighton, Thursday.—Old white wheat, 33s to 34s; old red ditto, 32s to 33s; barley, 29s to 34s; grinding ditto, 22s to 23s; English oats, 22s to 25s; beans, 35s to 36s. Oats 6d to 9d dearer; barley, 9d. dearer; American flour 1s dearer. Wheat in small supply, and 2s dearer on the week. Quiet trade and small attendance.

Bristol, Thursday.—There has been a good business since our last. To-day English wheat was very scarce, making a shilling advance. Foreign 6d dearer; grinding barley 3d dearer; maize 1s more money; oats very firm. Flour sales have again been fairly numerous, and a further advance of 6d to 1s has taken place.—GRACE BROTHERS.

Bury, Wednesday.—Wheat: Farmers seemed indisposed to part with their samples, although the actual advance in values considerably exceeds the about 1s per quarter import duty on foreign wheat. Rather extreme prices prices were asked at the opening of the market, but although the supply was only small, business could not be done at anything over 30s 6d to 31s 6d per 504lbs. Flour was a strong trade, at 2s per sack advance. Oats, beans, peas, lentils, and grinding barley fully maintained their last week's advance. Maize was firm at the recent advance, as also was maize germ. Linseed cakes: English were offered rather lower, at £8 15s to £9, but foreign were firm, at £8 5s to £8 10s per ton. Cotton cakes firm Milling offals remain very scarce, and are helped by the duty on imported meals.

Cambridge, Saturday.—The local markets have been scantily supplied during the week. Wheat is now in few hands, and holders demand high prices. Farmers report well of the growing crops. At this market to-day farmers sold rather more readily at the advanced prices. Supplies were not large, and millers were forced to give 1s to 1s 6d more money; red wheat making 32s to 32s mills, 31s 6d to 32s 6d near stations, and white 33s. Oats are scarce, and command high rates, 11½d to 1s 1d per stone. Beans 6d dearer.

Canterbury, Saturday. — Wheat again a shilling dearer, but not much business doing. Ruling prices: White wheat, 33s to 35s; red, 32s to 34s; grinding barley, 22s to 24s; white oats, 24s to 26s; black oats, 21s to 24s; grey peas, 33s to 35s; tick beans, 36s to 38s; mazagans, 33s to 34s; round maize, 24s to 26s; flat, 29s to 30s per quarter; spring tares, 7s to 8s; giants, 8s to 9s per bushel.

Carlisle, Saturday.—Very small supply of oats in our market to-day. Good demand at 1s quarter dearer; 23s 3d to 24s 6d per quarter 33lbs.—THOMAS ROBINSON.

Chester, Saturday.—No change in prices of English grain, which maintained full rates of last week. Indian corn has had sharp advance, 9d per sack more being asked for prime old American maize. Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding dull, 3s 6d to 3s 8d per 64lb; beans, 5s 8d to 5s 10d per 80lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 46lb; Indian corn, 13s to 14s per 240lb.

Chichester, Wednesday.—Small attendance and quiet trade. Wheat was steady at last week's advance. Barley was 3d per quarter higher, and flour on the week marked a rise of from 6d to 1s per sack.

Croydon, Thursday.—White wheat, 32s to 33s; red ditto, 29s to 31s. Malting barley, none; grinding, 23s to 25s. Oats, 19s to 22s. Beans, 31s to 35s. Peas, 29s to 31s. A small supply of wheat on offer, trade very firm; all spring corn dearer.

Colchester, Saturday.—Very little wheat offering, and, to supply their wants, needy millers had to pay 1s per qr advance upon last week's prices. Practically nothing offering in spring corn.—FRANCIS AND Co.

Devizes, Thursday.—There was an exceedingly small supply of corn, and to-day there was a further rise of 6d per sack in the price of wheat. Oats were also very scarce and dear. The following were the quotations:—Best wheat, 16s to 17s; secondary ditto, 14s to 15s; new wheat, not quoted; secondary, not quoted; grinding barley, 20s to 24s; malting ditto, 29s to 34s; rye, 23s to 25s; winter oats, 22s to 24s; beans, 16s to 20s; fine flour, 24s to 24s 6d; extra fine, 25s to 30s; best bread, 6s 10d.

Glasgow, Wednesday.—Wheat and flour are quiet, with prices rather against buyers. Indian corn and round maize steady, with quiet trade. Foreign oats firm, with little doing. Home oats about 3d per 264lbs. dearer. Grinding beans and Canadian pease, none on spot; price merely nominal. Bran and thirds firm at full prices. Oatmeal 6d per sack dearer.—GIBSON AND CLARK.

Ipswich, Tuesday.—The wheat supply was moderate, and farmers were asking higher prices, and seemed inclined to hold for more money than millers can afford. The market was from 1s to 1s 6d per qr. dearer on the week, and reds closed at from 31s to 31s 6d, with whites 31s 6d to 32s per quarter. All meals and feeding stuffs were quoted at fully 5s per ton more money, millers' offals particularly being sparingly offered. Fine middlings £6 15s to £7, coarse ditto £6, and bran £5 15s to £6 per ton. Maize 1s to 1s 6d dearer on the week, at 25s to 26s 6d per qr. Flour, in sympathy with wheat, advanced a further 1s per sack on the week, making a rise of 2s per sack. Linseed cake firm at £9 5s.

Leeds, Tuesday.—The market rules exceedingly firm to-day, and millers show more disposition for business at fully 6d per qr. advance since last Tuesday on both English and foreign wheat. Forward business in oats is checked by the higher prices asked from abroad; spot values firm; beans 6d dearer. Maize rather better.—DUNNS AND Co.

Maidstone, Thursday.—There was an average market, with all corns dearer in consequence of the war tax. Quotations:—White wheat, 29s to 31s; red ditto, 28s to 30s. Grinding barley, 21s to 23s. Oats, 21s to 25s. Peas, 36s to 37s; white ditto, 37s. Maize, 24s to 28s. Beans, 36s to 40s. Tares, 7s to 10s. English linseed cake, £8 10s to £9; foreign ditto, £7 15s to £8 10s. Cotton cake, £5 to £5 5s.

Leeds, Friday.—American wheats the turn lower. There is no further advance upon any descriptions of wheat since Tuesday, all of which, however, are very firmly held, especially English flour. Beans, peas, maize, barley, and other articles at full late values, with a hardening tendency.

Leicester, Saturday.—Good attendance, with better supplies of home-grown wheats, for which extreme rates were demanded. Prices, 30s to 33s 6d per 36 stones. Barley quiet. Beans and oats very firm.

Lincoln, Friday.—Small supply of English wheat. Trade slow at 1s advance. Foreign wheats 6d to 9d up on week. More money asked for oats, but no trade. Maize and beans may be quoted dearer.

Liverpool, Friday.—The market has had a poor attendance, and wheat is in small demand, but prices are ½d to 1½d advance on previous market quotations. Flour.—No further change has been made in the quotations for English milled flour, but foreign brands are generally again advanced in values. The demand is, however, slow. Maize.—Mixed is firmly held at 1d advance, but meets a very slow consumptive inquiry. European is also 1d. dearer, with a quiet trade passing. Plate is in moderate demand, at about ½d over last Tuesday's prices. Barley.—Malting is idle, nothing doing, Chilian being 6d to 1s lower to sell. Feeding, however, is firmly held at quotations, but quiet. Beans firm, owing to scarcity, with a moderate inquiry. Peas are firmly held at late rates for No. 2 White Canadian; other sorts in quiet demand. Oats have been in fair request. English sorts sold at full prices, and for foreign qualities ½d per bushel advance has been paid. Oatmeal in slow demand, but is held at the extreme prices of last market day. Oilcake is slow for spot lots, but quotations forward are hardening.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Very little variation from the position of the wheat trade. Firm at the advance of last week is about the proper record, though some owners of choice samples obtained an advance of 6d to 1s per qr. Barley is slow, though keeps the price fairly well. Oats are not any dearer on the week, but the cost of them is comparatively high against other provender. Maize, beans, and peas no change, nor any alteration in tares, rye, hemp, brak, sergo, millet.

Manchester, Wednesday.—English wheat is quoted at slightly higher rates than last Thursday, and sellers on the whole are firm thereat. Flour continues in quiet demand; but millers want rather higher rates for anything done. Indian corn also is firm, with a hardening tendency in view of small supplies. Oats, peaso, beans, and barley move quietly at full rates.

Newcastle-on-Tyne, Saturday.—A fair demand for wheat on spot and near at hand, prices favouring sellers. Maize steady at last week's prices. Oats firm, sellers asking 6d advance, which, however, checks sales. No change in barley. Peas and beans scarce and dear.—JOSEPH POLLARD AND Co.

Newport, Wednesday.—Wheat was in better demand, at an advance of 1s 6d to 2s on the week, including the new tax. Maize 1s to 2s advance. Barley slow, and about 1s dearer. Oats very firm, at an advance of 1s to 1s 6d. Flour 2s 6d per sack for fines.

Norwich, Saturday.—There was a fair supply of wheat at our market to-day, with a further advance since last Saturday of 1s per qr. No improvement in the weather, which remains very cold, with biting east winds. Wheat, red, 32s to 33s per qr. weight 63lb per bushel imperial. Corn inspector's return for the week ending 21st April, 1902: Wheat, 1,179, 27s 6d.—J. ARTHUR MILLS.

Nottingnam, Saturday.—Wheat but very little offering, and values advanced 1s per qr., but trade ruled slow. Grinding barley made full rates. Oats and beans in small supply, and fully 6d higher.—R. HUBBLE.

Peterborough, Saturday.—Wheat trade a full sixpence dearer on the week; supply quite moderate, but rather more than of late. Oats firmly held for full prices, but demand slow.—THOMAS HILL AND SON.

Plymouth, Thursday.—Very fair attendance; good trade; advance prices. Maize, 3d dearer; barley, 6d dearer; wheat 1s to 1s 6d dearer; oats very firm.—ORLANDO DAVIS AND Co.

Reading, Saturday.—An unsettled feeling pervaded the trade here to-day, and as a result sales were scarce. The quantity of corn on sale was unusually small, especially home-grown wheat, and chiefly for this reason higher prices were asked, quotations ranging from 30s to 33s per qr. Other descriptions of corn changed hands steadily at rates fully equal to those which have recently prevailed.

Ripon, Thursday.—A fair attendance and a firm tone prevails. Wheat, oats, and maize rather more money. Wheat, English, new, 30s 6d to 31s 6d; ditto foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; ditto malting, 27s to 32s; oats (new), 24s to 26s; round maize, 24s to 26s per qr; beans, 1s per stone; bran, £5 15s to £6 5s per ton.

Romford, Wednesday.—English wheats very dear, owing to scarcity. A small quantity changed hands at 31s to 32s 6d per qr., according to the sample.

Rye, Wednesday.—White wheat, 30s to 33s; red ditto, 30s to 32s. White oats, 22s to 25s; black ditto, 21s to 25s. Barley, 29s. Tick beans, 35s to 38s; Mazagan ditto, 33s to 35s. Grey peas, 33s to 35s.

Stamford, Friday.—Wheat advanced 1s to 2s per qr. Oats and beans were quoted at fully 1s dearer. Maize very dear. Short supply of every description of corn.

Sheffield, Tuesday.—The attendance was poor. There was very little English wheat on offer, and prices fully maintained last week's advance. English oats were scarce, and quotations advanced 6d and 1s per qr. Beans and maize were firm at last week's prices, while barley was 1s dearer. Quotations:—Wheat, white, 31s to 32s, ditto, red, 31s 6d to 32s 6d per 504lb; barley, grinding, 23s 6d to 24s; ditto, malting, 30s to 32s per 448lb; oats, new, white, 23s to 25s; ditto, new black, 21s 6d to 23s per 336lb; peas, grinding, 36s to 37s; ditto blue, 53s to 80s; beans, Egyptian, 35s to 35s 6d per 504lb; ditto English, new 37s 6d to 38s per 532lb; Indian corn small, 24s to 25s; ditto American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—English wheat scarce, and advanced 1s 6d to 2s on the week, selling at 31s 6d, at which price there was a good demand. Oats, 24s, a rise of 2s on the fortnight; beans, 36s, farmers being reluctant to sell at this figure. Everything in small supply, and a limited amount of business doing.

St. Neots, Thursday.—Only a few samples of wheat on offer, and these were mostly held at prices above the views of buyers. Some sales took place at 32s per quarter 504lbs. Oats were scarce and dearer.—ELGOOD AND SON.

Stockton, Wednesday.—No samples of English wheat showing. The foreign wheat trade keeps firm, owing to the continued rise in America, but prices show no change from last week when they were from 1s to 1s 6d per qr. up. Oats and maize firm, and 3d dearer. No malting barley showing.

Sunderland, Saturday.—Farmers offering very little wheat, and prices are 1s to 2s per qr higher. Barley and oats 1s dearer. Arrivals coastwise: Wheat, 689 qrs; oats, 175 qrs. Foreign: Wheat, 8,480 qrs.—E. AND F. RICHARDSON.

Wakefield, Friday.—The wheat market remains exceedingly firm, but does not follow the speculative movements of the American exchanges. Millers observe great caution in their operations, and do not readily pay the further advance of 6d per qr. Maize and oats 3d dearer. Beans unchanged.—DUNNS AND Co

Wakefield, Friday.—A very quiet market to-day, with a small attendance, and but a nominal business passing in wheat, which is quoted 6d per quarter dearer on the week. English malting barley now in very small supply. In feeding stuffs 3d per quarter advance is obtained with the exception of beans.—MICHAEL SANDERSON AND SON, LIMITED.

Wisbech, Saturday.—A moderate supply of grain. Wheat advanced 1s per qr. on the week: prices, 31s to 32s. Oats, 23s to 25s. Beans 35s to 39s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a good attendance, but the market was in a disturbed state, owing to advances in prices elsewhere Quotations: Wheat, new, 32s 6d to 33s per 210lb; oats, old, 16s to 17s, new, 13s to 14s; beans, old, 16s to 17s; new, 14s 6d per 196lb, barley, 32s to 33s per 448lb; new maize, 25 to 27s; old, 28s 6d to 29s 6d per 480lb.

Worcester, Saturday.—Wheat scarce and fully 6d per quarter dearer. Barley 6d to 1s higher. Oats at full rates. Wheaf, white, 29s 6d to 31s 6d; red, 28s to 29s 6d per quarter.

Worksop, Wednesday.—Fair attendance of farmers and factors; very little grain on offer, and trade still unsettled, last week's advance on wheat and feeding stuffs of 1s. per stone being maintained. White wheat, 29s to 30s; red wheat, 29s to 30s; grinding barley, 26s to 27s; white oats, 22s 6d to 24s; black oats, 21s to 23s; round maize, 24s 6d to 26s per qr.

York, Saturday. — Farmers are offering very little wheat. They say they have not much to thrash, and ask an advance of a shilling per quarter, which they cannot obtain. Quotations: Fine white, 30s to 31s; red and mixed, 29s to 30s per quarter of 35 stones; feeding barley, 24s to 26s per quarter of 32 stones. Oats very scarce and dear; white Tartary, 21s to 22s; black, 22s to 24s; white Garton, 23s to 25s per quarter of 24 stones. Rye, 8l. Beans, 11d to 1s per stone.

FOREIGN.

Hamburg, Saturday.—Stimulated by reports from foreign markets, there was an increasing demand for all descriptions of grain, and prices took a turn in sellers' favour; however, towards the end of the week the demand abated, and our market closes quiet. The imports during the week amounted to 22,196 tons wheat, 5,388 tons rye, 2,956 tons barley, 22,196 tons maize. Hard winter wheat No. 2 is selling at 29s. No. 2 Northern Duluth is held at 28s 6d, Manitoba No. 2 at 28s 6d per 480lb, Walla Walla at 29s 9d to 30s 3d per 500lb. Rye firm. Offers are scarce. 9 15-20 Odessa-Nicolaieff April-May shipment is held at 23s to 23s 3d per 480lb c.i.f. Malting barley quiet. Mecklenburg, Pomeranian, and Prussian is offering at 25s to 27s. Bohemian and Saale at 28s to 32s per 448lb f.o.b. Feeding barley in demand, 60 to 61 kroner Russian, and Danubian prompt shipment is selling at 18s to 18s 6d; autumn shipment at 16s 9d to 17s per 400lb c.i.f. Maize in fair demand. Odessa and Danubian April-May shipment is selling at 20s to 20s 3d per 480lb c.i.f.. Mixed is held at 25s, but meets no attention.—JOHN TATLOCK.

Paris, Wednesday.—Although the native wheat market to-day was more important from an attendance point of view than of late, it did not give place to any brisker movement so far as trading was concerned. Farmers' offers were still very moderate in the provincial centres, and some instances of higher prices were reported. Still the tendency ruled quiet throughout with a little more active demand, if not on the part of the millers, at least on the side of traders, who appeared much more disposed to treat in view of the reiterated assertions of some agricultural journals representing that stocks in growers' hands are, so to say, exhausted, and consequently insufficient to tide over wants till the next campaign. In short, though still tedious, transactions were somewhat more lively, but prices showed no appreciable change on the week, choice red wheat being quoted 37s 10d to 38s 3d and white 38s 9d to 39s 2d per 480lb. Flour.—Fleur-de-Paris.—The market opened dull at a slight decline, and closed at a further reduction of 10c. to 20c at the following prices:—April, 27s 1½d to 27s 5d; May, 27s 1½d to 27s 5d; May-June, 27s 1½d to 27s 5d; May-August, 27s 5d to 27s 8d; July-August, 27s 5d to 27s 8d, and September-December, 27s 5d to 27s 8d per 280lbs. Offers of rye are still very limited, so in spite of a rather slow trade, prices were with difficulty supported. The growing crop for the present is full of promise. Here values are quotably unchanged. Good-conditioned lots are held at 25s 3d to 25s 8d per 480lbs. Oats are cheaper in all directions, and it could not be otherwise in face of the good appearance of the growing crop and the increased offers in the market. Here prices are quoted as follows:—Grey Beauce, 23s 9d; White, 22s 7d; Red, 23s 6d; Black, from the Central Provinces 24s 1d to 24s 4d; White Libau is quoted 22s 7d to 23s 11d; Black, 23s 1d, and Swedish, 25s 6d per 320lb. Business in barley is wanting in activity, and prices are merely nominal. Beauce still asks 24s 8d to 25s. Here the following rates were quoted:—Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); grinding, 17f. to 17.25 (24s 8d to 25s); and feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lbs.). Offers of Buckwheat are getting more and more scarce, but still in regular demand, at 28s 9d per 480lbs.—DORNBUSCH

CORN STATISTICS.

IMPERIAL AVERAGES.

FOREIGN CORN TRADE.

The shipments of grain from the chief exporting countries last week were as follows:—

	Wheat. Qrs.	Flour. Sks.	Maize. Qrs.	Barley. Qrs.	Oats. Qrs.
United States	318,000	152,000	34,000	—	9,000
Russia	216,000	—	70,000	132,000	60,000
France	—	5,000	—	—	—
Austria-Hungary	—	5,000	—	—	—
Roumania	80,000	—	177,000	34,000	1,000
Argentina	135,000	—	48,000	—	—
India	—	—	—	—	—
Australasia	11,000	—	—	—	—
Miscellaneous	20,000	10,000	10,000	20,000	5,000
Total	780,000	172,000	339,000	186,000	75,000

THE BALTIC.

The flag which denotes that the maximum of building height has been reached will soon be floating over the handsome new building in St. Mary Axe. The façade, in the classical style, is to be seen to some extent behind the boarding, and the whole structure promises to be worthy of the two great trades which are to inhabit it.

The Liverpool Corn Trade Association held its annual meeting on Wednesday, and the following gentlemen were elected directors:—Messrs. Griffiths, G. A. Moore, Wilson, Dobell, J. A. Shone, and Richard Cornelius.

The wheat cargo trade is great, and 1s. per quarter rise is the utmost made in the majority of instances. As the duty is 1s. 1d. per quarter, the position is not satisfactory. Californian on passage has been sold for 29s. 6d., Oregon for 29s. 9d., Walla Walla for 29s., Bahia Blanca (very fine Argentine) for 29s. 6d., South Australian for 29s. 6d., New South Wales for 29s. 9d., and Victorian for 29s. 7½d. There is not much of the dear loaf about these prices.

Maize cargoes are firmer, 21s. 6d. made for Odessa, 22s. for Galatz on passage; but Argentina is sapping the position with offers of July shipment at 20s. 6d. per quarter. Other cargoe sales include White Libau oats at 18s., Paida beans at 29s., and Danubian oats at 18s. 9d.; all per quarter.

An Australian wheat standard sample may now be obtained at the offices of the Corn Trade Association.

Arrivals at ports of call last week were 10 wheat cargoes and a cargo of Canary seed from Larache. Total amounts from January 1st to April 26th were:—103 wheat, 3 maize, 7 barley, 2 beans, 2 linseed, and 4 Canary seed; also 17 mixed cargoes, partly wheat and partly barley.

HOPS.

Canterbury, Saturday.—There has been a steady trade passing during the week, and stocks are much smaller than usual. Prices tend to harden.

Worcester, Saturday.—The trade in hops on this market is quiet; a few pockets pass over the public scales every week, buyers picking out the best samples, for which prices keep very firm. Lower sorts are neglected, even at the very low prices asked for them.—PIERCY AND Co.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Bright and sunny days have latterly been the rule rather than the exception, and the April record in this respect will be a great improvement on the exceptionally dismal March. But rainfall has been much below the average, and the pastures are not growing either fast or well. Wheat is irregular, but its deep roots serve it in good stead in a season like the present, and in favoured situations it is fifteen or sixteen inches high. Winter oats are healthy, and certainly appear to have done better on a scanty rainfall than in theory we could have expected them to have done. Rye is being fed off to sheep; the farmers are uncommonly glad that they sowed a larger area than usual last autumn. In America an extraordinary heat wave has forced plant growth probably far too fast. The May Bureau report will be awaited with interest. Continental news of growing crops is, for the most part, very favourable.

The registration duty has met with a remarkable measure of approval, only three supporters of the Government being opposed to it, and the Opposition having but half-hearted support from their county members, some 96 in number. The duty on milling offals has now been modified, and stands at 3d. per cwt. only, and it is said that the poorest sort of offals, such as rice husks and the like, will receive a still further reduction.

The advance in the top price of flour by another shilling per sack is a matter which concerns the top price millers and their customers only, but it is in some ways to be regretted, seeing that the flour in question is supposed to represent the best blend of English and foreign wheat which London milling skill can produce. The success of millers in getting 2s. more money on the fortnight now will probably induce a corresponding reaction later on. With respect to wheat, the idea that the duty will fall on the English consumer is confronted by figures very difficult to get over.

The wheat average for 1894 was 22s. 11d., which is 7s. 6d. below the last London average. Was this cheapness in 1894 due to a large crop surplus at home or abroad?

Bushels.	1894.		1901.
U. K.	61,000,000	..	57,000,000
U. S. A.	409,000,000	..	640,000,000
France	355,000,000	..	396,000,000
Russia	364,000,000	..	408,000,000
India	259,000,000	..	192,000,000
Australasia	43,000,000	..	48,000,000
Argentina	117,000,000	..	72,000,000
Total	1,608,000,000	..	1,813,000,000

These figures, answering the above question in the negative, are of great importance to the trade at the present juncture, for they prove that the American, Russian, Indian, Australasian, and Argentine wheat growers can sell at 7s. 6d. under currencies, and still make a profit. It is therefore presumable that they will not lose the British market for the value of a shilling per quarter. The price of 22s. 11d. in 1894 was not, it may be added, followed by a decline in the wheat area in the producing countries; indeed, it is not seriously maintained that the foreign wheat producers cannot pay their way at a 22s. 11d. level. The trade fluctuations in wheat of recent years have been of a character demonstrating that value is fixed by causes "vastly more potent" than a shilling duty. Let us give a few instances.

1876 to 1877: 10s. 7d. nett advance.
1877 to 1878: 10s. 4d. nett decline.
1883 to 1884: 5s. 10d. nett decline.
1890 to 1891: 5s. 4d. nett advance.
1892 to 1823: 4s. 0d. nett decline.

Taking more recent dates still, wheat advanced 6s. 1d. per quarter from July to September, 1897, and 10s. 5d. per quarter from April to May, 1898. Wheat fell 11s. 1d. per quarter from July to September, 1898, and though latest gradients have been slight, it fell 1s. 10d. from October to December, 1900.

Of the direct contest exercised by foreign movements, one need only recall that in August, 1897, America put up her terms 9s. per quarter, that in April, 1898, Russia put up hers 7s. per quarter, and that in June, 1900, wheat at New York rose 4s. 9d. per quarter. In April, 1898, Paris rose 5s. 3d. per quarter, while from July to September of that year Bastin fell as much as 11s. per quarter!

It is a somewhat remarkable fact that from 1869 to 1902 the machinery for collecting a duty on corn was never abandoned, and an importer had to go to the Custom House and clear his entry of corn just as if it had been tobacco or other duty-laden commodity. Thus the new duty entails no new burdens on the Customs, though the staff will doubtless have longer hours, and need strengthening in the performance of the old "clearance" duties. The chief firms are already opening accounts. By the current Acts the burden of paying the duty on any imported staple falls on the buyer, unless otherwise agreed in writing. The new duty may do good in leading to better and more frequent returns of stocks in our warehouses.

These stock returns are miserably inadequate; they only appear once a quarter, and then they lump together all sorts of wheat, barley, maize, and so forth. Thus we were indebted only the other week to the courtesy of Messrs. Watney, Woodley, and Richardson for the intelligence that the stocks of barley in London, 93,000 quarters, did not include any Californian, a most important variety. Of course, the would-be purchaser would have experienced no greater difficulty than a few days delay in delivery, and if he did not ask for very prompt supply would not even need to know anything about the scarcity for the moment on the spot. At the same time, the trade ought not to have to depend on chance or private information. When the Customs' staff is augmented, as it is bound to be, we hope that provision will be made for monthly returns of London grain stocks, and that these returns will separate home from foreign produce, malting from feeding barley, round from flat and flat from yellow maize. This is already done at Liverpool.

The week's imports into the United Kingdom have been small of wheat, flour, and barley, and mediocre of maize and oats. They thus compare with the like week of last year.

	1902.		1901.
Wheat, qrs.	195,000	..	481,000
Flour, sks.	76,000	..	210,000
Maize, qrs.	145,000	..	196,000
Barley, qrs.	23,500	..	91,000

Beans, qrs.	3,275	..	4,715
Peas, qrs.	7,410	..	5,910

American visible supplies weer cabled on the 26th at 5,535,000 qrs. of wheat, 900,000 qrs. of maize, 390,000 qrs. of oats, 231,000 qrs. of rye, and 171,000 qrs. of barley. It should be observed that the term American is used in a high conventional sense in this dispatch, as it includes Canada and Manitoba, which are English colonies, but does not take in Oregon, Washington, and California, which are States of the American Republic. From a separate cable we learn that California holds 550,000 qrs. of wheat in granary against 635,000 a year ago.

Supplies on passage on the 26th inst. were good of wheat, small of flour, maize, barley, and beans, very heavy of linseed, good of rapeseed, and about an average of cottonseed. They thus compare with a year ago.

	1902.		1901.

Rapeseed, qrs.	14,000	..	4,000
Cottonseed, qrs.	42,000	..	44,000

The market for feeding stuffs is now fairly active, the articles chiefly favoured being milling offals, Russian grinding barley, round maize, and the minor articles, such as dari, dholl, sorghum, millet, and buckwheat. Oats, however, are not easy to move, and flat maize is held above buyers' ideas. There is a fairly good sale of barley meal at 7s. per cwt. Trade in malting barley is not active, but values are firmly maintained. The London official average of 24s. 4d. is very misleading; in fact, little English barley, even of feeding grade only, is to be had at this very low price.

FEEDING STUFFS.

London, Monday.—Linseed cake: Very little spot trade; no change in prices, but more money is asked for forward positions. Decorticated cotton-cake and meal as before. Undecorticated still very firm. Linseed has jumped up 1s 6d since this day sen'night, owing to American purchases of Calcutta seed.

ROBERT AND JOHN HEWETSON.

HOPS.

London, Monday.—W. H. and H. Le May report:—The general trade has been quiet during the past week. There is still an inquiry for the best qualities, prces for which continue to harden.

THIS DAY'S MARKETS.

MARK LANE, MONDAY.

[FIRST REPORT.]

The finest English wheat to-day made 34s. It was of fine weight, 512lb., fine condition, and fine quality, so that the price was not excessive. Ordinary samples made 32s. per 504lb. There was a scarcity of chicken wheat weighing 480lb., and for this type 29s. was paid. Foreign wheat maintained, but did not exceed the advance of 1s. 6d. established last week. Barley was firm, but dull for English. Californian made 31s. to 32s. 6d. for Chevalier and 26s. to 28s. 6d. for brewing, but prompt delivery could not always be guaranteed, stocks being mostly at Liverpool. The prices include duty. American maize, owing to great scarcity, was again dearer on the week, and round oats were also tending to appreciate in value. Yellow corn in increased prospective supply rather favoured buyers. Oilseeds were unsettled, linseed favouring buyers, while with respect to cottonseed the reverse was the case. Oats were not an easy trade, as the price was decidedly high before the new duty, and the extra 9d. per quarter is resisted. The forward offers of this staple work as if there might be some reaction soon, but the total shipments are so small that holders have intrinsically the best of the position.

CLOSE OF THE MARKET.

THE NEWS FROM FRANCE AND RUSSIA MADE THE SPECULATIVE MARKET IN FUTURES IN BUYERS' FAVOUR, AND THIS REACTED ON MARK LANE. THE HOME TROUBLES OF RUSSIA ARE REGARDED AS GUARANTEEING PEACE IN THE NEAR EAST, WHILE THE FRENCH GENERAL ELECTION HAS RESULTED IN THE RETURN TO POWER OF THE LIBERAL OR PACIFIC PARTY, THOUGH BY A SOMEWHAT REDUCED MAJORITY. IF PEACE BE ALSO SECURED IN SOUTH AFRICA, IT IS GENERALLY THOUGHT THAT THE CHANCELLOR WILL GET HIS THREE MILLIONS ON GRAIN AND FLOUR WITHOUT ANY PERMANENT MARKET RISE WHATSOEVER. CROP PROSPECTS ARE REGARDED AS IN THE MAIN FAVOURABLE.

THE FLOUR TRADE.

MARK LANE, MONDAY.

The top price of London flour to-day was 30s. per sack, while whites are stiffly held for 27s., and households for 24s. per sack. The result of this all-round rise of 2s. was that bakers held off, and it is to be feared that Americans, who are content with the duty rise of 1s. to 1s. 3d., secured the bulk of the business done. Country flour, at 1s. 6d. advance on the fortnight, had a fair, but not a fast, sale. The trade in meal was quite irregular, as some of the material advances made last week proved maintainable, while others had to be modified. Wheat germ meal comes under the latter heading, being now obtainable for 117s. per ton. On the other hand, whole meal has gone to 185s. per ton, rye flour to 180s. per ton, and homing feed to 118s. 9d. per ton. Rice meal flour and cones were not much dearer on the fortnight, despite the 5d. per cwt. new duty. Left to itself, this branch of the market would probably have declined 3d. per cwt., in order to clear stocks. Mincing Lane reports heavy holdings of cleaned rice, but less than usual on passage.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
April 21 noon	6 1	6 1	6 4
4 p.m.	6 1	6 1	6 4
April 22 11 a.m.	6 1	6 1	6 4
4 p.m.	6 1	6 1	6 4
April 23 11 a.m.	6 1	6 1	6 4
4 p.m.	6 1	6 1	6 4
April 24 11 a.m.	6 1	6 1	6 4
4 p.m.	6 1	6 2	6 4
April 25 11 a.m.	6 1	6 2	6 5
4 p.m.	6 2	6 2	6 5
April 26 noon.	6 2	6 2	6 5
To-day noon.	6 1	6 2	6 5

The value of maize is maintained at 4s. 5d. per cental for June to any delivery; 4s. 9d. new cereal year bins, which include the duty.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the 18th inst. the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement the Acts of 1876 and 1901 throw the burden on the buyer.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—There is rather more inquiry this week, and greater firmness in prices. Values on sport are as follows:—First spring patents, 25s. to 26s; second spring patents, 24s. to 24s. 6d.; American winter patents, 24s. 6d. to 25s.; extra fancies, 23s. to 23s. 6d.—GREENHILL BROTHERS (Belfast).

Offals.—There is a fair demand for bran; the better qualities, however, are obtainable at 2s. 6d. to 5s. per ton below last week.—GREENHILL BROTHERS (Belfast).

Flour.—The market has been firm, with more business doing at late full prices. Grain.—Flat and round maize, 3d. to 4½d. per boll up. Beans and pease now fetch extreme prices. Barley 3d. higher. Oats continue in good demand at prices in sellers' favour. Oatmeal firm. Oilcake, 5s. cheaper on spot. Mill Stuffs.—Bran and thirds remain scarce.—MCKINNON AND MCDONALD (Glasgow).

Wheat and flour have been in larger supply. Trade is firm, and prices of wheat 6d. per quarter, and of flour 6d. per sack higher. Maize, barley, and oats are unchanged in value.—COVENTRY (Mark Lane).

There has been a fair demand for middlings during the past week, and prices are fully maintained. Bran and pollard rather dull, but no cheaper. Mills are keeping clear of all offals, and prices are against buyers.—JOHN BAWCOMB AND CO.

Flour.—A firm trade at 3d. and 6d. over last Monday.—T. S. MEDILL AND SONS.

Owing partly to the shorter supplies of English wheat at the country markets there is an improved demand for foreign descriptions, which are 3d. to 6d. dearer on the week. Maize shows a slight improvement, but demand is slow.—W. J. WOOD AND CO. (Mark Lane).

MANURES.

Liverpool, Friday.—The weather during the past week has been generally favourable for tillage operations, and all fertilisers are in active request. Nitrate of soda is sparingly offered on the spot, and for immediate delivery the quotation for best quality is £10 12s 6d; but there are sellers below this price ex ship now due. Other fertilisers are unchanged in values. Feeding stuffs move off only slowly at late rates to a slight decline for oil cakes. At auction, 1,200 bags American decorticated cotton cake meal sold at £6 7s 6d to £6 8s 9d per ton ex quay. Nitrate of soda, best quality, i.e., guaranteed 95 per cent pure, in bags, £10 12s 6d per ton; East India bone meal, fair to prime, in bags, £4 10s to £4 13s 9d per ton; kainit, prime, 23 per cent, in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, nominal; linseed cake, American thin oblong, prime, in bags, £7 to £7 3s 9d per ton; linseed cake, English prime, in bulk, £8 2s 6d to £8 10s per ton; linseed cake, foreign, round, prime, soft and oily, in bags, £8 2s 6d per ton; cottonseed cake, N.A., decorticated, prime, new, in bags, £7 to £7 5s per ton; cottonseed cake, English, do, prime, soft, in bags, £7 2s 6d to £7 7s 6d per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 to £4 12s 6d per ton; cottonseed cake, Egyptian, do, prime, in bags, nil; cottonseed (crushed), 20 to 25 per cent. oil, meal, prime, in bags, £5 17s 6d per ton; rice meal, Rangoon, as imported, in bags, nominal; Indian meal, coarse to fine grinding, prime, in bulk, 13s 6d to 13s 9d per 240lb.; linseed, fine bold feeding, in bags, £3 2s 6d to £3 5s per quarter, 416lb.; N. A. cleveraseed, new red, fair to good, in bags, nil; D.N.S. Brand, superphosphate of lime, guaranteed, 25 to 27 sol, in bags, £2 5s to £2 7s per ton at depot; do, do, 30 to 31 sol, in bags, £2 10s to £2 12s per ton at depot; do, do, 35 to 36 sol, in bags, £3 to £3 2s per ton at depot; basic slag, prime quality, do, 30 to 35 per cent phos, in bags, nominal; do, do, 35 to 40 per cent phos, in bags, nominal; finest do, 38 to 45 per cent phos., in bags, nominal.—H. JONES LANGAR AND CO.

WOOL.

Canterbury, Saturday.—The advance on the Liverpool market has improved the demand locally, but values of Kent fleeces do not go higher than 5½d per lb; lamb wool, 4d; locks, 2d per lb.

London, Saturday.—English—per pk of 240lb.—Fleeces S. Dn. Hggs., £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester do, £5 to £5 10s. Colonial—per lb.—Vic.—Fleece, super, 1s 7d to 1s 9d; scoured good, 1s 7½d to 1s 8½d; scoured average, 1s 6½d to 1s 7½d; greasy average to fair, 10½d to 11½d; N. S. W., scoured average, 1s 4d to 1s 4½d; greasy average, 8d to 9d; S. Australian, greasy average, 6½d to 7d; N.Z., scoured average, 1s 5d to 1s 6d; grease average, 8½d to 9½d; Cape scoured super, 1s 5d to 1s 6d; fleece average, 7d to 7½d; greasy average, 6½d to 7d; Natal scoured, 1s to 1s 1d; greasy average, 6½d to 7½d. Cross-breds.—Grs.—Vic. good super, 11d to 11½d; New Zealand fine, 8½d to 9½d; medium, 5½d to 6d; coarse, 4½d to 4¾d.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 1,690 bales bacon, and from foreign ports 12,216 bales bacon. There was a steady demand for bacon last week, although with heavy supplies of Danish, the latter was rather quieter, and prices in some cases 1s to 2s easier, quotations ranging Irish 58s to 63s up to 67s; Danish, 56s to 60s up to 64s; Canadian, 54s to 57s up to 60s. The butter market was quiet, and prices easier, Danish, however, selling better at reduced rates. Danish was ranging 108s to 110s, Colonial 96s to 102s, Russian 96s to 104s. The lard market was firm: Irish 48s to 53s, Danish 57s to 58s, American 50s to 51s 6d.

CATTLE.

Metropolitan Market, Islington.

Monday, April 28th, 1902.

	British.	Total.	April 29, 1901.
Beasts	1,080	1,080	950
Sheep and lambs	7,630	7,630	10,250
Calves	5	5	5
Pigs	—	—	20
Milch cows	35	35	40

Quotations per 8lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 4 ..	4 4 ..	5 0
Sheep	3 10 ..	5 4 ..	6 4
Lambs	6 0 ..	6 10 ..	7 4

Milch cows, per head, £15 to £23.

British arrivals include as follows:—Scotland, nil; Eastern Counties, 743; Midland, Home, and Western Counties, 306; Devon, 20; Ireland, 11.

In the beast market to-day the supply was the smallest voted for many weeks (Easter Monday excepted), there being no arrivals from Scotland, and from Ireland only a few two-and-a-half years old stores, which were quoted at £11 10s to £12 10s per head. Trade for fat beasts was slow, though firm, in regard to value, higher rates by 2d per 8lb being obtained. Fat cows and bulls were also dearer.

The following are top quotations per 8 lb (sinking the offal):—

	To-day.	April 29th, 1901.
Devons	4s 8d to 4s 10d	4s 2d to 4s 4d
Norfolks	4s 10d to 5s 0d	4s 4d to 4s 5d
Lincoln	4s 4d to 4s 8d	4s 0d to 4s 3d
Irish	—	4s 2d to 4s 3d
Fat cows	4s 2d to 4s 4d	3s 8d to 3s 10d

In the sheep market there was a decrease of 1,130 in the number penned, compared with Monday last. Lambs, which were in greater proportion, and slow to vend, made last Thursday's advanced prices; wether sheep were exceptionally short in number, and sold readily at an advance of 4d to 6d per 8lb. Ewes also made 2d per 8lb more money; the supply included 510 Scotch, 2,810 from the Eastern Counties, and 740 from Yorkshire.

Undermentioned quotations are at per 8 b (sinking the offal), and are for the best of each class penned.

	To-Day.	April 23, 1901.
7½ to 8-st Downs	5s 2d to 5s 4d	5s 6d to 5s 8d
9-st Downs	5s 10d to 6s 0d	5s 4d to 5s 6d
10-st half-breds	5s 6d to 5s 8d	5s 2d to 5s 4d
10-st Yorkshires	4s 10d to 5s 0d	4s 8d to 4s 10d
12-st Lincolns	5s 0d to 5s 2d	4s 10d to 5s 0d
10-st Down ewes	4s 10d to 5s 0d	4s 8d to 4s 10d
11-st half-bred do.	4s 6d to 4s 8d	4s 4d to 4s 6d
8-st Down lambs	7s 2d to 7s 4d	7s 10d to 8s 0d
6-st half-bred do.	6s 6d to 6s 8d	7s 4d to 7s 6d

London (Central), Monday.—Moderate supplies; good trade. Beef carcases, 4s 1d to 4s 2d; hind-quarters, 4s 6d to 4s 8d; roastings, 5s 4d to 5s 8d. Sheep.—Ewe, 3s 6d to 3s 10d; wether, 4s 6d to 4s 10d; hind-quarters ewe, 4s 4d to 4s 8d; wether, 5s 4d to 5s 8d. Pigs, large, 3s 8d to 4s; small, 4s 4d to 4s 8d.

St. Ives, Monday.—Beasts, 1,045; sheep and lambs, 575; pigs, 668. Beef, 8s to 9s; mutton, 7s 7d to 9s 11d; lamb 1s; pork, 6s 9d to 7s 6d. Fat beasts sharp trade, dearer; stores fair; fat and store sheep fair; fat and store pigs good demand. Milch cows fair; trade prices £15 to £23.

FOREIGN CATTLE.

Liverpool, Monday.—Fewer cattle in market. Demand slow, and prices in favour of buyers. Sheep supply smaller. A good demand, particularly for handy weights, at higher prices. Lambs, excepting fat ones, no better to sell. Beef 7½d to 8½d per lb. Mutton 9d to 9½d per lb.; lambs 11d to 9d per lb. At market 853 cattle and 4,654 sheep.

Deptford, Monday.—Beasts, 289. To-day's supply, compared with Monday last, showed a decrease of 452, and consisted of consignments from the United States, trade for which was of a firm and steady nature at an advance of 2d per 8lb, with an early clearance. The best on offer, to dress about 640.b, made 4s 11d and occasionally 5s per 8lb, offal given in; second quality made 4s 9d. Sheep numbered 803 from the United States, and found ready buyers. The best made 5s per 8lb out of the wool. On Saturday 1,040 States beasts and 300 from Canada were on sale, and met a firm trade, the former being quoted at from 4s 8d to 4s 10d per 8lb. Canadians made 4s 4d to 4s 8d. The following were the numbers on offer on the corresponding day last year, with the current top rates:—Beasts, 685, 4s 1d to 4s 2d per 8lb, to dress about 720.b; sheep, 1,450, 4s to 4s 2d per 8lb, to dress about 68lb.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are irregular; arrived Californian are dearer; Argentine are 6d. up. On the other hand, American futures favour buyers. Barley is steady. Oats are well held, but with few purchasers. Maize is firm for yellow, but firmer for round.

BUSINESS DONE.

WHEAT.—Californian, 32s 6d, arrived; No. 1 Northern, 29s 6d, prompt shipment; soft red Calcutta, 29s 9d, prompt shipment; Australian, 30s, on passage; hard Manitoba, 30s 6d, May shipment; hard Manitoba, 30s, June shipment; No. 2 Manitoba, 29s 3d, May shipment; No. 2 Manitoba, 28s 9d, June shipment.

BARLEY.—Californian brewing (superior), 25s, on passage; Californian brewing (standard), 24s, on passage; Azoff, 19s 3d, on passage; Azoff, 17s 9d, September shipment.

OATS.—Black Libau, 18s 6d, prompt shipment; Danubian, 18s, prompt shipment; Danubian, 16s, October shipment; No. 2 Canadian, 19s 3d, May shipment.

MAIZE.—Roumanian, 21s 6d, May shipment; Galatz, 22s, on passage.

LINSEED.—Calcutta, 52s 3d, on passage; Bombay, 54s 6d, July shipment.

RAPESEED.—Yellow Cawnpore, 39s 3d, May shipment; brown Calcutta, 36s, June shipment.

COTTONSEED.—Bombay, £5, prompt shipment.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 7d to 7¾d. Clover, 7d to 8d. Straw, oat, 5½d to 6½d per stone.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Following on the rise noticed last week in all descriptions of beasts, we have this week to note a sudden drop of from 2d. to 3d. per 8lb. Even at this reduction trade was entirely void of life. This is accounted for by the larger consignments of beef to the dead-meat market attracted by the higher rates obtained. A clearance at Islington on Monday could not be made, beasts having been bought too dear in the country. It was generally reported that on the previous Saturday on Norwich Market the best made 5s. per 8lb.; fat butchering cows and bulls met with less inquiry, and consequently were bought on easier terms. At the foreign cattle market holders of stock had a similar experience, rates for both prime and second quality being lower by from 2d. to 3d. per 8lb., this fall being particularly noticeable on Wednesday, some 400 head being held back. The total number on offer at both markets was , as against 3,278 during the previous week. The supply consisted of 1,290 British (decrease 250) and 2,791 foreign (increase 1,053); these latter consisted of 2,451 from the United States and 340 from Canada. The following were the top rates paid per 8lb., sinking the offal:—80 to 85 stone polled Aberdeens, 4s. 11d.; 90-stone polled Norfolks, 4s. 9d.; 100-stone Shorthorn ditto, 4s. 8d.; 100-stone Lincolns, 4s. 6d. to 4s. 8d.; 90-stone Irish, 4s. 3d. to 4s. 6d; 85-stone States, 4s. 8d. to 4s. 9d.; 90-stone Canadians, 4s. 6d. to 4s. 7d.; 90-stone fat cows, 4s. to 4s. 2d.; 100-stone fat bulls, 3s. 6d.

The trade for sheep, which was chiefly confined to the Islington Market, was of a firm and steady nature, at the previous week's quotations, except for ewes, on Monday, which ruled 2d. per 8lb. in favour of the buyer. On the same day lambs, with a slower sale, declined 4d., but for these on Thursday there was more demand, sales being readily effected at an advance of 6d. The total number penned was 11.514 (previous week 10,870), consisting of 10,624 British and 894 American. Best pens made per 8lb. as follows, sinking the offal:—7½ to 8 stone Downs, 5s. 8d.; 8-stone Scotch, 5s. 8d.; 9-stone Downs, 5s. 6d.; 10-stone ditto, 5s. 2d. to 5s. 4d.; 10-stone halfbreds, 5s. to 5s. 2d.; 12-stone Lincolns, 4s. 10d. to 5s.; 9-stone Yorkshires (clipped), 4s. 8d.; 7½-stone Americans (in the wool), 4s. 10d. to 5s.; ditto clipped, 4s. 6d. to 4s. 8d.; 10-stone Down ewes, 4s. 8d.; 11-stone halfbred ditto, 4s. 4d.; 5-stone fat Down lambs, 7s. to 7s. 6d.; 6-stone halfbred ditto, 6s. 8d. to 6s. 10d.

Calves numbered 80, and met a slow trade; best quoted at 6s. per 8lb.

Trade in the West.

With moderately good deliveries of both fat and store stock at the leading markets of the district, a fairly active demand has prevailed, though the tone of the trade has been scarcely so buoyant, except for the bettermost grades of store cattle and calves, as it was a few days since. We incline to the opinion that both dairy beasts and also barreners are likely to keep very dear throughout the coming season, for even now the greatest difficulty is experienced in meeting the wants of milk purveyor, despite the fact that the ordinary runs of milch beasts now range from £16 10s. to £21 10s., and even beef at such a price—11s. 6d. to 12s. 6d. per score for good steers or heifers (or from £18 to £24 10s. each)—barreners are not very likely to be much a drug on the market for some time, seeing that graziers are now paying £25 up to £40 a pair for those easiest of conversion into beef. And the plainer kinds also market well, these making £18 to £22 or £23 a-piece; in fact, everything is snatched up almost before it is on the market. Young stock, too, is making a capital price, barren heifers bringing £26 to £30 per pair, and yearlings £16 to £24. As regards the beef trade, although prices are being well maintained, buyers are evincing a little less eagerness in making their purchases to what was the case a week or a fortnight since; but still the tone of the trade is strong throughout, and present indications point to a dear season, more especially if the shortage in American deliveries continues. Mutton, although selling much better than it did, still admits of an improvement in value, some classes f sheep making disappointing prices, which is a matter of some surprise, beaoring in mind the price of other classes of meat and also of the generally recognised shortage of sheep in the country; and the same may be said of lamb. Only in very exceptional cases is 8½d. made for mutton, a more general range being from 7½d. to 8d., whilst plenty of ewes only make 7d., if they do as much. A few of the very ripest of lambs—dainty little cross-breds—sell from 10d. to 11d. per lb.; but against this must be placed the 8½d. to 9½d. realised for ordinary runs; and in some cases even less is made for poor, badly finished lambs. Calves continue to make old rates; prime picked lots 8½d. to 9d. per lb. (or up to £6 each); seconds ranging from 7d. to 8d. The pig trade continues firm, light-weight porkers comanding 10s. 6d. to 11s. 6d. per score, and baconers 9s. 6d. to 10s. Stores are also in active request at widely varying prices—25s. up to 51s. Sows also make a good price—£5 to £9 5s. each. But very few store sheep are changing hands just now; but from what we have seen sold, we rather fancy that stores, of the two, sell relatively better than those for death.

Trade in Ireland.

There was a small decrease of nearly 100 cattle, and a big one of nearly 900 sheep at last Thursday's Dublin Market. A fair attendance of local buyers, but many of the large shippers were conspicuous by their absence. Trade was brisk for all kinds of good cattle, but coarse, wasty beasts and rough cows were neglected. There were very few really choice beef cattle on sale, and smart prices were paid for these, last day's prices being more than confirmed, and for good second-grade beef values showed a distinct hardening. Prime ox and heifer beef made from 57s. 6d. to 63s., and extra choice up as high as 67s. 6d. per cwt.; second quality, from 54s. to 56s. 6d.; and inferior sorts, 47s. 6d. to 52s. 6d. per cwt. In one instance, for a small lot of particularly good beasts, as high as 71s. 9d. was realised. In the mutton department supplies were of more reasonable dimensions, and trade was of a more healthy tone. Home butchers operated on a more liberal basis than during the past few weeks, while the buying for Liverpool, Manchester, etc., was also a good deal improved. Prices for the best classes of sheep were decidedly in favour of sellers, and there was a general advance of from 1s. to 2s. per head. Coarse, common descriptions of sheep, however, did not seem to profit by the rise. In sympathy with mutton, lambs also met with a brisker sale at slightly improved rates for nice fat, but small thin lambs were hard to dispose of. There was a decided preference showed for sheep out of the wool, the right stamp of shorn hogget realising from 8d. to 8½d. per lb. Prime wether mutton made from 7½d. to 8½d. per lb; ewe, 7d. to 7½d.; medium and inferior from 6d. to 6½d. Hoggets sold all the way from 28s. each for small, up to 56s. for heavy. Lambs also showed a great range in price, small thin lambs selling at from 16s., while for exceptionally good ones as high as 40s. and 42s. was paid. Best veal in small supply, and sold readily at from 8d. to 9½d. per lb.; rough ditto from 4½d. up. There was a fairly active demand for good cows, prime new milchers making from £17 to £19, and springers from £18 to £20; common cows from £9 upwards. Some large auctions of store cattle took place, and there was keen competition for animals in good condition. In the pig department trade was dull, and, towards the close of business, sellers had to give way from 1s. to 2s. per cwt. to effect sales. Small choice pigs, from 46s. 6d. to 48s. per cwt.; heavy, from 44s. to 46s.; and coarse, from 36s. to 40s.

LONDON.

Islington, Thursday.—A limited number of beasts, mainly consisting of fat bulls and rough cattle. The demand was of a generally quiet nature, but prices ruled steady. Fat bulls, 3s 6d to 3s 10d. Fair supplies of sheep met with fair support for both wethers and ewes, prices as a rule being firmer: 7½ to 8-stone Down wethers (clipped), 5s 2d; extreme, 5s 4d; 9-stone ditto, 4s 10d to 5s; 10-stone half-breds, 4s 8d; 10-stone Down ewes (unclipped), 4s 6d to 4s 8d; exceptionally, 4s 10d; and 11-stone half-bred ditto, 4s 4d to 4s 6d. Lambs also firm and dearer; 4½ to 5-stone Downs, 7s to7s 4d; 6-stone half-bred ditto, 6s 8d to 6s 10d. Calves steady, the best on offer making 5s 8d. Pigs, firm. Neat small porkers, 4s 10d per 8lb to sink the offal.

London (Central), Wednesday. — Fair supplies, which met a better demand, while a fair business transpired. Arrivals of beef included 60 tons Scotch, 450 Liverpool sides, 1,000 hindquarters and 600 forequarters American killed. Prices: Beef, Scotch short sides, 4s 4d to 4s 8d; long, 4s 2d to 4s 4d; English, 4s 2d; American, Deptford killed, 4s to 4s 2d; Liverpool, 3s 11d to 4s; American, refrigerated, hind-quarters, 4s to 4s 1d; fore-quarters, 2s 10d to 3s. Mutton: Scotch, 4s 2d to 4s 6d; English wethers, 4s 2d to 4s 4d; ewes, 3s to 3s 8d; English lamb, 5s 4d to 6s. Veal: English and Dutch, 3s 8d to 4s 8d. Pork: English, 4s 2d to 4s 6d; and Dutch, 4s to 4s 4d per 8lb.

London (Central), Friday.—Supplies were good, and the demand as a rule was fair, prices being firm. A fair amount of English, moderate of Deptford-killed American, 120 tons of Scotch, 300 sides from Liverpool, 3,700 hind-quarters and 180 forequarters American-killed, and 100 Dutch sides constituted the arrivals of beef to-day. Quotations:—Beef: Scotch short sides, 4s 4d to 4s 6d; long, 4s 2d to 4s 4d; English, 4s to 4s 4d; American, Deptford-killed 4s 1d to 4s 3d; Liverpool, 4s to 4s 2d; American, refrigerated, hindqurarers, 4s to 4s 3d; forequarters, 3s to 3s 3d; Dutch sides, 3s 8d to 3s 10d. Mutton: Scotch, 4s 8d to 4s 10d; English wethers, 4s 6d to 4s 8d; ewes, 3s 8d to 3s 10d; Canterbury, 2s 9d to 3s; Wellington, 2s 5d to 2s 8d; Sydney and River Plate, 2s 4d to 2s 6d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s 8d to 5s; and Dutch, 4s 2d to 4s 8d per 8lb.

COUNTRY.

Ashbourne, Thursday.—There was a good show of horned stock and a good attendance of farmers, dealers, and butchers. Trade all round showed a decided improvement, higher prices being obtained. Quotations: Useful calving cows up to 20 guineas; best calving heifers, £16 to £17; calving stirks, £10 to £13; barren stock dearer, making up to £15 and £16 for best young fresh barren cows or heifers; stirks, £9 to £17. Small supply of beef, best heifers making 7d to 7½d per lb; young calves, 6d to 6½d per lb. A good number of head of horned stock were disposed of under the hammer, and taking the market all round, the prices were satisfactory to the sellers.

Ashford, Tuesday.—Best beef dearer, making up to 12s 6d per score; secondary, 10s to 11s. Mutton a good trade at full rates. Veal a little cheaper. Pork sold well, making up to 10s 6d for the best.

Basingstoke, Wednesday.—At Raynbird Son's Sale Yard there was a good attendance of buyers to meet a supply of 46 fat beasts, 85 calves, 772 fat sheep, lambs, and 119 head of dairy and store cattle, for which the following prices were realised. Fat shorthorn steers, up to £22 5s; heifers, £18; a shorthorn cow, £19 10s; and Kerry steers, up to £18 5s. Fat wether sheep and young ewes, 38s to 53s. Fat ewes, 34s 6d to 50s. Fat sucking lambs, 27s to 38s. Fat calves, 80s to £5 10s; smaller, 20s to 45s. Dairy cows, £8 10s to £21 5s. Fat beasts were in fair supply, and met a good demand, but there was less animation in the biddings. A good show of fat sheep and lambs met a dull enquiry. Choice young sheep of handy weight were cleared atlast week's figures. Heavy and interior fat ewes were much lower. Fat lambs in good demand, but at lower figures. Dairy cattle met a better demand, and prices showed an advance. Store cattle trade was brisk, with a good enquiry for all best class stock. Fat calves continue a good trade at high prices. Ruling values: Best quality fat beasts, 7d to 7¼d; second ditto, 6½d to 6¾d; bull cows and inferior beasts, 5¾d to 6d per lb. Best quality fat sheep, 7½d to 8d; second ditto, 6½d to 7d; old ewes, rams, and inferior sheep, 5d to 6d; choice fat 3 months old sucking lambs, 9d to 10 per lb. Fat calves, 7d to 8½d per lb.

Braintree, Wednesday.—At Messrs. Balls' auction mart the trade in sheep and pigs maintained recent rates, but cattle were not so keenly demanded, probably owing to the drop in London prices. Store hoggets met with a good trade. Bullocks went up to £24 15s. Numbers penned: Beasts, 50; fat sheep, 140, hogs, 56; store pigs, 476; store cattle 16; calves 19; store sheep, 105; horses, 2.

Bristol, Thursday.—Fat cattle in moderate supply today. Trade firm. Best qualities, 65s to 66s per cwt; secondary, 58s to 60s. Sheep in limited number; demand firm. Shorn light wethers, 6¾d to 7¼ per lb; heavy weights, 6½d; ewes, 5d to 5½d; lambs, 10d to 10½d.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart there was a short supply of fat beasts for the time of year, and the quality was not up to the average. Full attendance of buyers. Trade ruled sharp, at a trifle more money. Good supply of store cattle, including several lots of cattle adapted for marsh land. All met a good enquiry, and full rates were obtained. Several lots of two-year-old steers fetched from £11 7s 6d to £10 11s 6d. Other lots from £10 to £8 15s. Several lots of well-bred yearlings made from £8 15s downwards. The supply of fat sheep was the best this season, both in numbers and quality. Trade was hardly up to last week's high rates. Clipped Suffolk wethers went up to 60s. The supply also included several lots of very choice Southdowns. Several lots of clipped half-breds fetched from 56s to 48s per head. Short supply of store sheep. Good demand for all forward lots. Some black-faced couples fetched 52s. Good supply of pigs, which met a sharp trade at the late high rates.

Calne Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2½ n. ...	9 6
Under 11 sc. 10 lb.	... Not exceeding 2¾ in....	9 0
Under 12 sc.	... Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 452; sheep, 785; pigs, 487; horses, 20. Beef, 7s to 8s 3d. Mutton, 4s 4d to 5s 4d. Lamb, 9d to 10d per lb. Pork, 6s to 7s. A larger show store beasts, and all cleared. Fat beasts, a good number to hand. Price about as last week. Fat sheep, a large supply; trade not so good, at less money. Stores trade slow all round. Fat pigs market now open, and trade brisk, at good prices. Stores a good trade all round. Hay, straw, and roots, short supply.

Canterbury, Saturday.—The first market since the removal of the restrictions was held to-day, an immense number of store tegs being offered. Best animals ranged from 35s to 38s, useful classes from 30s to 33s. A few fat pens made as much as 44s per head. Useful heifers were selling at £11, yearlings at from £7 to £8. Trade not quite so good for cows and calves.

Carlisle, Saturday.—Between 700 and 800 Irish store cattle were offered, the show being slightly less than last week's. There was a large attendance of buyers, and the demand was good, many animals readily changing hands. A few stripping cows were sold at £8 10s. to £11 10s.; small heifers realised £6 10s. to £8 10s.; and the best descriptions of useful heifers made from £12 10s to £15 10s. A few young pigs sold dear, making 23s 6d each.

Dorchester, Wednesday.—Supplies came well to hand in all departments to-day. Both Messrs. Duke's and also Messrs. Sampson's sale, and buyers were also fully represented. With a brisk inquiry throughout, prices ruled exceedingly firm, and business was generally to the advantage of sellers to-day. Fat bullocks are keeping very dear, and with prices steadily hardening throughout the country, sellers are selling out for extreme values, which are now 11s to 12s for anything at all ripe, whilst ordinary grades bring 10s 6d to 10s 9d. Veal is correspondingly dear, best calves now making up to 8½d, and ordinary runs 7d to 7½d to-day. Mutton is equally buoyant both for ewes and wethers, the former making 7d to 7½d, and wethers fully 8d to 8½d (or from 42s up to 55s each). Lamb is now in much more general request than it has been as yet this season, and good crossbreds realise 34s to 40s, or 9½d to 10d, and seconds 8½d to 9d.

Dublin, Thursday. — Numbers in market: Beasts, 1,161 (decrease 93); sheep, 4,209 (decrease 874); calves, 58 (increase 21). Finished cattle scarce and dear. Last week's prices fully maintained for all sorts, and an early clearance effected. The large reduction in the number of sheep caused a brisker trade. Anything choice made a shade more, and a good clearance effected. Cattle—Live weight, best, 35s to 38s 6d per cwt; other sorts, 30s to 34s per cwt. Mutton: Dead weight, 6½d to 8½ per lb; extreme, 8¾d per lb.—GANLY, SONS, AND CO.

Hereford, Wednesday. — Bullocks and cows, 902; calves, 218; sheep and lambs, 2,021; pigs (fat and sows), 14; sucking pigs, 105; pigs (stores, not more than 10), 269; pigs (stores, more than 10), 15. Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½d per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb; lambs, 11d to 1s per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons

report, compared with the abnormal supply of last week, fat cattle were not so numerous; trade was firm throughout at last week's quotations, viz., 8s to 8s 9d per stone. Fat sheep pens were well filled, and a good trade was experienced, some of the best lots of hoggets making more money. Only the best fat lambs were in demand. The trade for sheep was dull. The best weaning calves sold well, and fat calves were considerably dearer. Fat swine were in good supply, and sold freely, at somewhat easier prices. Well-bred stores were also rather lower. Several cows were penned; the best were wanted, and values advanced from £1 to £2 per head. A good entry of grazing cattle, including some excellent qualities; these, and all animals with condition, were in demand, but the descriptions were dull, and not much wanted. Numbers at sales and market: Cattle, 793; calves, 60; sheep, 2,715; swine, 1,100.

Leicester, Wednesday.—Lincolnshire and Norfolk fed bullocks were a large supply. Buyers and dealers were well represented, and trade ruled brisk all round, the demand being more animated than for a long period, and prices advanced £1 per head all round. Heifers, 6½d to 7½d; choice bullocks, 7¼d to 7½d; secondary, 6¾d to 7d; cows, 5d to 6¼d per lb. Sheep were a very good delivery, and changed hands readily at 7¾d to 8d for choice; large sheep 6¾d to 7¼d; ewes, 5½d to 6d; shorn sheep, 6½d to 7½d; lambs, 11d; calves, best, 8½d to 9d; secondary, 7d to 8d per lb.

Newport, Wednesday.—Quotations were:—Best beef, 7d to 7½d per lb; secondary sorts, 6½d to 6¾d; cows, 6d to 6¼d; best wether mutton, 8d to 8¼d; ewes, 7d to 7½d; lamb, 11d to 1s; veal, 7d to 8½d; porker pigs, 10s 3d to 10s 9d per score. A large supply, and an exceptionally brisk trade. Prices generally firm. Messrs. Newland, Davis and Hunt conducted a most successful sale of cattle, sheep, etc. About 20 store cattle, the property of Colonel Herbert and Mr. Henry Oakley sold remarkably well, averaging £20 15s to £31 15s per pair.

Norwich, Saturday.—The supply of store beasts on offer here to-day showed some falling off. Prices experienced scarcely any change. The show of fat beasts was moderate; trade was dull at 8s to 8s 6d per 14lb. The supply of store sheep showed some reduction; trade was dull, except for lots in a more or less forward condition. Keeping hoggets were quoted at 32s to 44s per head. Fat sheep out of their wool made 8s to 8s 6d and 9s per 14lb. Marshlands for grazing purposes have been let at unusually high rents this spring.

Romford, Wednesday.—Short supply of fat beasts; trade lower. Best animals, 4s 8d to 4s 10d; middlings, 4s 3d to 4s 8d per stone. Calves in very short supply; trade not quite as dear, at 5s to 5s 4d per stone. Sheep in average supply; trade about the same; best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. A short supply of lambs sold slowly at 6s 8d to 7s per stone. A few store beasts on offer; fair demand. Pig market still closed.

Salford, Tuesday.—There was a smaller supply of cattle, and a slow but firm trade at better prices. The supply of sheep and lambs was also smaller. There was a good demand for sheep, and sellers obtained an advance on last week's prices. Trade for lambs ruled dull, and prices were lower. A large show of calves, and a slow sale at less money. Quotations:—Cattle, 5½d to 7½d; sheep (in wool), 7d to 9½d; ditto (shorn), 6d to 9½d; calves, 5d to 8d per lb; lambs, 25s to 46s each. At market:—Cattle, 2,045; sheep and lambs, 9,765; calves, 247.

Sheffield, Tuesday.—Very small show of milch beasts, and little business done. Best lots, £19 to £22; secondary sorts, £15 to £16.

Spalding, Tuesday.—A fair show of fat beasts, and very good demand; best, to 8s 6d per stone; cow beef, 7s 9d. There was a ready sale for cows, which fetched high prices. Stores a large show, but a dragging trade, and several lots unsold. Mutton was in small supply; choicest, to 9d per lb.

Stockton, Wednesday. There were on offer 137 cattle, 11 calves, 304 sheep, and 40 lambs. A very small show of fat cattle, but trade was slow and prices firm at 8s 6d to 8s 9d per stone; rougher kinds 6s 6d to 7s 6d; calves, 5d to 6d per lb. A quiet trade was done in sheep; young ones, 8½d; clipped sheep, 8d; ewes, 7d, tups, 5d per lb; lambs, 25s to 40s each.

Thame, Tuesday.—There was a short supply of beef, but mutton, lamb, veal, and fat pigs showed an increase. Beef ruled at extreme rates, and can be quoted at 5s 6d per stone. Prime mutton, to 5s 4d. The late Mr. Bond's sale comprised 51 fat beasts, 242 fat and store sheep and lambs, 152 fat and store pigs, and 66 fat and weaning calves. Fat bullocks made from £19 to £26 7s 6d. Fat heifers, £20 to £25 12s. Fat ewes, 45s to 57s 6d. Fat lambs, 48s to 51s. Fat lambs, 28s to 34s.—Couples up to 56s. Fat calves, £3.10 to £4 16. Weaning cow calves, 22s to 55s. Bull calves, 16s to 50s. Bacon hogs, 9s 6d per score. Store pigs in demand.

Wakefield, Wednesday.—Business rather slow this week for beef, and prices realised were the same as last week. Choice young sheep made ¼d per lb. more money; secondary quality, 6d to 6½d per lb; good demand, and all sold up. Numbers: Beasts, 1,352; sheep, 4,417.

Wolverhampton, Wednesday.—Beasts, a moderate supply, fair demand for best. Sheep, fair supply; trade slow. Calves, moderate supply; fair demand. Beef, 6d to 7¼d per lb; mutton, 6¾d to 8¼d per lb; veal, 7¼d to 9d per lb. Only a few pigs on offer, and they realised good prices.

Worksop, Wednesday.—Fair show of all kinds of stock; good trade, with best decidedly dearer. Mutton fetched a trifle more money. Lamb trade bad. Best beef, 7s 6d to 8s per stone, a few extra quality making up to 8s 6d; secondary, 6s 6d to 7s per stone; Southdown shearlings and long wools, 7d to 8d; ewes, 6d to 7d; veal, 10d; lamb, 10d to 11d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day amounted to 760 head, against nil on Wednesday last, and consisted of shipments from the United States. Trade ruled slow, at 4s 6d to 4s 9d per 8 lb, offal given in. 400 cattle were not shown. 160 United States were offered, no quotation, however, being given.

Yorkhill, Monday.—A sale of American cattle was held in the afternoon, but only 57 animals were offered, all of which were bullocks. As regards quality, they were up to the average, and the trade for them was brisk, consequent upon the small supply. The dead-weight quotations were as follow:—Bullocks, best quality, medium weight, 64s per cwt secondary, 62s; and bulls, 52s to 54s, according to quality and finish.

Yorkhill, Thursday.—A sale of United States sheep was held in the morning, there being penned in the sheds 755 sheep landed by the Livonian (s), from Philadelphia. The consignment consisted for the most part of wedders, which, as well as the lambs, were far above the average quality, the shipment being the best landed here for a long time past. There was a fair turnout of purchasers, and the demand keen, values all round showing an increase on those ruling last week. The dead-weight quotations may be given as follows:—Wedders, 7½d per lb; lambs, 7¾d.

BUTTER.

Tuesday.—Bedale: 1s to 1s 1d per 24oz roll. Gainsborough: 1s 4d per lb. Leeds: 1s 3d to 1s 4d per lb. Settle: 1s 1d to 1s 2d per lb. Spalding: 9d to 10d per lb. Stone: 1s 1d to 1s 2d per lb.

Wednesday.—Barnsley: 1s 2d to 1s 3d per lb. Boston: 9d to 10d per lb. Colne: 1s 2d per lb. Goole: 11d per lb. Keighley: Wholesale, 1s 1d; retail, 1s 2d per lb. Kirbymoorside: 10d to 11d per lb. Knaresborough: Wholesale, 1s 6d; retail, 1s 8d per 24oz roll. Louth: 10d per lb. Northallerton: 1s 4d to 1s 7d per 21oz roll. Worksop: 1s 3d to 1s 4d per lb. Hereford: 1s 2d to 1s 3d per lb. Market Drayton: 1s 1d to 1s 2d per lb; seconds, 1s to 1s 1d per lb.

Thursday.—Brigg: 10d to 1s per lb. Driffield: 11d per lb. Penistone: 1s 3d per lb. Ripon: 1s 3d to 1s 5d per 24oz roll. Scarborough: 1s 3d per lb. Wetherby: 1s 2d to 1s 3d per lb. Wellington: 1s 1d to 1s 2d per lb. Kidderminster: 1s 2d per lb.

Friday.—Easingwold: 11d to 1s per lb. Helmsley: 9d to 11d per lb. Leyburn: 1s 1d to 1s 3d per 24oz. roll. Lincoln: 1s to 1s 1d per lb. Otley: 1s 4d to 1s 6d per 24oz. roll.

Saturday.—Appleby: 9d to 1s per lb. Berwick: 8d to 9d per lb. Carlisle: 1s to 1s 3d per lb. Doncaster: 1s to 1s 2d per lb. Grantham: 1s to 1s 2d per lb. Howden: 11d and 1s per lb. Lancaster: 1s 1d to 1s 2d per lb. Malton: 10d to 1s per lb. Pontefract: 1s 3d per lb. Retford: 1s 2d to 1s 3d per lb. Richmond: 11d and 1s per lb. Skipton: 1s 1d to 1s 2d per lb. Stokesley: 1s to 1s 1d per lb. Whitby: 1s to 1s 1d per lb. York: 1s per lb.

EGGS.

Tuesday.—Bedale: 17 or 18 for 1s. Gainsborough: 15 for 1s. Leeds: 7s 3d to 8s 3d per 120. Settle: 18 or 19 for 1s. Spalding: 17 or 18 for 1s. Stone: 16 or 17 for 1s.

Wednesday.—Barnsley: 13 or 14 for 1s. Boston: 17 or 18 for 1s. Colne: 1s 3d per score. Goole: 16 for 1s. Keighley: Wholesale 15, retail 14, for 1s. Kirbymoorside: 19 or 20 for 1s. Knaresborough: 16 or 17 for 1s. Louth: 18 for 1s. Northallerton: 17 for 1s. Stockton: 14 or 15 for 1s; duck, 10 for 1s. Worksop: 1s 4d to 1s 6d per score. Hereford: 17 and 18 per 1s (wholesale 19 and 20). Market Drayton: 16 to 18 for 1s.

Thursday.—Brigg: 16 or 17 for 1s. Driffield: 19 or 20 for 1s. Penistone: 16 for 1s. Ripon: 15 or 16 for 1s. Scarborough: 16 for 1s. Wetherby: 15 or 16 for 1s. Wellington: 16 and 17 for 1s. Kidderminster: 17 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Helmsley: 18 to 20 for 1s. Leyburn: 17 to 18 for 1s. Lincoln: 16 or 17 for 1s. Otley: 15 or 16 for 1s.

Saturday.—Appleby: 16 to 18 for 1s. Berwick: 8d to 9d per doz. Carlisle: 15 to 17 for 1s. Doncaster: 14 or 15 for 1s. Grantham: 16 or 17 for 1s. Howden: 18 for 1s. Lancaster: 12 to 15 for 1s. Malton: 18 and 19 for 1s. Pontefract: 13 or 14 for 1s. Retford: 1s 4d to 1s 5d per score. Richmond: 16 and 17 for 1s. Skipton: 15 or 16 for 1s. Stokesley: 15 or 16 for 1s. Whitby: 18 for 1s.

CHEESE.

Glasgow, Wednesday.—There is little doing in the Glasgow cheese trade, old cheese being particularly over for the season. Those left are quoted from 56s to 62s per cwt. There were a few lots of new fodder cheese forward, which met a quiet sale. Any trade that was doing was in New Zealands and Canadians, which realised late prices.

Newport, Wednesday. — Quotations:—Caerphillies, 40s to 54s; tancy dairies, 55s to 56s; Derbys, 63s to 65s; truckles, 68s to 70s; and Cheddars, 65s. There was a good supply, and a moderate demand.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Arrivals of both fruit and vegetables fair; fair demand. English apples, 6s to 12s per bushel; Tasmanian and Australian, 10s to 16s; Californian, 9s to 12s per case; pineapples, 1s 6d to 4s 6d each; Denia oranges, 10s to 25s; Valencia, 10s to 16s; Murcia, 7s to 10s per case; bananas, 7s 6d to 12s per bunch; lemons, 8s to 18s per case; Canary tomatoes, 4s to 4s 6d per case; cauliflowers, 9s to 10s per tally; broccoli, 3s to 3s 6d per bag; parsley, 3s to 4s; mint, 4s to 5s; leeks, 2s to 2s 6d per dozen bunches; seakale, 8s to 12s per dozen punnets; horseradish, 1s 3d to 1s 9d per bundle; rhubarb, 1s 6d to 2s 6d per dozen bundles; Valencia onions, 5s to 7s per case; spring onions, 2s to 2s 6d per dozen bunches; potatoes, 35s to 85s per ton; new, Canary, 14s to 15s; Malta, 12s to 13s per cwt.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter.—The supplies of New Zealand butter are getting smaller week by week, and as about only 9,000 boxes more will arrive this season, buyers are turning their attention to fresh sources of supply for the coming summer. Prices are slightly easier than last week, and may be quoted at 104s. to 105s for "Choicest" brands, and 100s to 102s for "Finest." The Copenhagen official quotation, after remaining at 95 kroner for seven weeks, has been lowered to 92, which is 4 kroner higher than it was last year. The market in Manchester last Tuesday was affected by sentiment rather than large supplies, and, owing to retailers abstaining as much as possible from buying, values fell 2s. to 3s. per cwt. Russian butter is very short this week, as the steamer from Riga—the first vessel this season from that port—will not arrive before early next week. Supplies of all kinds of Continental butter will now increase week by week, and early shipments of Canadian are coming along. In America butter continues excessively dear; "Choicest" quality making 150s per cwt.; even process butter there is selling at 120s to 133s. Cheese.—The demand for Canadian and New Zealand cheese continues steady and prices have advanced another shilling per cwt. this week, the top quotation for Canadian being 58s, while New Zealand is only a shilling less. It looks as if 60s would be reached shortly.—W. WEDDEL AND CO.

GAME AND POULTRY

Smithfield, Saturday.—Supplies limited, and met good demand. Yorkshire fowls, 3s 3d to 3s 9d; Boston, 2s 6d to 3s 6d; Essex, 3s to 3s 6d; Surrey, 3s 6d to 5s; Sussex, 3s 3d to 4s 6d; Welsh, 2s 6d to 2s 9d; Irish, 2s 3d to 2s 9d; cock turkeys, 6s 6d to 8s 6d; hens, 4s to 5s; goslings, 6s to 7s 6d; Aylesbury ducklings, 4s 6d to 5s; country ditto, 3s 9d to 4s 6d; Bordeaux pigeons, 10d to 1s; feathered, 8d to 10d; quail, 9d to 11d; wild rabbits, 6d to 8d; tame, 10d to 1s 4d each; Australian, 8s 6d to 10s 6d per dozen; Russian game: Partridges, 1s to 1s 2d; ptarmigan, 10d to 1s; black game, 11d to 1s 2d; brown hares, 1s 6d to 1s 8d; white, 1s to 1s 2d each.

FEEDING STUFFS.

Hull, Tuesday.—Linseed.—The arrivals are 1,220 qrs. from Buenos Ayres, 23 qrs. from Harlingen, 14,102 qrs. Rosario, 3,975 qrs. San Nicholas, 5,980 qrs. San Pedro, 1,093 qrs. Villa Constitution; total 26,393 qrs. The market opened firmer, and a slight advance was paid; the close is steady, but not much business passing. Calcutta, April-June, 51s 3d. River Plate: There are sellers of spot and near seed at 48s 3d; afloat, 48s 6d; April-May, 49s 6d wanted. Cottonseed.—The market further improved after our last issue, spot, passage and April loading making up to £7 10s, but there was a sudden reaction, value declining to £7 6s 3d, whereat some business done by near steamers, and £7 5s accepted later. Yesterday, however, there was a better tone again, and several lots changed hands at £7 6s 3d to £7 7s 6d passage and April B/L, also up to latter price paid April-June. New crop has been sparingly dealt in at £6 7s 6d November-January. To-day the market is again dearer at £7 10s spot to June, and £6 8s 9d bidding November-January. Oils.—Exports for the week end ng 15th April, 1902:—Linseed oil, 1 Denmark, 1 France, 9 Germany, 20 Norway, 2 Russia; total, 33 tons. Cotton Oil: 102 Austria, 157 Belgium, 30 Denmark, 54 France, 172 Germany, 100 Holland, 1 Norway, 3 Sweden, total 619 tons. Linseed oil steady; 28s 10½d spot; 28s 6d May-August. Cotton oil firm. Rape Oil, Jamba naked, 23s 9d spot; 1st quality, 24s 3d spot.—KEIGHLEY

London, Thursday.—Linseed.—There has been a better consumptive demand this week, and although supplies have been on a large scale, prices at the close have improved. Calcutta to London spot, passage, 51s 9d, and April-June 52s; June-July 52s 3d buyers. La Plata on passage, 50s. Hull has improved a little. Calcutta April-June 52s 3d. La Plata, spot 48s 9d; April-May, 49s 6d; May-June, 50s. To the Continent, Bombay April-May, 53s 9d; June-July, 54s. Calcutta, April-June, 52s 6d. La Plata April-May, 49s 6d. Linseed oil has shown considerable firmness, and prices have fully recovered the recent decline. We quote spot in pipes £30 5s to £30 10s; barrels, £30 10s; May-August, £30 10s; September-December, £29. Hull naked spot £29 5s; May-August, £29. Linseed cakes are steady. We to-day quote London made £8 5s to £8 7s 6d ex mill. American Western £7 7s 6d to £7 10s; Russian, £7 12s 6d to £8 2s 6d. Cotton cakes firmer; London made, £4 10s to £4 12s 6d. Rapeseed continues steady, with a moderate demand. Brown Cawnpore, April-May, 35s; Brown Calcutta, April-June, 35s. To the Continent we quote yellow Guzerat 40s; yellow Cawnpore, April-May 38s 6d; Brown Cawnpore, March-May, 36s; Brown Calcutta, April-June, 35s. Ferozepore, February-March, 36s 3d; Jamba, March-May, to Hull, 33s. Cottonseed.—The excitement has continued, and prices have further advanced. Spot London, £7 12s 6d; April-May, £7 11s 3d. Hull spot £7 10s paid; April-June, £7 10s; November-January, £6 8s 9d buyers. Cargoes, May is held for £7 11s 3d; November, £6 12s 6d; December, £6 11s 3d. Bombay to Hull April-May, is held at £5; May-June, £5.—THE PRODUCE BROKERS' COMPANY, LIMITED.

Mark Lane, Monday.—Linseed Cakes: The demand continues extremely small, but, with limited stocks and short supplies of foreign, values are fully as dear, while in future positions shippers ask rather more money. Americans off the coast offer at slightly easier terms. Russians are the turn dearer. Calcutta-made in bags make £7 15s to £7 17s 6d. London-made remain unchanged on spot, and £7 12s 6d is asked for June to September delivery. Cotton Cakes: In the absence of any fresh arrivals of foreign, the market is firm at the recent advance, and best Egyptian in bags are held at unchanged prices, which is also the case with English. Decorticated are a slow sale at last Monday's prices, while meal is again dearer, having advanced 5s per ton on account of scarcity. Rape Cakes: Quiet; East India, £4. Maize Germ Meal: A parcel of American now due offers at £5 7s 6d c.i.f., with landed lots making £5 17s 6d, duty paid. English is in fair request at £5 15s to £6. Rice Meal: Parcels of Rangoon in warehouse are quite as dear at £4 17s 6d to £5, but a steamer lot due early May is obtainable at £4 5s per ton on the usual London ex ship terms.

POTATOES.

Borough, Saturday.—Supplies again good, but business quiet at unchanged values. Scotch maincrops (Dunbars), 80s to 90s; Blackland Up-to-dates, 45s; Lincoln (Silkland), 50s to 60s; Kent and Surrey Up-to-dates, 45s to 50s per ton. New: Teneriffe, 14s to 15s per cwt.

Great Northern, Saturday.—Good supplies, but slow sale. Scotch maincrops, 85s to 90s; Imperators, 40s; Hebrons, 85s to 90s; Reading Giants, 45s; Blacklands, 40s to 45s; Lincoln maincrops, 65s to 70s; Up-to-dates, 60s to 65s per ton.

Spitalfields, Saturday.—A light supply, and demand showed slight improvement, while prices all round maintained steady level. Best Lincoln Up-to-dates, 60s to 70s; Wisbech do, 55s to 60s; Blackland, 45s; Scotch, 65s to 70s; Scotch maincrop (grey soil), 70s; Lincoln, 75s to 85s; Reading Giants, 40s; Blackland Gartons, 35s per ton. New: Teneriffe and Canary No. 2, 14s to 15s; No. 3, 13s to 14s; Maltese rounds, 8s to 9s; Algerian kidneys, 14s to 15s per cwt.

STOCK AND SHOW NOTES.

By Herdsman.

The annual Spring Show of the North-East of Ireland Agricultural Association will open on Wednesday next, and continue over Thursday and Friday. Like the Royal Dublin Society, the North-East has a splendidly-fitted and convenient show-yard of its own at Balmoral, Belfast, and this week's show will, of course, be held there. The Secretary of the Association, Mr. Kenneth Macdonald, informs me that the total number of entries, including implements, &c., stands, is 1,590, or an increase of considerably over 1,000 when compared with the total at last year's spring show. The entries in the various sections are as follows: — Thorough-bred stallions, 14; draught stallions, 11; draught horses, 34; draught horses (in gear), 87; polo ponies, 18; harness horses, 51; hackney cart-horses, 10; cattle, 406; milking trial, 12; swine, 44; poultry, 515; butter, 260; eggs, 30; butter-making contests, 19; implement, &c., stands, 80. Total, 1,590. Total entry at last year's Spring Show, 1,416. An attractive programme has been drawn up, and given fine weather the show should be a most successful one.

The entries for the Witney Meeting of the Oxfordshire Agricultural Society, to be held on Tuesday and Wednesday, May 13th and 14th next, are some 100 in excess of those obtained when last visiting that town—ten years since—and if the exhibition of pigs had not been obliged to be cancelled, there could have been added another 60 to that number. The implement department is well ahead of the 1892 meeting by some 20 stands, which include many labour-saving machines and novelties. The cattle and sheep are more than last year, but in the horse section the numbers fall off by some 20 from the Thame meeting, when that part of the show was pronounced by all competent judges in the autumn to be one—if not the best—of the best county shows ever held. Mr. Will Brown is again engaged to demonstrate on the best way of cramming, dressing, and trussing poultry, which is an industry still requiring to be better understood.

The luncheon in connection with the show will be held on the first day of the show, at 1.30, under the presidency of Mr. J. Francis Mason, who, we understand, intends to follow the excellent example set by last year's President, of a very short list of toasts. The Special Railway Committee have been in communication with the Great Western Railway Company, and have arranged several early and late trains to and from Oxford and neighbourhood each day. The Witney Local Committee have engaged at considerable expense the band of H.M. Grenadier Guards, and have also done everything else in their power for furthering the success of the show, which with fine weather should prove a most enjoyable and profitable gathering.

The present advance in the price of meat which has received so much attention in all quarters has evoked an expression of opinion from the *Meat Trades Journal*, which fully bears out the opinion I have consistently advanced in these columns. "We believe," says the authority referred to, "we have been successful in showing that the supplies of cattle and fresh beef from foreign and Colonial sources, upon which we are so dependent, are so much shorter this year as to warrant the advance already made in the price of meat, and also to justify our traders in assuming that unless relief is afforded the probabilities are that a further rise will be necessary. With respect to the recent articles dealing with the alleged squeezing operations of certain American cattle and meat exporters, even in the light of the most recent news respecting the so-called Trust, we are not disposed to believe that the present situation is entirely due thereto. This, in brief, is the position of affairs as it presents itself to us from a purely economic or commercial view, unbiassed by any feeling one way or the other regarding 'Trusts' or 'Combines.'"

The schedule and list of prizes has been issued for the Show of the Peterborough Agricultural Society, which will be held on Tuesday, Wednesday, and Thursday, April 8th, 9th, and 10th. Horses, of course, receive the most attention, having 53 classes allotted to them, cattle have 14, sheep 9, and pigs 11. There is a very generous list of specials and championships offered, the total value of the prizes to be awarded being £1,400. The fox-hound show will be held on the second day, and harriers and beagles on the third day. Entries in all sections close on June 14th, late entries at double fees up to June 23rd. Schedules can be obtained of the Secretary, Mr. J. E. Little, Cowgate, Peterborough.

Altogether the list is an attractive one, and will no doubt draw, as it has done in the past, a large entry, and thus maintain the thoroughly representative and national character of the Scottish National Show.

Recent cattle sales in the United States show that the public demand for well-bred stock is still maintained, values ruling high for animals possessing quality combined with pedigree. Highest prices were realised at Mr. Woody's sale of shorthorns, at Newton, Iowa, on April 8th. The imported cow, "Lily of the Valley," made £350; next highest price being made by "Dalmeny Regina," which was sold for £158. Several cows brought over the century. Another successful sale of shorthorns was held by Mr. H. D. Parsons, at the same place, on the 2nd inst. Fifty head were disposed of, at an average of over £58 apiece. Highest price was made by "Princess II.," who realised £180; two other cows, viz., "Princess Mysie" and "Queen Mysie," making £160 each. Another sale on the same day was that of Mr. J. Gerlaugh's shorthorns, at Dayton, Ohio, where 29 head were sold, at an average price of over £52. One steer was offered and sold at 10½ cents per lb, and brought a little over £21.

THE SHIRE MARE "ALSTON ROSE," 21218, which forms the subject of the above illustration, is a seven-year-old bay, the property of Mr. R. W. Hudson, Danesfield, Marlow, and was bred by the executors of Mr. J. Mercer, Alston Hall, Preston, her sire being Vulcan VII., 1440, dam Fanny, 14724, by Northern King, 2635. "Alston Rose" was the Champion Female at the Shire Horse Society's Show at the Royal Agricultural Hall, Islington, last February. She won the First Prize in the class for Mares five years old and upwards, the £10 cup for the best of the older Mares, the £25 Champion Cup, and the Society's Gold Challenge Cup, value 50 guineas, for the best Mare or Filly in the Show. She was exhibited at the same Society's 1901 Show by Lord Rothschild, and was also on that occasion the Champion Female.

Entries for the Annual Whit Monday Parade of Cart Horses in Regent's Park close on Monday, April 28th, but late entries at extra fees will be received until May 6th. All information and forms can be obtained at the Society's Offices, 12, Hanover Square, London, W.

The Scottish National Fat Stock Club has issued the prize schedule for the club's sixth annual show, which is to be held in the Waverley Market, Edinburgh, on Wednesday, December 3rd, and following day. The total amount offered, including numerous special awards, is £1,403, as compared with £1,393 last year, and £1,343 in 1900. The sum is apportioned as follows: — Cattle, £996; sheep, £162; pigs, £33; roots, grain, &c., £185; and buttermaking, £27. The prize-list is much on the some lines as last year, especially in the live stock sections, but there are some important alterations in the grain and potato section. In the root classes the prizes offered are on a liberal scale. The Council have again decided to offer a framed diploma with a suitable inscription to the herdsman, shepherd, or pig-feeder who has fed and attended the stock gaining the first prize in each class of cattle, sheep, and pigs.

The prize schedule has been issued for the Maidstone Show of the Mid Kent Agricultural Association, to be held on July 2nd. Entries close June 11th, post entries being received up to June 18th, at double fees. Mr. Philip Champion, 3, Market Buildings, Maidstone, is the Secretary, and from whom full particulars can be obtained. There are four open classes for Sussex cattle, with special prize for the best female. Shorthorns have two open classes, and a class is set apart for dairy cows, any breed or cross-breed. Horses have nine open classes, divided into agricultural, with prizes up to £10, and hunters, with prizes up to £5. There are also classes for agricultural horses, harness, and jumping, confined to tenant famers and residents in Kent. Kent sheep have three, and Southdown two, open classes. Open classes for butter, home-made bread, agricultural implements, and motors are also included.

The Board of Agriculture has issued an order prohibiting the importation into this country of animals from the Channel Islands. The order appeared in Tuesday's *London Gazette*, and is to the following effect:—"Unless and until the Board otherwise order, it shall not be lawful to land any animal

brought from the Channel Islands, and the First Schedule (Prohibited Countries and Parts of Countries) to the Foreign Animals Order of 1896, shall be read and have effect as if those Islands were included in the list of prohibited countries and parts of countries mentioned in that Schedule." This Order came into force on Tuesday last.

The Large Black Pig Society has just issued volume three of the Large Black Pig Herd Book, which contains particulars of boars number 359 to 533, and sows 1,386 to 2,086. The entries of boars thus number 88 and those of sows 352, both of which totals are below those received for the second volume, but an increase on those in the first volume. The number of boars entered in the first volume was 82, and sows 316, the figures for the second volume being 97 and 376 respectively. The slight falling away in entries does not signify, however, that this particular breed of swine is decreasing in numbers, for, on the contrary, it is more popular than ever, and herds of large blacks are to be found all over the country now, whereas but a few years ago the breeding of these pigs was confined almost exclusively to the Eastern Counties.

The extensive herd of pure-bred shorthorn cattle belonging to Mr. P. H. Chesters, J.P., of Nantwich, is to be disposed of on May 9th, at The Laurels, Coole Lane, Audlem, Nantwich, the auctioneers being Messrs. John Thornton and Co. For upwards of a quarter-of-a-century Mr. Chesters has kept a large herd of shorthorn cattle, for the especial object of improving the breed of dairy cattle in the County of Cheshire, and particularly for developing their great milking properties. With this object in view, he visited many of the most distinguished herds in various parts of England, selecting specimens calculated to be beneficial to the farmers of the county. The remarkably fine herd of dairy cows will show the good judgment exercised in their selection. Many of the animals are of well-known families, chiefly of the old Bates blood, and of strains that have been retained for their good udders and large milk yields. A number of the cows for sale have yielded from 16 to 20 quarts daily during the summer months, and a large quantity of milk has been sold at the Audlem Creamery. They have either good calves at foot or are near calving, whilst others will come in for winter dairying.

The sires used have been from high-class herds, and of strains that have been very successful in the show yards. Mr. W. Taylor's Pride of Freedom 73,241 (now being used in the Duke of Northumberland's herd at Alnwick Castle), is the sire of several lots, his stock being much in demand at the Wharton Hall sale last year, where they realised very high prices. There are some beautiful heifers in the herd by him. The unreserved dispersion of this fine stock will afford a good opportunity to lay the foundation of first-class shorthorn dairy herds. As some evidence of this, it may be mentioned that four cows from his herd have taken the prize given by the Shorthorn Society, and two sold at the sale in 1899 took first and second for this prize at the Shropshire and West Midland Show at Shrewsbury, 1901. Several animals in the sale are well adapted for showing in the dairy classes this season.

Butter Containing 21 per cent. of Water.—Messrs. C. and E. Walker, butter merchants, of Wellington, Somerset, were fined £30 and costs at Fareham, Hampshire, yesterday, for issuing a false warranty with butter supplied to local tradesmen, stated to be pure and unadulterated, but which on analysis was found to contain 21 per cent. of water. A member of the defendant firm said that they received the butter from about 200 farmers, and blended it into butter of one colour and texture, during which process a spray of water was played on and occasionally worked in. The magistrates held that the invoice sent with the consignment was a warranty, but they acceded to the application of Mr. Ricard, K.C., for the defence, to state a case for the higher court.

Lincoln Bull Sale.

The seventh annual sale of Lincoln red shorthorn bulls, held under the auspices of the Lincoln Red Shorthorn Association, took place on Thursday last at Lincoln, on the usual place, the racecourse, just outside the city. The auctioneers who were engaged in conducting the sales were Messrs. Calthorpe and Briggs, Dickinson and Riggall, T. B. Richardson and Son, Saul, B. Simons, J. E. Walter, and E. A. Young and Son.

The number catered for the present sale was 187, as against 200 last year, when 168 were sold at the average of £25 5s. Of this year's entry no less than 170 were sold at the average of £25 2s. 9d., a result that cannot be deemed other than most satisfactory, for, compared with last year, although the average is fractionalyl lower, the far larger proportion sold more than compensates for this small difference in average.

There were no less than sixty-five different members who consigned stock for sale, of whom sixty-one are included in the sale list, whose average range from £49 7s. to £16 5s. 6d. It is manifest with so large a number of consigners that space will not permit of full details of the whole being given. We have, therefore, been reluctantly compelled to limit our notice to some of the higher averaged lots. Before referring, however, to any details of the sale, it will be of interest to note that the continued increase in the popularity breed was still further emphasised at this year's sale by the wide area over which the purchases were distributed, this including Ireland, whose representative, Mr. Gordon, was one of the largest buyers at the sale. He took no less than seven animals, of about fifteen months of age, at the handsome average of £39 15s. per head.

Last year 85 guineas was the top figure realised, Mr. G. E. Sanders being the purchaser. This year it was this breeder who, with Mr. J. W. Farrow, shared the honour of selling the top price bull in the sale for the firm. Each of these two consignments made 60 guineas, the top figure of the day. Mr. Sanders's average being £41 7s. 5d. for four, and Mr. J. W. Farrow's £37 2s. for three. The best average of the sale, however, was made by Mr. T. Bett's, whose herd has a very high reputation; his four animals averaged £45 8s. 3d., the top price being 50 guineas, three of this lot being included in Mr. Gordon's Irish lot. The Messrs. R. and R. Chatterton and J. C. Mountain each were represented by a single entry. These realised 47 and 45 guineas respectively, their purchasers being Mr. Colman and Mr. Thurlby. Mr. J. E. Davy's sole entry was keenly competed for, Mr. John Sharp securing him at 42 guineas. Mr. G. J. Brown with a single entry disposed of it at 36 guineas to Mr. R. Skelton. Messrs. T. and W. Dickinson were represented by an excellent lot of bulls, whose average for four was £37 10s., Mr. Gordon, for Ireland, taking the top priced one at 47 guineas, and another at 38 guineas, the other two making 30 and 28 guineas. Mr. E. H. Cartwright's single entry went at 36 guineas to Mr. C. Tinley. Three fine bulls from the executors of Mr. J. Abraham met with a good demand, and realised £35 14s. per head; top price, 40 guineas, to Mr. F. Ward, Messrs. Atkinson taking another at 34 guineas, the other making 28 guineas, to Mr. R. Walker. Mr. J. Mason's two made 36 and 27 guineas respectively, Mr. J. Crawley's single entry, 31 guineas, to Mr. H. Stokes, whilst 28 guineas was the figure realised by Mr. J. Ruston's entry, to Mr. C. Fieldsend, from Derby, who was an important purchaser. Mr. J. W. Measures sold all five of his entry, at the captial average of £28 7s., Mr. J. Evens, of Burton, taking a couple of very capital calves, for they were barely a year old, at 40 guineas and 21 guineas respectively, whilst Mr. Fountain gave 26 guineas for another. Mr. G. Walker's entry made 27 guineas, to Mr. Waddington. The Messrs. Freshney had eight entered, all being sold, their average being £28 4s. 4d. with the top price of 37 guineas, which went to Mr. Wells. Mr. C. W. Tindall taking two others at 36 and 32 guineas respectively. One from Mr. J. B. Nelson's herd went at 26 guineas, to Mr. J. C. Morton. Two of Mr. H. Olding's averaged £26 15s. 6d., their buyers being Mr. Webster, at 30 guineas, and Mr. J. Hendy, at 21 guineas. The Rev. P. C. Swan had a couple entered; these averaged £26 15s. 6d., one making 30 guineas, to Mr. B. Botherill, and the other 21 guineas, to Mr. Farrow. Messrs. S. E. Dean and Son had but three present out of their entry of four; these averaged £26 12s., top price, 30 guineas, to Mr. Gordon, for Ireland, the same buyer taking a second one at 27 guineas. One of Mr. E. King's made 26 guineas. Ten of Mr. Rueben Roberts's realised the satisfactory average of £25 18s. 8d., 30 guineas being the top figure, three times the respective purchasers being Messrs. Williams, Hall, and Mayfield. Mr. W. B. Swallow's capital consignment of six found purchasers at the average of £21 15s. 9d.; Messrs. J. Brocklebank and S. Turnor averaged each £24 3s.; Mr. S. Crawley, £23 19s. 6d., for three; Messrs. Holm, £23 12s. 6d. for two; Mr. J. Searby, £23 9s., for three; Mr. T. Wells, £23 9s., for three; Mr. G. Langton, £23 2s., for the same number. Messrs. J. Laverock, J. M. Richardson, and R. Searby the same figure for one each; whilst Mr. G. Morris made £22 17s. 9d. for four; Mr. W. Dukes, £21 17s. 10d., for ten; Mr. B. Simons, £21 17s. 6d. for six; Mr. J. Langham, £20 17s. 4d. for five; Captain E. M. Grantham, £20 14s. 9d. for six; Mr. W. C. Tory, £20 for ten, etc.

Cattle and Cattle Breeding.

At the annual general meeting of the members of the Albert Agricultural Students' Association, which was held at Dublin during the spring show last week, Mr. James Byrne, J.P., Wallstown Castle, Co. Cork, delivered a lecture upon "Cattle and Cattle Breeding." The lecture was illustrated by lantern views of representatives of the leading breeds, and was followed with much interest by the members present. Mr. Byrne began by calling attention to the importance of the cattle breeding industry of the country, and as evidence of this he mentioned the fact that the money invested in this industry amounts to £40,000,000 sterling. After pointing out how much room there is for improvement in the types of cattle kept in many parts of the country, Mr. Byrne went on to show that if farmers and stock-owners, by devoting more attention to the cattle kept by them, could improve the values of the animals by £1 or £2 per head, the result would mean the addition of several millions to the annual revenue of the country. He next proceeded to trace the origin of the leading breeds as we know them at the present day, first commencing with the wild white cattle, of which he showed illustrations, as kept at Cadzow and Hamilton Park. Among these wild white cattle there was always to be found a great similarity in appearance, and a wonderful uniformity in the matter of type and conformation. When they came to be domesticated, however, variations at once began to assert themselves, and it was owing to the operation of this tendency to variation that so many breeds of cattle have now arisen in various parts of the Kingdom.

From the wild white cattle Mr. Byrne next proceeded to the Shorthorns, whose early history in the hands of the Collings and other old-time improvers he traced in much interesting and instructive detail. The Collings, said Mr. Byrne, had begun with the use of a bull for which they had paid £8, and before their life work had been completed they were able to sell some of the animals bred by them at 1,000 guineas. This, he said, showed how much could be accomplished by the exercise of skill and good judgment in improving and establishing a breed of cattle even in the comparatively short period of a single generation. The various influences bearing upon the work of the stock breeder were next reviewed by Mr. Byrne, special mention being made of atavism, and the very conflicting results of which it was frequently productive in causing animals bred from certain types of cattle to throw back to progenitors several generations removed.

In dealing with the different breeds Mr. Byrne gave special prominence to the Shorthorn, of which he gave some very fine lantern views, specially notable being the reproductions of such bygone celebrities as Commander in Chief, Lady Fragrant, etc., etc. Mr. Byrne traced in detail the work done by the Collings in the improvement of this breed, and went on to say that, as we know it at the present day, the Shorthorn has proved itself to be the breed best adapted for Ireland. In addition to being a good beef producer, this breed also is capable of creditably acquitting itself at the pail, and in this way it contrived as it were a double debt to pay, for after being done with at the dairy the cows admitted of being rapidly and economically fattened off for the butcher.

There was no country in the world, said Mr. Byrne, better adapted for cattle breeding than Ireland, and no breed of cattle was so well adapted for Ireland as the Shorthorn. In no other country, said the lecturer, was the soil more fruitful than in Ireland, and in few other countries was the Irish climate surpassed from the point of view of the cattle breeder. Ireland is specially fortunate in its water supply, for while its rivers never run dry in the summer, they seldom over-

flow in the winter. There is at all times a constant supply of water, and owing to this circumstance stock-owners are able to carry on their breeding operations under much more favourable conditions than are to be met with in almost any other country in the world. After tracing the rise of the Shorthorn, and discussing the rivalry that at one time existed between admirers of the Bates and Booth cattle, and the unfortunate result of the extremes to which the views held by them were carried out by the opposing factions, Mr. Byrne dealt at length with the question of the feeding of stock for show purposes, and had nothing but condemnation for the existing condition of affairs under which animals in order to qualify for recognition in the show-ring had to be fed to such a pitch that their procreative and breeding powers were materially marred.

From the Shorthorns the lecturer went on to the Lincoln Reds, and then in turn he dealt with the Aberdeen-Angus, the Galloway, the Hereford, the Devon, the Sussex, the Longhorn, the Red Poll, the Ayrshire, the Jersey, the Guernsey, the Kerry and the Dexter, the West Highlander, and the Welsh, winding up with a reference to the small and hardy but unattractive-looking cattle which eke out a livelihood amid the barren uplands of the Shetland Islands. Of each of the breeds referred to Mr. Byrne had splendidly-executed slides thrown upon the screen, and as he went along he not only dealt with the points of the various animals, so far as shape and make were concerned, but also briefly touched upon their qualifications as milkers and general purpose stock.

After reviewing the various breeds, the lecturer next proceeded to discuss the question of feeding and breeding. In this connection he advised the greater use of home-grown crops, the value of which he said was not properly appreciated by a great many farmers. He also laid stress upon the necessity for providing the animals with a variety in their food, and while he was not in favour—in the case of breeding cattle—of the very high condition usually met with in the showyard, he strongly advocated the principle of keeping ordinary farm animals at all times improving. With a view to avoiding the risk of purchasing highly-fed bulls at shows, Mr. Byrne recommended as a good plan that farmers and others requiring bulls for breeding purposes should pay visits to herds at certain seasons of the year, and purchase therefrom the young calves at an early stage of their growth. These calves they could then feed up as they thought best, taking care not to overdo them at any time by over-loading the animals with too much flesh. The lecture which was followed with much interest and attention was spoken to by Mr. Gallagher, Professor Carroll, Mr. Simpson, Mr. O'Mullrenin, and others, and at the close a hearty vote of thanks was accorded to Mr. Byrne, who suitably replied.

Sale of the Sherlowe Shorthorns.

This well-known herd of shorthorns belonging to Messrs. Evans was disposed of by auction on Friday at Sherlowe, near Wellington; Messrs. Alfred Mansell and Co. conducting the sale. The herd was founded sixty years ago by Mr. John Evans, and owing to judicious selection and mating a high level of excellence was attained. The herd was founded on practical lines with a view to produce animals combining "flesh with milk."

The sale was very well attended by breeders and their agents, while buyers for export were represented. The average obtained for forty-two cows and heifers was £37 1s., while eight bulls realised an average of £24 8s. 3d. Following is a list of the principal prices made:—

COWS AND HEIFERS.

	Gs.
Lady Duthie, red, c. June 20, 1895, s. Golden Baron 65581 ..... Mr. Miller	36
Her bull calf Northern Star, red, c. Sept. 1, 1901, s. Vain Count 78047 ..... Mr. G Harrison	50
Dorothy Burnell 3rd, roan, c. June 19, 1894, s. Careless Mercer 63761 ..... Mr. Goucher	25
Her roan heifer calf ..... Mr. Goucher	9
Painted Pansy, roan, c. Feb. 10, 1896, s. Great Western 70571 ..... Mr. R. H. Aldred	20
Her heifer calf, roan, c. Feb. 5, 1902, s. Vain Count 78047 ..... Mr. Aldred	12
Magnolia, red and little white, c. Aug. 17, 1896, s. Fairy King 65479 ..... Mr. F. Havhurst	40
Her heifer calf Eglantine, roan, c. Sept. 20, 1901, s. Vain Count 78047 ..... Mr. J. Day	40
Vine, roan, c. Nov. 19, 1896, s. Fairy King 65479 ..... Mr. Halsall	24

Sale of Mrs. Perkins' Jerseys.

A draft sale of Jerseys from Mrs. Perkins' herd was held at Oakdene, Holmwood, near Dorking, on Tuesday, Messrs. J. Thornton and Co. being the auctioneers. Owing to the inclement weather there was not a large attendance, but the best animals made good prices. A number of the heifers were bred in Jersey, several of them showing fine breeding and quality. As will be seen by the sale list, the 37 animals sold brought an average of just over £19.

Canterbury Farmers and Foot and Mouth Disease.

At a meeting of the Canterbury Farmers' Club, held at Canterbury on the 19th inst., the following suggestions, with a view to obtaining the speediest possible termination of an outbreak of foot and mouth disease, with the least possible unnecessary interference with the sale and movement of fat and store stock, were considered and agreed to:—

(1) The immediate slaughter of all the stock in the fields or enclosure in which the outbreak occurs—with full compensation. It is recognised, however, that there may be cases of pedigree stock in which the need of saving the animals may outweigh the need of immediate slaughter.

(2) The proclaiming of a first area within a comparatively short radius of the spot, out of, into, and within which nothing alive shall be moved.

(3) The proclaiming of a second area, outside the first, into and within which stock may be moved by licence and markets and sales held by licence with the killing of fat stock within a fixed period if considered necessary; and out of which are a lean stock should not be moved unless in exceptional cases with the sanction of a competent inspector.

(4) The giving of discretionary powers to competent inspectors of the Board of Agriculture to modify rules within the areas where this is absolutely necessary for the well-being of the animals and no risk is entailed.

It was also considered that, if the Board would, in these matters, confer with practical local men and with the Diseases of Animals' Committee of the County Council, and give due weight to their opinions, the attainment of the objects in view would be greatly facilitated. It was resolved to write to Mr. Akers-Douglas, asking him to arrange for an interview by the deputation with Mr. Hanbury, and to send copies to the members of Parliament for East Kent and to ask their support.

Store Stock Sale at Shrewsbury.

Messrs. Mansell and Co.'s April sale of store cattle and sheep was held in Shrewsbury Cattle Market on the 11th inst., and conducted by Mr. Alfred Mansell. The attendance was much larger than usual, and it was evident, by seeing the intending purchasers so early in the market, and the critical manner in which the various lots were examined, a brisk trade would ensue, and this proved to be the case. The rise in price of beef was noticeably felt, inasmuch as any animal half or three-quarter fat was in great demand. The sale opened with the sheep, for which good market prices were obtained. An adjournment to the sale ring was made at one o'clock, and before 4.30 o'clock 1,104 cattle had been weighed and sold. The Irish consignments were the finest ever seen in Shrewsbury Cattle Market, and comprised no fewer than 115 shorthorn bullocks from Mr. Persse, which realised from £19 10s. to £16 7s. 6d. A grand lot of shorthorn bullocks were also sold from some of the best breeders in Ireland at prices ranging from £16 15s. to £13.

Other prices were as follows:—English-bred shorthorn bullocks, £14 2s. 6d. to £11 15s.; shorthorn heifers, £12 15s. to £12 5s.; shorthorn yearlings, £10 10s. to £8 7s. 6d.; shorthorn barrens, £11 15s. to £10 12s. 6d.; Hereford bullocks, £18

to £13 2s. 6d.; Hereford heifers, £13 5s. to £12 2s. 6d.; Hereford yearlings, £11 7s. 6d. to £10; Hereford barrens, £10 17s. 6d. to £9 15s.; polled Angus cross-bred bullocks, £15 10s. to £12 10s.; polled Angus cross-bred heifers, £13 12s. 6d. to £11 17s. 6d.; polled Angus calves, £7 5s and £7 2s. 6d.; cross-bred bullocks and heifers, £13 to £10 7s. 6d.; Welsh runts, £10 to £7 15s.

Imports of Live Stock and Meat in 1900-1901.

At the present moment the imports of live and dead meat into the United Kingdom have a special interest, not only to traders, but also to the general public, because of the extraordinary attention now centred upon the question of our food supply, says the Editor of the "Meat Trades Journal." With respect to the imports in 1900, it is noticeable that, while the number of cattle was actually less by 8,370 head, the value was greater by £440,080, thus clearly showing that a considerable advance had been obtained. The fact also that shipments from Argentina ceased in May, 1900, no doubt assisted in securing this rise. The number of sheep received in this year (1900) was the smallest for many years, although had the prohibition from South American stock not been enforced, the indications were that the total of previous year (607,755) would have been largely exceeded. In fresh meat, the principal increase was in beef and pork from the United States, mutton being less from all countries except Holland. Last year (1901) although the imports of live stock were only 909 cattle and 2,341 sheep less than previous year, the total value was less by £222,286, proving that the enhanced prices of 1900 had not been maintained. The weight of fresh meat was substantially increased in each class, representing an extra payment of £1,498,159 (after deducting the decrease on live animals).

Comparing the proportions of meat supplied by the various countries, we note that, while in 1899, the United States contributed 63.80 per cent. of the live cattle, this had increased to 70.71 per cent. in 1900, and last year it was 81.75 per cent. On the other hand, Canada, which in 1899 was credited with 18.80 per cent. of the live cattle, only increased its proportion in 1900 to 21.10 per cent., falling off in 1900 to 17.91 per cent. This decline, however, may be attributable to the fact that a number of Canadian cattle are shipped in the winter time from U.S. ports and consequently returned as American.

With all the elaborate figures before us for the past two years we are able to sum up very accurately the position of affairs to-day. Putting the facts as briefly as we can, we note that the weekly imports of cattle for first three months of present year, compared with 1901, are, on the average, 2,240 head less, while we have been receiving 318 more sheep weekly. In fresh meat the weekly imports are 16,77 7cwts less beef, 7,621 cw.ts. less mutton, and 3,896 cwts. less pork, the aggregate (live stock and fresh meat) being equal to a shortage in our weekly supplies of 4,821 cattle, 14,924 sheep, and 2,597 pigs. In the face of these figures—abstracted from official sources—it is hardly conceivable that any one — least of all a Cabinet Minister—should affect ignorance of the fact that the supply of meat is appreciably diminishing.

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

There was an average supply of cattle at the fair held at Cahirween, co. Kerry, on Tuesday, but a good many thin animals remained unsold. Prices:—Yearlings, second class, £6 10s.; third class, £3 5s. to £4 10s.; two-year-olds, second class, £8 15s.; third class, £3 10s. to £6 7s. 6d. Young pigs, eight to ten weeks old, sold at from 14s. to 18s. each.

At Roscommon sheep fair, held on Tuesday, there was but a small supply, and a good demand prevailed. Prices:—Lambs, first class, 9s. to 11s.; over twelve and under twenty-four months old, first class, £1 12s. to £1 19s.; second class, £1 4s. to £1 10s.; two years old and upwards, first class, £2 5s. Young pigs, eight to ten weeks old, sold at from £1 to £1 7s. each.

Roscommon Cattle Fair, held on Wednesday, was composed chiefly of first and second class two and three year old cattle. Those in good condition met a ready sale, but a large number of thin animals were not sold. Prices:—Calves, first class, £5 to £5 5s., second class, £3 5s. to £4 5s.; third class, £2 10s. to £2 15s.; yearlings, first class, £7 10s. to £8 5s.; second class, £5 16s. to £6 5s.; third class, £3 15s. to £4; two-year-olds, first class, £10 10s. to £11 15s.; second class, £7 10s. to £9 5s.; third class, £5 to £6 10s.; three-year-olds, first cass, £14 to £17; second class, £11 10s. to £13; third class, £8 7s. 6d. to £9 5s.; springers, first class, £17 to £18 13s. 4d.; second class, £13 to £15.

THE SHORTHORN BULL shown above is "STONEYTOWN ARCHER," 80053, sire Sittyton Archer, 73659, dam Gem of Aberdour by Minjekahun, 53319. This Bull was bred and exhibited at the Birmingham Spring Shorthorn Show and Sale this year, by Mr. J. McWilliam, Stoneytown, Keith, N.B. "Stoneytown Archer" won a First Prize at several Scottish Shows last year, and at Birmingham in March last was awarded the Second Prize in the class for Bulls over ten and not exceeding twenty-one months old. At the subsequent sale he was sold for 58 guineas to go to South America.

SHEEP.

Lincoln April Sheep Fair.

This fair was held on Thursday, when about 12,000 grazing sheep were penned, a very small number for the April Fair. The sheep were in good condition. In the early part of the day trade was very slow, dealers being unwilling to concede the advance asked by the farmers. There was a slight improvement as the morning advanced, but trade throughout was slow. Messrs. Smith, Ellison, and Co. again offered a silver cup for the best pen of 50 wether ewes shown in the fair, the prize being given under the auspices of the Lincolnshire Agricultural Society. Two pens were entered, and the cup was awarded to Mr. Maltby, of Dunston. There were offers of 63s. 6d. per head for the prize hogs, but 65s. was asked. Mr. Headland, of Potterhamworth, the other exhibitor, sold his pen, together with another pen of 50, at 58s. per head, which was the highest price of the day, the prize hogs excepted.

HORSES.

Sale of Hackneys at York,

A special sale of hackneys and harness horses was held on Thursday by Messrs. Walker and Sons in the paddock adjoining their repository at York, the catalogue consisting of 100 horses. There was a good attendance of buyers, and trade for useful harness horses and cobs was very keen, a marked improvement being noticed on recent sales. The following were the chief sales:—

	Gs.
Bay horse, 7 years, 16 h.h.	36
Strawberry roan mare, rising 6 years, 15 2 h.h.	35
Black gelding, rising 8 years, 15.3 h.h.	39
Bay mare, 5 years, 15 h.h.	36
Grey mare, 5 years off, 15.3 h.h.	47
Bay mare, 7 years, 15.2½ h.h.	43
Bay mare, foaled May, 1898, 14.2 h.h.	40
Dark chestnut gelding, 6 years, 15.2 h.h.	40
Bay gelding, rising 8 years, 15.3 h.h.	38
Bay gelding, 6 years, 15.2 h.h.	46
Bay mare, 6 years, 15 h.h.	37
Chestnut mare, 7 years, 15 h.h.	46
Bay gelding, 5 years, 16 h.h.	66
Bay gelding, aged, 16 h.h.	37
Chestnut mare, 8 years, 15.3 h.h.	37
Chestnut mare, 5 years, 15.3 h.h.	46
Chestnut mare, foaled 1894, 14 1½ h.h.	35
Chestnut horse, 5 years, about 15.3 h.h.	43

Lincoln April Fair,

This old-established fair opened at Lincoln on Monday, but, as is usually the case, most of the more important business had been transacted before the opening of the fair proper. The show of horses was not so large this year as it has been on former occasions. Trade was fairly brisk, Irish horses particularly meeting a good sale. Many of these were sold to go on the Continent, while extensive purchases were made for Army purposes. Three splendid Irish jumpers were sold by Mr. Quinn, of Dublin, to Mr. Gallina for £375. Cart horses made up to £75, the vanners selling at £40 to £45, and a lighter stamp of animal, suitable for 'bus work, about £32 apiece. Best price for cart horses was made in the yard of Messrs. Skillington and Sharpe, a five-year-old bay out of this yard going to Mr. Robb, of Glasgow, for £110. Mr. Stokes, of Market Harborough, bought a blue roan hunter from Mr. Grimoldby for £150. On his side Mr. Stokes disposed of about 23 horses, making up to £100 for the best. Hunters and harness horses made anything from £40 to £80, although £100 was several times secured for animals of outstanding merit. Of carriage horses, Mr. Greenwood sold a fine pair of greys for 164 guineas. Other good prices were £210 each, secured for three horses by Mr. F. Bedlam, the same dealer selling two to go to Brussels at £230. Trade in draught horses was fairly good. The best animals for town work made up to £80 each, and a great many were sold at £60 to £70 each. There was also business for horses of less quality at £40 to £50. Many local breeders disposed of agricultural horses at this fair, and all the well-known dealers were present with long strings, among them being Mr. George Meakins and Mr. John Meakins.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending April 12, 1902:—

Kilmarnock.

The annual show of the Kilmarnock Farmers' Society was held at Kilmarnock on the 12th inst., in dull and smewhat cold wether. The show of stock was a fine one as regards quality, although the numbers had decreased by 75. Attendance was exceptionally large, this being in some measure due to the fact that this show opens the season in Scotland.

Cattle.

About the average number of Ayrshires were forward, and this section was, as usual, one of outstanding strength, and competition was keen. Out of seven competitors in the aged dairy cow class (in milk), Mr. William Howie, Burnhouses, was first, while Mr. John M'Alister, Ardyne, was second with a cow bred by Mr. Steel, Newton. Mr. James Kilpatrick, Craigie Mains, was third with a short-legged, good type of a cow. A heavy class of aged cows in calf came before the judges. Mr. William Howie was again first with his well-known White Rose, which also took the red ribbon of the female section. Second prize in the class went to Mr. T. C. Lindsay, Aitkenbrae, for a big cow, and Mr. Hugh Todd, Harperland, was placed third with a beautiful brown and white. There was some good quality in the Derby for three-year-old queys. Mr. William Howie won with Gipsy of Burnhouses, a half-sister to the winning four-year-old cow. Messrs. M. and A. Hunter, Adamhill, were second with Silver Moon, while Mr. A. Harvey, Trees Farm, secured third with a big commercial quey. Mr. Howie's Derby winner also led in the class for three-year-old cows in milk, while a newcomer, belonging to Mr. John M'Alister, Ardyne, was second. Mr. James M'Alister secured first in the three-year-old calving quey class, and Mr. John M'Alister followed with a daughter of Prince of Avondale. The competition in the section for bulls and yeld stock was specially keen. The quality as a whole was good, and in the case of the leaders it was very high. There was a strong class of two-year-old queys, the winner being found in Eileen Aroon, belonging to Mr. James Howie, Hillhouse. A quey of Messrs. R. and P. Wardrop, Garlaff, was placed second. Mr. R. Osborne, Wynholme, was placed third. Quey stirks made hardly so good a class. Messrs. Wardrop were placed first with a daughter of Strongbow, after a hard contest with a quey of Mr. Osborne's typical daughter of Gigantic Stunner. Five aged bulls were entered. Mr. James Howie had an easy win with Not Likely, which again secured the championship of the section. Mr. Osborne was second with Still Another, Mr. R. M. Reid, Bonshaw, being third. Nine two-year-old bulls were catalogued. Mr. James Robb, Hindsward, had a fairly easy victory with Great Bloom, while Colonel Fergusson-Buchanan, of Auchentorlie, was second with The M'Kinlay. The bull stirks formed an unusually strong lot. The winner was found in a home-bred son of Cornelius, belonging to Messrs. Wardrop. Mr. James Howie followed with a good, stylish son of Prince Imperial.

Horses.

The Clydesdale horse section formed a good average display. Mr. J. Ernest Kerr, Harviestoun, led the way in the brood mare class with Lady Garnet, while Mr. John Weir, Townhead Farm, was second with Clarinda. Only three yeld mares were forward, but they were of good quality. Three-year-old fillies comprised a meritorious lot. Mr. John M'Kay, Crossmill Farm, was preferred for first place with Miss Taylor, second prize going to Mr. William Dunlop, Dunure Mains, for Nancy Young. In the two-year-old filly class Mr. William Park, Brunstane, was a clear winner with Florodora, Mr. Frame, Greenfield, being awarded second place, after a close contest with the filly by Hiawatha. Mr. David A. Hood, Balgreddan, led the way in a large class of yearlings, a daughter of Gartly's Heir, the property of Mr. Wood, Townhead, being placed second. The stallion classes were of considerable interest. In the three-year-old class, Mr. William Park led the way with his well-known Marmion, Messrs. Montgomery, Netherhall, securing a second ticket for Baron's Peer.

The two-year-old class formed probably the best in the show. Messrs. Montgomery won first prize with a well-grown son of Baron's Pride. He was closely run for the position by Mr. James Kilpatrick's Pearl Stone. Messrs. Montgomery topped the yearling colt class with a very good son of Baron's Pride.

Light horses, as a whole, made a very creditable display. In the hackney section the leaders were of exceptional merit. There was a nice class of aged mares or geldings over 15 hands. Mr. Alexander Gemmell, Ayr, was placed first, Mr. A. Rennie, Paisley, coming second with Morning Glory. The class for mares or geldings under 15 hands was led by Mr. Gemmell; Mr. Thomas Neill, Kilmarnock, was second, and Mr. William S. Miller, Dumberck, was third. Messrs. J. and W. Sword were first in the brood mare class with Mascotte, which was reserve for the medal. Messrs. Sword also won in the three-year-old class with Lady of Quality; Mr. G. R. Watson was second with Happy Thought. In the two-year-old class Clyde Beauty, belonging to Mr. Mirrlees, Chassels, Bothwell, was the winner. Mr. Charles E. Galbraith, Terregles, secured first in the yearling class with Princess Mercedes. The male classes hardly came up to the standard of the females. The judges were unanimous in giving the award to David Harem, a horse belonging to Mr. Thomas Neill, Kilmarnock, Mr. Alexander Gemmell's Cossack being placed second. Mr. Galbraith won in the two-year-old class with Administrator, the same breeder winning in the yearling class with Roosevelt.

Hunters made a fairly satisfactory section. The first and second in the class for hunting horses or mares were both heavy-weights. The next two were as good in quality, but not up to the same weight. Mr. J. Harling, Turner, Cessnock, won in the yearling class. Cessnock, a meritorious three-year-old belonging to Mr. Harling Turner, secured the red ticket in his class. Ponies made a better show than usual.

Sheep.

The sheep exhibits did not bulk largely in the show. There was a fairly good turn-out of the blackfaced breed. Mr. John Millar, Lambhill, won the medal for the best sheep in the section with his aged tup Royal Sovereign, a thick sheep with a good skin. Amongst the Leicesters, Mr. John Pollock, Springside, won the medal with his winning aged tup Midland Stamp, a sheep with a splendid skin and great substance and quality.

Poulton-le-Fylde Horse Show.

The Poulton-le-Fylde and District Entire Horse Society's second annual show was held at Poulton on the 12th inst., and was favoured with beautiful weather, and was visited by a large number of people. Although the society has only been in existence two seasons it has more than fulfilled the expectations of the committee. Mr. H. W. Worsley Taylor, K.C., M.P. for the Blackpool Division, is patron of the show, and Mr. Arthur H. Ballantyne is the president. There were six classes—three for Shire entires, two for hackney entires, and one for thoroughbred entires, and, with the exception of the latter class competition, was keen in each instance.

In the class of Shire entries, three-years-old and upwards, 16.2 hands high and over, the first prize was carried off by Mr. Jas. Forshaw and Sons, Carleton-on-Trent, Newark, Burgeon, which won first honours in the London Shire Horse Show three years ago. Mr. T. A. Cook, of Inskip, near Kilham, came second with Crosmoor Carbon, a well-known local winner. Mr. Yerburgh, M.P., of Woodfold Park, Mellor, took first in the class of shire entries, three-years-old and upwards, under 16.2 hands high, with Woodfold Royal Harold, Mr. T. Hull, Thornton, being second with Harold William. There was a good entry in the class for shire entires foaled in 1900 and 1901, and the judge had a difficult task to decide upon the merits of the respective animals. Eventually they awarded the first prize to Mr. T. A. Crook, Insqip, for a bay yearling of a very promising appearance, and the second to Mr. John Melling, of Treabs, for a bay two-year-old. Sir George White, an upstanding colt of good class and character.

Mr. T. B. Sykes, Breck House, Poulton, easily carried off first honours in the class for hackney entries, any age, over 15 hands high, with Rodosto, a splendid chestnut, with precise movements, and boasting a very good sire. Mr. Alfred Crossley, Brierley Hall, Wakefield, came second with a fine chestnut, Jubilee King IV. The best class in the whole show was undoubtedly that of the hackney entries, any age, 15 hands high and under, and here Mr. Wm. Lawson, Blackpool, took the first with Blackpool Gentleman, a very handsome horse with a capital movement, the second prize going to Mr. J. Howarth, Thornton, whose Hisberto moved equally as well, but was shorter in substance. There were only three entries in the class for thoroughbred entires, and of these two were thoroughbred polos. The first prize went to Messrs. John Lucas and Co.'s Black Rover, a ten-year-old. The judges were: Shires, Mr. Thos. Churnock Hall, Liverpool; hackneys, Mr. T. M. Bentley, Driffield; thoroughbreds, Mr. Anthony Orr, Lancaster.

THE BUDGET.

Debate in the House of Commons.

On Tuesday there was a long discussion on the tax in the House of Commons, the subject being raised on the motion of Mr. A. Chamberlain to consider the report of the Committee of Ways and Means of April 14, which embodied the Budget Resolution in regard to the proposed Corn, Grain, and Meal Duty.

Sir E. Strachey said that after thirty-two years the question of the corn law was again raised. He thought that no member on the Opposition side would give his vote in favour of this iniquitous proposal, and many Unionists also would be against it. Bakers could not raise the price of the loaf by ½d. or d., and they would consequently put the price up, as already seen, 1d., ½d., and, in some cases reported, 1d. per loaf. The effect of the duty on feeding stuffs would be to increase the cost of production of meat, bacon, cheese, and butter, thereby handicapping the English farmer, and closing markets against him. As a confirmed Free Trader, he strongly opposed the tax, which undoubtedly in its incidence must fall on the working classes, and which would seriously hamper the dairy industry. (Opposition cheers.)

Mr. Law urged that if it were admitted that indirect taxation was necessary, the wisdom or unwisdom of the proposed tax must be judged, not as a question of principle, but as a matter of expediency. On whom would the proposed tax fall? No one, unless blinded by party prejudice, would say for a moment that the whole of this proposed tax must fall on the consumer, and that none would be paid by the producer. Even if it fell on the consumer it would only amount to one-fourth of a farthing on the two-pound loaf, and no one could say that tax was an unfair one. If hon. gentlemen opposite imagined they were going to arouse the country on this question by means of agitation and sending out pictures of big and little loaves, they would show that they had learned nothing and forgotten nothing. Such an agitation now was utterly impossible. It would not be a real agitation, and would neither deceive nor excite anyone. (Ministerial cheers.)

Sir H. Fowler challenged the statement that the Chancellor of the Exchequer was following in the footsteps of Sir R. Peel and Mr. Gladstone. If Sir Robert Peel had ever conceived the possibility that a time would arise when a proposal would be made in that House to put a tax upon corn, which, even at the rate of a shilling a quarter, would produce two or three millions sterling, could anyone doubt that he would have regarded it with the strongest opposition? Mr. Gladstone, according to his speeches, did not regard registration duty on corn as a permanent imposition upon the "greatest article of human subsistence among us." They were calling upon the consumer to pay upon all corn, wheat, and flour, whether it be foreign corn directly taxed, or the homegrown and indirectly protected. Homegrown would not pay, and foreign-grown would pay, and that was a protective duty for all purposes. (Mr. J. Lowther: The home grower of corn has to pay rates and taxes.)

Sir H. Fowler said that was no satisfaction to the consumer. It was a taxation of all for the benefit of a class. Did anyone think the Government would stop at that proposal? (Opposition cheers.) It was Protection begun, and the appetite, once gratified, would very soon want more. Why not extend it to ham, cheese, and other articles of consumption? Admitting that indirect taxation was necessary; the last thing they ought to tax was the food of the people. A bread-tax should be left to the very last. It was about the meanest tax which a nation of the boundless wealth of Great Britain could propose. If the choice was between bread and tobacco, he would say tax tobacco; if it was between bread and beer, then tax beer; if between bread and the income-tax, increase the income-tax. (Loud Opposition cheers.)

Sir Michael Hicks-Beach then rose and replied to Sir H. Fowler, and gave his reasons for not further taxing the articles mentioned by the latter. He said his reason for proposing the grain duty was because he believed it to be one which can fairly be borne by the country, without any such interference with trade as the right hon. gentleman suggested. Corn, flour, and meal, with rare exceptions, are not raw materials of manufacture. The tax does not directly interfere, as a tax on raw material would do, with the manufactures of this country, or with the growth of trade. Continuing, Sir Michael said: The right hon. gentleman has three objections to my proposal. The first is the rooted belief that this tax is protective—(Opposition cheers)—and the second is that if this Budget passes the policy of England will be the policy of Protection in the future. For a convinced Free Trader, who has inherited the traditions of the party opposite with regard to economic questions, the amount of timidity with regard to the future of Free Trade which is shown by the right hon. gentleman is

to me absolutely astounding. Do gentlemen opposite believe that the country is convinced of that principle or not? The right hon. gentleman has stated that neither we nor any other party could lead the country into Protection. Then why all this timidity about Free Trade? I agree with him. I do not believe that the country would accept Protection for a moment, and that being so I cannot understand the extraordinary alarm which is manifested by hon. members opposite.

The question with regard to this duty on corn and flour really is, is it of such an amount as to make it really in practice a protective duty? I say it is not. (Ministerial cheers.) Sir Robert Peel instituted and maintained this as a nominal duty, and the mere fact that it produced a small amount then has nothing whatever to do with the great question of principle. (Ministerial cheers.) When Mr. Gladstone wanted a revenue himself he was perfectly willing to overlook the theoretical violation of Free Trade. But he had in his mind a day when possibly somebody else might want a revenue, and the theoretical violation of Free Trade might seem to him more important then than it did at that time. ("Hear, hear," and laughter.) But I will come back from what Mr. Gladstone said to what he did. In the eight or nine years during which he was Chancellor of the Exchequer he maintained this duty in all his Budgets, and it was not objected to by the great Free-Trade politicians of that day. (Ministerial cheers.) We see now a strong manifesto by the Cobden Club against this proposal. Can hon. gentlemen quote a single word from Mr. Cobden or Mr. Bright against the registration duty on corn and flour? I will venture to say they can quote nothing of the kind. (Ministerial cheers.) Throughout all those twenty-three years until Mr. Lowe abolished it you will find no one of any authority who saw anything protective in this tax. Sir H. Fowler argued that while a duty may not be protective while it lasts, if you reimpose it, it may raise prices. That is precisely what I had in my mind when introducing the Budget. I said that in my belief this duty would have no practical effect on prices. I said also that it might be a trifling contribution towards the expenditure of the country from the working classes. I have been twitted since with having made two absolutely inconsistent statements. Those statements are perfectly consistent. When this duty was imposed, as I anticipated, dealers in corn and those who have to sell corn or flour raised the price by the amount of the duty, and in some cases—though by no means in many cases—there has also been a rise in the price of bread. It is very natural that these things should happen when a duty is first imposed. But directly the conditions of the trade —say a new harvest or some general variation in the price of the article—have time to assert themselves, then this duty will cease to bear anything more than that proportion to the price of the article to which it is properly entitled.

I have had an opportunity of looking at the bakery trade journals, and I find the general opinion of the trade to be that the duty was not sufficient to justify an immediate advance in the price of bread, that there was no real excuse for a halfpenny advance, and that the whole rise that would be justified would be an eighth of a penny on the 4lb. loaf. The explanation of the rise in the price of bread that has occurred in some cases appears to me to be very natural. It is said that the low-price bakers, who are actually selling bread at threepence per quartern loaf in parts of South Essex, will probably have to raise their prices because of the continuous rise in the cost of other ingredients used in bread-making, and that they will take advantage of this opportunity of doing so. It is also stated that this would mean a serious loss to many of them, especially large firms dependent for the majority of their custom on being able to sell at ½d. or 1d. lower than the district price, showing that the rise is temporary. Sir H. Fowler has made a great deal of this tax as a burden upon the working classes. Let it be remembered that when it existed before the price of wheat was something like half as much again as it is now. The price is now 31s. per quarter, which is so small that even with the addition of this tax the working classes would still have an extremely cheap loaf as compared with former years. The right hon. gentleman referred to persons earning from 18s. to 25s. per week. Take a man earning 24s. a week, with his wife and three children. Does the right hon. gentleman think that the man consumes nothing but bread? I can take him to cottages of agricultural labourers in my own neighbourhood, earning perhaps 13s. a week themselves and a few more shillings among their families, where you will find not only bread, but butter—everything a man can want, including meat every day upon the table at dinner. I venture to say that there has been an increase in the comfort and means of that class greater in proportion than has been the case in the class above. (Hear, hear.)

At this juncture Sir Michael gave some statistics concerning the relative burden of direct and indirect taxation at the present time and what it was forty years ago. He pointed out that during that period there has been an increase of 2s. 8d. per head of the population on indirect taxation. In 1861, indirect taxation altogether amounted to 27s. 3d. per head, and 13s. 6d. came from alcoholic drinks, and 13s. 9d. per head from all the rest of the indirect taxation. Last year, of 29s. 11d. per head indirect taxation, 18s. 6d. per head came from taxes on alcoholic drinks, and 11s. 2d. only from all the rest of the indirect taxation. That has been due to two causes. The rate of taxation of alcohol in its various forms has been increased—on spirits by 10 per cent., on beer by 24 per cent. But if you allow for the increase of that higher taxation, and for the same amount of drink as was consumed per head in 1861-2, the revenue that alcohol ought to produce now would be £29,697,000. The actual yield from these two articles was last year £36,990,000. In other words, there has been an increase in the revenue from alcoholic drinks of no less than £7,293,000, due solely to the increase in the drinking habits of the people. Well, I am bound to say that, if our working classes can afford to expend so much on drink, is it not a little exaggeration to talk about the tax I now propose as being likely to produce, as I have seen it argued, a future of poverty, a pauper community, and the creation of all sorts of social disorders? If our people only consume as much alcohol now as they did forty years ago, the result would be that they would pay 26s. 3d. per head indirect taxation, as against 27s. 3d. now. (Ministerial cheers.)

I hope I have said something to show the House that there is a vast increase in the working classes as well as in the class who pay the whole of the direct taxation. I hope I have showed the House that in making that small proposal to increase the indirect taxation of this country I am not imposing upon any particular class that enormous burden. Of this I am certain, while it existed this duty was never considered in practice by those who had to deal with the finances of this country as a protective duty, or as weighing heavily upon the people until 1869. When it was abolished not a soul was benefited. (Ministerial cheers.) There was, in fact, serious loss. Now we have the necessity for it, and to my mind, it is absolutely essential that we should extend the area of our indirect taxation. I believe we can do so by this tax with less strain upon the people, with less injury to the manufacturing industry, and with less hardship to anyone than by any other tax which will produce as much revenue. (Ministerial cheers.)

Sir C. Dilke wished to know how the tax was to apply to farmers' feeding stuffs, as it was infinitely heavier on these than upon bread.

Sir M. Hicks-Beach: I had forgotten to say what I intended with regard to feeding stuff. Of course, this tax is practically a revival of the old tax. In the time of the old tax the amount of offal imported into this country was very small. Now it is considerable, and certainly it was not my intention that offal should be included among the higher-taxed meal. I therefore propose to place offal in the first tax, under which it will bear a charge of 3d.

Sir C. Dilke continuing, pointed out that among other things to be taxed were locust beans, but locust beans were just as much beans as a Scotch woodcock was a woodcock, a Welsh rabbit a rabbit, and an angel on horseback an angel. (Laughter.) The tax was a crude duty on the feeding stuffs of the farmer and on the food of the poor, and the political dangers of imposing it were very great.

Mr. Kearley said the Chancellor of the Exchequer had not taken the pains to investigate what the effect of the taxes was going to be.

Mr. Lloyd Morgan: Only the protectionists now viewed with rapturous applause the proposal to tax corn, and they would take care that this thin end of the wedge shall be driven in a great many pegs before they had finished with the question. He welcomed the concession that the Chancellor was willing to make in favour of feeding stuffs, but as representing an agricultural constituency he hoped he would withdraw the tax upon these stuffs altogether. In the three countries abroad against whom the farmer had to compete there was no tax at all upon these stuffs.

Mr. Cripps approached this question as an uncompromising free trader, and he maintained that the duty on corn proposed by the Chancellor of the Exchequer was not protective in its object. The tax did not offend against free trade principles —it did not unduly interfere with trade restrictions or industrial conditions, and it did not interfere with the area of production. To his mind no tax could be obtained with less friction or less industrial dislocation. As a subject of revenue only he should support the tax.

Mr. Chaplin said it was yet to be proved that the enhanced price of bread which had been talked about had been obtained up to the present time. It was certain that unless there was some failure in the wheat crop of the world, or some other cause entirely apart from the imposition of this duty, there would be no permanent rise in the price of bread.

Sir W. Harcourt said they had been wanting an answer all the evening as to who was going to pay this tax. Here they were in the position that £4,000,000 was going to be raised, and all they were told was who was not going to pay it. (Laughter.) Taxes of this kind must ultimately fall on the consumer, and if that was denied the Government should tell them on whom they would fall. It was said that the tax was paid by the foreigner. The Chancellor of the Exchequer on the night of the Budget was quite confident that there could not be a rise in price. He was not so confident now that he had had time to consider the question, and it was evident that the price of bread would increase as corn rose. All this was said to be done to broaden the basis of taxation; that meant multiplying taxes. The tax was an act of injustice to people who were living on the margin of starvation, and if any person believed that there were not thousands of such people in this country he knew nothing of his country. (Opposition cheers.) The Opposition had a most profound conviction of what was right in this matter, and they would offer to it a most resolute and persistent resistence. (Opposition cheers.)

Mr. Balfour said they had to judge the tax on its merits, and he asked the House to consider for a moment on what ground it could be supposed that this tax was going to make any important difference in the price of bread. Did any human being suppose that the imposition of 1s. duty on corn would bring into cultivation a single acre of ground which was not in cereal cultivation at the present time Was there a single acre in the United States of America, in Canada, in Russia, in India, or in any country from which we drew our corn supplies, which would go out of cultivation, or a single quarter which would be diverted from this country by the tax of 1s. on corn? He did not believe there was one gentleman in the House, whatever his prejudices might be in this matter, who would for a moment answer those questions except in the negative. He did not believe any economist would venture dogmatically to say how a tax of this kind was to be divided, but every economist would say it was wholly absurd to suppose it was to be entirely paid by the consumer. In this case only a fraction would be paid by the consumer. The doctrine of free trade or protection was wholly outside the purview of this tax. Since 1894 the price of wheat had varied between 23s. and 34s.—a difference of 11s. The price of wheat was only one of the elements that went to make up the price of bread. There were many other elements. In the year 1897, when the price of wheat was 30s. —5s. less than its present price—they were told that a large proportion of our population were living on the margin of starvation. The price of wheat at the time had no effect on the consumption. He suggested the Opposition was acting rather the part of demagogues than of statesmen. (Ministerial cheers.) That was a part acted by all parties and in a free country. (Opposition cheers.) Within the limits of the Constitution— (Ministerial cheers)—no man would take exception to it. But what he meant was the part of men who went down into the country and used old arguments and raked up old controversies, in order to rouse old passions—that was the part of a demagogue which deserved the condemnation of every honest man. (Ministerial Cheers.) He believed even if those practices were indulged in, the working men of the country would object to a tax, which even to them might amount to nothing. (Opposition cheers and laughter.) He did not believe that, be even the whole tax on the working men, they would object. They had the ultimate control of parties; they had endorsed by immense majorities the course of policy that had made this tax necessary, and that being so he did not think so ill of them as to suppose they would object to bear their share of the burden. (Ministerial cheers.)

Several members on the Opposition side of the House rose to continue the debate, when

Mr. Balfour moved the closure.

On a division the closure was carried by 285 votes to 195.

The Committee then divided on the resolution affirming the duty on corn and flour—

For the resolution	283
Against	197
Majority	86

The announcement of the numbers was received with Opposition cheers and counter cheers.

Questions in Parliament.

On Monday, Mr. C. M'Arthur asked the Chancellor of the Exchequer whether, under Clause 10 of the Finance Act, 1901, buyers of flour from corn-millers under contract would pay the duty on the corn from which the flour had been milled, in addition to the contract price; and, if so, whether it was intended to take power to remit the amount of such duty to the buyer on flour exported by him to foreign receivers in pursuance of a contract made prior to the imposition of the duty.

The Chancellor of the Exchequer: I am afraid I can give no general answer to such a question as this. The answer in each case would depend upon the circumstances of the contract. As to the second part of the question, my answer is in the negative. There is no such remission in the case of sugar.

Mr. C. M'Arthur said his question had reference to a simple contract.

The Chancellor of the Exchequer: It is not for me to interpret the law. The tenth section of the Finance Act govern cases of this kind. It is impossible for me to say whether any particular case or cases generally come under it. It is for those interested to consult their legal advisers.

Mr. C. M'Arthur gave notice, as the question was an important one, that he would put it to the Attorney-General.

Mr. J. Ellis, on Tuesday, asked the Chancellor of the Exchequer whether he would lay upon the table a statement giving the names of all articles on which the Customs import duties of threepence and fivepence respectively would be charged, with the quantities of each imported during the financial year ended March 31st, 1902, and the respective amounts which each article would have contributed had the proposed duty been then in operation.

The Chancellor of the Exchequer: If the hon. member will place on the Paper a Motion for such Return as he desires, I will see what can be given.

On the same day, Mr. S. Ormsby-Gore asked the Chancellor of the Exchequer if, in view of Section 10 of the Finance Act, 1901, not covering the existing contracts between maltsters and brewers in the United Kingdom, he would exempt such contracts for barley imported for malting purposes from the operation of the proposed duty on corn.

The Chancellor of the Exchequer: I cannot say whether the Section covers or does not cover the particular class of contracts referred to, but in any case I could not propose to Parliament the exemption of such contracts from the corn duty.

Manifesto by the Cobden Club.

A manifesto, signed by Lord Welby, was issued by the Cobden Club on Tuesday evening. It set forth that the Government were undoing the great work of Peel and Gladstone. They were proposing a tax which would hamper and interfere with trade; for example, the trade in feeding-stuffs, which was none so important to all British farmers. But they were also inaugurating a policy of protection, and the Protectionists, by their cordial acceptance of the bread tax, showed that they at least so interpreted it. The interest of the consumer was sacrificed to the supposed interest of the home producer, and a tax was ti be imposed on the first necessity of life—on the loaf of the poor man. The Chancellor of the Exchequer expected to get £2,650,000 from the tax, but the increased price of home grain would add half as much again to the charge on the pockets of the people, and the total would probably amount to £4,000,000, which would come out of the pocket of the consumer.

Meeting of Members of the London Chamber of Commerce.

A special meeting of members of the London Chamber of Commerce and others interested in the corn, grain, flour, and meal, etc., tax, was held on Tuesday at the offices of the Chamber, Eastcheap. Mr. Kearley, M.P., who presided, said the object of the gathering was to afford the trades affected an opportunity of ventilating the anomalies which naturally cropped up in connection with a tax of this kind, and so that the meeting should not be confined merely to the grain trade, the invitations embraced members of the flour, corn, grain, grocery, and other kindred trades.

Mr. Pillman said he had been requested by the members of the Flour Trade Association to represent them at the meeting. The importations of flour into the Port of London were as large, if not larger, than those of wheat. He moved:—"That this meeting of members of the Chamber of Commerce and others interested in the corn, grain, flour, and meal trade views with dismay the unfairness of the tax imposed, in that the incidence of the duties of 3d. per cwt. on wheat and 5d. per cwt. on flour and offals would inflict serious injury on th emillers in the Colonies and abroad, and that the true ratio should be—on wheat, 3d. per cwt.; flour, 4d. per cwt.; and on bran and offals, 2d. per cwt." He argued that the incidence of the proposed taxation was altogether out of accord with what had gone before from the year 1830 onwards. Had this been considered, the duty upon flour would have been reduced from 4½d. to 4d.; and with regard to offals the true incidence would be that as offal had only about half the market of flour it should only pay 2d. per cwt.

The motion was carried with two dissentients, and it was agreed that a Special Committee should be appointed to give effect to it.

Mr. F. C. Frye, as the President of the Grocers' Association, proposed "That this meeting protests against the difficulties thrown upon the retail grocery trade by the inclusion in the proposed new duty upon corn, rice, arrowroot, sago, farinaceous food, and other similar articles which form a substantial portion of their business. The revenue that will be derived from this source can be trifling, and the irritation and difficulty thrown upon the trade great They therefore appeal to the Chancellor of the Exchequer to omit these articles altogether from his tariff." He said the tax was so small that it would be impossible to raise the price of the various articles. It would, therefore, fall upon the importer or the retailer.

Mr. Cushen seconded the motion.

Mr. Palmer Bryan, as a member of the Metropolitan Grocers' Association, urged that these things were manufactured articles. Everything was sold by grocers at the smallest possible profit, and the retailers could not bear any additional burdens.

Mr. Mitchell said the Chancellor of the Exchequer had practically dared the retailer to raise his prices. The duties should be so fixed that the consumer should pay his fair quota.

The resolution was adopted.

Finally Mr. Lough, M.P., moved:—"That, in the opinion of this meeting, it is impossible to arrange one standard for the large series of great articles of consumption included under the proposed new corn duty, and requests the Chancellor of the Exchequer to make further inquiries before proceeding with his plan, so as to arrange a just tariff for the various articles which it is intended to tax, and the meeting refers it to the committee which has been already appointed to suggest the due relation of one item to the other." (Applause.)

The resolution was unanimously adopted, and it was resolved to send a copy to the Chancellor of the Exchequer.

Chancellor of the Exchequer Receives a Deputation.

On Thursday the Chancellor of the Exchequer received, at the Treasury, a deputation from London, Liverpool, Southampton, and elsewhere, of corn millers, exporters of flour and clean rice, and importers of offals and feeding meals, in regard to the new tax. With the Chancellor were Mr. Austen Chamberlain, M.P. (Financial Secretary to the Treasury), Mr. Dudley Ryder, C.B., and other departmental officials. Mr. C. M'Arthur, M.P., introduced the deputation, which included Sir John Willox, M.P., Mr. A. F. Warr, M.P., Mr. W. F. Lawrence, M.P., Mr. R. P. Houston, M.P., the Secretary of the Liverpool Chamber of Commerce, and others.

Mr. M'Arthur said the deputation desired to submit various reasons why, in their opinion, they apprehended that the new tax on corn and other grains as applied to these particular trades, if not modified to suit the circumstances of those trades, would have a detrimental effect. They asked that there might be a drawback on the duty in respect of articles which were not imported to be consumed within the country, but for re-exportation.

The Chancellor of the Exchequer said that he had already received several memorials from the deputation, and he would ask them to combine in making a joint statement on the subject in writing. The arrangements already announced would allow rice to be re-exported free of duty. Interrupting one of the speakers who was dealing with the question of feeding stuffs, Sir Michael said, "Don't go on arguing like this. If you have anything to say about your particular trade I will hear it, but I cannot listen to this kind of argument from a person who does not understand it. I know something about farming myself."

After various members of the deputation had spoken, the Chancellor of the Exchequer said that as to the question of the drawback, he had hoped that the arrangements that had been suggested originally would have been sufficient to meet the case. He admitted that they had made out a strong case in regard to the rice milled in this country and re-exported. He considered, therefore, that it would be necessary to reconsider the matter. As to the question of wheat, when they came to a drawback on an article produced in this country there was considerable risk of fraud. He could not that day say absolutely that it would be possible to grant a drawback in this case, but he was inclined to do so if he could. As to the offals, there might be other kinds upon which even a duty of 3d. would be too high. The question was how to distinguish the offals, and impose such a rate of duty as would really be fair to the original article in the shape of grain and corn.

The deputation then withdrew.

Views of Agricultural Societies.

At a largely attended meeting of the Stockton Chamber of Agriculture on Wednesday it was unanimously agreed to send a resolution to the Chancelor of the Exchequer accepting the Government's proposals respecting the tax upon corn, but suggesting that the tax upon imported flour should be doubled.

The corn tax was considered at a meeting of the East Suffolk Chamber of Agriculture, held on Tuesday, at Ipswich, but here the opinion differed. One member moved that:—"This Chamber, believing that the future of British agriculture lies rather with the production of meat, milk, poultry, and live stock, than of corn, regrets the proposal in the Budget to put a tax on imported corn, and believes it will be hurtful to our agricultural industry." This resolution met with practically no support, and another member proposed the following amendment, which was eventually carried:—"That this Chamber, while offering no opinion on the policy of taxing food stuff, and recognising the necessity of increasing the revenue by increased import duties, considers that if such extra duty is partly to be raised by a duty on corn, it should be on flour and meal, and not on the raw material."

At a meeting of the Cleveland Chamber of Agriculture, held at Guisborough on Tuesday, on the motion of the chairman (Mr. J. W. Clarke, J.P.), the following resolution was passed:—"Resolved: That this Chamber heartily approves the re-imposition of the registration duties on imported grain and flour, and further thinks that as the Government relies upon a strong navy to safeguard our food supplies in time of war, part of the cost of upholding the navy might well be borne by an even larger duty, and that manufactured products should bear a larger proportion than raw material."

The members of the Monmouthshire Chamber of Agriculture met at Usk on Monday and passed, with one dissentient, a resolution approving the action of the Chancellor of the Exchequer, but regretting that he had not placed a higher duty on foreign flour, thus reviving the decayed home milling trade, giving employment to many men, and not appreciably increasing the price of bread."

The Tax as it Affects Existing Contracts.

The question of the duty on grain and flour, particularly as it affects existing contracts, was under the consideration of the National Association of British and Irish Millers, at a meeting held at Birmingham on Thursday, under the presidency of Mr. William Vernon, of Liverpool. A communication was read from Sir Michael Hicks-Beach, in response to representations by trade organisations that the duty would bear unduly on many if exacted on goods already contracted for when the Budget was introduced. Sir Michael replied that he feared he could hold out no hope of exemption.

West Bristol Women's Liberal Association's Resolution.

At a very well-attended public meeting, under the auspices of the West Bristol Women's Liberal Association, the following resolution was passed unanimously:—"That this meeting enters its earnest protest against the proposed tax on bread, which involves a return to protection, insidiously re-introduces the old corn law, and falls most heavily on those least able to bear it. The meeting, therefore, urges all Liberal electors to insist on its withdrawal."

The Land Law Reform Association's annual meeting was held on Thursday evening at the rooms of the National Liberal Club, Whitehall Place. Mr. Charles Trevelyan, M.P., occupied the chair in the absence through indisposition of the President, Sir Walter Foster, M.P. The Chairman, in moving the adoption of the annual report of the Executive Committee, which referred to the Urban Sites Value Rating Bill, introduced by him in the present session, and rejected by 229 votes against 158, said the majority of 71 did not represent the feeling in England with regard to land taxation in the country. The movement was not opposed by a single municipality, while it was being supported more and more by municipal Progressives, as well as by large numbers of Conservatives who were beginning to understand local government, and to feel the oppression of the existing rates. The report was agreed to. Mr. Channing submitted a resolution expressing the regret of the meeting that, in spite of the recommendations in the report of the Royal Commission on Local Taxation, the Government had not taken steps to initiate legislation for the taxation of land values, but, on the contrary, had resisted the moderate proposal of Mr. Trevelyan's Bill. The resolution also repeated the demand made by the National Housing Conference for the immediate extension of the period for which loans were granted for housing schemes to 100 years for sites and 75 years for buildings, and expressed regret that the Government, instead of acceding to this request, had appointed a Select Committee of Inquiry, thereby involving delay. The resolution, seconded by Mr. Howard Evans, and supported by other speakers, was agreed to unanimously. Sir Walter Foster was re-elected president of the Association.

By Hordeum.

The Beer Bill.

As this measure was so completely defeated last Wednesday, it may be looked upon as one of the *has beens*. From the nature of the defeat, and the causes that led to the inevitable fiasco, it need not be treated as if it is likely to come on again. It does not retain a spark of vitality.

The complete removal from the stage of this ill-conceived and badly-considered measure, leaves us free to look at several things from a new standpoint. There has been a long period of ineffectual struggling to secure the attainable. It is now time to settle down and see if there be anything of a perfectly practicable type that can be usefully secured to the advantage of barley-growers. Consumers are so utterly supine a set that they may perhaps be left to themselves.

The chief burden of complaint of all speakers in the House in the discussion on the Beer Bill seemed to be

Bad British Barley.

"However much brewers may wish to use home-grown grain, they cannot, for it has too many defects." It is lamentable that the perverted views of a few interested men are taken and echoed by a called leaders of science, and assume a potency for evil altogether out of proportion to their merits. British grain does not deserve the almost universal condemnation it far too often receives, and its growers will act wisely to stand up in self-defence. It is nearly useless for others to controvert lies if growers themselves do nothing. But before going more fully into this aspect of the question, there are a few arrears left over from the Beer Bill that call for a settlement. One of the most important is the actual attitude of the agricultural community with regard to the principles of the Bill. Does it really and truly represent the opinions of *any* section of the farming interest? If so, which?

This is a matter of more importance than it may appear at first sight. In what way have the farmers of this country been consulted, and how have they affirmed

The Strange Doctrines

of this crude and impracticable scheme?

Ever since the repeal of the Malt Tax there has been a steadily growing desire to see beer placed in the list of articles of food that fall under the scope of the Food and Drugs Act. As this found no mention in the precious Bill, are we now to be told we have put ourselves out of court on this point?

Then there has been a constant struggle against the free use by brewers of a diversity of nostrums of a deleterious type, or which undesirably substitute the normal and healthful ingredients in beer. Has this now to be brought to an end, as the Bill contained no reference to any such things? Is it to be supposed that the farmers have ceased to care for these things, as, so far, they have proved silent? Still more urgently do we need to know if the farmers of Great Britain admit the necessity of the use by brewers of

Fifteen per cent. of adjuncts

to enable our own defective barleys to be used? Surely such a momentous decision could be acted upon only after great care had been taken to ascertain its truth. How were farmers consulted? Has the matter been put before the Central and Associated Chambers, and, after suitable notice, been discussed and voted upon? If not, what are the Central Chambers for? It may now be merely an idle discussion of the character of thrashing dead horses, but if the matter is to be prevented from becoming a very lamentable one indeed to the farmers of this country, it ought to be discussed in a free and open way, and by men who are competent, by freedom of bias, to form opinions that can be relied upon and based upon sufficient knowledge of the subject.

It is monstrous that such a complete

Change of Front

should go out to the world unchallenged as the latest attitude of the agriculturists of this country, when not one in ten thousand of them heard a single word about it prior to their committal to such a suicidal policy.

To have the brewers left free to twit and gird the farmers at every turn hereafter, as they most certainly will, as the result of their ultimatum, will be intolerable, and the only way to stop it is to be quite clear and definite now. The Central Chamber *must* look to it

IN PARLIAMENT.

HOUSE OF COMMONS.

The Beer Bill Rejected.

On Wednesday the second reading of the Beer ill was moved by Mr. Tomlinson, who said that the real question underlying the measure was whether it was desirable, and, if so, practicable, to secure to the consumers of this English beverage that the beer sold to them should contain, in large measure, those ingredients of which it was supposed to be composed. Beer entered so largely into the consumption of the people that it was a matter of national importance to see that due care was taken that the materials from which it was brewed were not only wholesome, but the very best. It was provided that the term "beer" should have the meaning assigned to it by the Inland Revenue Act of 1880, as extended by the Customs and Inland Revenue Act of 1885, and the principle of the Bill might be said to be contained in its third Clause, which prohibited the use of a less quantity of barley malt than 85 per cent. in brewing beer. Clause 4 absolutely prohibited the use of any substitute for hops; and it was also provided that imported beer should be sold under a name which should clearly distinguish it as being imported beer. Even if the Bill would entail a little additional work upon the Inland Revenue officials in enforcing its provisions, he thought the public were entitled to that extra attention. The main objection to the Bill embodied in an amendment appeared to be that it interfered with freedom in the manufacture of beer in this country, and imposed upon the scientific development of British brewing industries arbitrary restrictions that could not be enforced upon foreign competitors. Did the scientific development referred to mean the substitution of other ingredients for barley, malt, and hops? If it did, then the opinion of the best brewers was on their side, and had been declared to the effect that barley, malt, and hops were the proper ingredients. He said, therefore, that, in the interest of the consumer, they had a right to ask the House to affirm the principle that the British consumer was entitled to have his beer composed of those ingredients. The Bill was brought in, in a spirit of conciliation, with a view, as far as possible, of combining all interests connected with beer, so that only good and wholesome beer should be placed upon the tables of rich and poor alike. (Hear, hear.)

Mr. E. Flower said the Bill was an entirely fresh measure, and enshrined proposals not previously the subject of debate. One essential point of difference between this and previous Bills was that the proposal to ear-mark beer by labelling part malt beer as an inferior article had been dropped. The Bill would entail a large increase in the numbers of Excise officers, and he calculated that it would mean a loss of from £156,000 to £160,000 to the revenue. He moved an amendment to the effect that the House declined to proceed with the consideration of a Bill which interfered with freedom in the manufacture of beer while it imposed upon the scientific development of British brewing industries aribitrary restrictions that cannot be enforced upon foreign competitors, in no way provided safeguards for the public health, and secured for consumers no guarantee as to the purity of the materials used.

Mr. Gretton, in seconding the amendment, expressed his opposition to the Bill on the ground that it would in no way help agriculturists in their difficulties, and that it would not safeguard the public health. The only result of it would be that brewers would be compelled to purchase more foreign barley than they did at present, as English barley was deficient for brewing purposes without the addition of certain ingredients of a saccharine nature.

Sir J. Dorington supported the Bill. He thought it a strange thing that English chemists should so much favour the use of substitutes, when in parts of Germany, where such good beer was produced, the use of substitutes was absolutely prohibited. Fifteen per cent. was an ample margin to allow for beer substitutes.

Dr. Farquharson opposed the Bill, and failed to see what public advantage would be met if it were passed. It gave protection to the farmer, or to the consumer of beer which might by accident contain arsenic.

Colonel Brookfield said he had no reason to conceal the fact that the supporters of the Bill had a more or less protective object; that was, they were anxious to preserve for their constituents and friends an industry which gave exceptional and remunerative employment, not only to those immediately engaged in it, but to thousands of men, women, and children who came from the poorest parts of London for the hop-picking. The brewers sometimes asked why they were not content with introducing a Hop Substitutes Bill. For many years they had introduced a Bill called Hop Substitutes, but they were extremely unfortunate in the ballot, and for some mysterious reason it was always blocked when it came into the House. Therefore they had determined to throw in their lot with their more powerful friends, the barley brewers. In these days of the rapid consumption of beer—barrels full in the morning and empty in the evening—he should like to know why it had become more and more necessary to use preservatives of different kinds. At the beginning of last century, when beer was heavily hopped, it used to be kept for a long time, and, to the best of his knowledge, without any preservative chemicals being employed. It was a question which scientific critics of the Bill ought to answer, whether hops were not one of the most effectual and certainly one of the most wholesome preservatives that could be employed. One of the functions of the hop was purely that of a preservative, its object being, not only to impart a bitter flavour to the finished product, but to clarify and also preserve it. He should like to consider at some future stage of the Bill whether the clause prohibiting the use of hop substitutes should not also prohibit the use of any preservatives whatsoever. He might call in evidence on this point the Central Chamber of Agriculture, and say that they were strongly in favour of excluding all these preservatives. They claimed that hops were all-sufficient and most wholesome for the preservation of beer. He warmly advocated this measure, and hoped that the second reading would be passed by a large majority. (Hear, hear.)

Mr. Price favoured the Bill because it sought to carry into effect the wishes of the public to have pure beer, and, while admitting that it might indirectly benefit the barley-growing industries, denied that it could fairly be characterised as a Protectionist measure.

Mr. Griffith Boscawen also supported the Bill, against which he contended that no adequate argument had been advanced. He insisted on the need for legislation against the use of deleterious hop substitutes, which were much more freely used, he declared, than was generally believed by the public, or even by a portion of the trade itself.

Sir Edward Sassoon objected to the Bill as an attempt to interfere with the freedom of the brewing industry. He was of opinion that the inevitable consequence of the passing of the Bill, so far from encouraging the consumption of British barley, would greatly lessen it, while stimulating the importation of barley from abroad.

Mr. G. Whiteley declared that the Bill had been founded upon the fallacy and misconception that beer brewed from hops and malt alone was the best. Brewers used sugar because it produced a better article, and the effect of this Bill would be to force the brewers to place before the public inferior articles.

Mr. Purvis supported the Bill, which, he said would be a great boon to the consumer, for even in regard to the lighter beers there was a growing opinion that the Bavarian beers, which were made exclusively from malt and hops, were the best.

Sir C. Quilter said that if the arguments in favour of beer made with substitutes were sound, how was it that the majority of brewers used no substitutes. He went out recently to Egypt, because the right hon. gentleman the member for West Monmouth threw some doubts on the veracity of some authorities whom he had quoted in a former debate. He thought that the right hon. gentleman took exception to the veracity of Herodotus. He (Sir C. Quilter) had with him now a certain number of inscriptions which went conclusively to prove that beer was made from barley, not only two thousand years ago, but nearly five thousand years ago. (Cries of "Read," and laughter.) It was quite clear that if they went on as they were going on now beer would no longer be made from barley, or from very little of it. He thought that the difficulties of enforcing the provisions of the Bill had been very much exaggerated. Those who promoted the Bill were advised that, without any additional staff, the Excise officers would be able to determine within very narrow limits whether more than 15 per cent. of other materials than barley malt had been used.

Mr. Chaplin also supported the Bill and denied that it had been drawn up in ignorance of what was required for good brewing. On the contrary, it carried out the practice of the best brewers in the country. From an agricultural point of view also, he thought it should be adopted. The great justification for the Bill was the very fact of the use of these sugars, treated with acids, which, as

they had seen, had caused so much suffering and so many deaths in different parts of the country. The position of the Government with regard to this question was that they had to deal with this question themselves nor allow anybody else to do so. He regretted that they should pursue a course which he considered unwise, and which was calculated to alienate many of their supporters. (Hear, hear.)

Sir M. Hicks-Beach said the Bill introduced last year was very different from that now before the House, and the complaint of Mr. Chaplin that no facilities had been given for last year's Bill was groundless, having regard to the fact that it was a Bill which he had not ventured to introduce. He would make a few observations on the effect of the Bill on the Exchequer and the officials of the Inland Revenue. The main object of the Bill was to limit the quantity of sugar used in brewing. In imposing the sugar duties last year he did so on sugar used in brewing, so that brewerm used a material which had become more costly. The complaint that brewers continued to use sugar to a large extent proved the correctness of the argument that the use of sugar was in many cases essential, in order to produce that peculiar class of light beer which was such an enormous improvement on the beer they used to drink. He could not form any estimate of the extent to which the Revenue would be affected, but he had no doubt that it would amount to a considerable sum. The authorities of the Inland Revenue had examined the matter very carefully, and though he did not wish to throw any obstacle in the way of the Bill from their point of view, they reported that there would be very great practical difficulty in carrying out the Bill. If it was essential to the public interest that beet should essential to the public inteerst that beer should be a penal offence to manufacture beer in any other way than that set out in the Bill, the Revenue must lose, and the Inland Revenue staff must be increased. For what object were they asked to say that beer should always be made of barley malt and other materials in the proportions suggested? Was it in the interest of the public health? Mr. Chaplin trotted out the argument used in last year's debate, but if a brewer was to be allowed to put 15 or 20 per cent of ingredients bevond barley malt into his beer, was there no room in that quantity for a good deal of injury to public health? If it was merely that hon. members desired that, as they were taught in their youth that beer meant a composition of barley malt and hops, the law should state that that was what beer was, he ventured to suggest that it would be an interference with a most important industry which would be most detrimental to the State. (Hear, hear.) The change from the heavy beer they were used to in their childhood to the light beer which was now consumed had been of enormous benefit, and he should be extremely sorry if anything should be sanctioned by Parliament which would interfere with the proper development of the industry. He was expressing his own individual opinions; some of his colleagues in the Government held different views; but in addressing himself to the Bill he was bound to have regard to his position as Chancellor of the Exchequer, and in that position he trusted the House would not give the Bill a second reading. (Cheers.)

The House afterwards divided on Mr. Flower's amendment, when there voted:

For the amendment	212
Against	140
Majority for	72

The Bill was therefore rejected.

The Price of Meat.

On Monday, Mr. Crombie asked the President of the Board of Agriculture whether his attention had been called to a resolution, passed on Thursday by a large majority of the London Butchers' Trade Society, that in order to relieve the short supply of meat and prevent a considerable rise in price, the restrictions on the importation of store cattle should be removed; and whether his Majesty's Government would take into consideration the hardship on meat consumers of increased price of meat, and repeal the Diseases of Animals Act, 1896.

Mr. Hanbury: This statement made with regard to the short supply of meat is apparently based on the fact that the imports of cattle and of fresh beef have been somewhat less during the first three months of the present year than in the corresponding period of 1901; but I know of no reason why it should be assumed that this shortage of supply is of a permanent character, or that a considerable rise in price is likely to ensue. In any case, however, the repeal of the Diseases of Animals Act, 1896, and the admission of store cattle from Canada, would afford no remedy. Since that Act was passed, the imports of fat cattle imported from Canada for immediate slaughter have been practically as large as the imports of both fat and store cattle prior to 1896, and there has been no decline during the past three months in Canadian imports.

The Rejected Beer Bill

Being present during the debate, I was struck by the lack of real interest manifested by the people's representatives, in a measure promoted for national benefit. When Mr. Tomlinson rose in response to the Speaker's call to move the second reading, only eighteen hon. members were in their places, two languidly lolled on the Opposition benches, and sixteen appeared on the Government side of the House. Up to the adjournment for luncheon, the total numbers did not exceed between thirty and forty, and until the eloquent speech of Mr. Fletcher Moulton in the afternoon attracted a larger attendance, the House generally presented a desolate appearance. The only member of the Government who sat through the debate was Mr. Jesse Collings. The Chancellor of the Exchequer appeared about 4 o'clock, and almost immediately arose. Soon after the conclusion of his remarks, the division bells brought in a crowd, and not till that moment could the House be described as well filled. Subsequently 352 members passed through the lobbies, adopting Mr. Flower's amendment, and rejecting the Bill by the substantial majority of 72.

To say that I am disappointed at this result, is to say but little of what I feel about it, and my mind has been deeply exercised in endeavouring to explain the causes which have led the House to reverse its pronouncement of last year. But I am bound to admit that if the merits and necessity of the measure from the barley malt point of view, were guaged by the arguments and speeches of its supporters as presented on Wednesday, it must have fallen to pieces from sheer weakness. The barley-growers were so feebly represented that they may well cry aloud to be "saved from their friends." Upon the chief link of the third section the Bill depended, and I did not hear a single good reason advanced why the proportion of 85 per cent. of barley malt, and 15 per cent. of other substances should be arbitrarily fixed, as was proposed by the Bill.

The compromise thus put forward as a sop to the brewers was certainly an obstacle to success, and to the failure of this section the loss of the Bill is, in my opinion, mainly attributable. It was otherwise with respect to section 4, which boldly prohibited the use of any substitutes for hops, it being understood that this section should be made even more drastic and comprehensive if the Bill had gone into Committee. Hop-growers have no reason to complain of the energy with which the claims of their product were advanced, nor of the sound arguments by which they were upheld by Colonel Brookfield and Captain Boscawen. Indeed, only once in the course of the debate was any question suggested as to the use of any other preservatives than hops, which appeared to be accepted by every speaker as the natural, the most efficacious, and the entirely sufficient materials for the purposes to which they are applied.

The strength of the attack upon the Bill was concentrated upon the barley malt-section, and when the amendment was moved by Mr. Flower and seconded by Mr. Gretton, two eminent brewers, whose beers are noted for purity, whose methods of manufacture are universally sanctioned and whose impartiality is therefore unquestionable, I felt that the death knell of the Bill had been sounded. Judgment was practically pronounced upon it by Mr. Fletcher Moulton, in a speech bristling with scientific technicalities, and adorned by fluent eloquence, that was listened to with the closest attention. Against such telling arguments, the trivialities of the ever-genial Sir Cuthbert Quilter and the stilted conventionalities of Mr. Chaplin, could avail but little, and it only needed the official declaration of Sir Michael Hicks-Beach that the adoption of such a measure would entail a large increase in the supervising staff, and consequently in the cost of the department, to drive the last nail into the coffin of the Bill from which we had anticipated so much public advantage.

I think it must now be admitted that the effort of trying to sit on two stools must be abandoned. Compromise has been tested in various forms, and has at last miserably failed. The House of Commons, under the influence of the "arsenic scare," said, last year, that legislation to regulate the brewing of beer was necessary. But this enthusiasm has evaporated as the alarm has passed away. So that we are now brought back to our original position; and being still convinced that the expression "pure beer" means nothing else than beer brewed in the most scientific and advanced fashion from barley-malt and hops only, we must cease from troubling about compromises, and recommence the battle for purity on the old field and under the old standard.

I join issue with the learned Mr. Moulton when he asserts that a return to the exclusive use of these well-proved materials will necessarily check the advance of science in the brewing industry. The great breweries of Munich are models of scientific knowledge and procedure. The materials used are simple, but the methods by which they are converted into wholesome, refreshing, and harmless beer are most exact. The standard of quality is never disturbed; it is established by State authority, and always adhered to, with the result that the excellence of Bavarian beers was frequently referred to during the debate as an example for our brewers to follow. None of us desire to return to "rule of thumb" methods with which we were taunted on Wednesday. We approve science, its research, and its attainments, but we object to its abuse in the introduction into our national beverage of any substances or compounds other than those that Nature has so bountifully provided.

For the present we must accept the inevitable. The Bill is consigned to the limbo of many other well-intentioned but forgotten proposals. Our hands are tied for some time to come, but we can still use our tongues and our pens, and I trust that the advocates of the legislation of "pure beer" will not be discouraged, but will continue to urge the justice and reasonableness of their cause, and will occupy the interval in getting such evidence together as shall ensure their ultimate triumph over the great interests opposed to them.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interest and benefit to the member of the society.*

Home Notes.

The Borough.

Trade has been jogging along quietly this week, but sufficient business is being done to maintain general values. Inquiry for good qualities is still active, but as growers' holdings of such hops are practically exhausted, buyers have no choice, and are driven to seek for them elsewhere. I hear that good profits have been made by merchants who bought earlier in the season, in sales made on the open market, and some excellent parcels are now held for figures which will arouse envy in the minds of planters, whose early realisation did not cover cost of production. Concerning the lower grades, a fair demand exists for them, and previous rates are being obtained. But the market for these kindshas been somewhat checked by the pressure of sellers from the Midland districts, who, despite their recent movement for local defence, seem just now to be affected by panic, that has induced them to offer in London some very good lots of Worcesters at absurdly low prices. London buyers are ready enough to take advantage of this ill-advised action, and have freely operated, securing profit for themselves, as they will have good opportunities to sell these hops at their legitimate market value, which is much higher than the prices they have paid. Although I am not altogether in accord with the

System of Business

which is established in the Borough, I cannot forget the fact that it is based upon the experience of many years, from which it claims a certain amount of respect, and which creates considerable difficulty when reformation is suggested. While waiting for the changes that may be desirable, and may yet be accomplished, I consider that my Hereford and Worcester friends would be wise if they more generally fell into line with the methods accepted by their Southern brethren, who, with but few exceptions, consign their produce to the care of trusted and trustworthy factors for sale to the merchants. The average results are doubtless satisfactory to growers, as they know that their hops will be fairly displayed upon the boards, the samples being drawn by men of experience, and therefore presented to buyers under the best possible conditions. The factor is aware of the views of his clients with respect to value, and by his own extensive knowledge is enabled to advise him if his ideas are correct. Handling, as he does, a great variety of growths, the factor can safely estimate their comparative worth, and, while he endeavours to get the highest figures for the grower, he does not readily allow business to pass if a reasonable concession will secure it. Factors occupy the position of impartial agents, but as their chief interests are identical with those of their clients, they naturally endeavour to

protect growers as far as possible from the adverse influence exercised by the other side. The regulation of their commission on a percentage basis would, I submit, create further inducement in this direction, and I yet hope to see this system of remuneration of factors accepted. But it must be remembered that they have much reason to claim a voice in the settlement of the terms of trade, as their contract with their clients includes guarantee of payment for all hops that pass through their hands. Double security is thus given to growers. If the merchant to whom the hops are sold fails to pay, the factor bears the loss, while if the factor should become a defaulter, the ultimate buyer is still responsible, and from him the grower can recover his money. Recent legal decisions have settled the latter claim, as in these transactions the law defines the position of factors to be that of agents only. There is decided contrast between this and

The Worcester Custom of Trading.

In the Midlands average samples are submitted. A large growth of hops is generally represented by a few samples, and as there may be much variation in the groups of pockets, there is much greater probability of dispute as to the regularity of quality than if, as in London, a sample is drawn from each pocket. The samples brought to Worcester market by the growers in hand-bags or parcels are usually drawn at the farms, and can hardly present the hops in such favourable light as if manipulated by skilled operators. The market opens at Worcester in September. A few London buyers attend for a few weeks, and after their retirement the practical control of the trade reverts to the local dealers. Should the brewery demand be inactive, growers are left with their hops on hand, and their isolation from the great centre of the trade hinders them from realising their produce at the right time. If the Midland growers followed the example of the Kent and Sussex men, and gave their hops a fair chance on the Borough boards, they would be classified and compared impartially, according to their merits, and would, in the majority of cases, be disposed of earlier and at better prices than are possible under the present system. Several Worcester and Hereford planters have tested the comparison for some seasons, and are satisfied with the average results. I believe that Midland growers, generally, object to the Borough system, because they fear that their hops would pass beyond their control. They need have no such fear. Until they have consented to a sale, the hops are still their own. They give their instructions to the factors, who are bound to abide by them, and to take no other step without consultation with and consent of their clients. My purpose in putting these points forward is to advance the interests of the English industry, and especially those of Herefordshire and Worcestershire. I therefore commend them to the consideration of my friends in the Midland hop counties.

Foreign Notes.

Nuremberg.

A slight reaction appears to be passing over this market. The favouarble weather incites the few country holders of hops to unburden themselves, as they now wish to give attention to their work in the plantations. Arrivals have therefore increased somewhat, and although buyers are moving about, their transactions are hardly sufficient to support the previous strength of the trade. Export business is also very slow, and these various influences, coupled with the low average of quality of hops on offer, combine to impart a quiet tone to the trade. It is not expected that this calmness will long continue, as with the development of warmer weather the brewery output must be enlarged, and the consumption of hops proportionately increased. We may therefore reasonably look for greater activity in demand, with higher prices for hops in the course of next month.

Belgium.

No practical change in the value of locally grown hops is reported. The advanced prices recently quoted seem to be fairly maintained, but the demand is of a normal character, the political disturbances having disorganised general trade to some extent, the consequent strikes having also interfered with the consumption of beer.

America.

The stocks held in the country are reported to be very light, and but few sales are being made, as holders are asking advanced prices. Dealers in their turn are rather inclined to withhold offers to sell, as they are waiting for demand from brewers, which they say must come as soon as the warmer weather increases consumption.

It is a singular circumstance that the English market is virtually denuded of American hops. The few that remain are held firmly at extreme rates, and will doubtless be re-shipped, and it is not improbable that they may be followed across the Atlantic by some of the English surplusage, American dealers being only convinced recently of the shortage of the last German crop.

CHICKENS ALL THE YEAR ROUND

The Largest Manufacturer of Incubators in the World.

Poultry Rearing in Monmouthshire.

Dr. Rutherfoor Harris, of Llangibby Castle, has arranged, through his head poultryman, Mr. S. Cook, for a series of lectures on up-to-date poultry keeping, to be given by the Monmouthshire County Council's expert, Mr. H. Bromley. A preliminary meeting was held at the Llangibby Club Room, the Rev. H. A. Williams, rector of Llangibby (in the chair), Mr. Honton, A. Williams, the Rev. C. T. Salusbury, of Tredunnock, and about twenty farmers and other sinterested in poultry being present.

Dr. Harris has placed at the disposal of Mr. H. Bromley the use of the poultry yard and appliances at Llangibby Castle for practical demonstrations, and it is hoped that the lead will be followed by other gentlemen who are interested in poultry rearing.

Feeding Fowls on Meat.

Mons. Emile Thierry, writing in the "Journal d'Agriculture Pratique," upon the method of feeding poultry upon meal, states that although it increases the number—also gives heavier eggs—he does not advocate this practice.

The animal food is richer in nitrogen and phosphoric acid, and excites the ovarian functions. He considers that the eggs are not eatable; indeed, have an objectiinable taste.

Mons. Thierry mad e an experiment upon some fowls which had been fed upon offal. He shut them up and fed them upon grains, and in about ten or twelve days the eggs were excellent.

When the fowls begin to leave off laying, it might be advantageous to add some animal matter to their rations; but it should not be continued.

The more natural the conditions under which fowls are kept, the better the flavour of the eggs and meat.

Profit in Poultry Keeping.

For many years the possibility of making poultry pay was ridiculed, but scattered over our country have been many who, on a small scale, have kept fowls and made them pay well; and others, observing the operations of their neighbours, have started on a similar plant, and have also proved the truth of the statement made by us twenty years ago that fowls, properly managed, would pay well.

The utility side of poultry-keeping has been a gradual lesson to many, for in the old days there were those who held the opinion that fowls could not be made to pay unless they were sold at large prices for the show pen; that to keep birds for the eggs they laid was sheer madness. They had some ground for their theory when we remember that 20 years ago it was a very rare thing to get an egg from the fowls from September to March. The hens were moulting, and their management during that trying period was not understood, so that they were not in active service for at least five, and frequently six, months during the year. The pullets were hatched late on account of the hens not laying until March or April, and being bred from birds which had never had any consideration bestowed upon them as to their capabilities as layers; they did not develop as our pullets do nowadays, and usually commenced to lay at from 10 to 12 months old; and laid during the summer; then moulted, and went out of action for several months.

Those who had, by careful study of their fowls, bred some birds which laid during the winter months, were regarded with surprise. And the statement then went forth that it was bad for the fowls to lay during the winter months, that it was against nature, as spring was the time for the laying of eggs for the purposes of reproduction. Latter-day poultry-keepers who had no experience of the early times in poultry keeping can have no idea as to the ridicule cast on the advocates of poultry keeping for profit by the breeders of the old school.

There were one or two isolated cases of writers during the seventies who sought to show that poultry might be made a source of profit to many; but the reception of their theories was so disheartening that they did not follow them up. We are always glad to meet those who started poultry-keeping in the days when their friends told them it could not be made to pay, as there is something very interesting in the relation of their experiences then. Amongst the greater number poultry-keeping is believed to be profitable now, and it is the possibility of making it pay on a large scale which is taxing the minds of many. First of all, it would be well for us to consider the points which led up to the successful management of fowls on a small scale. Years ago there was no selection amongst the poultry. A number of cocks of all ages and mixtures were allowed to run about with a number of hens of different age and conditions. When the eggs were laid, and this was invariably late in the season, they were set, and the young birds hatched out. They received no special treatment, frequently feeding with and roosting in the same houses as the old birds as son as they were old enough to leave the hens.

"Mark Lane Express" Diary.

April.
29. Sale of the Right Hon. Lord Sherborne's Shorthorns, at Sherborne, Glos.

1. Sale of Horses from the Gowanbank Stud, the property of Mr. Alex. Morton, at Gowanbank, Darvel, Ayrshire.

Hiring of Farm Servants: Important Point of Law.

An important case in connection with the hiring of farm servants was heard at Chester Castle by the county magistrates recently, when Mr. John Minshull, of Saighton, one of the largest farmers on the Duke of Westminster's estate, brought an action against a woman farm-servant to recover £5 for leaving his service without permission. Defendant was engaged about a fortnight before Christmas for the year, commencing at Christmas, at a salary of £17. She left on March 6th without giving any reason for her departure, and was now in the employment of another farmer. The money due to her up to date had been paid.

For the defence the technical objection was taken that the contract was invalid. A verbal arrangement was made a fortnight before Christmas for a hiring which was to extend to Christmas this year. Under the Statute of Frauds, a contract to serve for more than a year, or for a year commencing at a future day, must be in writing, and signed by the parties. That, it was claimed, was fatal to the case.

Colonel Evans Lloyd: The point invalidates 99 per cent. of the hiring contracts made in Cheshire.

Mr. Brassey: Yes, or anywhere else.

The Magistrates' Clerk (Mr. Churton) advised the Bench that they had no alternative but to dismiss the case.

The Chairman (Mr. H. D. Trelawny) advised Mr. Minshull in future to engage his servants after Christmas, or, if not, to engage them in writing.

The Sale of Cattle by Auction: Liability of Auctioneers.

In the King's Bench Division, on the 15th inst., the case of Holtom v. Bentley, Hobbs, and Mytton, came before the Lord Chief Justice and Justices Darling and Channell, sitting as a Divisional Court, on appeal from a decision of the County Court judge of Worcestershire (Sir R. Harington, Bart.), sitting at Worcester, who decided in favour of the defendants, a firm of auctioneers, carrying on business at Worcester, Pershore, and Bromyard. Mr. A. T. Lawrence, K.C., and Mr. Corner appeared for the plaintiff, in support of the appeal; and Mr. J. B. Matthews for the defendants.

Mr. Lawrence said the facts of the case were that the defendants held an auction sale of cattle at Bromyard in October last. Among the conditions of sale was one that the cattle should be paid for and taken away with all faults and errors of every description, and to be absolutely at the risk of the purchaser after the fall of the hammer. Another condition ran: "On payment of the purchase money the purchaser shall be entitled to a delivery order for the lot or lots purchased, but no lot can be delivered until the sale is ended, and then only by the production of the delivery order." The learned County Court judge seemed to think that the defendants were protected by these conditions of sale, but he (Mr. Lawrence) submitted that, under the last-cited condition, the defendants were bound to deliver the cattle on the production of the delivery order, which they had not done.

What occurred was this:—The plaintiff purchased four animals for £48 10s., paid the money, and got the delivery order, which he handed to a drover, to whom he gave instructions to take the animals away. The sale was not over till three o'clock, and about four o'clock the drover presented the delivery order, but plaintiff's animals were not then in the "sold ring," in which animals were placed when sold. One of them was subsequently found in the possession of another purchaser, to whom it must have been wrongly delivered, but the other three had never been traced. He submitted that the plaintiff was entitled to the return of the money which he paid for the cattle, and that was what he had sued for.

Mr Matthews submitted that the County Court judge was right, and the property in the cattle had been delivered to the plaintiff when he was given the delivery note, and the defendants had no further responsibility in the matter

The Lord Chief Justice said the learned County Court judge, it appeared, had delivered a very careful judgment in this case, but having carefully found the facts, he appeared to have overlooked the true effect of the contract. He seemed to have thought that because the property passed on the giving to the purchaser of the delivery order, there was no further obligation upon the defendants, unless they actually interfered to prevent the delivery of the cattle to the plaintiff. He (the Lord Chief Justice) could not take that view of the contract. The common-sense view of the condition relative to the delivery of the cattle on the production of the delivery order was that the beasts were bound to be kept safely in the custody of the defendants till they were delivered on the production of the delivery order, and further there was the implication that the cattle would not be delivered to any person who did not present a delivery order. Therefore he thought the County Court judge ought to have found that there was a breach of contract on the part of the defendants and that the plaintiff was entitled to recover. As to sending the case back to the County Court judge on the point of the presentation of the delivery order within reasonable time, that was not necessary. Justices Darling and Channell concurred. Judgment was accordingly entered for the plaintiff for £48 10s. and costs.

New Agricultural Patents.

Specially compiled for the "Mark Lane Express" by Mr. G. D. Howard (Hughes, Son and Co.), patent agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

7,310.—Herbert Hailey, of Hitchin, for "Wire brush harrow and rake."

7,485.—James Scarlett, of New Bond Street, London, for "Improvements in agricultural appliances."

7,540.—James Edward Ransome, of Chancery Lane, London, for "Improvements in land rollers and mowing machines."

7602.—James Walker, of Chancery Lane, London, for "Improved apparatus for cutting turnips and the like."

7,656.—Robert Andrake, of East Dulwich, for "Improvements in wind engines or motors for agricultural and other purposes, and in gearing and apparatus to be used therewith."

7,825.—William Groves, of Swanage, for "Improvements in machines or apparatus for collecting and loading hay and corn."

7,941.—Edwin Nichol, of Chancery Lane, London, for "A new or improved agricultural machine for weeding, cleaning, or cultivating the soil."

8026.—Gilbert Beale and William Thomas Rounsivell, of London, for "An improved machine for distributing seed, soil, fertiliser, or the like."

Patents Sealed.

22,187.—R. W. Hussey, of Indiana, U.S.A., for "Mowing machines."

22,247.—E. T. Mellor, of Southampton, for "Treating grain and other vegetable products."

22,761.—I. A. Timmis, of Westminster, for "Food preparations."

23139.—A. Eade, of Buxted, for "Turnip-thinning machines."

23341.—W. N. Whitely, of Springfield, Ohio, for "Sheafing or binding apparatus; harvesting machines."

The Home Secretary gives notice that he will make an order under the Factory and Workshop Act, varying the beginning and end of the period of employment of women and young persons in creameries in Ireland during the months of May to October inclusive, and permitting employment during the same months from six to nine o'clock in the morning on Sundays and holidays.

CAN YOU AFFORD AN "ALFA-LAVAL"?

Give the matter a moment's consideration, and you will speedily realise that you cannot afford to be without one.

Remember that your Reaper or Binder is at work but a few weeks in the year, the rest of the time it is a source of worry and care.

The "ALFA-LAVAL" gives you a handsome profit twice a day all the year round—in fact every time you run milk through it—and it lasts you practically a lifetime.

And add to this the enormous improvement in your dairy products, and the saving of the drudgery attendant on the antiquated "setting" pans you now employ.

An illustrated "ALFA-LAVAL" Catalogue—free for the asking—will make these and other advantages abundantly plain to you.

FOR FINE HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq, Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal I consider it excellent in every way"

WYE COLLEGE.
COUNTY COUNCILS OF KENT AND SURREY.

SOUTH-EASTERN AGRICULTURAL COLLEGE, WYE, Near ASHFORD, KENT.
(University of London).

APPOINTMENT OF PRINCIPAL.

The Governors of this College are prepared to receive applications for the post of Principal, who shall be "a person duly qualified for the office by attainments in science as applied to agriculture." The salary offered will be £500 a year, board, and a residence (rent, rates and taxes free), at the College, and a capitation fee of £2 a head for every student resident in the college, for whom there is accommodation for about 50. Candidates, preferably between the ages of 28 and 45, must produce evidence of their experience of teaching and other qualifications for the post. The Principal will be expected to take up his duties in September next.
Applications, giving full details of experience and qualifications, stating age and whether married or single, with twenty-five copies of not more than three recent testimonials, are to be sent to the Clerk to the Governors by Saturday, 24th May next.
Any attempt at personal canvassing will immediately disqualify. A copy of the Charity Commissioners' Scheme for the administration of the College can be obtained (price 6d.) of the undersigned.
By order of the Governors,
J. TURNER WELLDON, Clerk.
11, Bank Street,
Ashford, Kent,
April 28th, 1902.

Extracts from 20th annual collection of reports: Native Guano for Grass, Grain, and Root Crops. G. Dickson, Selby: "Oats and barley did well Heavy crop of cattle cabbage. Highly satisfied." E. Stanford, Warnham: "Clover good. Stopped fly on turnips. A good manure." H. O. Habberfield, Forestfach: "Oats 60 busnels per acre. Mangolds, best crop I ever had. Very pleased." W. Price, Hardwick: "A cheap and good manure for clover and swedes." J. Knight, Wisbech St. Mary: "Very good crops of mangolds and potatoes. Biggest and finest potatoes I ever had." W. Allsopp, Bloxwich: "Mangolds the finest crop ever seen on the farm. Swedes excellent." G. W. Gilbert, Boultham: "Cannot speak too highly of it for wheat; answers well for grub and wire-worm." J. Powell, Lulsley: "Hops, a very good crop." —Orders to the NATIVE GUANO CO., LIMITED, 29, New Bridge Street, London, E.C., where TESTIMONIALS FROM ALL PARTS AND FOR ALL CROPS MAY BE OBTAINED. AGENTS WANTED.

RATS CAN BE AT ONCE KILLED by laying down SANFORD'S POISON! They take it readily, and are found dead. "I found 42 rats dead with it in my wheat stack.—JOHN HALL, Morden." GATHERING FLINTS.

In stony districts great quantities of flints and boulders are periodically turned up by the plough. In the ordinary course of good husbandry some, at least, of these stones must be removed from the land. The minerals on a farm are almost invariably reserved to the landlord. Does such a reservation extend to surface flints? If so, how is it affected by a general custom for the tenants to pick the flints and dispose of them for their own benefit?

These questions have recently given rise to much discussion, under the following circumstances. On an estate where the usual reservation of minerals is in force, the tenants have been accustomed to gather the limestone boulders with which much of the land abounds, and sell thm to the District Council for the repair of the roads. This arrangement has been of mutual advantage; for, whilst it is necessary from the tenant's point of view to remove the stones from the land, it is a convenience to the Council to have material for repair of the roads close at hand, instead of having to lead it a considerable distance at a serious expense. The Council have paid the farmer a certain price for each load of stones delivered on the roadside.

One would have thought that so reasonable a practice, calculated to benefit the land and the farmer alike, would have been fostered by the landlord. It happened, however, that his interests were watched by an agent whose zeal was so extreme that he feared his master was losing more in minerals than he was gaining in good husbandry. Stones are minerals, he argued; the minerals are reserved to the landlord; therefore the proceeds of the sale of the stones belong, not to the tenant, but to the landlord. The argument was plausible enough on the face of it, but it lost sight of the fact that a detached stone ceases to be part of the freehold, and becomes a mere chattel, rather than a mineral which can be worked. Moreover, it ignored the possibility of a valid custom giving such perquisites to the tenant, and the statutory rights of highway authorities to take such stones in certain circumstances without paying for them at all. However, these considerations did not shake the agent's faith in his opinion that the tenants were selling part of the inheritance, and we are credibly informed that not only did he attempt to stop the future exercise of the practice, but actually compelled one tenant to take back to the farm some sixty loads of stone which he had carted on to the roads.

We fear the agent had overlooked the fact that the very question which he appears to have raised had already been thrashed out in the House of Lords, and had been decided against him. In 1883 their Lordships held that a custom for farm tenants to collect flints turned up in ploughing, and properly removed in the course of good husbandry, and to sell them for their own benefit, is reasonable, and further that in a district where such a custom prevails, it is not inconsistent with, nor excluded by, a reservation to the landlord of "all mines and minerals."

Lord Fitzgerald, in giving judgment, said that in the course of cultivation the plough brought up to the surface flints of various sizes, and it was absolutely necessary that some of them should be picked and removed. What was to be done with them? Were they to be left lying on the farm? If so, they would be doing further mischief by encumbering the ground, and occupying a space which could otherwise be used for cultivation. It was obvious, then, that for the proper use of the farm the flints so picked should be removed from it. When once they were taken off the farm, they ceased to be a portion of the inheritance, and became mere chattels. At one time, such flints were of very little value, and probably the origin of this custom was that the tenant acquired the privilege of selling them to recoup himself the expense of removing them.

Perhaps the fact that the surface stones were regarded as weeds, rather than as a remunerative crop, explains the somewhat arbitratory provisions of the Highways Act, 1835, under which the highway authority may gather stones off any man's land for repair of highways, after one month's notice, paying compensation for damage done by leading, but without making any payment for the stones. If the owner of the land refuse his consent, a licence may be obtained from two justices, who, after hearing the objections of the owner, may over-rule them, and may give the necessary authority. Gradually, these provisions of the Highway Act have fallen into desuetude. But they still exist, and as they fix the value of the stones at nil, it may be argued that the price paid to the farmers in question really represents the cost of labour and cartage, and does not include anything for the stones themselves. If so, clearly the landlord has no claim to any part of the proceeds, although but for the custom he might conceivably have been able to restrain the removal of the stones.

It is interesting to notice the changes which have gradually developed the value of flints. When the Highways Act was passed, it was the custom to gather the flints and pile them up in rows along the hedges, where they were often a positive nuisance. There was no market for them, but they were utilised as opportunity offered in repairing the farm roads and

buildings; and when the highway surveyor wanted any flints he fetched them, the farmer generally being glad to be rid of them. The Highways Act empowered the surveyor to get an order from the justices to take the stones if permission were refused, but instead of resorting to compulsion he probably arranged with the farmers to give them a small price for the flints delivered, rather than be at the trouble of collecting and carting them himself. Afterwards, principally owing to railways, the flints acquired a mercantile value, and there arose quite a new state of things. The surveyor had to compete with flint jobbers, and could no longer get the stones for little or nothing (except through the intervention of justices, who, perhaps, were not over anxious to help him). Even if he had the stones given him, he had to collect them and cart them, and it paid him better to give the farmers a fair price and have them delivered. So it came to pass that the flints were in fact sold, and the Highway Boards were the best customers.

By a Man of Mark Lane.

At a recent meeting of the Tunbridge Wells Farmers' Club, an important suggestion was made by one of the members (Mr. George Arnold), who formulated the idea that during June, when many Colonial Premiers would be in this country, an effort should be made by the combined Farmers' Clubs and Agricultural Associations of Kent and Sussex, to obtain a visit from one or other of the Premiers, to speak on the colonial aspect of agriculture and the possibility of a federation of home and colonial agriculturists. The suggestion was cordially endorsed, and it was decided to immediately take steps to ascertain the views of neighbouring clubs on the matter. This is an idea worthy of being copied by agricultural societies in other parts of the kingdom.

The receipts on account of Revenue from April 1st, 1902, when there was a balance of £8,566,947, to April 26th, 1902, were £13,632,023, against £11,818,320 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £18,185,348, against £19,162,532 to the same date in the previous year. The Treasury balances on April 26th, 1902, amounted to £6,722,457, and at the same date in 1901 to £6,376,666.

The quality of Canadian flour is much lauded in a leaflet issued by the Canadian Department of Agriculture. It is stated that for sweetness, whiteness, and strength, Canadian flour is unsurpassed. To meet the increased demand in England for hard wheats to mix with the home-grown and softer wheats, Mr. F. T. Shutt, M.A., of the Central Experimental Farm at Ottawa, made a comparative examination between Canadian best patents and the best grades of Hungarian flours. The foreign samples had been procured by the Hon. the Minister of Agriculture. The result of these experiments proved the superiority of the Canadian flour for bread-making purposes. The percentages of albuminoids or protein, the most important part from a nutritive standpoint, were:—Canadian best patents, 12.59 per cent.; Hungarian best grade, 11.27 per cent. The determination of gluten, both wet and dry, was also in favour of Canadian flour, namely:—Canadian best patents, wet gluten, 34.22; dry gluten, 12.33 —Hungarian best grade, wet gluten, 26.17; dry gluten, 9.79.

My readers, no doubt, clearly remember that stage in Mr. Gladstone's agrarian policy when he advised agriculturists to "make jam." The great statesman owed this advice to Mr. T. W. Beach, the father of the jam trade, who has just died. Mr. Beach revolutionised jam-making by his discovery of how to make whole-fruit jam, and the better to exhibit his skill hit upon the idea of putting his wares into glass bottles, so that the public could see the most delicate fruit made into jam without appearing bruised or altered in appearance. The success was instantaneous; no grocer's shop-window was regarded as complete without a show of the wonderful whole-fruit jam, and the demand upon the glass-bottle trade became so enormous that for long the makers could not cope with it. Mr. Beach was seventy-three years of age, and when twenty-two, won the Banksian medal for fruit-growing.

It will be remembered that last week I printed a communication from one of our correspondents, announcing that the farmers of the Tiverton Division had asked Mr. E. H. Dunning, of Woodleigh Court, to become a candidate for the division, should Sir W. Walrond receive a peerage at the Coronation. Mr. Dunning has now expressed his willingness to stand, and on Tuesday addressed a very large meeting at Tiverton. After declaring that he would never oppose Sir William Walrond, the present member, he declared himself an Imperialist and a supporter of the present Government. He was a Free Trader in principle, but he recognised that something must be done without oppressing the working-man to save agriculture from ruin. A resolution of confidence in Mr. Dunning was carried by a large majority.

Speaking at a meeting of the Staffordshire Chamber of Agriculture, Mr. Hanbury, President of the Board of Agriculture, expressed the belief that the corn duties would not have any considerable effect one way or the other. He looked upon the tax on flour as of much greater value to farmers than the tax on corn, and he wished it had been higher, because, after all, a tax on flour was not a tax on food. There was no earthly necessity why corn should be ground in America which could be as well ground in this country, yet, owing to the great importation of flour during the last twenty years, they had lost something like 25 million pounds' worth of offal, and the Americans had received, which our millers might have got in this country, something like ten millions for grinding corn into flour. He hoped that what had been undoubtedly a great source of evil to British farmers, who depended upon bran and other offals, would, to some extent at any rate, be removed.

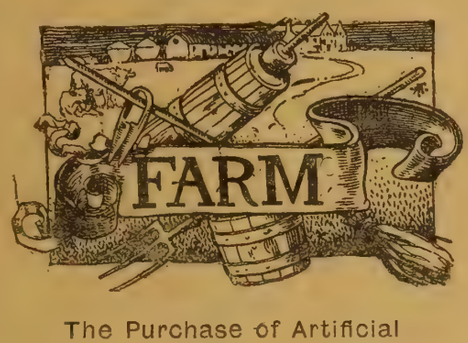
In concluding, Mr. Hanbury said there was one word of warning which he should like to give. Under the old system, and even at the present moment, a great proportion of the offals produced in this country was sent off to Denmark and other rivals of our own. So much of the milling being done at the ports, the offal cost less to send it by sea from Liverpool or Hull to Denmark than it did to bring it to the consumer at home. This was a serious matter, and he could not understand why it was the railway companies were so blind to their own interests in this respect.

The Margarine Law in the United States, which, as previously mentioned, levies a tax of 5d. per lb. on all coloured margarine, and heavy licence fees on all sellers of same, has now been passed and will shortly come into operation. Its effect will be to restrict the export of American butter, and probably it may also draw more butter from Canada than before, thus limiting the Canadian butter sent to British markets.

Northallerton May Fair.—On Thursday this annual horse and cattle fair took place, the entries being unusually large. The buyers present included Captain W. H. Fife, of the Army Remount Department. Coach-horses were a nice lot, and made £50 to £70 each; cart-horses were a splendid class, and realised £40 to £60; Hackneys were also strongly represented, making £50 to £75; some useful foals were shown, £20 to £30 being paid for them. Cattle sold well, English calvers pricing £20 to £24; good heifers, £16 to £20; young bullocks, £10 to £13; stirks, £6 to £8; and Irish graziers, £8 to £10 each.

I find that the House of Commons, and even the most Tory section of it, now accepts my estimate of the Budget. It will not confer any great benefit on the agricultural interest, but it is valuable as emphasising the new policy of at least one section of our Parliamentarians towards the interest. As a fact, too, it is perceived that the Budget will probably operate more decisively to the advantage of milling, than to that of agriculture pure and simple. "I think you are right," said a South of England M.P. to me; "it is a natural sequel to the Rating Act. It is not greatly valuable in itself, but it emphasises the wise attitude of mind which has come over us. This particular phase of the Budget was designed in the interest of agriculture. It is a practical illustration that it is perceived that the ruin which has so long menaced us cannot be warded off by generous phrases and a closely-shut purse. I look upon this Budget as the inception of the new policy, rather than its completion. It is a suggestion of the real intention—that is all." I have given this observation because it reflects the general attitude of the Conservative members for rural districts. The Budget is not going to usher in a new heaven and a new earth; and it is as well that we should not anticipate the dawn of either.

I have, however, to chronicle two incidents in connection with the Budget which are significant as revealing at once the temper of the community and the temper of the Opposition. The first is satisfactory; the other—which, by the way, I have already hinted at—is lamentable. The agitation against the corn and flour duties has fallen absolutely flat. In the House itself the proposal had an infinitely less moment than the proposal to put an extra penny on cheques. Outside, in the commercial community, the latter proposal has been regarded as an infamous interference with commercial activity, and as likely to paralyse all enterprise and originality. Of course, this is bathos; but, at least, the authors of these assertions have appeared to believe in them. This same community has, on the other hand, regarded the corn and flour duties as a pardonable infliction of little significance. The general body of the people has apparently shared this view. At all events, though they have had to pay a halfpenny and a penny more for their loaf—a passing affliction, which will re-adjust itself—they have been quiescent, or, at least, unprotesting. There has been none of that throbbing excitement, that quickening sentiment, which we might have suffered had a Bright or a Gladstone been still with us. The moral of this is that, left to themselves and untutored by agitators, the people no longer look upon a tax on cereals as in some mysterious way concealing the gaunt spectre of starvation. It has now little ominousness. Will this fact be an encouragement to those politicians who think that revived agricultural prosperity can only be born of an economic revolution?



And now I come to my second point, which indicates that the people are not to be allowed to remain in a state of untutored calm. The thunders of agitation have already been prepared. They are a little less resonant than they used to be; the stage-mechanism is a little more apparent. Still, they will soon rumble menacingly in our ear. The old flam-

boyant periods and taunts are being rescued from the armour of obsolete assault. The old stores of hunger and misery which did duty in the wild and hustling Bright-and-Cobden days are being given a garb of up-to-date piquancy. However, the real point of the attack will lie in the assertion that the new tax will be part of a conspiracy on behalf of the landlords. A Hyde Park demonstration — which usually places the coping-stone on every feather-headed ambition—will register the fact that this tax is only designed in order to place money directly into the pockets of the landlords. The Rating Act, it will be asserted, meant two millions for the landlords; these corn and flour duties mean two-and-a-half millions. Sir Michael Hicks-Beach had only to abandon what is, of course, described as "the dole to the landlords" to have secured as much as these duties will produce. Hence—the argument is a delightful *non sequitur*—the bread tax has been imposed in order to put money into the purses of the landlords. You will ask if it be possible that this contention can be credited. It is assuredly possible. However, its worse effects will be indirect rather than direct. It will tend to give an accentuated force to the antagonism between the town and the country. That antagonism has received a deepened character in the last few years. It is not a feud yet. It may become one.

We now know the real obstacle—we have it on the authority of Mr. Hanbury himself—to the development of the usefulness of the Board of Agriculture. Mr. Hanbury has an excellent programme; he has, we can well be persuaded, worked at it diligently and with that calm-eyed prescience which is his chief characteristic. But he cannot get the money. The demands which the war has made upon him have hardened the heart of the Chancellor of the Exchequer, and induced him to button up the nation's breeches' pocket. Now, the confession of this fact by Sir Michael Hicks-Beach should be an inspiration. Imagine if some desirable and wise extension of the Board of Trade, designed in the interest of the urban workers, were rendered impossible by the niggardliness of the Treasury—a niggardliness due to whatever cause, and then, having imagined this, conceive what a cry of rage and indignation would go up from the towns and the trades' unions. They are careless of any national and imperial necessities when these conflict with their own interests; and, selfish as this attitude may seem to be to the more altruist, I have come to the deliberate opinion that it is the only wise one. It is only thus that you can secure sympathetic treatment. It is no use Mr. Hanbury registering heroic resolves, if he is to be baulked by an economic Treasury. It is an imperative necessity that the Board of Agriculture should be reformed, or, rather, should be re-organised and extended on the lines indicated by the Minister for Agriculture. The fact that it has Mr. Hanbury's imprimatur indicates in itself that this anxiety is not of a very revolutionary character. It is an even more imperative duty to demand the necessary money from the Treasury, however harassed the Chancellor may be. We must be inconsiderate like the rest.

One phase of the agitation against the Education Bill will directly concern the villagers. This is the movement now being got up against the Bill by the Evangelical section of the Church of England. The assertion of these ladies and gentlemen is that the opportunities created under the new Act—for it is assumed that the Bill will pass into law—will be taken advantage of in the villages to propagate sacerdotalism, and even Popery, at the public expense. It is not assumed that it will be done in the towns. The espionage maintained by the Protestant bodies there will, it is urged, be too keen and exacting. However, this espionage cannot be extended to the villages; and hence it is that we have the rhetorical assertion that our lovely Auburns will be, as one orator has phrased it, "hot-beds of treachery towards Protestantism." Personally, I think the idea far-fetched; but I record it in order to warn my readers of the affliction which is in store for them. We shall have the House of Commons being assured in a few weeks that every village contains a Catesby or a Guy Fawkes, who will willingly blow up the whole system of national education, if it would advantage their sectarian and proselytising purpose.

Mr. Hanbury has certainly shown a most wholesome persistence in his dealing with the War Office in regard to the remount question. The success of his efforts—the fact that the War Office is working harmoniously with the Board of Agriculture in the hope that British farmers will take advantage of the field of enterprise and profit opened out to them by the cavalry necessities of the army—should be an encouragement to agitation. Mr. Hanbury adopted his wise attitude in response to pressure. I will not say that this pressure was imposed by the farmers' organisations. It was rather imposed by the MARK LANE EXPRESS and its sympathisers. But the Minister for Agriculture is a receptive man, and he—with an alacrity that was esteemable—accepted the idea. However, there are other sources of possible profit associated with the army beyond the supply of horses. How about instituting some system by which the British farmers will be provided with equal opportunities for supplying the necessary stores? You will reply that they can tender now, if they like. They can, and be killed by railway rates. Besides, hundreds of farmers are absolutely unaware of this privilege. Could not some method be adopted for conveying the knowledge direct to the farmers? More important still, could not the Government insist on more generous preferential railway rates in the carriage of stores from the farmer to the Government depots? This is not a matter for Parliamentary pressure as much as for pressure upon Mr. Hanbury personally. We have never had a more approachable Minister.

The Purchase of Artificial Manures.

While certain artificial or, as they are sometimes called, chemical, or light manures are to some extent applied in autumn, it is in spring that farmers lay in the bulk of their supplies, and therefore it seems appropriate that a few suggestions should be offered at this season in regard to their use and economical purchase.

There are three substances, and only three, that are valued in artificial manures, namely, nitrogen, phosphates, and potash. According, therefore, to the greater or less quantity of one or other of these substances the value of the manure will rise or fall. Some manures contain only one of these substances—for instance, nitrate of soda and sulphate of ammonia contain only nitrogen; superphosphate, precipitated phosphate, and basic slag contain only phosphate; and kainit, sulphate of potash, and muriate of potash contain only potash—while other manures hold two substances of value, as in the case of bones, which furnish both nitrogen and phosphates, or saltpetre (very seldom used, however, as a manure), which supplies both nitrogen and potash. Only one class of so-called artificial manure, namely, Peruvian or other similar guano, contains an important amount of all three substances.

In price-lists, *nitrogen* is often expressed as ammonia. The relationship between the two substances is, however, a very simple one, and need occasion no difficulty or uncertainty. Seventeen pounds of ammonia always contain exactly 14lb. of nitrogen, or, what is the same thing from the farmer's point of view, 14lb. of nitrogen are the equivalent of 17lb. of ammonia. If, therefore, a sample of, say "corn manure," is offered as containing 4.5 per cent. of ammonia, this is the same as saying that it contains 3.7 per cent. of nitrogen. Sometimes, though not often, the figure is made to look more attractive by being stated as sulphate of ammonia, but this also need cause no difficulty, if it be remembered that 66lb. of this substance are equivalent to no more than 14lb. of nitrogen or 17lb. of ammonia. If, therefore, we take the above example, the figures mean one and the same thing, whether they are stated 3.7 per cent. of nitrogen, or 4.5 per cent. of ammonia, or 17.4 per cent. of sulphate of ammonia. But a manure merchant, who failed to effect many sales for a fertilizer, of ever so high-sounding a name, on a statement of 1 per cent. of nitrogen or 1.2 per cent. of ammonia, might be more successful with a certain class of buyer if he entered the nitrogen as equal to 4.7 per cent. of sulphate of ammonia, and yet the three figures all represent the same fact. Under the Fertilizers and Feeding Stuffs Act, 1893, the invoice must contain the minimum guarantee of nitrogen, stated as such.

Phosphates or *phosphates of lime* may also be entered in an analysis or price list in several ways, but as a rule this ingredient is either stated as above or as phosphoric acid. In an invoice, however, the statement must be made as soluble or insoluble phosphates, as the case may be.

The relationship between phosphates or phosphate of lime, whether soluble or insoluble, and phosphoric acid, is quite as simple as that between nitrogen and ammonia. 142lb. of phosphoric acid always form 310 lb. of phosphate of lime; so that to convert the former into the latter one may multiply by 2.2, which, though giving an answer slightly above the truth, is quite accurate enough for all ordinary purposes.

If therefore the analysis of a manure is returned as 12 per cent. of phosphoric acid, it is equivalent to saying that it contains fully 26 per cent. of phosphates. Similarly 30 per cent. of phosphates is equal to nearly 14 per cent. of phosphoric acid.

Potash usually exists in manure in the two forms of sulphate of potash and muriate or chloride of potash. It takes 94.2lb. of pure potash to form 174.2lb. of sulphate of potash, whereas the same amount of potash will form only 149.2lb. of the muriate or chloride. In the former case, therefore, to convert potash into terms of sulphate of potash, we multiply by 1.85, whereas in the latter case we multiply by 1.58. If therefore an analysis of, say, kainit is stated as 12.5 per cent. of potash, this is equivalent to saying that it holds over 23 per cent. of sulphate of potash; while muriate of potash guaranteed to contain 56.8 per cent. of potash is of about 90 per cent. purity.

Just as a buyer may sometimes be led into purchasing a manure through its nitrogens being expressed as sulphate of ammonia, so may the contents of potash be made to look more attractive by being stated as sulphate of potash. In an invoice, however, the potash must be stated as such.

The rules for approximately converting the various terms into their equivalents may be thus summarised:—

To convert nitrogen into terms of ammonia multiply by 1·2.
To convert nitrogen into terms of sulphate of ammonia multiply by 4·7.
To convert phosphoric acid into terms of phosphates multiply by 2·2.
To convert potash into terms of sulphate of potash multiply by 1·85.
To convert potrsh into terms of muriate of potash multiply by 1·58.

Nitrogen and phosphates, and, to a less extent, potash, vary in effectiveness, and therefore in value, according to their source or origin. Nitrogen is never so effective as when in the form of nitrate of soda. It is not quite so active, and for some purposes not so valuable, when in the form of sulphate of ammonia, though under certain circumstances this somewhat slower action may be regarded as an advantage. Nitrogen in, what is called, the organic form is in its least active condition, though here again the rapidity and effectiveness of action vary greatly. Nitrogen is in the organic form in blood meal, fish meal, bones, shoddy, etc., and yet as a source of plant food blood meal is more active than these other substances. It is claimed as an advantage for slow-acting manures that they last longer, which is true; but one applies manures not to last but to act. It is only where it is convenient to apply manure at somewhat long intervals, as in the treatment of orchards, that the more inert manures are worthy of much consideration.

As regards phosphatic manures, it may be said that while soluble phosphates are all alike active, there is considerable difference in the value of insoluble phosphates. The insoluble phosphate of bone meal, for instance, is less effective, and for most purposes less valuable, than the insoluble phosphate of basic slag, precipitated phosphate, or even dissolved bones. Some of the insoluble phosphate of the last manure has once been soluble and has "reverted," and such phosphate is not much less effective than soluble phosphate. But raw bones as a manure have been longer known to British farmers than other forms of phosphate, and for this reason their price has kept relatively high.

The More Important of Manures.

The purely nitrogenous manures.—The most important are nitrate of soda and sulphate of ammonia, others in less general use being rape dust, blood meal, shoddy, etc. Other things being equal, nitrate of soda is specially suitable:—(a) For use in spring and early summer, as in the manuring of hay, cereals, potatoes, and mangolds. (b) For use on heavy land. (c) For use as a top dressing. (d) For use in a dry district. (e) For use where immediate effect is desired.

Speaking generally, sulphate of ammonia suits better:—(a) For use on crops that make their growth late in the season, for example, turnips. (b) For use on light land. (c) For use on soil holding abundance of mild lime. (d) For use

where it can be mixed with the soil (in contrast to top-dressing). (e) For use in a wet district.

It is, however, often difficult to say for which of these two manures the conditions are most suitable; and then the question should be decided either by the relative cost of the substances, or by using a certain amount of both.

If one of the organic manures can be bought at a cheap rate it may be used to some extent as an ingredient of a mixture.

Nitrogenous manures cannot be profitably employed on leguminous crops (peas, beans, clover, etc.); and on a mixed crop of say clover and grass, if the clover is to be preserved against suppression, they must be used sparingly, if at all. They must also be used with caution on barley, and especially so where a fine sample, rather than large yield, is looked for. Other crops, however, generally respond freely to the use of this class of manure.

Nitrate of soda and sulphate of ammonia are apt to be lumpy, therefore the buyer should look carefully to the mechanical condition. Nothing should be applied that will not pass a ½-inch riddle. Lumps larger than this will often kill plants with which they may come into contact.

Nitrate of soda is generally offered on the basis of 95 per cent. of purity (= 15.6 per cent. nitrogen or 19 per cent. ammonia), while commercial sulphate of ammonia usually contains 97 per cent. of the pure article (= 20.6 per cent. nitrogen or 25 per cent. ammonia). Sulphate of ammonia is thus the more highly concentrated manure.

The purely phosphatic manures.—Of these superphosphatic and basic slag are the most important. The former is, speaking generally, more suitable for use under the following circumstances:—(a) Where rapid effect is wanted. (b) In spring. (c) For arable land. (d) For admixture with sulphate of ammonia.

Basic slag is specially suitable:—(a) For use in autumn. (b) For use on grass land. (c) For use on land holding much peat or other vegetable matter. (d) For use on land addicted to finger and toe. (e) For use in orchards. (f) For admixture with nitrate of soda.

Basic slag generally leaves little to be desired as regards mechanical condition, provided the grinding be fine enough (80 per cent. through a No. 100 sieve—that is, 100 wires per linear inch, or 10,000 apertures per square inch—should be the minimum requirement). Superphosphate is sometimes almost as dry and mealy as slag, but in other cases it is lumpy and sticky. Samples of the latter character are of reduced value, and should be avoided.

Superphospate is of varying degrees of quality, the usual contents being 28 to 30 per cent. of soluble phosphate. Basic slag also varies in quality, the usual contents being 35—40 per cent. of insoluble phosphate.

Phosphatic manures are of special value in the manuring of turnips, leguminous crops, hay, and pasture. They are of less importance for potatoes and mangolds, and least of all for cereals. In the case of the last class of crops it usually happens that the plants are able to satisfy their requirements, as regards phosphates, from the natural supplies of the soil, or from residues of former applications. Whether, on any particular farm, it will pay to apply a direct phosphatic dressing to a corn crop can only be determined with certainty by means of a simple field of experiment.

The nitrogenous-phosphatic manures.—The most important of these is dissolved bones, though bone meal, fish meal, etc., have their value for certain purposes.

Dissolved bones lose in value through being damp and lumpy; they can, however, be bought as dry and almost as fine as superphosphate. They usually contain 32-34 per cent. of total phosphates (of which more than half should be soluble) and fully 3 per cent. of nitrogen.

Bone meal should be very fine and free from grease. Any particles 1-10 of an inch or upwards in size become available very slowly. It should hold about 50 per cent. of phosphates, and 4 of nitrogen.

Potash manures.—Genuine kainit contains about 12¼ per cent. potash, besides which it holds over 30 per cent. of common salt. Where, therefore, a farmer wants to use the latter substance he may find it to his advantage to employ this manure.

Sulphate of potash is offered in various degrees of strength, containing from 25 to over 40 per cent. of potash. Muriate or chloride of potash often holds over 50 per cent. of potash.

All potash manures are apt to be lumpy, and if they are stored long they may become so hard as to be almost unmanageable. Poor mechanical condition is here quite as undesirable as in the case of other manures.

Potash manures are most important for root and leguminous crops, less so for grass and cereals. There are many well-authenticated instances of potash manures doing positive harm to meadows, though in other cases they have been used effectively. Whether they are wanted on any particular farm or not can only be determined by experiment.

Valuation of Artificial Manures.

There are various methods of valuing artificial manures, of which that known as valuation by units is most employed by farmers and dealers. The general trend of prices is determined by market influences, and is largely beyond the farmer's control, but a reliable method of valuation enables him quickly and accurately to conclude which of several samples of the same class of manure is the cheapest. The following figures must be regarded merely as examples, prices fluctuating considerably from year to year, and in different parts of the country, owing to a variety of causes.

For the purposes of the valuation of artificial manures a unit may be taken as synonymous with one per cent. of the valuable substance in a manure. To find the value of a unit we divide the price of a ton by the percentage composition of the manure. Thus *sulphate of ammonia* containing 20 per cent. nitrogen, and costing £11 =11s. per unit. Or as 20 per cent. of nitrogen per ton, carriage paid, offers nitrogen at £11-20 is equivalent to about 24¼ per cent. of ammonia the cost of a unit of ammonia is 9s. 1d. We can use one or other of these unit-values to enable us to determine which of several samples of sulphate of ammonia is the cheapest. Suppose that we are offered other two samples, the one guaranteed 18½ per cent. and the other 16 per cent. of nitrogen. The price per ton of the former, on the same basis, should be 18½ × 11s. = £10 3s. 6d., while that of the latter should be 16 × 11s. = £8 16s. Comparing these figures with the price actually demanded we are able at once to determine which of the three lots of manure is the cheapest.

It may be mentioned that it would be rather exceptional to have the opportunity of obtaining sulphate of ammonia so poor in nitrogen as 16-18 per cent., but dirty samples do sometimes occur, and if the quotation of a price, to include carriage, can be obtained, one can sometimes secure good value in a low-class manure, provided the impurities are of a perfectly harmless character.

The value of a unit of nitrogen in nitrate of soda is generally rather higher than it is in sulphate of ammonia, which means that farmers regard the former source of nitrogen as rather the more valuable.

When sulphate of ammonia is selling at about £11 per ton carriage paid, *nitrate of soda* will usually be costing about £9. On a basis of 15½ per cent. of nitrogen, the value of a unit in the latter case works out at $\frac{£9}{15{\cdot}4}$ =11s. 9d., that is 9d. higher than in the case of sulphate of ammonia. If we use this unit to value sulphate of ammonia, we should get a value of a ton as 20 × 11s. 9d. = £11 15s., which is 15s. higher than this manure can usually be bought for when nitrate of soda is at £9 per ton. Now, it lies in the power of many farmers to secure this 15s. by depending on sulphate of ammonia rather than nitrate of soda where the conditions are specially suitable for the use of the former substance. When sulphate of ammonia costs more, per unit of nitrogen, than nitrate of soda, as occasionally happens, the latter manure is almost invariably to be preferred.

As a rule, organic nitrogenous manures are priced in the market at a much higher rate per unit than is the case with the two manures just looked at. The results of their use do not justify this position, for organic nitrogen will not produce so much increase as nitrogen from nitrate of soda or sulphate of ammonia. If we employ 11s. 9d. as the value of a unit of nitrogen in its most effective form, and apply it to the valuation of some organic manures, we should get some such results as these:—

= £4 14s., together with an allowance of about £1 for phosphates, giving a total value of £5 14s. per ton. Some samples of fish meal hold more and some less than 8 per cent. of nitrogen, in which case the value would rise or fall, though not quite proportionately, on account of the phosphates.

Blood meal, say 12 per cent. nitrogen × 11s. 9d. =£7 1s., together with about 5s. on account of a little phosphate.

Rape meal, say 5 per cent. nitrogen × 11s. 9d. = £2 18s. 9d. per ton.

The values per ton for these three manures are considerably higher than the merits of the manures would warrant. These manures, in fact, are only worthy of a farmer's attention, under ordinary circumstances, when they can be bought at a rate per unit of nitrogen that is considerably less than that which applies to nitrate of soda or sulphate of ammonia.

Phosphatic manures are also valued in the same way. At the present time the insoluble phosphates in *basic slag* are valued at about 1s. 3d. per unit, and at this rate a sample containing 40 per cent. may be put at 40 × 1s. 3d. = £2 10s. per ton, carriage paid, while a 30 per cent. sample is no better value at 37s. 6d. As a rule, the lower grades cost more per unit than the higher qualities, so that the latter are usually the better value.

The soluble phosphate of *superphosphate* may, at present, be valued at about 1s. 9d. per unit. At this rate a 28 per cent. sample would cost £2 9s. per ton, carriage paid, while a 34 per cent. sample would be as good value at £2 19s. 6d.

In *bone meal*—which should only be bought when very finely ground, really dust—the nitrogen is usually valued at about the same rate as that in sulphate of ammonia, while the phosphate may be put at the same rate as that which prevails for basic slag. On this basis, a sample containing 4 per cent. nitrogen and 50 per cent. insoluble phosphates, would work out as follows, though it can often be bought for less:—

		s.	d.	£	s.	d.
4	×	11	0 =	2	4	0
50	×	1	3 =	3	2	6
			Total	£5	6	0 per ton, carriage paid.

In *dissolved bones* the market rate for nitrogen may be put at that which prevails for nitrate of soda, while the rate for the insoluble phosphate is usually the same as that in bone meal. The soluble phosphate in this manure is exactly the same substance, chemically, as that in superphosphate, and yet it is generally valued about 1s. per unit higher. The only justification for this would appear to lie in the fact that the insoluble phosphate, being partly reverted, should be valued somewhat higher than that in raw bone, and raising the rate for the soluble phosphate makes some allowance for this.

Taking these figures, and assuming a good sample of dissolved bones, we come to the following result:—

		s.	d.	£	s.	d.
20 % soluble phosphates	×	2	9 =	2	15	0
16 % insol phosphates	×	1	3 =	1	0	0
3 % nitrogen	×	11	9 =	1	15	3
			Total	£5	10	3 per ton, carriage paid.

Although this is about the market rate for dissolved bones, it would appear to be higher than their intrinsic merit warrants.

Kainit can usually be bought at the rate of 4s. per unit of potash, so that on an analysis of 12¼ per cent. of potash the price of a ton, carriage paid, would be 12¼ × 4s. = £2 9s.

Sulphate of potash, containing 25 per cent. of potash (corresponding to a purity of about 46 per cent.), would at the same rate be worth 25 × 4s. = £5; while high-class manure, containing, say, 40 per cent. of potash (corresponding to a purity of about 74 per cent.) would be worth 40 × 4s. = £8.

The potash is somewhat higher than in kainit, so that, with kainit at £2 9s. per ton, the market value of potash is somewhat higher than that in kainit, so that, with kainit at £2 9s. per ton, the market value of sulphate of potash of a purity of 74 per cent. is likely to be about 40 × 4s. 3d. = £8 10s.

With a light haulage, and especially if the manure can be applied in autumn or early spring, so as to admit of certain undesirable magnesia salts being washed out, kainit is usually the preferable manure; but, for use at seed-time, and especially when mixed with other manures, sulphate of potash has advantages.

Muriate of potash is usually placed on the market of a purity of 80-90 per cent., corresponding to 50-57 per cent. of potash. Taking the former quality, and adopting the unit-value of potash in kainit, the price of a ton would work out at 50 × = £10. Generally a unit of potash in muriate is valued at a lower rate than that in kainit or sulphate of potash, so that the market quotation per ton is likely to be about 50 × 3s. 9d. = £9 7s. 6d.

Muriate of potash, in fact, usually offers the cheapest supply of potash, and for most crops it is probably as effective as any potash manure, while for potatoes it would seem to be superior.

The most important example of a manure holding nitrogen, phosphates, and potash is *Peruvian and similar guano*. The composition varies with in wide limits, but the following may be taken as an example:—

			s.	d.	£	s.	d.
Nitrogen	12	×	11	9 =	7	1	0
Sol. phosphates	5	×	1	9 =	0	8	9
Insol. phosphates	15	×	1	3 =	0	18	6
Potash	2	×	4	0 =	0	8	0
				Total	£8	16	6

Such a manure, however, would probably be priced at a much higher rate, so that guano, like bones, would appear to be still under the influence of past traditions.

It may be pointed out that the purchase of manures at a certain rate per unit, subject to analysis by an approved chemist, makes a farmer largely independent of variations in quality. If, for instance, he agrees to pay 1s. 3d. per unit, including carriage, for phosphates in basic slag, it is a matter of comparative indifference to him whether the consignment proves to be of 35 or 40 per cent. quality. In the former case the price per ton would be 35 × 1s. 3d. = £2 3s. 9d., while in the latter case, it would be 40 × 1s. 3d. = £2 10s., and the value would be as satisfactory in the one case as in the other. Needless to say, he would not apply the manure to his land till he was in possession of the analysis, and then he would regulate the dressing with some regard to the quality of the material.—*Leaflet issued by the Board of Agriculture.*

Prevention of Potato Disease.

For more than ten years experiments have been carried out in different parts of the British Isles in order to test the effect of certain dressings in checking the ravages of potato disease (Phytophthora infestans). As in all other experiments, the results have varied to a considerable extent, but in the majority of cases they must be regarded as satisfactory. It might have been expected from the success which has attended the operation that it would have become the general practice throughout the country to spray potatoes in order to prevent or, at any rate, check the disease. This, however, has not been the case, and in most districts of England and Wales preventive measures have never been tried. With the view of directing further attention to the matter in North Wales, trials were made in 1901 at the North Wales College Farm, Lledwigan, and at three centres in Carnarvonshire: Barrach, Llangian; Bryn, Llanfair, Portdinorwic; and Rorsedd Fawr, Chwilog. It has been found in previous experiments that the best results have been obtained where the dressings were applied before the disease made its appearance, as it spreads so rapidly under favourable conditions that in many cases it is impossible to arrest its progress after the plants have been attacked.

The preparation most frequently in use is known as the Bordeaux mixture, and consists of 20lb. of sulphate of copper, 10lb. of lime, 100 gallons of water. The mixture is applied at the rate of 100 to 150 gallons per acre.

It will usually be found convenient to purchase the sulphate of copper and lime of guaranteed purity mixed together in the above proportions, so that it is then only necessary to dissolve them in the required quantity of water. There are several preparations in use similar in their main features to the Bordeaux mixture, and one of these "Strawsonite" was used in this experiment.

In all cases the liquid, which should be kept well stirred, is applied to the plants by spraying machines, care being taken to cover the surface of the leaves more particularly on the under side. The success of the treatment depends upon the time it is carried out, upon the weather, and upon the care with which the work is done. It should be repeated if the dressing is washed off by rain.

In the present experiment the dressing was applied by a twin-spray machine about the middle of July. There was then no trace of disease. It was intended to repeat the dressing after an interval of three weeks, but this was not done owing to the unfavourable state of the weather.

A noticeable feature of the experiment was the fact that the sprayed plots remained green for fully ten days after the unsprayed plots, a result probably due to the increased vigour imparted to the plants on the sprayed portion.

The yields at the different centres are given in the following table:—

TABLE I.—YIELD OF POTATOES.

YIELD OF POTATOES.

Centre.	Marketable. T. C. LB.	Small. T. C. LB.	Disease. T. C. LB.	Total weights. T. C. LB.
Barrach, sprayed	10 6 28	1 18 94	0 13 44	12 18 54
Barrach, unsprayed	8 19 52	2 3 59	0 14 82	11 17 81
Rorsedd Fawr, sprayed	7 1 8	1 1 98	1 5 0	9 7 106
Rorsedd Fawr, unsprayed	6 6 8	1 9 52	1 0 10	8 16 38
Bryn, sprayed	14 6 4	0 11 36	0 5 16	15 2 56
Bryn, unsprayed	14 1 103	0 15 48	0 11 93	15 9 20
Lledwigan, sprayed	13 2 72	1 16 108	0 8 72	15 8 28
Lledwigan, unsprayed	11 4 80	1 18 46	0 14 93	13 8 1

It will be noticed that, with one exception, the total weight on the sprayed plots was considerably greater than on the unsprayed. As, however, this does not appear to be the most important feature of the experiment, smaller tables are inserted below, giving the averages at the four centres for the different qualities of potatoes.

MARKETABLE POTATOES.

	T. C. LB.
Average weight per acre at four centres, sprayed	11 4 0
Average weight per acre at four centres, unsprayed	10 3 24
Average increase per acre on the sprayed over the unsprayed plots	1 0 68

The table shows that on the average there was an increase of marketable potatoes on the sprayed plots of over a ton per acre, and it is worthy of note that the increase occurred at all the centres. This would appear to indicate that one effect of the spraying was to produce a more vigorous growth—a result which is confirmed by the following table, which shows that there was a much larger quantity of small potatoes on the unsprayed than on the sprayed plots.

SMALL POTATOES.

	T. C. LB.
Average weight per acre at four centres, sprayed	1 7 28
Average weight per acre at four centres, unsprayed	1 11 79
Average increase per acre on the unsprayed over the sprayed plots	0 4 51

The final table, which gives the average weight of diseased potatoes at the four centres, shows that the dressing was not very effective in preventing disease. The figures in this table, however, scarcely represent the facts, as a reference to Table I. shows that at Bryn and Lledwigan half less on the sprayed than the unsprayed plots. the quantity of diseased potatoes was about one-acre, but at the other centre there was actually At Barrach it was reduced by about 1½ cwt. per more disease on the sprayed plots.

DISEASED POTATOES.

	T. C. LB.
Average weight per acre at four centres, sprayed	0 13 5
Average weight per acre at four centres, unsprayed	0 15 43
Average increase per acre on the unsprayed over the sprayed plots	0 2 38

A New Potato Disease.

For several years, says a correspondent in the "Journal d'Agriculture Pratique," the potato crop in France has been decreasing, last year especially the yield was very low. The departments in the centre and west suffered the most. At the end of July, entire fields were attacked by disease, and in a few days presented a deplorable appearance. The leaves were faded, stalks withered, and when the crops were dug the tubers were only the size of nuts.

This disease has been carefully studied by Mons. Delacroix, and he says it is of a bacterian nature. It generally appears about the middle of July upon early varieties, and a little later upon later sorts. The former suffer the most from disease. Lands which have been devoted to potato crops for years are most affected, but the disease is also found in ground in which the vine has been grown, and also in land upon which a potato has not been produced within the memory of man. Although the disease is worst in calcareous soils, it is to be found in clayey and sandy ground.

The bacteria which causes the disease is infectious, and Mons. Delacroix has given it the name of "Bacillus Solanincola."

Mons. Delacroix has come to the following conclusions:—

(1) The disease is infectious, and produced by a bacteria, "Bacillus Solanincola."

(2) The soil is an intermediary, and the bacteria is conveyed to the plant by wounds caused by insects, etc.

(3) Tubers used as seed, which have been taken from an infected crop, will produce the disease without any new infection from the soil.

(4) The tubres should be disinfected by an immersion of an hour and a half in a solution of formol, provided they are perfectly sound and not bruised. This will prevent infection even when the ground is contaminated.

(5) Sections of potatoes used as seed facilitate the disease and should be avoided.

The last three years—1899, 1900, and 1901—have been characterised by a cold and damp winter and spring, and a dry, hot summer; thus the bacteria has found very favourable conditions. The early potato under ordinary conditions of temperature grows very quickly, but cold weather retards the growth, the shoots develop slowly, and the young plant is ill-protected against outside agents which menace it. If the plant should be bruised the bacteria penetrates at once, and if the weather is damp it favours the growth and multiplication of the disease.

It appears that the later varieties of potato are less liable to disease, and Mons. Delacroix thinks that the "Quarantaine de la Halle" and the "Jaune longue de Holland" are less resistant than any other.

The treatment is exclusively preventative. He advises that sound and whole tubers should be used as seed. In order to annul the action of bacteria in infected soil, potatoes should not be planted in the same plot for at least four years, and when dug, all the stalks, leaves, etc., should be gathered together and burnt in the field, and all rotten tubers should be buried deeply.

All tubers which are to be employed as seed, even if they are sound, may carry particles of earth upon them which contains bacteria, and Mons. Delacroix advises the immersion of the seeds in a solution of formol, a practice which should be continued for some years.

In a few words, Mons. Delacroix advises:—

(1) Careful selection of sound seed potatoes.

(2) Varied selection of crops every four years.

(3) Using whole tubers as seed.

(4) Immersion for 1½ hours of the seed in a solution at the time of sowing. The solution should only be used once.

(5) Delay planting as late as possible, but not to compromise the crop.

seed and to a cleaning of the ground by rotation crops.

Shire Horses for Canada and the United States.

FROM A CORRESPONDENT.

It is to be hoped that the suggestion made that the wealthy patrons of shire horse breeding in this country should take steps to have representative selections of shires shown at the province of Ontario Agricultural Exposition the first week in September and at the Chicago Horse Show in December next.

This would materially help th edeserving British tenant farmer to take advantage of the best market in the world for such of his stallions which do not come up to English show yard requirements as regards feather and other points, and also to assist the shire breeders in Canada and the States.

Those countries can take hundreds of such sires every year at prices ranging from £150 to £300 a head, or double the price the farmer would receive if he castrated such a colt.

The shire men should send out something to beat any Percheron, or other breed of draught horse exhibited, and those who are conversant with the subject affirm that they could easily do it. There is also a demand for the best specimens of the breed at the highest prices paid in this or any other country.

Your readers must have been surprised at the prices realised last year at the Toronto and Chicago Shows for British-bred stallions, bulls, rams, and pigs, one Yorkshire boar fetching two hundred pounds or 1,000 dollars by auction. The reason is not far to seek. Most of the wealthy breeders of pedigree stock do not care to cross the Atlantic, or they usually have too many other irons in the fire to spare the time. They, however, know good stock when they see it, and will pay extravagant prices for animals of exceptional merit when brought to their door. Such purchasers would, however, demand the highest English show yard standard points. The period has now arrived, owing to the general demand throughout the American continent for superior heavy draught stallions for the Shiremen to compete with the Percheron syndicates, who have held the field too long with their admittedly inferior stock.

The writer was at Havre, France, in the summer of 1883, when a steamer of the National line left that port for New York with upwards of 400 Percheron horses on board.

Whilst the total number of Percherons exported from France in 1875 was only 104, these numbers were increased to over 500, mostly stallions, in 1883. Practically, the whole of these went to the United States, and the trade has continued ever since.

The average value set down in the U.S. Consular returns was £80 per head, but as breeding stock enters the Unitd States and Canada free of duty this was evidently for sale purposes.

This wealthy American company could not have secured that number of draught sires, Clydes, Shires, or Suffolks in this or any other country but France, where so few horses are castrated.

English shire horse breeders could, however, now easily meet such requirements with infinitely better animals.

A statement was made at the time that the origin of the grey mare, which took all the leading American show yard prizes at that time, and upon whose successes such large numbers of Percherons were sold, was traced to Cambridgeshire. She was a magnificent specimen of the old English cart or shire horse, exported to France. It was not, however, this report so much as their general inferiority to the Clydes and Shires, together with doubtful pedigrees, which has prevented their ever obtaining a footing in Canada. As regards soundness, the Shire Horse Society could withhold export certificates, unless the applications be accompanied by a V.S. examination paper.

Other horse breeders' societies might follow suit in the interests of the export trade, which is yet in its infancy, not only to North and South America, but to Northern Germany, Denmark, Southern Sweden, and Russian fields, which only require to be intelligently exploited in order to secure a market for nearly all kinds of British pedigree stock.

In Canada the numbers of draught horses are increasing, as also the demand for them, both in the Great North West, Manitoba, and the States.

Last year there were in the province of Ontario alone, where all horses are stabled in winter, no less than 621,885 horses, or nearly one-third the

number of those in the United Kingdom. More than half of these are draught horses, and require improvement. The demand for high class sires in Ontario, Manitoba, British Columbia, New Brunswick, present. In the latter provinces the Government and Nova Scotia was never so great as at have just voted sums of money for the importation of stallions from Great Britain.

Horse societies have, and are, being formed throughout Canada, and the following prices have just been paid:—For the Clydesdale stallion, Burnbrae, six thousand dollars, or £1,200, to the County of Waterloo Horse Society; Harmony, £300. Other sales at good prices have been reported.

The new settlers in Manitoba and Western Canada will take the surplus draught horses from Ontario for many years to come. Last year between five and six thousand were sent there, and the shipment of stock has this spring been on an unprecedented extensive scale.

The Horse Trade of America.

Exports from the United States.

The present activity which prevails in the foreign trade of the United States in horses and mules dates back to the panic of 1893. The low prices, largely the result of the panic, at which good horses might then be had in this country doubtless had much to do with attracting the attention of foreign buyers to the exceptional advantages of the United States as a source of horse supplies. The result was immediately reflected in the export trade. Exports of horses and mules combined, which in 1893 had amounted to only 4,601 head, valued at less than a million dollars, increased by leaps and bounds until in 1898 they reached the total of 59,248 head, worth $6,841,358. In the following year the outbreak of the war in South Africa gave an additional impetus to this trade in all exporting countries, especially in the United States, Mexico, Argentina, and Australasia; exports from the United States quickly responded to the increased demand, and in the fiscal year ending June 30th, 1900, they amounted to a total of 108,091 head, horses and mules combined, valued at $11,532,094. In the succeeding fiscal year they increased further to the high-record mark of 116,655 head, with a value of $12,089,112.

A comprehensive idea of the recent development of the United States export trade in horses may probably be obtained from the following statement, which gives separately the exports to Europe, to North American countries and outlying islands, to South Africa, and to all other countries combined from 1894 to 1901:—

EXPORTS OF HORSES FROM THE UNITED STATES.

Year ending June 30—	To Europe.	To North America.	To South Africa.	To all other countries.
	No.	No.	No.	No.
1894..	1,452	3,653	0	141
1895..	7,972	5,850	1	161
1896..	17,243	7,690	1	192
1897..	28,488	10,508	1	535
1898..	37,673	12,989	117	371
1899..	31,949	12,890	127	812
1900..	37,377	14,045	10,220	3,080
1901..	24,488	14,842	37,465	5,455

It is thus seen that the extraordinarily heavy exports of horses from the United States in 1901, amounting as they did to 82,250 head, were due primarily to shipments of 37,465 head to South Africa—a larger number of horses, with one exception, than had ever been consigned up to that time to any single destination in the history of our country. If this factor, however, be entirely eliminated from the trade, there is still apparent a remarkable and almost steadily increasing demand in both North American and European countries for horses bred and reared in the United States.

Exports from Canada.

The Canadian export trade in horses, which reached the high-record mark of almost 22,000 head in 1896, has since undergone a steady and rapid decline, having reached a lower level—7,609 head in 1901 than at any time within the past twenty-five years. Canadian foreign trade in these animals, which up to 1898 had been characterised by a heavy excess of exports over imports, has been completely reversed, more horses having been imported during the past three years than were shipped abroad.

Up to 1900, when the war in South Africa created an extraordinary demand for horses, the two almost exclusive customers for Canadian horses were the United States and Great Britain, shipments to the other countries constituting comparatively a negligible factor. The United States, however, has within the past fifteen years become gradually a less and less important customer for foreign horses, and this has apparently had a decidedly reflex effect in late years upon the entire Canadian export trade. Moreover, the Canadian export trade to Great Britain, which had increased from a little over a thousand head in 1891 to over 17,000 head in 1896, has since rapidly fallen off, and in 1901 it amounted to only 2,143 head. A part of the decline in exports, however, both to the United States and Great Britain, in the last two years, has doubtless been due to the heavy shipments of Canadian horses to South Africa. The following statement, from Canadian official sources, will show the distribution of the exports of horses from Canada for the past eleven years:—

EXPORTS OF HORSES FROM CANADA.

Year ending June 30—	To United States.	To Great Britain.	To South Africa.	To all other countries.
1891..	9,957	1,222	—	479
1892..	9,261	1,369	—	433
1893..	10,606	1,946	—	667
1894..	4,490	3,510	—	734
1895..	6,604	7,430	—	710
1896..	4,021	17,179	—	652
1897..	3,606	13,720	—	2,577
1898..	2,457	11,479	—	413
1899..	6,284	5,810	—	290
1900..	1,527	5,044	3,287	195
1901..	2,088	2,143	3,063	315

With reference to the shipments to South Africa, it may be noted that within the past two fiscal years there has been shipped to that destination from the two North American countries, the United States and Canada, a total of 54,035 head of horses—a number almost equal to the aggregate exports from the United States to all countries in 1894. To this may be added shipments of mules from the United States to the same destination probably aggregating an approximately equal number.

Western Canada's Great Agricultural Show.

From the "Manitoba Free Press," just to hand, we learn that this show will be held at Winnipeg, July the 21st to 26th. The citizens of Winipeg have subscribed £1,200 for races to be held on the 22nd July, the Manitoba Derby, Steeplechases, and Hurdle Races, on occasion of the Coronation year. The prize list now amounts to over £8,000.

A cablegram announcing that the Shire Horse Society of England is offering gold medals at tsis show for registered Shire stallions and mares has caused great satisfaction.

Prevention of "White Scour" in Calves.

Sir,—The long letter from Mr. James Wallace, which appears under this heading, on page 522, is calculated to make the up-to-date farmer possessed of some knowledge of veterinary science rub his eyes and wonder whether this is really the twentieth century, and if microbes are a myth and bacteriology a dream.

We, of course, appreciate Mr. Wallace's motives, which are, no doubt, intended to benefit the farmer and dairyman, and instruct him in the practice of his profession as cattle breeder; but a little knowledge is a dangerous thing, and such a tirade against the conclusions of an unprejudiced, practical, and scientific expert as M. Nocard, and the measures adopted by the Department of Agriculture and Technical Education, for the instruction of the farmer, is calculated to do a good deal of harm, and prevent those it is intended to benefit from carrying out the recommendations that have been demonstrated to be an efficient preventive of the fatal disorder that has caused such loss, not only in parts of Ireland, but on many English farms as well. A good deal might be said about the bold expression of disagreement with a savant of international repute like M. Nocard, and the excellence of the proverb, "Ne sutor ultra crepidam," occurs to mind; but there is really no need to go through Mr. Wallace's letter in detail, or to point out the irrelevance of the quotations from Darwin, for it should be obvious to the meanest intelligence that the whole thing is founded on a misapprehension or a lack of knowledge that several very different and distinct diseases of calves are popularly lumped together under the designation "white scour."

"White," of course, has reference solely to the colour of the material passed, just as farmers used to differentiate between different forms of diarrhœa in young animals by the use of such terms as "white skit" and "green skit." "Scour" is merely a popular name for diarrhœa, and diarrhœa is not in itself a disease, but merely a symptom. Unfortunately, calf-owners very commonly regard the passing of an acrid irritating white discharge as a disease pure and simple, and treat the symptoms instead of attacking causes. Professor Nocard, or the authorities responsible for the dissemination of the most useful leaflet, have never suggested that all forms of 'white scour" in calves are due to the entry of a specific micro-organism at the open navel at birth, but only that in certain districts and on certain farms the calves die early of an infectious disorder, of which "white scour" is a prominent symptom. Professor Nocard and the officials of the Department of Agriculture deal in their pamphlet with quite a different disease to what Mr. Wallace has in mind, and the infectious dysentery of new-born animals has nothing whatever to do with "scour" arising from retention of the meconium. Authorities on the diseases and abnormalities of young animals differentiate between "scours" associated with indigestion, with gastro-intestinal catarrh, with retention of the meconium, or constipation, and what used to be recognised long before the Irish investigation is dysentria neonatorum or dysentery of new-born animals.

Because people ignorantly attribute any case in which there is "white scour" to one cause, or confound a symptom with a disease, it does not make it so, and it is a great pity that Mr. Wallace, before throwing cold water on leaflet No. 11, discrediting Nocard's conclusions, and upsetting farmers in their faith in the recommendations contained in the leaflet, did not take the trouble to inform himself concerning the several distinct diseases of calves of which "white scour" is a symptom, instead of confounding retention of the meconium with a dysentery due to a specific micro-organism. This infectious dysentery, concerning which the Irish authorities deal as it affects calves, is by no means confined to this animal. In order of frequency the calf stands first, then the lamb, the foal, the dog, and the cat; and once it makes its appearance on a place it may linger for years. In the second edition of Fleming's "Veterinary Obstetrics," published in 1895, there occurs this passage:—"It (gastro-enteritis) has been confounded with the dysentery of young animals, and in the first edition of this work this error was committed; indeed, for more than a century the two diseases have been, and are even now, described as one. But a distinction must be made, and they should be separately dealt with."

For many years before the Irish investigation, and long before this form of "white scour" became of national importance, we described cases occurring on different farms that were recognised as totally different to the several other forms of disease, of which "white scour" was a symptom; and what Nocard has done is not to discover a new disease of calves, but to demonstrate its infectious character and the point of entry of the infecting element. It would not be difficult to point out essential differences between this infectious dysentery and retention of the meconium; indeed, it might be useful to describe in detail the several diseases of calves of which "white scour" is a symptom; but perhaps when this variation is pointed out to Mr. Wallace he will at once recognise that he is talking about one disease while pamphlet No. 11 deals with another.

M.R.C.V.S.

April 29th, 1902.

Gun License.

Sir,—Will you kindly inform me if I can let my foreman kill rabbits without a gun license? I always take out a full game license myself.

INQUIRER.

[*** It would appear that your foreman could do so, but we would suggest that you refer to the Excise officer for your district, and also refer to the Act of Parliament, 43 and 44 Victoria, Chapter 47.—ED.]

Price of Wheat in the Seventies.

Sir,—If I am not mistaken, up to the "seventies" wheat was thought abnormally cheap when it was down to 40s. a quarter. So much so, that at that price people not in the corn trade considered it safe to buy as an investment. But was not the relative price of bread materially less, say, the 4lb. loaf at 5d., when wheat was at 40s.? A list of the prices of wheat and bread for the past 40 years would be of interest; but perhaps you can oblige by saying if I am right about 40s., and a 5d. loaf.—I am, yours, etc.,

J. MARSHALL STURGE.

Charlbury, May 2, 1902.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition, 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d., List of Game and Dairy Account Books post free of JARROLD and SONS 10 and 11, Warwick Lane E.C.—[ADVT.]

LITERARY NOTICES.

Three pamphlets of a useful character have been issued by the Board of Agriculture dealing with the three following subjects: The Colorado Beetle, Cultivation of Maize for Fodder, The Purchase of Artificial Manures. This last article, it will be remembered, appears in the current issue of the Journal of the Board, and is of a very useful character. In purchasing artificials, great discrimination and some knowledge of chemistry is necessary in order to buy a useful article. This article will do much to prevent farmers being misled by enticing advertisements or specious analyses. Copies of these leaflets may be obtained free of charge and post free on application to the Secretary, Board of Agriculture, 4, Whitehall Place, London, S.W. Letters of application so addressed need not be stamped.

The article on "Prices of Live Stock in 1901," as returned under the Markets and Fairs (Weighing of Cattle) Act, 1891, which appeared in the March issue of the Journal of the Board of Agriculture, has been issued in pamphlet form, with all the original tables and figures given in the Journal.

A very useful article on "Overdressing of Barley," which appeared in the last number of the "Transactions of the Highland and Agricultural Society of Scotland," is being issued in pamphlet form. It is from the pen of Mr. Hugh Baird, of the Glasgow firm of maltsters, who is able to speak on the matter, as one having an intimate and personal acquaintance of the evils produced by the practice of overdressing, which is unfortunately so prevalent as to be very fatal to the interests of British barley growers.

The Country Gentlemen's Estate Book for 1902, which is the tenth year book of the Country Gentlemen's Association, Ltd., is graced with the title of a Coronation edition. As in previous years, it is edited and compiled by Wm. Broomhall, and is a highly useful publication. In addition to a number of articles of subjects, a knowledge of which is necessary to the estate owner, a complete catalogue of every imaginable necessity for country houses, estates, or farms is included. The address of the Association is 16, Cockspur Street, Pall Mall, London, S.W.

A useful pamphlet on "Lucerne, with notes on Some Other Leguminous Crops," by Mr. Bernard Dyer, D.Sc., F.I.C., has been issued in pamphlet form from the Laboratory, 17, Great Tower Street, London, E.C. The article, it will be remembered, formed an interesting contribution to the 1902 volume of the "Transactions of the Highland and Agricultural Society of Scotland."

We have received a copy of the Year Book of the German Distillery trade. Among the interesting topics dealt with in this year's issue may be mentioned an article on the applicability of spirit for lighting purposes, and as a motive power.

We have received from the Secretary, a copy of the annual report of the British Chamber of Commerce, 25, Boulevard des Italiens, Paris. The report was presented at the twenty-eighth ar printed with it comparative statistics of Anglo-ar printed with it comparative statistics of Anglo-French trade for 1900-1901, with a compendium of French Legislation in 1901.

We have received a copy of the report of the Technical Education Committee of the Berks County Council. This shows the work done during the year by the committee, number of classes held, and subjects dealt with, also prizes and scholarships gained by successful scholars.

Messrs. Bamfords, the well-known manufacturers of farming implements, have published a new edition of their catalogue of harvesting machines for the coming season.

Messrs. Toogood and Sons, Southampton, have issued a pocket list of their farm seeds for 1902. It gives particulars and prices of the principal farm seeds, accompanied by several illustrations. It can be had gratis by farmers.

Spalding April Cattle Fair was held on Tuesday. There was a large supply of horned stock, especially store beasts, but very few sheep. There was an improved demand for stores, and the high prices asked were obtained for the better-class lots. Young beasts realised £6 to £8, two-year-olds £12 to £15, and fresh stores up to £17 a head. For milking cows and in-calvers there was an improved demand. The best quality beef fetched 8s. 6d. to 9s. per stone, and cow beef 7s. 6d. Mutton maintained late rates. Good agricultural horses were in demand, but inferior animals were a drug in the market.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLERS, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

The trade has not yet settled down to a normal state since the Budget was introduced, the principal difficulty, as far as millers are concerned, being in regard to the undelivered portions of contracts made before April 15th. Some millers had sold very large quantities ahead, and, as a consequence, have been charging 1s. per sack duty to the contract price of flour; that is to say, in cases where buyers have not objected to it. Other members of the trade, chiefly the inland millers, not having been placed in this position, have not been charging the duty. In the former case millers have only themselves to blame, because the tax was expected, and the remedy was in their own hands. They could either have covered their sales of flour with wheat, or they could have inserted a clause in their contracts with bakers to the effect that they would charge the duty in case it were imposed.

There is no doubt some of them have been very short-sighted in the matter; hence the trouble and disputes with buyers. In some parts of the country millers actually did insert a clause in their contracts, and in these cases it has saved a great deal of trouble, because the buyers of their flour knew what to expect. As matters stand just at present, very nearly every man is a law unto himself, and even the members of local associations have

not been able to agree upon a definite policy

with regard to charging the duty. The bakers are very much in the same position as to raising the price of bread. In many parts the latter has risen in price, more, however, on account of the advance in wheat than on account of the duty, although in some cases the latter has been taken into account. In this case they have a great advantage, because flour should rise 4s. per sack before one halfpenny should be put upon the 4lb. loaf, allowing .96 of the latter to the sack of 280lb.

Wheat, especially English, has had a strong rise, and still farmers who have stocks are not eager to sell, believing that it will still advance in price. In this they are probably right, because in the beginning of April, English wheat only made from 28s. to 29s. per 504lb., whereas now it is selling for 33s., and even 34s., a rise of 5s. per quarter. In certain districts farmers find no difficulty whatever in getting 34s. for samples. This wheat is dearer after the rate than most foreign sorts, but millers are perfectly willing to pay these prices for it when they can get it, and possibly the price will reach 35s. or 36s. before long, as stocks are evidently low.

At the present time, No. 1 Hard Manitoba is making no more than an equivalent of about 33s. per 504lb., and this is about the strongest and dearest wheat offered at the ports; while Cali, which most large millers put into their grist for colour, is selling at an equivalent of 32s. per quarter. These are

two of the standard wheats in the blends

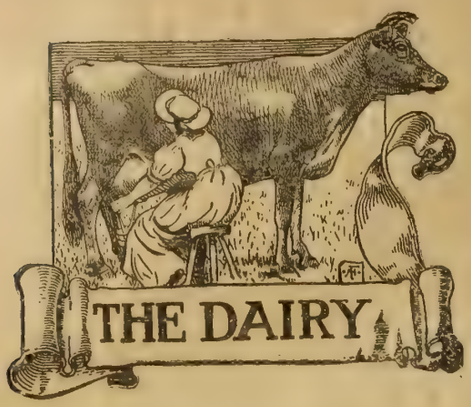
of merchant millers.

Flour, of course, has risen in sympathy with wheat, the advance being from 1s. 6d. per 280lb. to 3s. Not much business, however, has been done at the rise. Offals of all sorts still sell well, at much higher prices than are paid in the beginning of May.

The principal drawback so far as country millers are concerned is the shortness of English wheat, and it is feared that many of them will have to shut down shortly for lack of the raw material, while from some parts come reports of lack of water for purposes of power. The samples of home-grown wheat which have been ground during the past fortnight have come to the mills in very good condition, which has enabled millers to dress their flours a little finer. This is an improvement, because the tendency nowadays is to dress through higher numbers. In the large merchant mills it is no uncommon thing to see patent flours dressed through No. 15, 16, and even 17 silk. Of course, to enable millers to do this, they must have plenty of roller surface, and the wheat mixture must be in the very best condition.

In this country it is frequently the custom to dress the patent flours finest, but in the opinion of the writer the lower grades should be dressed the finest. The finer flours are dressed the whiter they will look, because if they are comparatively fine it is

only a question of casting shadows,



and the smaller the granules the less the shadows and the apparent—only apparent, however—whiteness of the flours. The tendency all over the country is to increase the roller surface, both on breaks and reductions, and this is an improvement in which the small millers should imitate the larger members of the trade.

There is no doubt, however, that finer dressing means more flaking, and this has led to the re-introduction of the detacher into mills—in some cases on a very large scale. No matter how fine the flour is dressed it must be distinctly granular, and when this is not case, when the particles of flour have been jammed into each other, the detacher of all machines is the one to bring into use to restore the stock which has been "killed." In some mills at the present time detachers are used to follow most of the smooth-roll reductions for the purpose of granulating the flour. But there is no reason why the reductions should be so close as to make so much flaky stock. Theoretically, smooth rolls should be used for breaking or sizing, and not for close grinding or mashing. The flour cannot be clean and bright where the stock is squeezed and the impurities pulverised. It is true there was a time in the history of milling when reduction meant little more than pulverising. But that time has gone by, and smooth rolls are now looked upon as purifying machines, and not as aids to making a conglomeration of flour and impurities.

MILLER-FARMER.

At Stockton May Hirings, held on Wednesday, there was a good supply of servants. The wages for men were considerably lower than last year, but for females there was very little change. Good men were engaged at £22 to £26 per year; good plough youths, £14 to £16; and boys in their first year out, £6 to £6 10s. Strong women got £15 to £17, and girls £8 to £10.

Louth April Fair.—The April fair at Louth took place last week, the sheep fair being held on Tuesday and the beast fair being held on the following day. The sheep penned numbered about 5,000, or no fewer than 3,000 less than last year; but notwithstanding the shortness of supply trade was anything but brisk. The best prices were 55s. each for a pen of 90 he and she hogs, and 56s. per head for a pen of 30; but the price which usually prevailed for good grazing hogs was 45s. to 48s. per head. On Wednesday there was a large show of cattle, but very few horses. Young beasts did not sell well, but two to three-year-old bullocks made up to £17 10s. each; two-year-olds, £13 10s. to £15 10s.; yearlings, £8 to £10 10s.; drape cows, £12 to £17 10s. Several Lincoln red bulls were offered by auction, and they made up to 31½ guineas.

The Purity of Milk: Important Case.

In the King's Bench Division on Friday, the Lord Chief Justice and Justices Darling and Channell heard the case of Smithers v. Bridge, an appeal which raised a somewhat delicate question under the Sale of Food and Drugs Act. It came before the court upon a case stated by the Chelmsford Quarter Sessions, from which it appeared that the appellant, Smithers, was a milk dealer of Clacton, and obtained a supply of milk from a farmer named Lilley upon a guarantee of purity. The respondent purchased from Smithers a pint of new milk, and had it analysed in accordance with the Act. From the certificate of the analyst it appeared that the milk contained only 2.09 per cent. of fat, an abnormally small amount. Under a regulation of the Board of Agriculture it had, since the prosecution, been laid down that the least percentage of fat should be 3 per cent. That regulation, however, was not in force when the proceedings were taken. The appellant proved that he sold the milk in the same condition as he received it, and just as it came from the cows. It appeared, however, that the farmer milked his cows at four o'clock in the morning, and not having milked the cows for sixteen hours previously, the effect was that though the quantity of the morning milk was increased, a portion of the fat in the milk was absorbed by the cows, and went to the sustenance of the calves, which, in consequence, were abnormally large. The Clacton magistrates, before whom the proceedings were taken in the first instance, held that there had been, under Section 6 of the Sale of Food and Drugs Act, upon which they were founded, a sale to the prejudice of the purchaser, because the appellant had supplied milk not of the nature, substance, and quality demanded. They, therefor, fined the appellant £20, but, on his appealing to the Justices of Quarter Sessions at Chelmsford, they, while affirming the conviction, reduced the penalty to £1.

Mr. Warburton appeared for the appellant, and Mr. C. E. Jones, represented the respondent.

The Court being divided in opinion,

Mr. Justice Channell, as the junior Judge, delivered judgment first in favour of dismissing the appeal. He said it was material to recollect that Section 6 of the Sale of Food and Drugs Act differed materially from some of the other sections, because it had been clearly decided that in cases coming under it, no question of guilty knowledge could arise. The question was whether or not the seller had sold something different and inferior to the article demanded by the purchaser; in other words, not of the nature, substance, and quality demanded. In this case, the purchaser asked for new milk, and he got something which was different from that which he would expect, and which lacked a portion of the proper constituents of new milk. Take the case of a cow being ill, it would not produce milk of the proper character, and it would lack, probably, some of the essential characteristics of milk. The seller would in that case sell the direct produce of the cow, but it would be of inferior constitution, and in such a state of things he ought to be convicted, although, perhaps, the fine might be nominal. The magistrates had come to the conclusion, as a matter of fact, that the cows did not, in consequence of the way in which they were treated, produce what was properly called milk. That was a conclusion of fact which they could come to, and, therefore, the Court could not interfere with their decision.

Mr. Justice Darling was of opinion that the appeal should be allowed. The purchaser in this case asked for new milk, and got it exactly as it came from the cow. Therefore, it seemed to him that he got what he asked for. He feared that to hold otherwise would be to run the risk of having the decision applied to natural products, such as apples, and a man might be found guilty of supplying an article which was not of the nature, substance, and quality demanded, because the apples he sold were, in the opinion of an analyst, deficient in malic acid or some other ingredient which should be present in the fruit.

The Lord Chief Justice concurred in the opinion expressed by Mr. Justice Channell that it was open to the Justices to come to their decision, as a matter of fact, though he did not say he should have come to the same conclusion. It was, no doubt, a hard case on appellant, but he could have protected himself by setting up the warranty he had received, which would have been a good defence.

In accordance with the opinion of the majority of the Court, the appeal was dismissed.

Mr. Jones asked that the appeal should be dismissed with costs.

The Lord Chief Justice: We do not think it a case for costs.

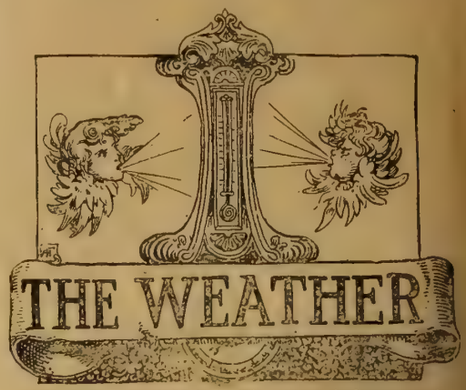
Preston Cheese Fair.

The monthly Cheese Fair at Preston was held on Tuesday, when there was a pitch of 60 lots, comprising 836 cheeses, a decrease of 9 lots and 56 cheeses compared with the corresponding fair last year. Most of the cheese being hay cheese, buyers bought for immediate needs only, grass cheese being expected shortly. There was a reduction of 5s. to 7s. 6d. on the prices realised last fair. Quotations:—Best, 60s. to 66s.; medium, 55s. to 60s.; common, 50s. to 55s. per cwt.

GARDEN.

Something like a blizzard on a small scale has prevailed for nearly a week past now, a strong and bitterly cold north to east wind blowing almost continuously. This has quite checked all growth in the open air for the time, and it is to be feared that serious damage to fruit trees in bloom and setting will be found to have resulted, especially in the more exposed positions. Even the chestnuts, which were just unfolding their delicate leaves "into the perfect fan," are in many cases blasted and blackened on the windward side, as if scorched by fire. There are, fortunately, some indications of a change to-day, but it is still unusually cold for the time of year.

In the vegetable department beds of onions, parsnips, carrots, etc., that were sown fairly early will need attention in the matter of thinning or "singling" the plants, especially if the seed were sown at all thickly, and the little plants are consequently crowded, this work should be commenced in good time, not making a great clearance all at once, but thinning tentatively, as it were, at first, or reducing the seed'ings to little clumps of five or six at short distances apart, to be presently thinned down again to a single plant. This dry, cold weather is, however, as unfavourable for such work as could be imagined, and unless really imperative, the operation had better be deferred until the conditions are more favourable. A mild, showery time is the best. In default of this, water the rows well both before and after thinning, using a fine rose.



Onions may be thinned down to 4in. to 6in. apart, but only if a comparatively few large roots or bulbs are wanted—to obtain a maximum yield of medium to small bulbs, thin only lightly, or merely by drawing for use, as salad, as required. Thin parsnips to 9in., to 12in. distance, or rather more if for exhibition; carrots of the "long" kinds, 8in. to 10in., and beet, salsify, etc., about 9in., with rather less for the early Egyptian or turnip-rooted varieties. Spinach may be thinned to 4in. or 6in., according to the variety, strength, etc; and parsley and others also should not be allowed to stand too thickly in the rows.

The early-sown beet (Egyptian or turnip-rooted—the "Globe" is the best type) ought to be up and growing now, and will need thinning; the thinnings may be transplanted if necessary.

Leeks also will need attention now. Where an early sowing was made get a few rows of the most forward plants out as soon as possible. The ground must be deeply dug and well manured, and certainly the most convenient method of planting is in V-shaped furrows, cut with a spade, placing the plants 6in. to 8in., or even 9in., apart, if very large sticks are wanted. The furrows may be 6in. or so in depth.

Bedale Hirings.—The first of the Bedale May Day Hirings was held on Tuesday, when there was a fair attendance, but few servants found fresh masters and mistresses. Farm foremen asked £24 to £25, strong youth £16 to £18, young lads £8 to £10, women £12 to £20, and girls £5 to £14.

Agrarian Offences in Ireland.—An official return was issued on Tuesday of the agrarian offences throughout Ireland reported to the Inspector-General of Constabulary during last year. The total number reported was 245, of which 126 were cases of intimidation, 55 were incendiary fires, 24 killing, cutting, or maiming cattle, and 17 injury to property. More than half of the total offences occurred in Munster. Convictions only took place in 14 cases, of which three were in Munster. The number of cases in which offenders were neither convicted nor made amenable was 219.

Monday (April 28th).—The east wind was again strong over the south of England and in the English Channel as well as over the southern portion of Ireland. In Scotland and the more northern parts of England the winds were light and variable. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, in the south-west of England, but the amounts were not large. Temperatures were rather lower than on the preceding day, and the mid-day readings were not generally much above 50 degrees.

Tuesday (April 29th).—Fine and dry weather prevailed over the British Islands, and the temperature was generally low for the time of year. No appreciable rain was measured in the morning in any part of the kingdom, the weather having everywhere continued dry since Monday. The winds were north-easterly in England, as well as over the greater part of Ireland, but the wind was westerly in Scotland, under the influence of shallow disturbances which were travelling north-eastwards from the Atlantic. There was a slight frost over the inland parts of England during Monday night, and the mid-day temperatures were below the average. In London the exposed thermometer fell three degrees below the freezing point early in the morning, and the highest temperature during the day was 52 degrees.

Wednesday (April 30th).—A mild westerly wind was experienced over the whole of our Islands, and a general rise of temperature had set in. Small amounts of rain were measured in the morning, as the result of the fall since the previous day, at most places in the north and west, and rain again fell during the day at many of the western stations. A cyclonic disturbance had arrived from the Atlantic, and was passing eastwards to the north of Scotland, while the barometer, under the influence of this disturbance, had everywhere fallen briskly. Temperature was rather higher than of late during Tuesday night, and the mid-day temperatures were in fair agreement with the average.

Thursday (May 1st).—The weather was very changeable during the day, and showers occurred in most parts of the country. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, over nearly the entire kingdom, but the amounts were not large. The cyclonic disturbance which was passing to the north of Scotland on Wednesday had its centre during the day over Denmark, and the wind had become north-westerly over our Islands. Temperature had not changed very materially, and it was in fair agreement with the average. Wednesday night was cold in Scotland, the thermometer in the screen falling nearly to the freezing point, and the mid-day readings were generally below 50 degrees in the north and east.

Friday (May 2nd).—The weather continues showery in most parts of our Islands, and the general condition had become thoroughly unsettled. Rain was measured in the morning over the entire kingdom, as the result of the fall in the preceding 24 hours, but the amounts were nowhere large. The wind was generally westerly, and it was increasing in strength on our west coasts, a moderate gale being reported in the north of Ireland. Thursday night was cold over the eastern portion of the kingdom, and although a brisk rise of temperature had occurred, the readings were nowhere high for the time of year.

Saturday and Sunday (May 3rd and 4th).—During these two days, cold, cheerless weather prevailed over the whole of the United Kingdom. On Saturday, when a cyclonic disturbance moved South-Eastwards across the North Sea, rain fell generally, and thunderstorms occurred in many parts of England, the thermometer failing to reach 55deg. in any but the most Southern districts. On Sunday the disturbance passed away over Germany, cold Northerly winds being experienced in its rear, with further showers in most places. In London the early part of Saturday was fair, but shortly after noon a thunderstorm, with hail, passed over, and for some five or six hours afterwards rain fell at frequent intervals, the total fall at Brixton for the day being practically equal to the aggregate amount recorded during the whole of last month.

Berkshire.

The weather during the month of April was good for farm work, and the planting of spring corn is practically finished, and the early-sown has come up and looks well, and the wireworm pest has not been quite so busy as usual. The wheat is rather backward, but, generally speaking, there is a fair plant. Rye came on well, and has been a most useful crop, as the cold weather has kept it from running away, and with a few mangolds the sheep have done well. Vetches are good, but will not be ready to feed for nearly another month. The young grasses are a good plant, but as there is a frost nearly every night, with cold winds in the daytime, they do not make much progress yet.

The meadows are green, and there is rather more grass than usual for the 1st of May. Cattle are being turned out from the yards in good condition, and there is a good trade at fair prices. Sheep have doen well, and there was a better breed of lambs than usuel; but as there was rather a scarcity of roots, flockmasters hve had a little difficulty in providing food, but the useful mangolds have been of great serivce.

Mutton is dearer, and there is a good trade for fat sheep, but stores are still dull of sale. Hay is cheaper, but straw sells well, for it is nearly all used up, and many farmers will not have sufficient left to thatch their hay-ricks. Corn markets have taken a decided turn, and no doubt the duty has caused a little excitement; but what effect can the small duty of about 1s. per quarter have on the price of bread? and it seems ridiculous to hear the cry about raising the pric eof the poor man's loaf, when they have been living on the farmer's loss of production for many years.—J. L. (May 1st).

Cornwall (West).

April was, upon the whole, a cold, rough month, with lots of rain, but also a lot of easterly wind, which soon dried the soil again.

May has come in with a bitterly cold north wind. Notwithstanding, the country looks very well. Grass is growing fine. Dry fodder, however, is scarce, and most cattle are now out.

Wheat looks well and strong. Most of the oats and barley are up, but where the growers have been waiting for the clearing out of the late broccoli there is still some to be sown. Farmers are now busy getting their mangolds in.

Beef is at a fair price—60s. to 63s. per cwt. Store cattle are also selling very well, but cows and calves, however, are rather slow.

The early potato crop looks promising indeed, and providing we get some warmer weather there is every appearance of there being an early one. Fruit-trees look like having big crops, but that has yet to depend largely upon how much blossom gets blown off with the hard wind we are having. Gooseberry-picking will commence next week, and the crop is excellent.

The broccoli season is about over; it has been, upon the whole, a very fair one.

The agricultural prospects now are certainly better for the time of the year than they have been for a long time. We all hope these prospects will develope, and farmers will have a better year than they have had for some time. All want it badly.—F. C. (May 1st).

Herefordshire (North).

Things are looking fairly well. The frosts of February put the land in such order for the drill that very little labour was required for oats, barley, mangels, and the swede land will soon be fit. The lambing season on the whole has been satisfactory; amongst the Shropshire flocks would be over one and a-half lambs to the ewe, with little tegs amongst the latter, and look healthy where amount of care and feeding has been attended to, though many sheep will not pay for their food this winter. Beef has been selling better, but few have been fed in this part. Hay and roots being scarce, very few were put into the stalls, there being no prospect of pay for the purchased food in cake or any fresh stock. Both cattle and sheep are now being sold at a good price. Wool trade, being so bad, is much against the sheep trade. All the strong bullocks were cleared out of the district in the autumn, I suppose, for none have come to the spring sales as usual at this time of year, nearly all being yearlings. The breeders work them out younger, and probably it pays better. We were in hopes cycles would have come under the notice of the Chancellor of the Exchequer; they swarm the roads, and want them kept in good order. The tax on corn is so small that it will affect no one very much. It was said when the duty was taken off the corn that the cost of bringing it over would be two shillings per quarter, but this has turned out to amount to about a penny half-penny.—W. H. (May 2nd).

Huntingdonshire.

The appearance of the growing crops now and on last May Day is totally dissimilar. A year since, wheat was very thick in plant and far too promising; this season much of it is thin in plant and of doubtful promise. The barley had been muddled in and presented a wretched appearance; now it looks as well as could be wished, after a splendid start. Last year oats were only about a crop; this season the plant is fine, although a little rain would now benefit them. In this neighbourhood we had very little of that rain which appeared to have been general last week; still, we are busy side-hoeing the kohl rabi and mangolds, which are a splendid plant, and have been visible from end to end of row for at least ten days. At this period last year very few roots were drilled, and none were showing above ground. Altogether, the outlook, so far as the crops are concerned, is as good this season as it was bad twelve months since. Grass is fairly plentiful on the low meadows, whilst beef and pork are at more remunerative prices than for several years. The plant of small seeds leaves much to be desired by hay-makers and cheap owners. Work of all kinds is well forward, and labour plentiful.—(May 1st).

North Devon.

Wheat good, plenty and healthy. Barley and oat seed put in fine condition. The land worked well after the early frost. Potatoes nearly all planted, with fairly healthy seed and the land in fine trim. Grass and clover backward from the cold. Hay and general food scarce and dear. All farm stock healthy. The lambing season good; doubles plenty in most flocks. Cattle, sheep, pigs, and horses sell freely at good prices. Our great complaint is the very low price of wool, also labour trouble, both indoors and out in both sexes.—J. H. (May 3rd).

Mid Somerset.

We are now well advanced into spring, but the pastures and country generally up to the present do not indicate it. March weather being postponed apparently until April, the east winds and nightly frosts are seriously affecting the meadows, seeds, and fruit blossoms, and gardens, The stock of hay left is very limited, many having none, and great care has been exercised, and almost miracles performed to make the stores of hay, straw, and roots last out till now, when green crops are naturally expected, and cattle generally looking bare. Corn crops all requiring some real genial April weather. Sheep have wintered well.

All stock advanced in price materially during the past three weeks, which is to be hoped will continue, and give an impetus to grazing (which the last five years, with one exception, has been almost unremunerative), also to the rearing of young stock, and raise the price of dairy products, butter, cheese, and milk. With seasons we have become accustomed to of late years our pastures, yielding about one-half of what they are expected to through droughts, and the increase in labour bill, many farms have been worked at a loss. The patient farmer (proverbially grumbling) is waiting hopefully for a good season, as we have only heard our forefathers talk of, and old books tell us of.—T. S. T. (May 3rd).

Salop.

Weather mild, but still cool. All crops are growing fairly well. Green crops sown early are cut and carried for cattle and sheep. Potatoes are nearly all put in in very fine order. The few showers that fell kept the land in a moist state, but did not hinder the work.—J. G. (May 2nd).

Somerset.

Wheat is a fair plant, but somewhat patchy. Barley and oats have come up well. Clovers are good, and mangolds have been sown under favourable conditions. The cold winds and frosty nights have thrown back all vegetation, turning the corn from green to yellow. Hay ricks have become scarce, and on many farms have disappeared for some time, while cattle as yet can hardly find a living on the pastures. The great need just now on the farm is some warm growing weather. Mutton and beef are selling freely, especially the latter, while for store stock there is a good demand at fair prices. Milk is more plentiful, and not so easy to sell. Live stock appears to be generally healthy, but on many farms, owing to the short hay crop, is in somewhat poor condition. Farmers in this grazing and dairy district will not thank the Government for adding 5s. per ton to the price of their feeding-stuffs. The duty on grain and meal intended for consumption by animals is a serious tax on the meat and milk producing industries of this country, and should be either withdrawn, or a corresponding duty imposed on imported meat and dairy produce.—C. D. (May 2nd).

Foreign Prospects.

FRANCE.—Our neighbours complain of too much rain, and fears are entertained that on heavy soils wheat and rye crops will suffer. So far, apparently no harm has been done, and the return of dry bright days will prevent a falling-off in the fine appearance of the wheat fields.

BELGIUM.—With the cessation of labour troubles, trade has improved, and lately Antwerp has done a good business in wheat at well maintained prices.

HOLLAND.—With the exception of oats, supplies of native grain are small, and there is nothing in the crop outlook to cause uneasiness.

ITALY.—In the upper provinces wheat-crop conditions are considered to be favourable.

SPAIN.—With the exception of heavy rain in some of the provinces, the general crop outlook continues satisfactory.

SERVIA.—Cereal crops have wintered well and spring sowings were concluded under favourable conditions, so that present prospects are for a good harvest.

HUNGARY.—Abundant snow-showers and nocturnal frosts have been prevalent, and are anything but acceptable in the interests of the autumn and spring crops.

GERMANY.—Strong east winds and night frosts have been lately experienced, but the appearance of the crops is luxuriant, and warm weather, with rain, would soon repair any damage that may have accrued from low temperature.

RUSSIA.—The Neva at St. Petersburg is full of drift-ice. Navigation is expected to be open in about a fortnight. Weather recently has been too cold and dry for the crops, and general conditions are much less favourable than they were a month ago.

UNITED STATES.—Excepting in Kansas and Nebraska, wheat has benefited by rains and milder temperatures, and it is now doing fairly well. The average condition is as good as was the case a month ago. Maize had a good stand in the south, and it is going favourably into the ground in the north, and the acreage is large. The weather is more favourable for oats, and the condition is fair.—*Dornbusch.*

IN PARLIAMENT.

HOUSE OF COMMONS.

Purchase of Remounts.

On Friday, Mr. Markham asked the Secretary for War, having regard to the fact that shortly after the commencement of the War Captain Wynne Griffith was asked by the War Office to purchase remounts for its account in the Midlands at the Leicester, Crewe, and York repositories, and that he thus obtained the horses at cost price; whether he could explain why this practice of purchasing horses at the hammer was discontinued; and whether he was aware that agents of the German Government, both before and during the War, had regularly attended those sales, making purchases for the German Army; and whether in future he would follow the same practice as adopted by the German Government.

Lord Stanley: This officer purchased horses, as stated, at Leicester, Crewe, and York; but they proved unsatisfactory, and such purchases were discontinued at the two former places. I have no information as to the latter part of the question.

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

8,662.—Charles Healy Burlingame, of Strand, for "Improvements in mowing machines."

8,907.—Thomas Gibson, of Glasgow, for "Improvements in harrows."

Patents Sealed.

24.—J. Gordon, of North Britain, for "Seeds, sowing."

335.—R. Battersby, of Lancashire, for "Potato diggers."

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: We have no change to notice in the trade since our last. Barley: Steady at fully late rates. Wheat was 6d to 1s per qr. dearer. Oats advanced 3d per qr. Maize firm. Flour improved 6d per sack on the week.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—The attendance was of average proportions, and recent influences again created distinct firmness in the general range of prices, while business was steadily carried on without interruption until closing hours. English wheat may now be considered out of supply here, but what little remains goes to provincial millers, who are not backward in paying the high limits imposed. Foreign sorts held for last week's advance, with American in exceptionally small supply, and No. 1 Northern Duluth, about the only grade in granary, at 32s 9d demanded, and 32s 3d ex ship to arrive. American flour on spot and near remains very scarce, and more especially fancy grades and bakers. Town households, 24s 6d; and whites, 3s more per sack, delivered to the baker. Top price Town made 30s net; No. 1 households, 23s. cash at the mill door (extras 1s over). Cascadias, 23s 3d ex store. Hungarians, 33s for best, while still very scarce. Belgian supported. Australian patents 22s 6d to 23s 6d 280lb. ex store. Grinding barley maintained, and only inspected in a fortnight. Malting unaltered. Oats steady, and heavy sorts well maintained. English held for fully the recent advances. Mixed American maize remains exhausted, ex. granary and fresh arrivals are still awaited. Round corn steady. Egyptian split beans held for 23s 9d; Mazagans, 22s 9d ex. mill, 320lb. New Zealand, 38s to 39s 504lb. ex store. Canadian white peas still in no supply worth naming at 37s ex granary, and White Indian, 36s 6d. American maize germ meal finds buyers at £5 7s 6d on spot.

Mark Lane, Friday.—To-day's meeting was limited, but no doubtful mood existed in the general departments, and the full rates last established were again current in all sections of cereals. English wheat still appreciates in value, while scarcity becomes more and more felt. As a matter of fact, there seems next to nothing now left here, and provincial millers take up what offers at fully last figures. Good reds, 34s per qr delivered, and in the country up to 32s. Stock of chicken continues small. Foreign sorts again held for last week's advance, and American in very scanty supply. American flour remains very scarce on spot for both patents and bakers', fancy brands being almost unobtainable. May Blossom, 25s 6d ex granary. First patents (Pillsbury, etc.) quoted at 25s 3d; second ditto (Guinea Gold), 23s 9d. Of bakers', Iron Duke held for 21s ex store. The London Millers' Association name households at 24s 6d, and whites 3s per sack more. Top price town made 30s net; No. 1 households 23s, cash at the mill door, and extras 1s more. Cascadias, 23s 3d ex store. Hungarian up to 33s for best. Australian patents,, 22s 6d to 23s 6d 280lb, ex store. Grinding barley maintained, with a firmer tendency. Odessa, 20s 6d, ex quay, and 20s, ex ship to arrive. Danubian in latter position, 19s 9d. Fair to bold poultry (52lb Danubian), 22s to 22s 6d. Oats generally steadier since last Friday, with attention mostly paid to heavy sorts. Common Libau, 19s 3d to 19s 6d, ex quay, 38lb; Riga, 19s 6d; 40lb Libau, etc., bold, 23s to 23s 6d; ordinary to fine Konigsberg, Dantzic, and Stettin, 22s 6d to 23s 6d; Danubian, 19s ex ship, 19s 3d ex quay, 38lb; Turkish in latter position, 19s. English fully supported on continued scarcity. Maize unchanged. Mixed American remains exhausted, and there is not much round corn on hand at present. Odessa, 22s 3d ex ship to come up, and 22s 6d to 23s, according to quay. Galatz-Foxanian in former position, 22s 3d. Cinquantina, 24s 6d, ex quay. Egyptian split beans held for 23s 9d; and Mazagans, 22s 9d, ex mill, 320lb. Konigsberg, 35s 6d. White Indian peas, 36s 6d, ex store, 504lb. Canadian white nominal, being still out of supply.

COUNTRY.

Ashford, Tuesday.—Both red and white samples of wheat were sold at 32s to 34s 6d per quarter. Feeding corn of all descriptions firm at late rates. Flour unchanged, and bakers in the district have not raised the price of bread.

Banbury, Thursday.—Wheat, 27s to 28s per qr; wheat (red), 31s 6d to 32s per qr; barley, 27s to 30s per qr; beans, 34s to 35s per qr; oats (red), 23s to 24s per qr; peas, 32s per qr. Wheat a quiet trade at late advanced rates.

Birmingham, Thursday.—Market opened quietly. English wheat 9d to 1s dearer, at 12s 3d to 12s 6d per bag; and foreign wheat 6d to 9d per qr higher; grinding barley 3d dearer, commanding 20s to 20s 6d per qr Sharpness; maize unchanged to 3d higher; flat, 27s 6d to 28s Liverpool; and round, 23s 6d to 24s per qr Sharpness.

Boston, Wednesday.—Wheat, 32s to 32s 6d; grinding barley, 23s 9d; oats, 24s; beans, 35s to 37s 6d; maize, 23s to 24s.

Braintree, Wednesday.—The price of red wheat went up 1s per quarter on the week, the quotations ranging from 32s to 33s. White wheat about the same. The trade was quiet.

Bristol, Thursday.—There has been a small trade since our last; English wheat is very scarce at our market to-day, at last week's prices. Foreign also unchanged. Maize and barley unaltered. Oats 3d. dearer. Flour trade slow, without change in values.—GRACE BROTHERS.

Cambridge, Saturday.—During the week trade has been very firm, the advance in prices has tempted farmers to offer more wheat, and values show very little change on the week. At this market to-day, with a somewhat better supply, millers were able to obtain their requirements more easily, but prices were quite as dear as last week. No spring corn offering. Red, 32s to 33s; white, up to 33s per 504lb.

Canterbury, Saturday.—Wheat again dearer, other articles firm. Ruling prices:—White wheat, 33s to 36s; red, 32s to 34s 6d; grinding barley, 22s to 24s; white oats, 24s to 26s; black oats, 21s to 24s.

Carlisle, Saturday.—Very small supply of oats in our market to-day; mostly in the hands of dealers; brisk trade at fully last week's prices, 23s 6d to 24s 6d per 336lb. No barley or wheat offered for sale. Feeding stuffs much dearer this week.—THOMAS ROBINSON.

Chichester, Wednesday.—The market was well attended, but the tone of business was quiet. Scarcity of supplies was responsible for another rise of 1s per quarter in wheat, and flour was also rather dearer, at 24s 6d per sack. The only other change in prices was a rise of 6d to 1s per quarter in oats.

Chester, Saturday.—English grain in small supply; wheat and oats firm at last week's rates; and beans, barley, and Indian corn unchanged. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb.; malting barley, 4s 2d to 4s 4d per 60lb.; grinding barley, 3s 6d to 3s 8d per 64lb.; beans, 5s 8d to 5s 10d per 80lb.; oats, new, 3s 2d to 3s 4d, old, 3s 4d to 3s 6d per 46lb.; Indian corn, 13s to 14s 9d per 340lb.

Colchester, Saturday.—Very little wheat offering; 1s per qr dearer. Spring corn nil.—FRANCIS AND CO.

Croydon, Thursday.—White wheat, 32s to 34s; red ditto, 31s to 33s. Malting barley, none; grinding, 23s to 25s. Oats, 20s to 23s. Beans, 32s to 34s. Peas, 31s to 33s. Wheat trade firm, very little offering, 1s per qr dearer. Beans and peas—Prices firm; trade quiet.

Devizes, Thursday.—There was a very small supply of corn to-day, and there was a further rise of 6d per sack in the price of wheat. Other corn unaltered in value on the week. The following were the quotations:—Best wheat, 16s to 17s; secondary ditto, 14s to 15s; new wheat, not quoted; secondary, ditto, not quoted; grinding barley, 20s to 24s; malting ditto, 29s to 34s; rye, 23s 6d to 25s; winter oats, 22s to 24s; beans, 16s to 20s; fine flour, 24s to 24s 6d; extra fine, 25s to 30s.

Glasgow, Wednesday.—There was the usual attendance at our market to-day. Wheat and flour steady, with quiet trade. Indian corn scarce on spot, and 3d. dearer. Round maize 1½d. dearer, but quiet. Home and foreign oats firm, but little doing. Grinding beans easier owing to arrivals. Barley steady. Bran and Thirds unchanged. Oatmeal firm.—GIBSON AND CLARK.

Leeds, Tuesday.—The trade is sadly puzzled by the constant variations in the American markets, which, naturally, tend to restrict forward business. Spot wheat is firmly held at last week's full prices, except English. Wheat is quite 6d. dearer. The demand, however, is inactive. Maize and beans a slow sale at late rates. Oats firm.—DUNNS AND CO.

Leeds, Friday.—With much firmer prices for foreign wheat, Americans have a tendency to rise, and English fully maintain Tuesday's advance. All other articles, especially flour, which is 3s per sack of 20 stones dearer since the Budget tax, are very firmly held.

Leicester, Saturday. — Good attendance of buyers, with small supplies of home-grown wheats, which sold most freely at 32s to 34s per 35 stones. Beans, firm. Barley quiet. Oats very firm.

Lincoln, Friday.—Small supply of English wheats, which were 6d to 1s higher since last Friday. Foreign wheat 1s up; oats were 6d dearer. Maize and beans very firm.

Liverpool, Friday.—The market has had a good attendance, and wheat is very firmly held, with few descriptions for sale. The advance of ½d to 1d was paid reluctantly, but a fair business was done. Flour—English milled flour is quiet, unchanged from last market day, but foreign sorts are firm, with sellers holding at 6d to 1s per sack advance, which checks the demand. Maize—Mixed moves steadily at recent prices, and is very firm owing to extreme scarcity. European is in fair request, with prices ½d lower to ½d dearer. Plate is scarce, and firmly held for full prices. Barley—The new Californian is firmly held, and meets a fair sale at quotations. Feeding is in good demand, and 1d per bushel dearer. Beans are steady at 3d to 6d loss, but have a moderate inquiry. Peas—There is rather more offering in Canadian, the top price of which is rather lower, but sellers are firm at the quotations. Oats—English are quiet, unchanged, but foreign sorts have, in most cases, improved ½d per bushel in price, although the demand has not been very active.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Attendance at the market to-day fairly good, and the supply of wheat moderate, the firm tone for which continues, with a slight occasional advance of 6d per qr. Barley—Trade quiet; also maize. Oats are decidedly against buyers, and high prices for good quality obtained. Not any alteration in maize, rye, hemp, brank, or millet.

Manchester, Thursday.—Salesmen generally are steady at the higher rates now quoted, but, compared with last Thursday, there is little change in any section. Foreign wheat is quoted slightly higher, but purchasers operate sparingly. English is steady and unchanged. Flour continues in slow demand, the higher rates preventing free buying. Indian corn is rather worse to buy, but a fair inquiry is about. Oats, beans, peas, and barley are quietly steady.

Newcastle-on-Tyne, Saturday.—At our to-day's market wheat ruled firm at last Saturday's quotations. Maize unchanged. Peas scarce, and firmly held at advanced prices. Beans—A fair demand at late rates. Oats advanced another 6d per 336lb, which, however, checked sales. Barley—A quiet demand; prices, however, were in sellers' favour.—JOSEPH POLLARD AND CO.

Newport, Wednesday. There was only a small attendance, and prices were unchanged from last week's rates.

Northampton, Saturday.—Good attendance, but a limited quantity of samples of farm produce on offer. Wheat very firm at last week's quotations. In some cases a little more money was paid. White wheat, 32s to 34s; red wheat, 30s to 32s; grinding barley, 22s to 24s; oats, 20s to 23s; old, fine, 26s; beans, 34s to 40s; flour, 22s to 26s.

Norwich, Saturday.—Wheat came to hand less freely at our market to-day, with a rise of 6d per qr on the week. The weather of the past week has been fickle and cold, with night frosts, and has ended to-day with a thunderstorm and hail. Wheat, red, 33s to 33s 6d per qr, weight 63lb per bushel imperial. Corn inspector's return for the week ending 28th April, 1902:—Wheat, 2,662, 29s 2d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat only a poor show; values well maintained. Grinding barley in moderate request at previous rates. Oats—But few offering, and prices advanced 6d to 1s per qr. Beans sparsely represented, and full rates supported.—ROBT. HUBBLE.

Peterborough, Saturday.—The supply of wheat to-day was small, and buyers had to pay a further advance of 6d per qr. Oats held very stiffly for full prices, but the demand was restricted.—THOMAS HILL AND SON.

Plymouth, Thursday.—Wheat is dearer, owing to scarcity. Maize, barley, oats, firm at last week's prices.—ORLANDO DAVIS AND CO.

Reading, Saturday.—Business was very firm to-day for all descriptions of corn. The quantity of wheat on offer proved again to be small, and, with a firm trade, prices showed an upward tendency on the week, and the sales negotiated were at figures varying from 30s to 34s per qr. Barley was in fair supply, and sold steadily at recent quotations, as did also oats. The attendance was good.

Ripon, Thursday.—An average attendance. Light show of samples, and only a moderate business. Farmers' wheat firmer. Wheat, English, new, 31s to 32s; ditto foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s to 26s per qr.; beans, 1s per stone.

Romford, Wednesday.—Wheat trade was firm at fully last week's prices, with an occasional advance of 6d per qr. White wheat made 33s to 34s, and red wheat 32s to 33 per qr. There was only a small supply.

Sheffield, Tuesday.—There was very little English wheat on offer, and sellers were asking 6d and 1s per qr. more money. English oats scarce, and prices again went up from 1s to 2s. Trade in beans, corn, and barley was moderate at recent rates. Flour 1s per sack dearer on the week. Quotations:—Wheat, white, 32s to 34s; ditto red, 32s 6d to 34s per 504lb; oats, new white, 26s to 27s; ditto black, 23s to 24s per 336lb; barley, grinding, 23s 6d to 24s; ditto malting, 30s to 32s per 448lb; peas, grinding, 36s to 37s; ditto blue, 53s to 60s; beans, Egyptian, 35s to 35s 6d per 504lb; ditto English (new), 37s 6d to 38s per 532lb; Indian corn, small, 24s to 25s; ditto American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—Further advance in wheat, the price being 32s per qr., an increase of 6d on the week. Oats dearer, making 24s per qr. Beans and peas very firm, and dearer.

Stockton, Wednesday.—There was no farmers' wheat showing. Very little business was done in foreign wheat, and to effect sales a little less money had to be accepted. Oats about 6d per qr. dearer. Maize unchanged. No malting barley showing.

Sunderland, Saturday.—Moderate supply of grain. Wheat firm at late rates. Spring corn unchanged. Arrivals:—Coastwise: Barley, 355qr; oats, 200qr. Foreign: Nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—A small attendance, and but little business passing on to-day's market. English wheat is held for fully 3d and foreign 3d to 6d per qr advance on the week. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—English wheat, from scarcity, commands 6d to 9d per qr advance on the week. Foreign meets a fair consumptive demand at 3d to 6d more money. Offers for shipment are mostly limited at impossible prices. Feeding stuffs very firm, but unchanged.—DUNNS AND CO.

Wisbech, Saturday.—A small attendance at market. Very little wheat offering, and 1s advance paid; prices, 32s 6d to 33s 6d. Spring corn maintain fully late rates.—JAMES FLETCHER.

Wolverhampton, Wednesday.—A small attendance and quiet market. Quotations: Wheat, white, 12s 6d to 13s per 216lb; oats, 15s 6d to 16s; beans, old, 16s to 17s per 196lb; barley, 35s to 40s per 448lb; maize, new, 26s to 27s; old, 28s 6d to 29s 6d per 480lb.

Worcester, Saturday.—Only a retail business was done. English wheat scarce, and held for more money, and foreign quotations come dearer. Barley and oats firm. English wheat (White, 30s to 31s 6d; red, 28s to 30s per qr.

Worksop, Wednesday.—Moderate attendance, and small show of grain. Wheat was up again about 1s per qr., and the advance on other feeding stuffs was fully maintained. White wheat made 30s 6d to 31s 6d; red, 28s 6d to 30s; grinding barley, 26s to 27s; white oats, 23s to 24s 6d; black, 21s to 23s; round maize, 24s 6d to 26s per qr; fine sharps, £6 to £6 10s; barley meal, £6 10s to £7; bran, £5 15s to £6 10s per ton.

York, Saturday.—Farmers ask 6d. to 1s. per quarter advance on wheat, which buyers do not see their way to give. Fine white wheat, 31s to 32s; red and mixed, 30s to 31s per quarter of 36 stones. Feeding barley, 24s to 28s per quarter of 32 stones. Oats very scarce and dear; white Tartary, 21s to 22s; black, 22s to 23s; white Garton, 23s to 25s per quarter of 24 stones.

FOREIGN.

Paris, Wednesday.—The weekly market was held with rather fine weather, though cloudy and presaging further showers. Farmers were rather thinly represented, but those who put in an appearance were unanimous in deploring the prolongation of rain, which inspires daily increasing anxiety for the future of the growing crops, particularly the rye and wheat in the heavy soils, where "lodging" is more and more to be dreaded. Native Wheat.—The attendance was a very ordinary one, with trade wanting in activity. Farmers' pretensions were just as elevated as of late, but millers were indisposed to accept their conditions, and would only treat at an average decline of 6d, though now and again at 1s per quarter on the week. In short, transactions were difficult, and prices in the aggregate were appreciably unchanged on the week, choice red wheat being quoted 37s 10d to 38s 3d and white 38s 3d to 38s 9d per 480lb. Flour.—Fleur-de-Paris.—The market opened quiet, but closed at a recovery of 5c. to 10c., at the following prices—April, 27s 1½d to 27s 5d; May, 27s 1½d to 27s 5d; May-June, 27s 5d to 27s 8d; May-August, 27s 5d to 27s 8d; July-August, 27s 5d to 27s 8d, and September-December, 26s 7½d to 26s 10½d per 280lbs. Consumption Marks Flour.—Trade is very quiet, and prices unaltered. It seems that millers will have some difficulty in maintaining values if the flour market does not soon manifest more firmness. Quotations are as follows:—Choice Marks, 31f. to 32f. (31s 5d to 32s 5d); First Marks, 30f. 50 to 31f (30s 11d to 31s 5d); good makes, 29f.75 to 30f.50 (30s 2d to 30s 11d), Ordinary Marks, 28f50 to 29f.75 per 100 kilos (28s 11d to 30s 2d per 280lb.). Rye keeps very quiet. Distillers appear amply stocked until the end of the campaign, and the special milling trade finds a poor sale for its product; sellers ask 25s 3d to 25s 8d per 480lbs. Oats have receded a little in all directions, but it is in consequence of the movement in the metropolis. Here business was most restricted at about last week's values. Grey Beauce, 23s 2d to 23s 6d; white, 22s to 22s 4d: Red, 22s 11d to 23s 2d; black, from the central provinces, 24s 1d; white Libau is quoted 22s 7d to 22s 11d; black, 22s 11d to 23s 2d, and Swedish, 24s 4d per 320lb. Barley looks well, but warmer weather is now desirable. Business is not very brisk, and prices practically unchanged. Beauce still asks 24s 8d to 25s. Here the following rates were quoted:—Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); grinding, 17f. to 17f.25 (24s 8d to 25s), and feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lbs. Buckwheat is still firm, with scarcer offers at 28s 9d per 480lb.—DORNBUSCH.

Hamburg, Saturday.—There is not much life in the trade, but the demand is adequate to the supplies, and prices remain firm. The imports during the week amounted to 14,761 tons wheat, 7,338 tons rye, 6,502 tons barley, 8,361 tons maize. Hard winter No. 2 wheat near at hand is held at 29s. to 29s. 3d.; Northern spring No. 2 Duluth, at 28s. 9d. to 29s: fine River Plate, on the spot, 29s. per 480lb.; Walla Walla, 30s. 3d. per 500lb. Demand slow. Rye firm. Offers from Russia are scarce; 9 15.20 floating is held at 23s. 6d., May-June shipment at 23s. 3d. per 480lb. Some good Pomeranian malting barley has been taken at 25s., Mecklenburg at 24s. to 25s. per 448lb. Stocks of good Mecklenburg and Holstein are getting much reduced. Bohemian and Saale we quote nominally, 28s. to 30s. per 448lb. f.o.b. Feeding barley firm. South Russian and Danubian prompt, 17s. 9d. to 18s. 3d.: autumn shipments, 16s. 9d. to 17s. per 400lb. c.i.f. Maize is selling at unaltered prices, though the damand is not brisk. Odessa and Danubian fetches 20s. 3d. to 20s. 9d. per 480lb. Mixed American is held at 25s. 3d., but meets no attention. From Hungary, fine yellow and white corn, similar in form to North American, is selling at 22s. 6d. to 23s. 6d. per 480lb.—JOHN TATLOCK.

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended May 3, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

THE BALTIC.

Wheat cargoes have been firmly held and prices are 1½d. to 3d. dearer on the week. The upward movement of April, however, may be said to have spent itself within the month. Prices made since May came in have included 30s. 6d. for Californian on passage and 29s. 7½d. for prompt shipment, 29s. 9d. for Walla Walla on passage, 29s. 9d. for Australian on passage, 29s. 4½d. for No. 1 Northern (May), 29s. 4½d. for No. 2 Hard Winter (May), 30s. 6d. for finest 1901 Manitoba (June), 30s. 3d. for soft red Calcutta (June), and 29s. for new white Kurrachee (July). Neither New Zealand or Russian cargoes are offered for sale, and Argentine is held above the ideas of buyers.

Maize cargoes are quiet. For Danubian 21s. 3d. has been paid, and 20s. 10½d. has been accepted for La Plata. There are no buyers of American at the 26s. demanded.

Oats are not in speculative demand for the summer months, and there is nothing offered near at hand. Barley on Friday made 19s. 3d. for a large cargo of Taganrog (South Russian).

The arrivals of grain and seed-laden vessels at ports of call for the week were 7 wheat (1 Geelong, 1 Portland (O.), 4 San Francisco, 1 Tacoma); 1 barley and wheat (San Francisco); 1 barley (Portland (O.); total 9.

The sailings of grain and seed-laden vessels from ports of call for the week were:—10 wheat (1 Birkenhead, 3 Hamburg, 2 Hull, 1 Limerick, 3 London); total 10.

Since January 1st, 1902, the total arrivals have been:—110 wheat, 2 flour, 18 barley and wheat, 3 maize, 8 barley, 2 beans, 2 linseed, 4 carnary-seed; total 149.

Last year during the same time the arrivals were:—89 wheat, 2 flour, 6 barley and wheat, 11 barley, 3 beans, 4 peas, 1 peas and beans, 2 locust beans, 3 carnaryseed, 3 valonea; total 124.

POTATOES.

Borough, Saturday.—A good supply, and the demand showed a slight improvement, while prices ruled steady. The following were the quotations:—Scottish maincrops (Dunbars), 80s to 90s; Lincoln Up-to-dates, 55s to 60s; Blackland ditto, 45s to 50s; Lincoln maincrops, 80s to 70s per ton; new Canary kidneys, 13s to 14s per cwt; Lisbons, 5s 6d and 6s per cwt.

Great Northern, Saturday.—Supplies were of lighter extent this morning, and experienced a moderate inquiry. Scotch maincrops, 80s to 90s; Reading giants, 40s to 45s; Blackland up-to-dates, 45s to 50s; Lincoln maincrops, 75s to 85s; Lincoln up-to-dates, 50s to 60s per ton. New: Jersey, 3½d per lb; Teneriffe, 14s; Maltese, 12s per cwt.; Lisbons, 6s per case.

Spitalfields, Saturday.—Arrivals not so heavy; trade remained in a slow state. Best Lincoln Up-to-dates, 60s to 65s; Blackland ditto, 45s; Wisbech ditto, 55s to 60s; Scotch ditto, 60s to 70s; Scotch maincrops (grey soil), 65s to 75s; Lincoln maincrops, 70s to 80s; Reading Giants, 40s; Blackland Gartons, 35s per ton; new Teneriffe and Canary (No. 2), 14s; No. 3, 13s; Maltese rounds, 10s; Algeria kidneys, 14s per cwt.

Southwark, Monday.—During the past week the arrivals have been moderate, for which trade has been slow, and prices for all samples, except the best, in buyer's favour. The following are this day's quotations:—Essex and Kent, F. Challenge, 50s per ton; Essex and Kent, Up-to-Dates, 45s to 55s per ton; Lincoln, Up-to-Dates, 50s to 60s per ton; Lincoln, F. Challenge, 50s to 60s per ton; Blackland, B. Queens, 45s to 50s per ton; Blackland, Up-to-Dates, 45s to 50s per ton; Forfar and Fife, Up-to-Dates, 50s to 60s per ton.—R. G. BROWN.

Goole, Wednesday.—Plenty of potatoes on offer here to-day, with a slow trade at last week's prices. Giants, 40s; Up-to-Dates, 50s per ton. Retail price, 5d per stone.

COLONIAL DAIRY PRODUCE.

London. Friday.—Butter.—There has been no arrival of New Zealand butter since the 17th April, and consequently stocks are getting very short, and as the Gothic with the next cargo is not due before 7th instant holders of New Zealand butters are firm in their prices, although values are slightly declining in sympathy with the large fall in all other kinds of butter, which always occurs at this time of the year. May and June are, as a rule, the two cheapest months of the year for butter. New Zealand is 2s. per cwt. cheaper on the week, while Russian and Danish are from 4s. to 6s. lower. There is practically no Canadian butter on the market. The Copenhagen Official Quotation has been lowered by 2 kroner this week, and stands at 90 kroner against 88 kroner at the corresponding period last year, where it remained for 13 weeks, and was the lowest quotation of the year. We thus appear to be about the bottom of Danish prices, unless they fall below last year's figures, which at present does not appear very likely. Cheese.—The present week has witnessed a rise of 2s. to 3s. in the cheese market, and the high prices now prevailing are restricting business, but as the stocks of cheese are exceptionally small, holders are very firm in their demands. "Choicest" Canadian, last season's make, realises 60s to 61s, while new season's fodder cheese for arrival next week is bringing 55s. New Zealand "Choicest" brands are making 58s to 59s.—W. WEDDEL AND CO.

HOPS.

Canterbury, Saturday.—A good demand continues, and a fair amount of business has been done during the week at hardening prices. The principal demand is for good copper hops, at from 35s to 45s per cwt., but some choice bramlings have, within the past few days, been sold at 70s.

Worcester, Saturday.—A fair quantity of hops have been sold at our market during the past week, but prices have been low, considering the qualities sold. One or two choice lots have made good figures, but such hops are rare, and low qualities are unsaleable.—PIERCY AND CO.

HAY AND STRAW.

Whitechapel, Saturday.—Fair supplies, and demand was experienced at steady prices. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 110s; inferior ditto, 80s to 90s; mixture and sainfoin, 95s to 105s; and straw, 28s to 44s per load.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The wealth of white blossom in the orchards shows that plums and pears have come on well, and the season is favourable to most deeply-rooted plants from wheat to trees. It is, however, most trying to the lighter-rooted forms of vegetation, and the following record for a now completed third of an agricultural year seems scarcely compatible with hopes of a full yield of either oats or barley hay or clover. The position may possibly be relieved by a wet, warm May, but that is as sanguine a view as it seems possible to take.

1902	Rainfall. Inches.	Sunshine. Hours.	Temperature. Degrees
January	1.00	17	42.5
February	0.90	21	39.5
March	1.62	40	44.5
April	0.50	135	48.0
Total, 1902	4.02	213	43.6
Average	6.38	305	41.8

The deficiency of rainfall, therefore, is now 2.36 inches. April was not lacking in sunshine, but did not, of course, succeed in wiping out the previous heavy arrears. The high temperature of January is the cause of the year thus far being 1.8 warmer than the mean. April had 18 frosts on the grass.

The course of the wheat markets during the first week has been marked by quietude and firmness. No speculative energy has made itself manifest, but a good sale for actual consumption has to be reported. The large supplies of foreign white wheat which were a feature all through April seem to have gone into use without much delay, and the feeling is not one of depression in either Californian or Australian kinds. Strong red wheat, whether English American, or Russian may be quoted sixpence dearer on the week, and demand for English and Russian is still ahead of the supply. The average price of household flour for April was 23s., being 1s. 3d. rise on the month. But for April, 1901, the average was 24s., and to-day though 23s. 9d. is paid at Mark Lane we are still a trifle lower on the year, despite the new duty. The top price of flour, 30s., is a trifle high, but 6s. is usually allowed as the mean difference between household and top price. Hungarian flour at 33s. is decidedly dear, for 8s. above household grade is the usual allowance, and this would only bring it to 31s. 9d. per sack. Country flour, despite a good supply into London, is a good trade at the late advance. The average price of British wheat for April is 28s., as compared with 27s. 1d. in March. The advance of 1s. 6d. from the 15th to the 30th is reduced in result by the weak markets from the 1st to the 9th. On the 10th, 11th, and 12th the markets were already rising. English barley is quoted at 26s. 5d. for April, against 26s. 8d. for March. The feeding sorts have been more in evidence than in March, and this is the sole cause of the average showing a decline. Oats attained for April an average of 21s. 1d., being 1s. total rise from January 1st, and 7d. advance on the March average. This rise had been almost all effected before the 14th April. The sales of English wheat for April were moderate, only 360,000 quarters changing hands. The average sales of April are about half a million quarters.

Stocks of wheat on the 1st of each month have been as follows:—

1902	British Qrs.	Foreign Qrs.
1st January	3,856,000	2,953,000
1st February	3,287,000	3,000,000
1st March	2,606,000	2,762,000
1st April	1,824,000	2,450,000
1st May	1,464,000	2,375,000

These figures are strongly in favour of wheat holders, and in English wheat, at least, must have, by this date, have brought about a price advance even if there had been no duty mooted on foreign wheat.

The influence of the returns of stocks is, however, to a great extent counterbalanced by that of the wheat supplies on passage, which, owing to an unexpectedly good quantity of La Plata and Californian shipped in April, now stand at close upon four million quarters.

	Qrs.
Californian	2,240,000
American	330,000
Russian	30,000
Argentine	446,000
Indian	75,000
Australasian	825,000
Other Countries	12,000
Total—1 May	3,956,000
1 April	3,930,000
1 March	3,575,000
1 Feb.	2,820,000
1 Jan.	2,350,000

Last week's imports into the United Kingdom were good of wheat, fairly good of flour, small of barley, moderate of oats and peas, fairly good of beans, and about 20 per cent. below the average of maize. The figures thus compare with the like week of last year:—

	1902.	1901.
Wheat, qrs.	342,000	402,000
Flour, sks.	182,000	282,000
Maize, qrs.	160,000	207,000
Barley, qrs.	68,000	121,000
Oats, qrs.	118,000	157,000
Beans, qrs.	18,000	1,000
Peas, qrs.	7,000	9,000

The quantity of flour on passage to the United Kingdom is only 310,000 sacks against 430,000 a year ago, a fact which does something to discount the large total of wheat on passage.

Of barley the quantity afloat is 325,000 qrs, against 350,000 a year ago. Present expectations consist mostly of Californian and Russian.

Of maize the quantity on passage on May 1st was about the same as at the same period of the two preceding years. Figures are as follows:—

	Qrs.
1902	515,000
1901	505,000
1900	503,000

Present expectations include an unusually large quantity of round and much less than usual of flat corn. There are 8,000qrs. of beans on passage; also 220,000qrs. of linseed.

The markets for feeding stuffs have been decidedly firm, and oats are held for such very high prices that horse owners are gravely troubled. The supply on passage is only about 100,000qrs., against an average of a quarter of a million, and the home crop of 1901 was not reputed by market judges to be up to the Government estimate. Feeding barley makes 20s. 6d. to 21s. at Bristol, and in London has the somewhat wider range from 19s. 6d. to 22s., as some very good barley is to hand from both Roumanian and South Russian ports. Maize is rather dearer at Hull, and in Scotland, but neither London nor Liverpool move forward as yet. The visible supply in American is cabled at only 804,000qrs., against 2,938,000qrs. for a year ago. The shipments of maize from January 1st to April 30th were as follows:—

	Qrs.
From America	410,000
Argentina	284,000
Russia	2,410,000
Roumania	2,700,000
Turkey, etc.	600,000
Total	6,404,000
Last season	8,680,000

This genuine deficiency of 2,276,000 quarters on a third of the year standing for a presumed deficit of 6,828,000 quarters on the year is so very large that we are lucky to get maize at anything under 3s. per bushel. Beans and peas are firm, but without much doing.

Linseed has advanced 1s. 6d. on the month, but is not subject to duty. The rise is due to a good inquiry and to the Indian new crop being short. Imports of linseed for the last fortnight of April were 25,000 quarters into London and 80,000 quarters into Hull. Rapeseed is steady, the recent imports (April 15th to 30th) have been 3,000 quarters into London and 18,000 quarters into Hull. Cottonseed is 2s. 6d. per ton dearer on the week, but Alexandria holds 81,000 tons against 52,000 tons a year ago, so that buyers would do well to hold off in hopes of a collapse in the attempt to keep back the big Egyptian reserve.

FEEDING STUFFS.

London, Monday.—Linseed Cake.—Market firm owing to dearness of seed and high prices wanted in America. Decorticated cotton cake, no change; meal in short supply; prices as before. London cotton cake, 2s 6d dearer. Egyptian firm, unchanged. Linseed very strong; 9d. dearer on the week. Cable reports probable very short Indian crop.

ROBERT AND JOHN HEWETSON.

HOPS.

London, Monday.—W. H. and H. Le May report: There has been a fair trade passing on this market for the time of year; the business done has been principally for consumption.

THIS DAY'S MARKETS.

MARK LANE, MONDAY.

[FIRST REPORT.]

Good English wheat to-day was scarce in the the natural form, though a very fair supply was obtainable in the ground state, as country flour made from British grain. The question is, rather: Where will country millers get their supplies from during the next four months? To-day the milling trade paid 33s. to 34s. for English, and all that was offered went promptly into sale. Foreign wheat was dull at the recent advance. The supply in prospect exceeds an average, and deadens enquiry. Maize was firm at currencies. For barley, previous full prices were likewise made. Heavy oats remained at a premium. Haricots made 42s. to 44s. for Italian. Some split Egyptian lentils had buyers at 14s. 6d. to 15s. per cwt., while butter beans fetched 28s. to 29s. per cwt.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITHOUT CHANGE. BUSINESS WAS NOT BRISK.

THE FLOUR TRADE.

MARK LANE, MONDAY.

There was a fair demand for London makes at 3d. to 6d. decline from the highest prices of April. Value for to- households pushed up to 24s. on the 28th ult. was now not above 23s. 9d. Country whites touched 27s. 6d. for the very finest, but ordinary prices were as given in our quotation list. Some Red Dog or feeding flour from Hungary was a feature of the market; 14s. 6d. was paid. Of American sorts the popular "Iron Duke" made 21s., "Gilt Edge" made 20s. 3d., "Star" 26s., and "Ceresota" 25s. 9d. per sack.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
April 28 noon.	6 1	6 2	6 5
4 p.m.	6 1	6 2	6 5
April 29 11 a.m.	6 1	6 2	6 5
4 p.m.	6 2	6 2	6 5
April 30 11 a.m.	6 2	6 2	6 5
4 p.m.	6 2	6 2	6 5
May 1 11 a.m.	6 2	6 2	6 5
4 p.m.	6 2	6 2	6 5
May 2 11 a.m.	6 2	6 2	6 5
4 p.m.	6 2	6 2	6 5
May 3 noon.	6 2	6 2	6 5
To-day noon.	6 2	6 2	6 5

Maize to-day makes 4s. 5d. per cental for June to Aug., and 4s. 8d. from September to November delivery. Wheat sales for April were 2,630,000 centals, say 526,000 qrs.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the 18th inst. the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement the Acts of 1876 and 1901 throw the burden on the buyer.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

POULTRY AND PROVISIONS.

Smithfield, Saturday.—Supplies moderate, with improved demand at firm prices. Quotations:—Fowls: Yorkshire, 3s 3d to 3s 9d; Essex, 3s to 3s 6d; Boston, 2s 9d to 3s 3d; Surrey, 4s 6d to 6s; Sussex, 4s to 5s; Welsh, 2s 6d to 3s; Irish, 2s 3d to 2s 9d; turkeys (cock), 6s to 8s; (hen), 4s to 5s; goslings, 6st o 6s 6d; Aylesbury ducklings, 4s to 5s; country, 3s 3d to 3s 9d; pigeons, 7d to 1s; quail, 9d to 1s; wild rabbits, 6d to 8d; tame, 10d to 1s 3d each; Australian, 8s to 11s per dozen; Dutch plover eggs, 4s per dozen. Russian game: Partridges, 1s to 1s 2d; ptarmigan, 10½d; black game, 1s; brown hares, 1s 3d to 1s 8d; white, 1s to 1s 2d each.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—The demand for spot flour has further improved, and stocks being extremely dull, business at present is more favourable for home-made than for imported flours. Quotations are now advanced fully 1s. per sack, and are very firm. Values on spot are as follows:—1st spring patents, 25s. 6d. to 26s. 6d.; 2nd spring patents, 24s. 9d. to 25s. 9d.; American winter patents, 25s. to 25s. 6d.; extra fancies, 23s. 6d. to 24s. Offals—Bran continues in fair demand; no further change to report in prices.—GREENHILL BROTHERS (Belfast).

Flour.—During the week the market has been very firm, and winter wheat patents especially were in good demand. Grain.—Maize is 3d. per boll dearer. Beans, owing to arrivals, are 9d. per boll cheaper, with a good demand. Barley 3d. higher. Pease unchanged. Canadian corn in sellers' favour. Oatmeal 1s. per sack dearer. Mill stuffs.—Bran and thirds unchanged.—MCKINNON and MCDONALD.

The wheat market shows little alteration on the week, but white descriptions, owing to liberal arrivals, tend in favour of buyers. Maize scarcely maintains last quotations, although supplies are only moderate. Oats 3d. to 6d. dearer.

Milling Offals.—While middlings remain firm at last Monday's prices, bran and pollard are dull and occasionally 2s. 6d. per ton cheaper.—JOHN BAWCOMB AND CO.

Arrivals of wheat are small and liberal of flour. The trade is firm and prices are fully supported. Maize unchanged. Barley and oats 3d. per quarter dearer.—COVENTRY.

Flour met a fair consumptive demand to-day, at the full prices of this day week.—T. S. WEDILL AND SONS.

EGGS.

Wednesday.—Dorchester: 8d. to 9d. per doz. Barnsley: 14 for 1s. Boston: 17 for 1s. Colne: 1s 4d per score. Keighley: Wholesale, 15; retail, 14 for 1s. Kirbymoorside: 18 or 19 for 1s. Thursday.—Brigg: 16 or 17 for 1s. Driffield: 19 or 20 for 1s. Penistone: 16 for 1s. Ripon: 15 or 16 for 1s. Scarborough: 17 for 1s. Wetherby: 15 or 16 for 1s. Birmingham: 14 and 15 for 1s. Kidderminster: 16 for 1s. Wellington: 15 or 16 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Helmsley: 17 or 18 for 1s. Leyburn: 17 to 19 for 1s. Lincoln: 16 for 1s. Otley: 15 or 16 for 1s.

Saturday.—Appleby: 16 to 17 for 1s. Berwick: 8d to 9d per doz. Carlisle: 16 to 18 for 1s. Doncaster: 15 to 17 for 1s. Grantham: 15 to 17 for 1s. Howden: 18 for 1s. Lancaster: 14 or 15 for 1s. Malton: 18 to 19 for 1s. Retford: 1s 2d to 1s 4d per score. Richmond: 17 for 1s. Skipton: 15 or 16 for 1s. Stokesley: 16 or 17 for 1s. Whitby: 17 or 18 for 1s. York: 16 for 1s.

BUTTER.

Wednesday. — Dorchester: 11d to 1s 2d per lb. Barnsley: 1s 1d to 1s 3d per lb. Boston, 9d per lb. Colne: 1s 2d per lb. Keighley: Wholesale, 1s; retail, 1s 1d per lb. Kirbymoorside: 10d to 11d per lb. Knaresborough: Wholesale, 1s 3d; retail, 1s 4d to 1s 5d per 24 oz. roll. Louth: 10d. per lb. Market Weighton: 10d per lb. Northallerton: 1s 5d to 1s 7d per 24 oz. roll. Stockton: 11d to 1s 2d per lb. Worksop: 1s to 1s 3d per lb. Hereford: 1s 2d to 1s 3d per lb. Market Drayton: Best, 1s to 1s 1d per lb.; seconds, 11d to 1s per lb. Uttoxeter: 1s to 1s 2d per lb.

Thursday.—Brigg: 9d to 10d per lb.; Driffield: 10d per lb. Penistone: 1s 3d per lb. Ripon, 1s 3d to 1s 5d per 24 oz. roll. Scarborough: 1s 2d per lb. Wetherby, 1s to 1s 2d per lb. Birmingham: 1s 2d to 1s 3d per lb Kidderminster: 1s 2d per lb. Wellington: 1s 1d to 1s 2d per lb.

Friday.—Easingwold: 11d to 1s per lb. Helmsley: 9d to 10d per lb. Leyburn: 1s 1d to 1s 3d per 24oz. roll. Lincoln: 1s per lb. Otley: 1s 4d to 1s 6d per 24oz. roll.

Saturday.—Appleby: 8d to 11d per lb. Berwick: 8d to 9d per lb. Carlisle: 1s to 1s 1d per lb. Doncaster: 1s 1d to 1s 3d per lb. Grantham: 11d to 1s 1d per lb. Howden: 10d per lb. Lancaster: 1s 1d to 1s 2d per lb. Malton: 9d to 11d per lb. Retford: 9d to 1s per lb. Richmond: 11d per lb. Skipton: 1s to 1s 1d per lb. Stokesley: 11d to 1s per lb. Whitby: 1s to 1s 1d per lb. York: 1s per lb.

CHEESE.

Glasgow, Wednesday.—Several lots of new cheese forward, quality improving with each arrival. Inquiry limited, as the quantity is too small yet to test the market. Only a few lots of old Cheddars left. In the absence of business former quotations for Cheddars and Dunlops have to be given, viz., from 56s to 62s per cwt. Moderate trade passing in Canadians and New Zealands at late figures.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A good supply of greenstuffs was available this morning, but the demand was of a slow character. Good arrivals of potatoes experienced an improved demand. Fair supplies of fruit were received, and met a fair demand. Greenstuffs—Cabbages, 5s; cauliflowers, 5s to 10s per tally; broccoli, 2s to 3s per bag; spinach, 2s; beetroots, 3s per bushel; parsley, 3s to 4s; mint, 3s to 4s; leeks, 2s 6d to 3s; radishes, 6d to 9d per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; seakale, 8s to 10s per dozen punnets; rhubarb, 1s 6d to 2s per dozen bundles; Egyptian onions, 6d 6d to 7s 6d per bag; spring ditto, 2s to 3s per dozen bunches. Potatoes—Maincrops, 70s to 80s; Reading Giants, 40s to 50s per ton; new Canary, 12s; Teneriffe, 14s; Maltese, 12s; Algerian kidneys, 14s per cwt; Lisbons, 6s per case.

CATTLE.

Metropolitan Market, Islington.

Monday, May 5th, 1902.

	British.	Total. May 6th, 1901.
Beasts	1,120	1,120 1,200
Sheep and lambs	9,920	9,920 9,870
Calves	10	10 15
Milch cows	30	30 50

Quotations per 8lb. (sinking the offal).

	ENGLISH. Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 4 ..	4 8 ..	5 1
Sheep	3 10 ..	5 0 ..	6 2
Lambs	5 8 ..	6 2 ..	6 3

British arrivals include as follows:—Scotland, 3; Eastern Counties, 842; Midland, Home, and Western Counties, Devon, 20; Ireland, 30.

We note to-day a fair average supply in the beast market, Norfolks numbering about 100 less. Trade for both prime and second quality was firmer, both in regard to tone and value, the best polled beasts making 1d per 8lb more money with a clearance. Trade for butchering cows and bulls was also firm, the latter making more money. The Irish arrivals consisted of consignments from Dublin.

The following are top quotations per 8lb (sinking the offal):—

Scotch	5s 1d to 5s 2d	..		
Devons	4s 10d to 5s 0d	..	4s 4d to 4s 5d	
Norfolks	5s 0d to 5s 1d	..	4s 4d to 4s 5d	
Lincolns	4s 8d to 4s 10d	..	4s 0d to 4s 2d	
Irish	4s 8d to 4s 10d	..		
Fat cows	4s 3d to 4s 4d	..	3s 6d to 3s 8d	

There was an increase of 2,230 in the number of sheep and lambs on offer, the supply including 490 Scotch, 3,230 from the Eastern Counties, and 850 from Yorkshire. Trade for wether sheep was rather dull, rates being 2d. per 8lb. in favour of the buyer; ewes met a dragging trade at a decline of 4d.; too many lambs on offer, sales consequently being forced with the usual consequence, the choicest were bought at 6d. per 8lb. less money, whilst heavy lambs were most difficult to cash at any price.

Undermentioned quotations are at per 8lb. (sinking the offal), and are for the best of each class penned, all clipped, except small Downs and ewes:—

	To-day.		Monday, May 6, 1901.
7½ to 8 st. Downs	6s 0d to 6s 2d	..	5s 10d to 6s 0d
9-st. Downs	5s 6d to 5s 8d	..	5s 2d to 5s 4d
10-st. Halfbreds	5s 2d to 5s 4d	..	4s 10d to 5s 0d
10-st. Yorkshires	4s 8d to 4s 10d	..	4s 10d to 5s 0d
12-st. Lincolns	4s 8d to 4s 10d	..	4s 4d to 4s 6d
10-st. Down Ewes	4s 6d to 4s 8d	..	4s 2d to 4s 4d
11-st. Halfbred ditto	4s 2d to 4s 4d	..	3s 10d to 4s 0d
5st. Down lambs	6s 6d to 6s 8d	..	7s 6d to 7s 8d
6st. Halfbred ditto	5s 10 to 6s 0d	..	6s 10d to 7s 0d

Calf trade nominal. No pigs on the market.

London (Central), Monday.—Moderate supplies; fair trade. Beef carcases, 4s 4d to 4s 6d; hind-quarters, 4s 8d to 5s; roastings, 5s 4d to 5s 8d. Sheep.—Ewe, 3s 4d to 3s 8d; wether, 4s 4d to 4s 8d; hind-quarters, ewe, 4s 8d to 5s; wether, 5s 8d to 6s. Pigs.—Large, 3s 8d to 4s; small, 4s 4d to 4s 8d.

St. Ives, Monday.—Beasts, 925; sheep and lambs, 843; pigs, 584; horses, 3. Beef, 8s to 9s; mutton, 7s 7d to 9s 11d; lamb, 1s; pork, 6s 9d to 7s 6d. Fat beasts sharp trade; dearer; stores fair; fat and store sheep fair; fat and store pigs good demand; milch cows fair trade; prices, £15 to £23.

FOREIGN CATTLE.

Deptford, Monday.—To-day's supply, compared with Monday last, showed an increase of 224 head, and consisted of consignments from the United States, quality being well up to the late average, trade for which was of a firm and steady nature, at fully last week's quotations. The best on offer to dress from 680 to 720lb., made 5s per 8lbs, offal given in. A few found buyers at 4s. Sheep, 653, consisting of consignments from America, trade for which was fairly steady, at from 4s 11d to 5s per 8lbs. On Saturday 1,362 beasts from the United States were on offer, and a firm trade at from 4s 10d to 5s per 8lbs, offal given in. The following were the numbers on offer on Monday, May 6th, 1901, with the current top rates per 8lbs:—Beasts, 806, 4s 2d to 4s 3d; sheep, 1648, 4s 6d to 4s 8d.

Liverpool, Monday.—Smaller supply of cattle in market; good trade at higher prices. Sheep supply considerably larger; demand good for mutton at higher rates, a good clearance being effected. Lambs no easier to sell. Beef, 7½d to 8½d per lb; mutton, 9d to 9½d per lb; lambs, 11d to 10d per lb. At market—636 cattle and 6,236 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat and maize cargoes are steady, while barley is firm for near, but weak for distant, futures. Oats are in poor request for summer shipment. Cottonseed for November shipment is already in speculative offer, £6 11s. 3d. being asked.

BUSINESS DONE.

WHEAT.—Californian, 29s 9d, May shipment; Walla Walla, 29s 3d, May shipment; Australian, 29s 9d, May shipment; No. 1 spring, 29s, May shipment; No. 1 Manitoba, 30s 6d, May shipment; Argentine, 29s 6d, on passage; Russian winter, 31s, June shipment; Calcutta Club, 30s 9d, May shipment; white Kurrachee, 29s 3d, June shipment; white Bombay, 30s 9d, prompt shipment.

MAIZE.—Argentine, 21s, on passage; Odessa, 22s, on passage.

BARLEY.—Danubian, 19s 3d, on passage; Azoff, 17s 6d, October shipment.

OATS.—Libau, 320lb, 20s 6d, May shipment; Riga, 304lb, 18s, May shipment.

LOCUST BEANS.—Portuguese, 90s, May shipment.

LINSEED.—Russian, 95 per cent., 53s 6d. May shipment.

CANARYSEED.—Turkish, 38s, prompt shipment.

MILLET.—Smyrna, 21s, prompt shipment.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, S.E., write that the present spring season seems now nearly over. However, a few small sowing orders continue to drop in, which are executed at the moderate rates current. Meantime, stocks of cloverseeds all round leave off, as previously noted, in unusually small compass. Sanfoin, timothy, and especially lucerne are still in very short supply, whilst spring tares appear nearly used up. More business has been doing in mustard seed, and at hardening rates; but rapeseed is slow of sale. As regards canary seed, the Liverpool market shows some improvement. Other bird seeds are, however, dull, and call for no comment. Blue peas have moved in favour of holders, and full prices are asked for haricot beans.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

With a rather shorter supply of fat beasts at Islington, trade, though entirely void of life, was, in regard to value, of a firmer and steadier nature, higher rates by about 2d. per 8lb. being both asked and obtained, a practical clearance being made on Monday, a few more than usual being sold on Thursday, amongst which were a few Scotch, whilst on Monday none from that country or Ireland arrived, consignments from the latter consisting of stores two years old, which were quoted at from £11 10s. to £12 per head. Trade for butchering cows and bulls also ruled firmer at a similar advance, all on offer finding early buyers. At the foreign cattle market, where the supply was rather lighter, trade on all three market days was firm at an advance similar to that experienced at Islington, the supply consisting entirely of shipments from the United States. The total number of beasts offered for sale at both markets was 3,234, consisting of 1,230 British (decrease 60) and 2,004 foreign (decrease 787). The following were the top rates obtained per 8lb., sinking the offal:—90-stone Norfolk, 5s.; 100-stone Shorthorns, 4s. 8d.; 110-stone ditto, 4s. 4d.; 85 to 90-stone States, 4s. 10d. to 5s.; 90-stone fat cows, 4s. 4d.; 100-stone fat bulls, 3s. 10d. to 4s. The trade for sheep, as usual of late, was chiefly confined to the Islington market, and was of a firm nature, rates ruling 4d. per 8lb. in favour of the seller, an early clearance being made. Ewes also sold to better advantage, lambs being in full supply, were steady in value, last week's advanced rates being well maintained. At Deptford trade also ruled firm, the total number offered for sale on both markets was 11,723 (previous week, 11,514), consisting of 10,920 British (increase 300) and 803 Americans (decrease 91). Best pens made, per 8lb., as follows, sinking the offal:—7½ to 8-stone Downs, 6s. 2d. to 6s. 4d.; 8-stone Scotch, 6s. 2d.; 9-stone Downs, 6s.; 10-stone Yorkshires (clipped), 5s.; 10-stone Downs, 5s. 10d.; 10-stone half-breds, 5s. 8d.; 12-stone Lincolns, 5s. 2d.; 8½-stone Americans, 4s. 10d. to 5s.; 10-stone ewes, 5s.; 5-stone fat Down lambs, 7s 4d.; 6-stone half-bred ditto, 6s. 8d. Calves numbered 75, and the trade was restricted to Thursday, and was of a rather slow nature at a decline of 4d. per 8lb., the best being quoted at 5s. 8d. per 8lb., sinking the offal. The few pigs on offer sold readily at an advance of 4d.; best small breeds were quoted at 5s. 2d. per 8lb.

Trade in the West.

The bitterly cold weather experienced for some days past, not only at night, but by day as well, coupled with the serious deficiency in the rainfall last winter, and also during the early spring so far—amounting for the past twelvemonth to some seven inches, if not more—cannot fail to cause apprehension in the minds of agriculturists generally throughout the country, tending, as it does, in the absence of the usual supply of nitrogen, to greatly lessen crops, not only on grass, but also of grain, owing to the want of reproductive power on food plants of all kinds. Of course, this is a very serious matter, not only for stock owners, but also for the agricultural interest generally, and unless we have a copious rainfall during the next few weeks the drought, which will inevitably follow later on, must undoubtedly be attended with most disastrous consequences, and, as it is, many districts are already experiencing considerable inconvenience from a scarcity of water, even for domestic purposes. Therefore, with such a prospect it is some little encouragement to find the markets for store cattle as firm as they are, especially for grazing beasts, which are making £30 to £40 per pair for bullocks carrying anything like a supply of flesh; but this cannot continue if the drought lasts much longer, and we can hardly expect a continuance of such rates unless the present scarcity of beef becomes more accentuated even than is the case at present. The more ordinary grades are, of course, procurable on lower terms—from £18 to £27 or £28—but still there is a good inquiry for the rougher grades of graziers. Store sheep, of which the great spring sales are about to begin in the principal sheed-breeding districts, are also likely to be affected by the dry weather to a serious extent, which will be a still further heavy loss to flock masters, seeing that even at present sheep are selling by no means any too well, the trend of the market for fat sheep during the past week being decidedly against buyers, prices having once more gone back quite another halfpenny per pound. Very little of the mutton sold during the past week has realised 8d. for the best wethers, a more average figure being 6½d. to 7½d for ewes and wether. Lamb, however, is meeting a trifle better sale, though the cold weather is naturally against prices, the best Downs and cross-breds sell from 34s. to 39s. (or about 10d.), and the more ordinary runs at about 9d. As far as we can state from transactions that have come under our own notice, the general at present for store sheep is for horn and Down couples, 46s to 57s. 6d.; horn wethers, 36s. to 38s.; Downs, 35s. to 39s.; Down ewe hogs, 36s. 6d. to 39s.; Down ewe hogs, 41s. to 44s.; cross-bred hogs, 39s. to 40s.; off-going horn ewes, 41s. to 43s.; off-going Down ewes, 38s. to 43s. 6d.; Down Chilver lambs, 23s. to 27s.; wether lambs, 22s. to 25s. Veal maintains the firmness which has been such a characteristic of the trade for some weeks past. Best calves range in values from £4 10s. to £6 each (or 8½d. to 9d. per lb.); seconds, £3 to £4 (or 7d. to 7½d.); and rearers from 30s. to 45s. each. Everything, however, brought out is quickly cleared, the result of the high prices ruling, and, with the exception of the very small proportion of rearers reserved, indiscriminate slaughter seems to be the order of the day, and, whilst this continues to be the case, there is very little likelihood of our dairies being furnished to the extent that could be hoped for, and a more abundant supply of good milchers ready at hand to be drafted into dairies, especially in towns, to replace older bullocks which have had their day. Pigs have undergone but little change, since our last report; in fact, values, if there has been any alteration, have rather been against buyers, especially in all the neater weights, both of porkers and baconers, which make phenomenally high rates—10s. 6d. to 11s. 6d. for picked lots, which meet the special requirements of buyers. For the time there is undoubtedly a very strong trade in everything, the milder weather, which set in on Thursday, proving very helpful to trade.

Trade in Scotland.

The supplies of fat cattle on offer this week have been very large all over, and, with a very good demand on the part of the English buyers, trade has been again very dear, although in some markets the exceptionally high prices of last week were barely maintained; taken throughout, no falling off can be quoted. Fat cows and bulls have been offered in very large numbers, and met the dearest trade of the season. The supply of fat sheep was considerably in excess of that of last week. With a much improved trade in the London market and better prospects all over, there has been the best demand for fat sheep that has been experienced for some time, the rising price being from 2s. to 3s. per head. Fat lambs, if of good quality, can be easily sold at high prices, but secondary descriptions are hard to cash. The usual number of fat calves and pigs at a very dear trade. In the store market there has been the largest number of sheep offered for sale that has been exposed for a very long time. Best class of cross and half-bred hogs have met a good demand, and have been all sold at satisfactory prices. Sheep of secondary class, however, have met a dull trade, some of the latter remaining unsold. There was a large show of store cattle, which met an exceedingly slow market, a considerable number of those offered not finding purchasers. A great many more milch cows have been exposed, for which there has been a very good trade, at greatly advanced prices. Extreme top price of best cattle per live cwt., from 39s. to 41s.; current, from 37s. 6d. to 39s. 6d.; secondary, 36s. to 37s.; mutton, from 7¾d. to 8¾d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

The recent rise in price was instrumental in bringing in increased supplies of both cattle and sheep to last Thursday's Dublin market, there being 234 more of the former and 1,892 of the latter, as compared with the previous market. This, of course, had a very perceptible effect on the tone of business, and though really tip-top beasts repeated last day's prices with some difficulty, the common rough cattle depreciated in value from 10s. to 15s. per head, and a large number were left over unsold. Indeed, the boom of last week was quite discounted. Choice ox and heifer beef made from 65s. to 67s., and in a few cases up to 70s. per cwt.; second class from 55s. to 64s., and inferior from 45s. per cwt. With such a big increase of nearly 2,000 sheep, it might naturally have been supposed that the mutton market would get more of a set back than the beef, but such was not the case. Really prime aged wethers were scarce, and in wool made fully 8½d. to 8¾d. per lb. Shorn sheep were also in good demand, making from 7¾d. to 8d. per lb. There was more stir in the shipping trade than there has been for some time past, but common rough sheep were very much in evidence, and receded somewhat in price. A large number of thin inferior lambs helped to swell the sheep statistics, but they were simply unsaleable, or any that were disposed of sold at from 15s. upwards; second-class made from 24s. to 32s., and prime lambs from 34s. to 40s. each. The trade for shipping lambs exhibited a slight improvement, but business in that line has not yet rightly opened. The demand for veal was not so good, but really prime calves made from 8d. to 9d. per lb.; inferior do. from 4½d. upwards.

There was a large market of milkers, but they were chiefly rough and inferior cows; the best springers and new milch cows made from £18 to £20, but in the other classes, which could be bought from £8 10s. up, nothing like a clearance was effected. There was a good supply of pigs, and in consequence of the Dublin buyers being busy, trade showed more animation than on the previous week, and prices were a shade firmer, and a clearance effected. Nice light-weight pigs made from 47s. to 49s. per cwt.; and coarse bacon pigs from 32s. to 40s. per cwt. Mr. Gavin Low held a very important sale of store stock at his paddocks in Prussia Street, when over 1,250 cattle were offered for sale. A number of English and Scotch buyers were present, and the bidding was animated. Some fine lots of Aberdeen-Angus crosses, Herefords, etc., were sold at remunerative figures. One lot of heifers made £16 15s. each, and 20 two-and-a-half-year-old polled bullocks belonging to Mr. Cobbe brought from £15 to £16 12s. 6d. each. The demand for store stock in forward condition is very brisk, and the country fairs all show rising prices.

LONDON.

Deptford, Wednesday. — Only 343 United States beasts were shown to-day, this being 357 head less than on Wednesday last, and sold slowly, but at firm rates, viz., 4s 10d to 5s per 8lb to sink the offal.

Islington, Thursday.—Supplies fair, the bulk consisting of fat bulls and rough cattle; a good demand prevailed, prices being steady. Fat bulls, 3s 6d to 3s 10d. Sheep were in good supply, but met with quieter request, prices for both wethers and ewes marking a general decline of 2d; 7½ to 8-stone Down wethers (clipped), 5s 2d to 5s 4d; 9-stone ditto, 5s; 10-stone half-breds, 4s 10d; 10-stone Down ewes (unclipped), 4s 8d to 4s 10d; and 9-stone ditto, 4s 4d to 4s 6d. Lamb trade dull, and prices weaker; 4½ to 5-stone Downs, 7s to 7s 4d; 11-stone half-bred ditto, 6s 6d to 6s 10d. Calves steady, the best on offer making 5s 6d to 5s 8d. Pigs steady. Neat small porkers, 4s 8d to 4s 10d per 8lb to sink the offal. Total supplies—150 beasts, 3,290 sheep, 70 calves, and 20 pigs.

London (Central), Wednesday.—Fair supplies met with a good request at firm prices. Beef arrivals included 60 tons Scotch, 650 sides from Liverpool, 1,400 hindquarters and 600 fore-quarters American killed. Quotations:—Beef, Scotch short sides, 4s 6d to 4s 8d; long, 4s 4d English, 4s 2d to 4s 4d; American, Deptford killed, 4s 2d to 4s 4d; Liverpool, 4s 1d to 4s 3d; American, refrigerated, 3s 5d to 3s 6d; Argentine, hindquarters, 3s 7d to 3s 11d; forequarters, 2s 11d to 3s 1d. Mutton: Scotch, 4s 10d to 5s; English wethers, 4s 6d to 5s; ewes, 3s 10d to 4s; English lamb, 5s 8d to 6s 4d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s 8d to 5s; and Dutch, 4s 2d to 4s 8d per 8lb.

London (Central), Friday.—Good supplies were offered, but trade ruled rather quiet, excepting for beef, which was firmer. A fair quantity of English, moderate of Deptford-killed American, 100 tons Scotch, 600 Liverpool sides, 2,700 hindquarters and 1,500 forequarters American refrigerated, and 100 Dutch sides comprised the arrivals of beef this morning. Quotations:—Beef, Scotch short sides, 4s 4d to 4s 8d; long, 4s 4d; English, 4s to 4s 6d; American, Deptford-killed, 4s 3d to 4s 5d; Liverpool, 4s 2d to 4s 4d; American, refrigerated, hindquarters, 4s 4d to 4s 8d; forequarters, 3s 6d to 3s 8d. Mutton: Scotch, 4s 6d to 4s 10d; English wethers, 4s 4d to 4s 8d; ewes, 3s 8d to 3s 10d; Canterbury, 2s 8d to 3s; Wellington, 2s 4d to 2s 8d; Sydney and River Plate, 2s 2d to 2s 4d; English lamb, 5s 8d to 6s 4d. Veal: English and Dutch, 4s to 4s 8d. Pork: English, 4s 4d to 4s 8d; and Dutch, 4s to 4s 4d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef trade very good, best beasts making 12s 6d to 13s per score. Mutton better trade, 5s 6d being the top price per stone for Down and half-bred wethers. Lamb sold more readily at 1s to 1s 2d per lb. Veal dearer Pork a little better, roasters making 10s a score. Store sheep trade quiet.

Basingstoke, Wednesday.—At Raynbird and Son's Sale Yard there was a very good attendance of buyers to meet a supply of 31 fat beasts, 93 calves, 723 fat sheep and lambs, and 106 head of dairy and store cattle, for which the following prices were realised. Fat shorthorn steers, up to £23 10s; year old heifers, £16 15s; cows, £19; bulls, £19 5s; polled steers up to £21; 2 years old fat Welsh runts, £29 10s the pair. Fat wethers and young ewes made up to 54s 6d; fat ewes, 38s to 54s; fat sucking lambs, 29s 6d to 39s. Fat calves, 70s to £5 12s 6d; smaller, 20s to 45s; dairy cows, from £8 to £18 10s. A short supply of fat beasts was cleared at an all round advance on prices. A good show of fat sheep and lambs met with a brisk demand, and a clearance made with an advance on prices all round. An easy clearance was made of the milch cattle at satisfactory prices. Store cattle met a slightly less demand, and last week's prices could not be maintained. Fat calves continue a brisk business at late quotations. Ruling values:—Fat beasts, best quality, 7½d to 8d; second quality, 6½d to 7d; bulls, cows, and inferior beasts, 5½d to 6½d per lb. Best quality sheep, 8d to 8½d; second ditto, 7d to 7½d; old ewes, rams, and inferior, 6d to 6½d; choice 3 months old sucking lambs, 10d to 11d per lb. Fat calves, 7d to 9½d per lb.

Boston, Wednesday.—Very little business done, and few cattle on offer. Sheep a scanty supply. Store beasts, £18 to £18 10s; in-calf cows, £22 to £22; heifers, £16 to £18; hogs, 48s to 52s; best wethers, 8d to 8½d; ewes, 7d to 7½d per lb.

Braintree, Wednesday.—At Messrs. Balls' auction mart the trade was generally brisk. Prime beasts were in strong demand, and made up to £23 15s; store cattle, £8 10s; hoggets, 35s. A good company of buyers. Stock penned:—Beasts, 56; fat sheep, 136; hogs, 47; store pigs, 376; store cattle, 30; calves, 16; store sheep, 78; horses, 2.

Bristol, Thursday.—There was a moderate supply of fat cattle to-day, for which there was a firm trade. Best animals fetched 66s per cwt, and secondary 60s. A moderate show of sheep. Best light shorn wethers ranged from 7½d to 7¾d per lb; heavy wethers, 7½d; and ewes, 6d to 6½d. Lambs, 10d to 10½d. About 800 pigs were in the market, and baconers sold at 9s 9d to 10s per score, and porkers 10s 9d to 11s. About 1,000 store cattle on offer, and trade was very dull, but at reduced prices several were unsold.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under	10 0
Under 10 sc.	Not exceeding 2½ n.	9 6
Under 11 sc. 10 lb.	Not exceeding 2¾ in.	9 6
Under 12 sc.	Not exceeding 3 in.	

—C. & T. Harris & Co., Ltd.

Cambridge, Monday.—Beasts 707, sheep 940, pigs 722, horses, 10. Beef, 7s 3d, 8s 6d; mutton, 4s 4d, 5s 6d; lamb, 9½d, 11d lb; pork, 5s 6d, 6s 6d. A larger show store beasts, nearly all cleared. Fat beasts, a fair number to hand. Trade rather slow. Fat pigs, a large supply; trade trade, at a little more money. Stores, some good lots to hand trade rather slow. Fat pigs, a large supply; trade not quite so good as last week. Stores, a good show, and trade slower than last week. Hay, straw, and roots, full supply, and fair trade.

Canterbury, Saturday.—There was a much smaller supply of sheep, prices for best tegs ranging from 36s to 38s; second class, 29s 6d to 33s per head; yearlings ranged from £8 10s to £9 15s. Some useful Sussex stock were also offered. Cows made from 16 to 17 guineas; yearling steers and heifers from £15 to £16.

Carlisle, Saturday.—The supply of Irish store stock was below the average of recent weeks, and consisted of about 600 beasts, mostly heifers. The attendance also was smaller, and trade, in sympathy with the home grazing cattle, was easier on account of the backwardness of the season and the scarcity of grass. The prices for small heifers were from £6 10s to £8 10s, and for the best sorts up to £14 10s. A few stripping cows realised £8 10s to £11 10s. Young pigs were a small show, and met a slow sale at 30s a head.

Chichester, Wednesday.—There were again full supplies in all departments, and the market was largely attended. A good demand was experienced for best fat beef and mutton, and the price for fat ewes showed an upward tendency. A fair trade was passing in store cattle but business in the store sheep department was extremely sluggish, and the supply, though smaller than at the previous market, was much in excess of the demand. Calves and pigs, on the other hand, met a brisk trade, and prices in each case were well maintained. During the morning, Mr. C. Stride, of the firm of Messrs. Stride and Son, held a successful sale of cows, heifers, etc., which found ready puchasers at good prices. Particulars as to the number of head of stock in market are appended:—Cattle, 922; sheep, 5,245; pigs, 793; calves, 121; horses, 23; total 7,04. Tolls taken, £42 17s.

Dorchester, Wednesday.—The mid-weekly cattle market to-day, both Messrs. Ensor's and Mr. Sampson's, proved a very full one in every respect, both in regard to attendance and supply, and, with a quick sale for all classes of stock of a suitable stamp, as well as dairy produce, a clear once was very soon effected at good prices throughout. Beef keeps relatively much dearer than mutton, and we must still quote good bullocks as worth 11s to 12s per score, and seconds 10s to 10s 6d. Fat sheep met a steady but by no means brisk, sale, and only in very exceptional cases do prices exceed 8d per lb., though there is a fair demand now for mutton—better than was the case some time since. Lambs make 9d to 9½d for the best runs, the trade having declined since Easter. Calves keep outs of the dearest things on the market, really ripe calves making over 8½d, and ordinary runs 7½d to 8½d. Pigs are very dear again all round, best light-weight porkers making 10s 6d to 11s per score, baconers 9s 6d to 10s, and heavy pigs 8s to 9s. Chickens meet a brisk sale at 5s to 6s 6d per couple, and fowls at 3s to 4s 3d. Cheese is also very dear for good makes, 48s up to 62s per cwt; seconds, 22s to 42s. Butter, 11d to 1s 2d per lb. Eggs, 8d to 9d, as a general run, the latter only in exceptional cases.

Dublin, Thursday.—Numbers in market: Beasts, 1,335 (increase 234); sheep, 6,101 (increase 1,892); calves, 39 (decrease), 19. Choice qualities making higher quotations. Secondary and inferior sorts not in such good demand, and prices show a reduction on last week's rates. Brisker trade for sheep, and a better clearance effected. Prices favouring sellers. Cattle (live weight): Best, 36s to 40s per cwt; other sorts, 28s to 35s per cwt. Mutton (dead weight), 7d to 8½d per lb.—Ganly Sons and Co.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a good average supply of fat cattle of excellent quality; buyers were numerous, and a sharp trade was experienced for all the best descriptions at higher prices, which ranged from 8s 3d to 9s per stone. Fat sheep were not so numerous, and the best hoggets may again be quoted dearer. Lambs in fair request up to 38s. A good entry of grazing and breeding sheep; couples and poor hoggets met a dull trade, but the latter with condition sold well. Good weaning calves in request, and fat calves dear. Fat swine met a brisk sale at an advance, which was specially marked in the case of medium weights. Stores were penned in larger numbers. This being the third spring sale of grazing cattle, a large number were forwarded. There was a large company of buyers, and strong cattle suitable for grass were wanted, and higher prices were paid. Several cows and heifers were offered; the best sold well, but the high rates of last week were not maintained. Numbers at sales and market: Cattle, 822; calves, 55; sheep, 2,245; swine, 1,597; horses, 26.

Leicester, Wednesday.—The deliveries of Lincolnshire and Norfolk fed bullocks were very extensive, and of excellent quality, and rather in excess of the demand. Buyers and dealers were well represented, but trade was rather unsettled, and prices showed a decline of 20s per head on choice lots, and 10s on inferior. Heifers, 6½d to 7d per lb; choice bullocks, 7d per lb; secondary, 6½d to 6¾d; cows, 6d to 6½d per lb. Sheep were a large delivery, and sold very freely at 3s to 5s per head advance; choice lots, 7¾d to 8d; large sheep, 7d to 7½d; ewes, 6d to 6½d; lambs in demand at 11d; calves firm at 8½d to 9d per lb.

Newport, Wednesday.—There was a good all-round supply and brisk inquiry, especially for the best qualities of stock. Quotations:—Best beef, 7d to 7½d; seconds, 6½d to 6¾d cows, 6d to 6½d. Best wether mutton, 8½d to 9d; shorn wethers, 8d; lamb, 10d to 11d. Veal, 7½d to 8¼d. Porker pigs, 10s 6d to 11s per score.

Norwich, Saturday.—Store cattle were in good supply here to-day; trade was dull except for the best descriptions, and previous rates were barely maintained. Fat beasts, which were offered to a fair extent, were firm at 8s to 8s 6d and 9s per 14lb. Store sheep were not freely offered; trade was quiet except for lots in a forward condition. Keeping hoggets were quoted at 35s to 43s a head. Fat sheep, of which there were no great number on offer, moved off readily at 8s to 8s 6d and 9s per 14lb. Keep prospects in Norfolk have been improved to-day by heavy rains.

Romford, Wednesday.—There was a short supply of fat beasts, and trade was a little better. Best animals made from 4s 8d to 4s 10d per stone, and middlings 4s 2d to 4s 4d. Very short supply of calves, at 5s 4d to 5s 6d per stone. Sheep in short supply, and trade much better. Best clipped sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Short supply of lambs, and trade a little better, at 7s to 7s 4d per stone. A few stores were on offer. The pig market is still closed.

Salford, Tuesday.—The supply of cattle was again smaller. Trade ruled firmer in consequence, and sellers easily maintained last week's advanced prices. The supply of sheep and lambs was about the same as at last market, but a larger proportion were lambs. There was a brisk demand for sheep, and prices were 2s to 3s per head more than last Tuesday. Lamb trade dull and prices in favour of buyers. There were so few wooled sheep in market that our quotations refer to shorn sheep only. Fewer calves on offer, but a slack demand, and prices about the same as last week. Quotations:—Cattle, 5½d to 7½d; sheep, 6½d to 9d per lb; lambs, 25s to 45s each; calves, 5d to 8½d per lb. At market:—Cattle, 1,819; sheep and lambs, 9,564; calves, 195; pigs, 63.

Sheffield, Tuesday.—Better show of milch beasts, and brisk demand for animals of good quality, which made £18 to £21; secondary, £15 to £17; heifers, £10 to £13. Business altogether better than last week. No sheep offered.

Shrewsbury, Tuesday.—Store pigs and best stock generally made high prices, with a good clearance. Demand brisk. Quotations:—Lamb, 9d to 10½d; beef, 6d to 7½d; mutton, 8d to 9d; and veal, 8d to 9d per lb; porket pigs, 10s to 11s 6d; and bacons, 9s 6d to 10s 6d per score; cows, with calves, up to £19 15s; hay up to £5 10s; and straw up to £4 10s per ton; sows, with pigs, up to £14 12s 6d. Number offered:—Lambs, 423; cattle, 1,088; cows, with calves, 68; sheep, 737; calves, 181; fat pigs, 60; porket pigs, 107; and store pigs, 614.—B. R. Croxt.n, Markets Inspector.

Spalding, Tuesday.—Small supply of beasts Trade brisk at fully 9s per stone for best quality; cow beef, 7s 6d to 8s. Stores sold at full prices. In the sheep market a small supply, and prices high, fully 8d per lb being obtained for mutton. Lambs sold readily.

Stockton, Wednesday.—There were on offer 127 cattle, 4 calves, 210 sheep, and 58 lambs. A small show of best cattle, and trade was firm at 8s 6d to 9s per stone; rougher kinds, 6s 6d to 7s 6d. A small show of sheep; clips, 8½d; wool sheep, 9d; ewes, 7½d; tups, 5d per lb; lambs, 25s to 38s each.

Thame, Tuesday.—Beef supply continues very short, and again made extreme rates. Mutton and lamb were well represented, together with veal, bacon hogs, and pork, all sharing in the recent advance in prices. There was a good supply of store stock, but the cold winds have checked demand. The late Mr. Bond's sale comprised 55 fat beasts, 212 fat and store sheep and lambs, 180 fat and store pigs, and 67 fat and weaning calves. Fat bullocks made from £19 to £24; fat heifers, £20 to £23 10s; fat ewes, 54s to 61s 6d; fat tegs, 48s to 52s; fat lambs, 29s to 35s 6d; couples up to 63s; fat calves, £3 10s to £6 2s; weaning cow calves, 20s to 63s; bull calves, 14s to 58s; bacon hogs, 9s 6d per score. Stores dearer.

Wakefield, Wednesday.—A better market all round, and fair attendance of buyers. Best quality beef, ¼d per lb more money at 7½d; choice young sheep made 8¾d per lb, and secondary sorts down to 6d, but nothing sold under that price. Number of beasts, 1,314; sheep, 4,316.

Wolverhampton, Wednesday.—A fair supply of beasts, and trade fair. Sheep: A fair supply and trade. Moderate supply of calves, and fair demand. Beef, 6d to 7½d per lb. Mutton, 6d to 8½d per lb. Veal, 7½d to 8½d per lb. Only a few pigs offered, good prices being realised.

Worcester, Saturday.—Trade in cattle brisk at full prices. Fair entry of sheep, but quiet trade. Beef, 6½d to 7½d; mutton, 7d to 8½d; and veal, 9d per lb. Pork pigs, 10s; bacons, 9s 6d per score.

Worksop, Wednesday.—Fair attendance, and moderate supply of stock. The high rates of last week were maintained, but there was not so firm a tendency. Best beef made 7s 6d to 8s 4d, and secondary qualities 6s 6d to 7s per stone. Best South Down wethers and long wools, 7d to 8d; ewes and other sorts, 6d to 7d; veal, 10d; lamb, 10d to 1s per lb.

FOREIGN.

Yorkhill, Monday.—The usual weekly sale of American cattle was held to-day, when there were penned in the sheds 128 cattle landed by the Livonian (s), from Philadelphia, and 145 cattle, ex Sardinian, from Boston. Bullocks, as is generally the case, formed the greater proportion of the total number. All the cattle were of superior quality, all corn-fed beasts, and very suitable for the requirements of the trade. There was the usual attendance of customers. The demand for the bullocks was keen, and very high rates were obtainable—in fact, they realised more money than a week ago. The number of bulls on offer was not sufficient for the requirements of the trade, and in consequence they met a keen inquiry, and sold dear. The dead weight quotations may be given as follows:—States bullocks, best quality, medium weight, 63s to 65s per cwt; secondary and heavier, 60s to 62s; bulls, 54s to 56s, according to quality and finish. Canadian bullocks, best class, handy sorts, 63s to 64s; and in one or two instances up to 65s per cwt; secondary and heavier, 60s; bulls, 54s to 56s for best class; secondary, down to 52s.

WOOL.

London, Saturday.—English—per pk. of 240lb.—Fleeces, South Down Hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicesters do., £5 to £5 10s. Colonial—per lb.—Vic.—Fleece super, 1s 7d to 1s 9d; scoured good, 1s 7½d to 1s 8½d; scoured average, 1s 6½d to 1s 7½d; greasy average to fair, 10½d to 11½d; N.S.W., scoured average, 1s 4d to 1s 4½d; greasy average, 8d to 9d; S. Australian, greasy average, 6½d to 7d; N.Z., scoured average, 1s 5d to 1s 6d; grease average, 8¼d to 9¼d; Cape, scoured super, 1s 5d to 1s 6d; fleece average, 7d to 7½d; greasy average, 6½d to 7d; Natal, scoured, 1s to 1s 1d; greasy average, 6¾d to 7½d; crossbreds—Grs., Vic., good to super, 11d to 11½d; New Zealand, fine, 8½d to 9½d; do medium, 5½d to 6d; do coarse, 4½d to 4¾d.

Canterbury, Saturday.—An improved demand, and although prices have not advanced, full rates are being made. Kent fleeces are quoted at 5½d; lamb wool at 4d; and locks at 2d per lb.

HAY AND STRAW h ise5a

Glasgow and Leith.—The market for Scotch wools has not undergone any material change in April. There have been no public sales, but a moderate business has been done privately in cheviots and half-breds. The finest lots of hoggs in these classes being all but cleared out, users have turned their attention more to wedders, of which rather fuller stocks are available. Prices of good lots are well upheld, and in half-breds may be quoted the turn against buyers, while, on the other hand, sales of low and medium cheviots have been made at minimum rates. There has not been much doing in black-faced for the home trade, and shipments to the United States have been also on a small scale. Stocks are very small, especially of hoggs, which command a slight premium. Prices are firm, and it is felt that an American order would sweep off the entire stock.—J. and W. Greig.

MANURES.

Liverpool, Friday.—With arrivals, nitrate of soda is decidedly easier, and there are sellers of best quality, ex steamer, just arrived at £10 2s. 6d. to £10 5s. per ton, and a good trade is recorded. Sulphate of ammonia continues firm, and likewise East India bone meal at the recent advance. Kainit is in brisk seasonable request, as also superphosphate of lime at unchanged values. Feeding stuffs generally keep idle, but values are steady and as per subscribed. American decorticated cotton cake meal is scarce and has advanced about 7s 6d per ton during the week. Nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 2s 6d to £10 5s per ton; East India Bone Meal, scarce, in bags, £4 10s to £4 15s per ton; Kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, £5 15s per ton; Linseed Cake, American thin oblong prime, in bags, £7 2s. 6d to £7 5s per ton; Linseed Cake, English, prime, in bulk, £8 2s 6d to £8 5s per ton; Linseed cake, foreign round, prime, soft, and oily, in bags, £8 2s 6d per ton; Cottonseed Cake, N.A. decorticated, prime, new, in bags, £7 1s 3d to £7 5s per ton; Cottonseed Cake, English decorticated, prime, soft, in bags, £7 5s to £7 10s per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 7s 6d to £4 15s per ton; Cottonseed Cake (crushed), 20-25 per cent. oil, prime, in bags, £7 2s 6d per ton; Maize Germ Meal, prime, in bags, £5 17s 6d per ton; Corn Oil Cake, 10-13. per cent. oil, prime, in bags, £6 5s to £6 7s 6d per ton; Rice Meal, Rangoon, as imported, in bags, £4 18s 9d to £5 per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb.; Linseed, fine bold feeding, in bags, £3 2s 6d to £3 5s per qr., 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton; D.N.S. Brand Superphosphate of Lime, guaranteed 30 to 31, in bags, £2 10s to £2 12s per ton; Superphosphate of Lime, guaranteed 35 to 36 sol., in bags, £3 to £3 2s. per ton—at depot; Basic Slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, guaranteed 35 to 40 per cent. phos., in bags, nominal; Basic slag, finest quality, guaranteed 38 to 45 per cent. phos., in bags, nominal.—H. Jones Langar and Co.

FEEDING STUFFS.

Hull, Tuesday.—Oils: Exports for the week ending 22nd April, 1902:—Linseed oil: 1 Denmark, 1 Germany, 1 Holland, 43 Norway, 4 Turkey; total, 50 tons. Cotton oil: 162 Belgium, 8 Denmark, 5 France, 125 Germany, 224 Holland, 42 Sweden; total, 566 tons. Linseed oil: 29s 6d spot, 29s 6d May-August. Cotton oil: 24s 6d spot, 24s 9d May-August. Crude: 23s 6d spot, 23s 6d May-August. Rape oil: Jamba naked, 23s 9d spot; 1st quality, 24s 6d spot. Linseed: The arrivals are 13,984qrs from Buenos Ayres, 26,500qrs Rosario, 3,125qrs San Nicholas, 4,807qrs San Pedro, 3,447qrs Villa Constitution; total, 51,863qrs. The market during the week has ruled firm, and advances of from 6d to 1s 3d per qr have been paid. Calcutta strong market. The value early last week was 51s 6d April-June, but on Monday as high as 52s 3d was paid. The close is a shade quieter, and 52s has been accepted. River Plate has also shared in the advance, and spot, which was sold last week at 48s 3d, made yesterday 49s 6d. There are, however, seliers over at the price. For May-June 50s has been paid. Cottonseed: The market showed little change up to end of last week, and business continued to be doing at £7 10s spot to June, and £6 8s 9d November-January, but since yesterday there has been a strong tone, with sales made at 3s 9d per ton advance on these rates, closing firm thereat. Oilseed cakes: Linseed cakes—A firm market spot and forward. The demand for future deliveries seems likely to be mainly upon the English mills on account of the prospective deficiency in Russian linseed. Cotton cakes: The consumpfive demand is lessening somewhat, but, as the seed supplies are lessening in greater ratio, prices are stiffening. The largely increased prices of stock will greatly help the cake trade.—Keighley, Maxsted and Co.

Mark Lane, Monday.—Linseed Cakes.—Owing to a further advance in the Seed Market, coupled with a strong Continental inquiry for cakes, values are again the turn dearer, while shippers ask fully 5s. per ton more money in forward positions. Russians meet a better demand at slightly easier terms in mats, and 2s 6d per ton less money in bags. Americans continue relatively the best value, and a good business has been done during the past week at £7 to £7 2s 6d per ton ex. ship. Calcutta made in bags still offer at £7 15s per ton ex. warehouse. London made selling quietly at 2s 6d per ton less money, but 7s 6d per ton less money has been accepted in quantity for delivery during the summer months. Cotton Cakes.—The trade is not large, but with a seed at a higher price than has been known for a considerable time, values are firmly held up, and English crushers now ask 5s. per ton more money, with Egyptian selling at last Monday's prices. Decorticated move off slowly at unchanged prices, and meal is also unchanged. Rape Cakes.—Neglected, although cheaply offered at £3 17s 6d to £4, at which they are worth attention. Maize Germ Meal.—Arrived parcels of American are quoted at £5 17s 6d to £6, with English obtainable at £5 15s., but the amount of business passing is small. Rice Meal.—The tone of the market is distinctly better, and £4 5s. ex. ship has been paid for June-July shipments of Rangoon, and £4 7s 6d for Sep.-Dec.

STOCK AND SHOW NOTES.

By Herdsman.

I have received a copy of the list of ordinary and special prizes to be given at the July Show of the United East Lothian Agricultural Society. The show will be held in Amisfield Park, Haddington, on July 5th, and entries must all be made on or before June 20th. Particulars may be obtained of Mr. J. Stirling, Haddington.

The prize schedule of the annual show of the Newchurch and District Agricultural Society, to be held on Monday, the 26th inst., has been issued. Classes are provided for horses, turnouts, hunters, polo ponies, horned cattle, sheep, pigs, dogs, poultry, pigeons, rabbits, cats, cavies, butter, eggs, and bread. There will also be held jumping competitions. Entries close on May 20th, and applications for schedules and entry forms should be addressed to the Secretaries, Messrs. Mitchell and Burrows, Newchurch, near Manchester.

At a meeting of the Cheshire Milk Producers' Association, at Crewe, on Monday, the question of the advisability of approaching municipal authorities with a view to endeavouring to arrange for the payment of compensation for animals condemned for tuberculosis was discussed, and also Bills which are being introduced into Parliament by municipal authorities to deal with the milk supply. It was resolved to approach the Board of Agriculture, and present the views of the association on the subject.

In a consular report on the trade of Lombardy, written by Mr. Consul Armstrong, it is stated that Signor Baccelli, the present Italian Minister for Agriculture, announced in the autumn of last year that he had discovered a cure for foot and mouth disease, which has been previously described in these columns. Experiments were at once begun all over Italy, and also in Germany and Switzerland. I do not think, continues the report, that the Baccelli prescription can, at least as yet, be described as effective. The results obtained are very contradictory, and if, on the one hand, cures are reported, many cases of death from poisoning have occurred, especially in North Italy. Far be it from me to deny all value to the new treatment, which has many stout supporters among persons well qualified to form an opinion, but certainly its efficacy requires further proof. I shall not fail to follow the experiments, which are still going on, and I will make a special report, if it should be necessary.

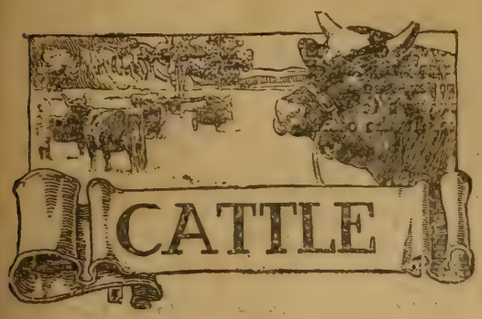
An outbreak of disease amongst cattle recently occurred in some parts of Rhodesia, and at the outset it was thought to be rinderpest, but last week the British South Africa Company informed a press agency that they had received official information that the disease was not rinderpest, but a form of redwater. The veterinary advisers of the Administration say that the approaching cold weather will probably stop the spread of the disease. It is not considered that the panic views expressed in Bulawayo are justified. The services of an expert from the Cape Colony have been secured, who was to arrive in Rhodesia near the end of the week.

The Board of Agriculture has revoked the Kent Foot and Mouth Disease Orders, issued on March 29th and April 8th and 19th last.

The recently-completed census taken by the United States Government contains some interesting figures respecting the numbers of cattle contained in the various States of the Union. By grouping the various States and Territories into divisions, according to the conditions under which cattle are usually kept, says an American contemporary, we have practically four different cuts of the country—the corn-belt, where most of the feeding for market is done; the range country, where the cattle run out all the year round; the South, and the far East, north of Maryland. Taking the census figures and arranging the holdings according to numbers in these divisions, we get the following figures:—The corn-belt (ten States), 28,417,179; the range (sixteen States and Territories), 23,278,981; the South (thirteen States and District of Columbia, 9,592,921; the East (ten States), 6,393,863. Few would have believed that the corn-belt holds such a great lead over the ranges, but there are the census figures for purposes of comparison. Texas is far and away the greatest owner of cattle, but the unexpectedly small totals for the States in which the North-Western range lands lie tell eloquently why it is that the men from the North must annually journey to the Lone Star State to buy steers wherewith to turn their grass into money.

The Herdwick Ram "Young Snowdon," shown above is a two-shear bred by Mr. W. Leathes, Wern Fawr, Ruthin. At the 1901 Show of the Royal Agricultural Society at Cardiff, this ram won First Prize in the class.

During the past week has been issued volume twenty-five of Davy's Devon Herd Book, which gives particulars of bulls number 4,520 to 4,695, and cows numbers 18,064 to 18,567. This volume is a little more than a herd book, and is really a brief history of the breed for the past year, containing, as it does, particulars of the sales by auction of Devon cattle during 1901; details of prizes won by the breed at various agricultural shows last year, and several other items of interest to breeders of Devons. It is published at 3s., by the Devon Cattle Breeders' Society, and can be had of the Secretary, Wiveliscombe, Somerset.



In our last issue, in my notice of the Large Black Pig Book, I was guilty of an unfortunate slip of the pen in stating that this breed was formerly confined to the Eastern Counties. It is true that at the present time there are more members, breeders, and herds of Large Black pigs in the Eastern Counties than in any other district, but as the Secretary (Mr. Ernest Prentice) points out, from the beginning of the Society there were a large number of old-established herds—some of from thirty to fifty years standing—located in the South-Western Counties.

On April 26th, fifteen grand Hampshire Down Tegs, selected from Mr. James Flower's noted prize-winning flock, were shipped on board the S.S. "Winnahaha," consigned to the Macy Estate, at Chilmark, U.S.A. This is not the first selection for the same destination, and evidently it is the intention of the purchaser to have one of the best flocks of Hampshire Downs in the States.

According to a telegram from Salisbury, dated Friday last, the epidemic of redwater is spreading with unabated virulence, and only the stock of a few farmers and transport riders has escaped the infection. At Umtali not a single span of oxen is available for transport the animals sicken and die is only equalled by the animals siegen and die is only equalled by the extraordinary infectiousness of the disease, which attacks a whole herd of cattle simultaneously. The native cattle have been so far immune; but it is feared the contagion will be introduced among them by the natives themselves, who are carrying the diseased flesh of the dead animals all over the country.

In consequence of the lamented death of Mr. Mullins, the Banwell and Weston-super-Mare Agricultural Association was left without a chairman, so that a meeting was held on Wednesday to select a gentleman to occupy the position. It was unanimously resolved that Mr. A. S. Hardwick be elected chairman, and that Mr. Thomas Castle, of Banwell, be elected vice-chairman for this year, it being decided that the position of vice-chairman should be filled annually. Mr. Hardwick, in returning thanks, spoke feelingly of the loss sustained by the society by the death of their late chairman, Mr. Mullins having always taken a leading part in anything relating to agriculture in the district. The committee considered it advisable that the office of president to the society should be filled annually, and it was proposed, and carried unanimously, that Sir W. H. Wills be asked to undertake the office of president for 1902. A sub-committee was appointed for the revision of the schedule of prizes, and the secretary informed the meeting that he had very substantial promises of support towards the prize list.

A council meeting of the Bristol District Property Protection Society was held on Thursday, at which 32 new members were elected. The secretary reported that since October last 139 special letters had been set out for members, which had resulted in many private settlements, and the discontinuance of various kinds of trespass; and that during the same period 27 prosecutions against 44 defendants had taken place, only one of which had been unsuccessful. Several local matters having been discussed the following resolution was passed:—"That, in consequence of the damage done through the trespassing of stray dogs, the Council of this society are of the unanimous opinion that the law in regard to dogs not under proper control should be made more stringent.

The Maiseyhampton Shorthorn Sale.

The sale of a portion of Mr. James Hobbs' well-known herd of dairy Shorthorns, on Wednesday, by Messrs. Thornton and Co., attracted a very large company, breeders being present from all parts of the country. Several of the South American agents attended, but they were not buyers. Three of the best heifers, however, were secured by Mr. Chirnside to join his herd near Melbourne, Australia. Altogether, it was a remarkable sale; the best lots were fairly "scrambled for," biddings coming from all parts of the ring, and considering the highest price of the sale was 75 guineas, the average of nearly £50 was extraordinary. The calves, however, were lotted with their dams, which helped considerably towards this figure. Lot 1, a grand type of Shorthorn, but eleven years old, quickly ran up to 70 guineas, at which price she went to Lord Calthorpe. The ten-years-old Rose of Oxford 31st, of Mr. Edmond's breeding, was also much admired, add went to the Buscot Park herd at 68 guineas. Ruby 15th, a sweet type of cow, bred by Mr. Greenwell, but from Maiseyhampton stock, went to Mr. Horlick, of Cowley, for 67 guineas. Among the heifers, Chorus 51st was fancied, and keenly bid for. Mr. Chirnside would not be denied, and at 75 guineas she goes to Australia. The bulls were an excellent lot brought out in first-rate condition, but not too fat. They sold well, as will be seen from the sale list given below:—

COWS AND HEIFERS.

Sale of Lord Sherborne's Shorthorns.

This fine old Gloucestershire herd, which has been bred in the county for over sixty years, was sold by auction on Tuesday by Messrs. Thorton and Co., at Sherborne Park. There was a capital lot of cattle to be offered, many of the younger stock being especially good, and among them was the beautiful pair of young heifers, which were commended at the Tredegar Show last season. For these two 70 and 80 guineas were given, and the latter price was also paid for Sherborne Lass, a nice two-year-old roan. Several of the animals were purchased for exportation. We give below a sale list:—

COWS AND HEIFERS.

	Gs.
Fanny 55th, roan, c. April 28, 1891; s. Cambridge Waterloo 57013 ..... Captain Duncombe	18

Mr. Hanbury and Foot and Mouth Disease.

On Wednesday afternoon Mr. Hanbury received at the House of Commons a deputation from the Canterbury Farmers' Club and East Kent Chamber of Agriculture, whose object was to make to the Board of Agriculture suggestions with a view to obtaining the speediest possible termination of foot and mouth disease outbreaks with the least possible unnecessary interference with the sale and movement of fat and store stock

Mr. Hanbury, in reply, said the board was always ready to receive criticisms, but it was entirely due to its action that this country was not as badly ravaged as France. The inconvenience suffered would be greater than it actually was if the mistake were made of drawing too restricted an area. In this instance the action of the department had been rewarded with success. There was a difference of opinion between the department and the farmers as to the slaughter of infected animals. There had been instances in which disease had been spread by the men engaged in slaughtering or burying, and the board found isolation preferable. He sympathised with what had been urged as to officials on the spot being given powers to modify local conditions where it was thought advisable, and with those officials the board were in close touch, always ready to receive suggestions. Officials of the board then explained what was done in the way of disinfecting sheep and pasture land, and after thanking the Minister the deputation withdrew.

Contagious Diseases of Animals.

Gowanbank Hackney Sale.

The annual sale of carriage horses, cobs, and ponies belonging to Mr. A. Morton, Gowanbank, Darvel, N.B., took place at Gowanbank on Thursday, there being a good attendance of buyers. Mr. D. Stevenson conducted the sale, some 61 animals were catalogued, but of these a number were withdrawn. A total of 41 animals were sold. In the pony section competition was anything but brisk, but prices on the whole were fairly high. The highest price realised amongst the ponies was 85 guineas for a beautiful little mare, which went to Mr. Gemmell, Ayr. In all, 16 ponies were sold, bringing a total of 578 guineas, the average being 38 guineas each. Bidding for the hackneys proper was slow, although in one or two instances it was decidedly spirited. Mr. Hoggan, Busbie, who secured a beautiful bay gelding at 205 guineas, had the credit of topping the prices. The total realised in this section was 1,762 guineas, giving an average of 74 guineas each. Following is a list of principal prices and purchasers.—

PONIES BROKEN TO SADDLE AND HARNESS.

	Gs.
Snip, mare, 5 yrs., 13.1½ .....Mr. J. Dunlop	25
Glee, mare, 6 yrs., 13 hands .....Mr. C. Morrice	25

Sale of Hackneys at Bingley.

On Thursday last some useful animals from the stud of Mr. W. Rycroft, of Drake Hill, Bingley, were disposed of by Mr. W. Bainbridge. The stock on offer consisted of hackney and show harness horses and ponies. There was a good attendance, many well-known breeders and exhibitors being round the ring. The sale realised 1,959 guineas in the aggregate. A few brood mares which were first put up did not realise much money, but some nice prices were realised for harness mares, the principal being as follows:—

	Gs.
Lady Newbald .....Mr. Leeming	60
Danseuse of Drake Hill .....Mr. T. Mitchell	60
Poppy of Drake Hill .....Privately	110
Maymead .....Mr. Lord	150
Scholebrook Emmaline .....Mr. Hopkinson	175
Broxton Heiress .....Mr. Thornton	60
Humph H., pony mare .....Mr. Fraser	130
Drake Hill Star, bay harness gelding..Mr. T. Mitchell	80
Mr. Winkle (full brother to Sam Weller)....Mr Mills	60
Entire bl. ch.	50
Gantry, stallion .....Mr. Naylor	73

Carlisle Horse Sales.

The May sale of the Hetherington Auction Co of high-class hunting, harness, and agricultural horses was held by Hetherington's Auction Co. on Thursday. There was a slight decrease in the number of animals offered, 132, as compared with previous years. Some of the best Hunters were bid to 60gs. and 65gs., but did not reach the reserves placed on them. The following were some of the principal prices: Five-year-old gelding, from Mr. Marshall, Cornhill, 47gs.; Hackney gelding, to 35gs., from Mr. Oram, Wetheral; others to 36½gs., from Messrs. Lloyd, Boustead Hill. At Harrison's Auction Mart the following prices were realised: Best harness horse: 1, Mr. Threlkeld, Kirkoswald; 2, Mr. Graham, Great Salkeld. Cobs and ponies under 15 hands: 1, Mr. Threlkeld, Kirkoswald, 38gs., for a black horse, 5 years old, to Messrs. Bertram and Son, Whitley-on-Tyne; 2, Mr. Johnstone, Kirkbride, 27gs., for a black cob, 3 years old, to Mr. Topping, Bowness-on-Solway. Cart horse (any age): 1, Mr. Dalton, Cummersdale, 50gs., for a bay horse, 6 years old, to Mr. Richards, London; 2, Mr. Longstaffe, Hawes, 45gs., for a bay mare, 5 years old, to Mr. Richards. Cart horse, 3 years old: 1, Mr. Westwarth, Morton; 2, Mr. W. C. Miller, Birklands.

SHEEP.

The Government and the Prevention of Sheep Scab.

At a meeting of the Stockton Chamber of Agriculture held last week, Captain Spencer, of the Board of Agriculture, appeared to convey the Board' reply to a resolution passed by the Chamber on the question of sheep scab. The answer, he said, was that the discussion of compulsory dipping was premature. They had already got an order called "The Sheep Scab Order," which gave power to the local authorities to protect themselves, and the Board therefore thought it would be premature to ask for further powers. They also thought that at the present time it would be impossible to carry out the compulsory dipping of sheep.

Mr. J. T. Wilson (who was in the chair) said it was very good of the Board of Agriculture to send down Captain Spencer to make that statement, but he did not consider it a very satisfactory one.

Mr. J. Furness expressed the opinion that they would never be thoroughly rid of sheep scab until it was compulsory to dip sheep twice a year.

The chairman said that in Scotland, England, and Wales there were fifty-five counties where there was sheep scap, and forty-one counties where there had been fresh outbreaks this year, so that sheep scab was pretty general.

After further discussion it was agreed to thank the Board of Agriculture for sending down Captain Spencer, and to again express the opinion that there is no effectual measure against sheep scab but the compulsory dipping of sheep throughout the country.

PIGS.

American Annual Pig Production.

There were more pigs slaughtered in the west in the past year, that period ending with March 1st, than ever before. The total number, according to the "Price Current," of Cincinnati, was 25,411,000, a gain of 1,811,000, or 7.6 per cent., over the preceding year. Of this, 10,340,000 hogs were slaughtered in what is known as the winter packing and 15,071,000 in the summer packing. Despite the large gain in number slaughtered, the gain in weight of meat was slight, owing to the lighter weight of the hogs. The summer-slaughtered hogs were nine pounds, or 4 per cent., lighter, while the winter-packed hogs were 24 pounds, or 10 per cent. lighter. While the hogs were lighter in weight they cost more. Reasons for the higher cost of pigs are not far to seek, these being the higher cost of all feed stuff and the expansion in demand, caused by the diversion of consumption from beef to pork, caused by the high price of the former. It is interesting to learn that the average cost of hogs in the west the past year was considerably higher than for several years previously. The general average indicated by the returns is $5.94 per 100 pounds, compared with $5.07 the preceding year, and an annual average of $3.96 for five years prior to the past year.

There are, of course, many hogs packed in the east, these being given separately. They numbered 4,976,000 in 1901-02, as against 5,389,000 in the preceding year. Adding the eastern and western packs together, a total aggregate of 30,393,000 hogs is reached, which compares with preceding years as follows:—

1901-1902	30,393,000
1900-1901	28,980,000
1899-1900	28,172,000
1898-1899	29,793,000
1897-1898	26,134,000
1896-1897	22,670,000
1895-1896	20,480,000

The total output of the country is shown to be about 30,000,000, and, taking the total number of swine in the country at about 64,000,000, the total pack at the leading centres east and west is shown to be nearly half of this. This takes no account of the millions of hogs slaughtered on farms without ever entering the packing house proper, and it shows that easily one-half of the country's total stock of hogs is slaughtered each year in the country's packing houses.

Birmingham Agricultural Exhibition.

The thirty-first annual meeting of the Birmingham Agricultural Exhibition Society was held at Birmingham on Thursday, Mr. Alderman Edwards in the chair. The Council announced that His Majesty the King, in response to their request, had been graciously pleased to favour the society by continuing his patronage. In their annual report they stated that the transactions of the society during the year 1901 had in every way been most satisfactory. The thirty-third annual Shorthorn Show, held in March, was well supported by exhibitors, but the demand at the auction was not so keen as usual, the South American ports being closed against British cattle, in consequence of the prevalence of foot-and-mouth disease in this country. As Bingley Hall was let for a Polytechnic Exhibition, promoted on behalf of the Birmingham University, the autumnal show of Shorthorns was held at Cave's Repository. The accommodation there not being so extensive as at the hall, the class for old bulls was omitted from the prize list. The entries were consequently less in number. Trade was satisfactory, although the South American buyers were still unable to make purchases.

The fifty-third annual Christmas Cattle Show took place on November 30th and December 2nd, 3rd, 4th, and 5th. The number of entries received was the largest for several years, and the merit of the various exhibits was pronounced to be above the average. Special regulations were again issued by the Board of Agriculture, which enabled swine to be exhibited, and their numbers showed a gratifying increase as compared with the previous year. The Champion Prize, the Maisemore Cup, and the three 100-guinea Challenge Cups were won by the Earl of Strathmore, a former president and an old supporter of the society. Favoured by good weather, the admissions continued to show an increase. The sub-lettings during the year had amounted to the largest sum ever received. As shown by the statement of accounts, the assets of the society, in addition to fixtures, amounted to £9,945 15s., as compared with £9,019 8s. 8d. last year. The number of life members was 251, and the number of annual subscribers 620. The number of shares in the Bingley Exhibition Hall Company (Limited) held by the society remains at 63.

The chairman moved the adoption of the report and statement of accounts. Mr. Henry A. Wiggin seconded the motion, which was adopted.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended April 26, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901.	1902.		1901.	1902.

North-East Ireland Show.

The annual Spring Show of the North-East Agricultural Association was held in the society's beautiful and convenient showyard at Balmoral, Belfast, on Wednesday, Thursday, and Friday last. It was altogether a capital show, and demonstrated in a striking manner the remarkable progress the Association has made of late years. We gave some particulars as to the entries in our last issue, under "Stock and Show Notes," but it will not be out of place to repeat them here. The total entry received for last week's show, including implement, etc., stands, was 1,590, as compared with 1,416, or a remarkable increase of over a thousand; whilst it may be mentioned that when the association first held its show at Balmoral—in 1896—the total was under a thousand. Almost all the sections of the show were numerically stronger than last year—a gratifying feature—while merit was conspicuous in every department. The entries in the various sections were as follows:—Thorough-bred stallions, 14; draught stallions, 11; draught horses, 34; draught horses (in gear), 87; polo ponies, 18; harness horses, 51; hackney carthorses, 10; cattle, 406; milking trial, 12; swine, 44; poultry, 515; butter, 260; eggs, 30; butter-making contests, 19; implement, etc., stands, 80. The history of the association is one of steadily-growing prosperity, the number of entries having grown in a most satisfactory manner. The members are enthusiastic and anxious to promote the society's welfare in every possible way, and if they cannot equal the record of the Royal Dublin Society they can at least lay claim to an equal desire to promote the welfare of those having an interest in horse-breeding and farming generally.

The show of cattle was undoubtedly one of the best held by the association as regards all-round quality. The Shorthorn again held pride of place, and indeed each year seems firmer seated in the favour of Irish breeders. At the Dublin Spring Show, of the ten hundred cattle exhibited nearly half were Shorthorns. The proportion at the Belfast show was not so great, but still of the three hundred and fifty cattle stalled a hundred and fifty are Shorthorns. To this breed, too, went the majority of the prizes offered by the County Councils of Antrim and Down for competition among farmers whose poor-law valuation does not exceed £150. Thus the amateur and the farmer are both given a deeper interest in Shorthorns than in any other breed as far as the show is concerned. The Aberdeen-Angus is nominally second favourite with Irish breeders, but each year the still hardier Galloway is coming more and more into favour. Last week there were five classes, in most of which competition was keen, except in that for aged bulls. Herefords were never a popular breed in the North of Ireland, and consequently the south captured most of the honours. Channel Island stock, Kerries, and Dexters, were very well represented. The horse section was an interesting one. Most of the classes for thoroughbred and agricultural sires, harness and draught horses, and polo ponies were very well filled, especially that for thoroughbred hunter sires, which numbered fourteen. Doubtless competition in this latter class received an incentive from the fact that four Government premiums of £50 each were offered. This is one of the modest favours that the association has received from the Government through the Royal Dublin Society. It may be hoped and fairly expected that direct Government assistance will be extended to the association in the future. Ulster has usually had to work out its own salvation, while the south and west have been largely benefited by Government aid, especially in agriculture. Pigs did not make a particularly strong section, though in some of the classes there was capital competition, the principal Dublin breeders, such as Messrs. Nash, of Lucan, and Smith, of Navan, being well represented. Poultry made a remarkably fine show—one of the finest indeed ever held in Ireland, whilst the dairy section was perhaps one of the features of the show. A huge marquee was devoted to it, and, in addition to the exhibits of butter—the product of the best creameries and dairies of the country—interest was attracted by the working dairies and the butter-making competitions which were set going from time to time As usual, the upper slopes of the showyard are allotted to machinery and implements, and these constituted an attractive feature of the exhibition.

Taken as a whole, the cattle made one of the best displays seen at this society's spring show, the shorthorns being especially good; in fact, many thought they were the best lot ever seen here. The premiums offered by the Department of Agriculture and Technical Instruction doubtless had something to do with the increase in numbers. There was an entry of 24 in the class for shorthorn bulls calved prior to 1900, and the best of these was Candahar, a Scotch bred animal of exceptional merit, shown by Mr. H. H. Smiley, of Larne. Messrs. Wm. and J. Ekin, Moneymore, were second with Golden Crown, bred locally, and third honours went to Mr. Walter R. Crawford, Tullyhogue, County Tyrone, for Superior, bred by exhibitor. Of the 21 entries for shorthorn bulls, calved in 1900, Mr. W. R. Crawford was first with Master Stephen, Mr. Robert M'Clure, Randalstown, being second with Barrister, bred by the Earl of Erne. The best of the 17 entries of shorthorn bulls, calved in 1901, on or before 31st March, was a Scotch animal, shown by Mr. Wm. Marshall, Stranraer, Mr. John M'Elderry, Ballymoney, took the second, and the third went to Mr. W. R. Crawford, Tullyhogue. Shorthorn bulls, calved in 1901, on or after 1st April, numbered 18, and the prize-winners in the order of precedence were Mr. W. R. Crawford, Mr. Thomas A. M'Clure, Killylea, and Mr. J. Wilson, Fleming, Cookstown. For the winners in the other shorthorn classes, we must refer our readers to the prize list given below. The Musgrave Challenge Cup, for the best shorthorn bull in the show not exceeding four years of age, was won by Viceroy, the property of Mr. Matthew Marshall, of Stranraer; whilst the Queen Victoria Challenge Cup, for the best yearling shorthorn bull bred in Ireland and the property of an Irish exhibitor, went to Mr. John M'Elderry's Silver Mist, bred by Mr. Crawford, Tullyhogue. The cup presented by Mr. Henry B. Murray, Antrim, for the best shorthorn dairy cow in milk, in the breeding section of the show, was won by Mr. James Bowden, of Cootehill, with Alice Gwynne, bred by winner, the same animal also capturing the "Robson" Challenge Cup for the third time in succession, and thus the cup is now the property of Mr. Bowden.

There were 44 entries of Aberdeen Angus cattle, and as at the Royal Dublin Society's Show, they formed one of the features of the exhibition. The twenty-five guinea Challenge Cup, for the best bull in the section, was won by Norman Baron, a splendid animal shown by Mr. C. Dunbar-Buller, Roburn, Donaghadee, Lord Crofton, beng reserve with Royal Hope of Mote. Mr. Dunbar-Buller's Norman Baron was also awarded the Polled Cattle Society's gold medal for the best Aberdeen Angus cattle, the reserve animal being May Empress, the property of Mr. E. Coey, Droagh, Larne, and winner of first prize in the class for cows or heifers of the breed, in calf or in milk, calved in or prior to 1899. Norman Baron was the first prize in the class for bulls calved prior to 1900, the second prize going to Aghalee, shown by Mr. F. L. Turtle, The Villa, Aghalee, who also secured a similar award in May Empress's class. As will be seen from the prize list, all the prize-winning animals in the Aberdeen section were shown by Irish breeders.

The feature of the Galloway classes, which numbered five, was the remarkable success of Mr. R. J. Calwell, Belfast, who secured the Galloway Cattle Society's special prize of five guineas for the best bull, a similar award for the best cow or heifer, and no fewer than four firsts, three seconds, and the same number of third prizes. The other successful Galloway exhibitor was Mr. B. H. Lane, of Limavady, who won first in the class for Galloway bulls calved in 1901, and second for Galloway heifers calved last year, whilst the bull was reserve for the Galloway Cattle Society's specia.

There were three classes for Herefords—one for bulls calved in 1901, and three for cows or heifers, in calf or in milk, and the other for heifers calved in 1901. In the first there were six entries, and the best of these was Admiral, shown by Lieut.-Colonel Everard, Randalstown, Navan, the same owner's Hero securing the second award. Pamellia, shown by Miss Madden, Nutley, was judged to be the best cow or heifer in calf or in milk, and later on she was awarded the Hereford Herd Book Society's Challenge Cup, value 10 guineas, for the best animal in the Hereford classes, the bona-fide property of a resident in Ireland. The reserve ticket went to Mr. Thomas Boylan, Drogheda, for Winnie II., the second prize winning in Camellia's class. Mrs. Madden also won the first prize in the heifer class, with Manilla, Lieut.-Colonel Everard getting the second with Needless 25th.

The five classes for Channel Island cattle were well filled with animals of good quality. The best Jersey heifer, two years old or under at date of show, calved in Ireland, was Hazelton Lass, shown by Mr. M. O'Neill, Milltown, County Dublin, and it secured the Rathmore Challenge Cup, value 12 guineas. The same owner's Gold Charm, was reserve for this special. Mr. O'Neill was also a successful exhibitor of bulls calved in 1901, he winning all three prizes in that class, whilst in that for bulls calver prior to 1901 he won the second prize.

There were 37 entries in the four classes for Kerries, and they made a very good display. The Duke of Leinster was first in the class for bulls one year old or upwards, the Earl of Shaftesbury being second, and the Duke of Leinster third. The Earl of Shaftesbury was first and second in the section devoted to Kerry cows or heifers, the Duke of Leinster being third. In the class for heifers calved in 1899 the Duke of Leinster secured first prize, the Earl of Shaftesbury taking second and third honours; whilst in the next class, that for heifers calved in 1900 or 1901, these two noble exhibitors divided the honours. Dr. H. J. Boyd, Hillsborough, was first in the class for Dexter bulls one year old or upwards, Mr. W. R. Cresswell being third. Other winners in the Dexter classes were Mr. Samuel Gibson, Dunmurry, and Mr. Frank Robertson, Lisburn. The Earl of Shaftesbury was awarded the champion cup for Kerrys, and Dr. H. J. Boyd the champion cup for Dexters. In dairy cattle, honours were awarded to Mr. Thos. Smyth, Carnmoney; Mr. John Russell, Carnmoney; and Mr. David M'Henry, Dunmurry.

The display of horses was perhaps the finest seen at the shows of the society. In the first class—that devoted to thoroughbred stallions to get weight-carrying hunters or high class harness horses—there were 14 entries, the largest in the history of the association. The quality, too, was excellent, and the record is perhaps accounted for by the fact that four premiums of £50 each are offered. The draught classes were the finest seen for many years, and it would appear that much more interest in being taken in this class of stock than in the past. This is as it should be, as this breed is particularly useful in this part of the country. The action of the Department of Agriculture in subsidising Clydesdales and shire horses is having a good effect. The results are perhaps not very apparent yet, but good is sure to come in the immediate future. Brood mares were a good class, and draught gelding or mares, too, show excellent quality. The farmers' class was disappointing, as only one entry was catalogued. Having regard to the fact that this section was specially placed on the show programme it was disappointing that better advantage was not taken of it. Farmers should certainly show more interest in it than they have done, as it is calculated to create a demand for cart horses whose breeding should prove remunerative. In the section for thoroughbred stallions Mr. H. H. Smiley took first honours with Mascarille a beautiful chestnut horse, 16 hands high, with great quality, fine well laid in shoulders, short back, powerful quarters, and plenty of bone. Mr. Edward Mitchell, Enniskillen, was second with Coylton; and another Northern owner, Mr. Francis Russell, V.S., Ballynahinch, was third, with Nasr-ed-Din. Draught stallions were a good class, the winners in the order of merit being Mr. Thomas O'Malley, Raheny; Mr. Thomas Lindsay, Crossgar; and Mr. W. L. Lamont, Cookstown. The class devoted to draught geldings or mares, any age, to have been in regular use on the streets of any town or city for at least two months prior to the show, brought out seven entries, and after very keen competition Messrs. Hugh Craig and Co. took first prize with Arley King, a fine bay gelding. Third honours also went to this firm for Jewel Princess, Messrs. Wordie and Co. being second with Lord Londonderry, a fine year old brown gelding.

The polo ponies were a high class lot, which, if not quite in the aggregate to other shows, yet singly displayed real merit. Indeed, Northern exhibitors hold their own still, and Mr. Houston, of Orangefield, a winner at Dublin, was again successful. Milady, a bay mare, sired by Son of York, won the silver medal presented by the Polo Pony Society for the best polo pony brood mare, and the silver medal for the best pony polo stallion went to the Keynsham Stud Company for White Mask. Milady was also first in the class for ponies not exceeding 14.2 hands, there being 10 entries, the same owners' Shula being third. Mr. G. F. Richardson's Pirate was second. The last-named owner's Cobweb was first for ponies suitable for and likely to make polo ponies. Mr. E. M. Stewart, Belfast, was second with Vengeance, and Mr. H. Rainey's Lady Clare was third.

A couple of jumping contests were decided on the second day, over a first-rate course. In the first competition, which was an open one, 23 horses competed. The test was a most exhaustive one before the judges (Messrs. T. H. Hutchinson and Alfred West) gave their award. Accountant, Mr. Baillie's well-bred, good-looking, but erratic hunter, was eventually placed first, and he certainly deserved his victory. A powerful and clever chestnut gelding belonging to Mr. Morton, of Ballymena, was placed second, while old Defiance, who did not display his customary finish, was third, and Mr. W. M'Bride's Shooting Star fourth. In the second event, which was for young horses up to four years old and maidens, Miss Persse's Folly, who had performed very well in the open contest, won from Mr. Morton's Lord Ashton and Mr. F. Barbour's Lady Doubtful.

There was about the average number of pigs, and, the quality being very good, competition was somewhat keen. The entry in the poultry department was the best that has ever been recorded in connection with the North-East Show, all the principal breeders being well represented. This is

doubtless owing to the exertions that are now being made to bring up the poultry industry of Ireland to the level of that of other countries which have found a ready and remunerative market for their produce in the United Kingdom. The majority of the prizes were won by competitors on this side of the Channel, but the proportion retained on the other side was sufficient to prove highly encouraging to home exhibitors. There was a capital display of butter and eggs, whilst implements were more numerous than ever.

Judges.

HORSES.—Thoroughbred Stallions: T. H. Hutchinson, The Manor House, Catterick, Yorkshire. County Livestock Committee's Classes: T. H. Hutchinson. Draught Stallions and Draught Horses: Thomas Macafee, Currysiskin House, Ballymoney. Polo Ponies: T. H. Hutchinson. Harness Horses and Hackney Car Horses: T. H. Hutchinson. Draught Horses in Gear: Thomas Macafee. Van Horses in Gear and Trotting Horess: T. H. Hutchinson.

CATTLE.—Shorthorns: George Harrison, Gainford Hall, Darlington. Aberdeen Angus: Colonel George S. Grant, Aucharachan, Glenlivet, N.B. Dairy Cattle: Joseph Taylor, Highfield Farm, Chorley. Galloways: James Biggar, Grange Farm, Dalbeattie, N.B. Herefords: William Tudge, Leinthall, Ludlow; T. H. Hutchinson. Channel Islands: G. P. Mead, The Woodlands, Bicton, Shrewsbury. Kerries and Dexters: R. Tait Robertson, Church Farm, Babraham, Cambridge.

PIGS.—Joseph Taylor, Highfield Farm, Chorley.

JUMPING COMPETITIONS.—T. H. Hutchinson; Alfred West, Kilcroney, Bray.

TROTTING HANDICAP.—P. T. Flanagan, Dublin; John Ballantine, Belfast.

Champion and Special Prizes.

CATTLE.

The Musgrave Challenge Cup (value 25 guineas) for the best shorthorn bull in the show, not exceeding four years of age: Mr. Matthew Marshall, Stranraer (Viceroy).

The Queen Victoria Challenge Cup (value 50 sovereigns), and the association's gold medal, for the best yearling shorthorn bull, bred in Ireland, the property of an Irish exhibitor: Mr. John M'Elderry, Ballymoney (Silver Mist); r., Mr. H. H. Smiley, Ardmore, Larne (Myosotis).

The Antrim Challenge Cup (value 25 guineas), for the best shorthorn dairy cow in milk, in the breeding section of the show, entered in Coates's Herd Book: Mr. Joseph Bowden, Cortober House, Cootehill (Alice Gwynne II.).

The Robson Challenge Cup (value 25 guineas), for the best shorthorn cow or heifer in the breeding section of the show, the bona-fide property of and exhibited by a resident in Ireland, and must be entered, or eligible for entry, in Coates's Herd Book: Mr. Bowden (Alice Gwynne); r., Mr. Smiley (Myosotis).

Challenge cup (value 25 guineas), for the best bull in the Aberdeen-Angus classes: Mr. C. Dunbar-Buller, Woburn, Donaghadee (Norman Baron); r., Lord Crofton, Mote Park, Roscommon (Royal Hope of Mote).

Gold medal, for the best Aberdeen-Angus animal in the breeding section of the show: Mr. Dunbar-Buller (Norman Baron); r., Mr. E. Coey, Droagh, Larne (May Empress).

Special prize (5 guineas), for the best Galloway bull owned in Ireland: Mr. R. I. Calwell, 21, Arthur Street, Belfast (The Orphan of Ballyboley); r., Mr. H. B. Lane, Rush Hall, Limavady (Brucina III. of Drumlanrig).

Special prize (5 guineas), for the best Galloway cow or heifer owned in Ireland: Mr. Calwell (Maggie II. of Tarbreoch); r., Mr. Calwell (Missil IV. of Ballyboley).

Challenge cup (value 10 guineas), for the best animal in the Hereford classes, the bona-fide property of a resident in Ireland: Mrs. Madden, Nutley, Booterstown, County Dublin (Ann Althea Still); r., Mr. Thomas Boylan, Hilltown House, Drogheda (Winnie II.).

The Rathmore Challenge Cup (value 12 guineas), for the best Jersey heifer, two-years-old or under at date of show, calved in Ireland: Mr. Matthew O'Neill, Milltown Hill, County Dublin (Hazleton Lass); r., Mr. O'Neill (Gold Charm).

Champion cup, for the best Kerry animal in the show: The Earl of Shaftesbury, Belfast Castle, Belfast (Ormeau Violet); r., the Earl of Shaftesbury (Ormeau Daisy).

Champion cup, for the best Dexter animal in the show: Henry J. Boyd, Hillsborough (Little Dan Darling); r., Mr. Frank Robertson, Sprucefield House, Sprucefield (Little Fan).

PIGS.

The Ulster Challenge Cup (value 10 sovereigns), for the best boar in the show: Thomas Lindsay, Crossgar.

The Ulster Challenge Cup (value 10 sovereigns), for the best sow in the show: Lord Dunleath.

Silver medal, for the best boar in the show: James Miskelly, Newtownards.

Silver medal, for the best sow in the show: Lord Dunleath.

HORSES.

Silver medal, for the best polo pony stallion: The Keynsham Stud Company, The Lodge Stud Farm, Keynsham, near Bristol (White Mask).

Silver medal, for the best polo pony brood mare: Mr. E. Blakiston-Houston, Orangefield, Belfast (Milady).

Class Prizes.

CATTLE.

SHORTHORNS.

Shorthorn bull, calved prior to 1900: 1, H. H. Smiley (Candahar); 2, W. and J. Ekin, Ballymoil, Coagh, Monevmore (Golden Crown); 3, Walter R. Crawford, The Priory, Tullyhogue, County Tyrone (Tirowen).

Shorthorn bull, calved in 1900: 1, Walter R. Crawford, The Priory (Master Stephen); 2, Robert M'Clure, Gortgarn, Randalstown (Barrister); 3, J. Wilson Fleming, Loughry Manor, Cookstown (Sir Thomas).

Shorthorn bull, calved in 1901, on or before 31st March: 1, Matthew Marshall, Stranraer (Viceroy); 2, John M'Elderry, Ballymoney (Silver Mist); 3, W. R. Crawford, The Priory (Washington).

Shorthorn bull, calved in 1901, on or before 1st April: 1, Walter R. Crawford (Oxford May Boy); 2, Thomas A. M'Clure (British Prince); 3, J. Wilson Fleming, Loughry Manor, Cookstown (Pilate).

Shorthorn bull, open to animals located in the province of Ulster, entered in classes 13 or 14; special district prize, £10: 1, John M'Elderry, Ballymoney (Silver Mist); r., Walter E. Crawford (Oxford May Boy).

Wharfedale Show at Otley.

The Wharfedale Agricultural Society's 104th annual show was held at Otley on Friday and Saturday, and was quite up to the average in quality, though the number of entries were fewer than last year, the total being 625, as compared with 715 in 1901. The decrease, unfortunately, occurred in the chief sections, viz., those for cattle and horses, but the falling off was somewhat slight, and was not of any importance. One of the most noteworthy features of the show of Hackneys was the quality of the youngsters. The class devoted to entire colts foaled in 1900, for instance, was worthy of a county show. There were 14 competitors, all of them well set up and promising, and if the winner, a chestnut owned by Mr. R. Brigham, of Millington, does not make its mark this year, some of the most com-

petent judges round the ring on Friday will be disappointed. The youngster has plenty of style and dash, and it was mainly on this account that it was placed before Mr. Hall's Fearless Footsteps, another excellent young horse, of which more ought to be heard. There were also two very fine yearling entries, Mr. Nessfield's exhibit having the advantage of Mr. Sugden's youngster only in point of size; while Mr. Whitworth's chestnut filly, which won in her class, was described by one of the judges as being "as fine a goer as ever entered a ring." In the older class for geldings and fillies, a black gelding owned by Mr. W. J. Fawcett, of Bradford, scored over Mr. Richardson's (Malton) filly principally by reason of the latter's lack of condition. The best Hackney stallion proved to be St. Thomas, owned by Mr. Hall, Malton, a horse with plenty of bone, and moving remarkably well. The second, Lord Loch, owned by Mr. Gawne, is a very promising young horse, and only requires time to further develop. The Hunters made a good show, and there was close competition for the Hunter Improvement Society's silver medal between Messrs. Ward's Blackthorn and Mr. Rickaby's bay gelding, Ripley. The balance rested with the former, and the decision of the judges was generally approved. The cattle included a number of animals of excellent quality, Mr. George Harrison's exhibits from Darlington especially attracting attention. His bull, which was awarded the Society's gold medal, was a big prize-winner last year, and took a first card at Dublin a fortnight ago. In the sheep classes one of the outstanding animals was a Wensleydale tup bred and owned by Mr. Thomas Leake, of Swillington. It has a splendid back and coat, and if further shown ought to win more first cards.

THE NEW FOREST PONY shown above is the property of Mr. Domoney, Bramshaw, near Lyndhurst, Hants, and was the winner of a Challenge Cup presented by Lord Arthur Cecil for the best pony, three years or over, at the Show of the New Forest Ponies Improvement Association at Lyndhurst on the 23rd ult

Prize List.

CATTLE (Open Classes).

Bull Calf, under 12 months.—1, E. Eckroyd, Armathwaite, R.S.O., Cumberland; 2, J. Handley, Barrow-on-Soar, Leicestershire; 3, Lord Middleton, York. Bull, 1 year and not exceeding 2 years old—1, J. Handley, Milnthorpe; 2, T. M. Crook, Hoghton, Preston; 3, J. P. Rayner, Whixley. Bull, 2 years old or upwards—1 and gold medal, G. Harrison, Darlington; 2, J. Handley; 3, H. Ker Colville, Market Drayton. Heifer Calf, under 12 months old—1, E. Eckroyd; 2, C. A. Hirst, Pickering; 3, Whitworth, Son, and Nephew (Ltd.), Wath-upon-Dearne. Heifer, 1 year old and not exceeding 2 years old—1, H. Dudding, Stallingborough, Great Grimsby; 2, Colonel Makins, Henley-on-Thames; 3, V. C. W. Cavendish, M.P. Heifer, 2 years and not exceeding 3 years old—1, G. Harrison; 2, V. C. W. Cavendish. Cow or Heifer, exceeding three years old—1, H. Dudding; 2, C. A. Hirst; 3, H. Ker Colville.

FARMERS' CATTLE.

Bull Calf, 12 months old—1, W. Walsh, Gilstead, Bingley; 2, W. H. Frank, Marton-le-Moor, Ripon; 3, C. Rollinson, Allwoodley. Bull, 1 year and not exceeding 2 years old—1, J. Pickard, Harewood; 2, J. P. Rayner; 3, Mrs. Cass, Ribston, Wetherby. Bull, 2 years old or upwards—1 and medal, W. H. Frank; 2, W. Walsh, Gilstead, Bingley; 3, J. Jackson, Husingore. Heifer calf, under 12 months old—1, Crosland Brothers, South Stainley; 2, Mrs. Cass. Heifer, over 1 year and not exceeding 2 years old—1 and gold medal, Mrs. Cass; 2 and gold medal, W. Walsh; 3, E. Roscoe, Norwood. Heifer, 2 years and not exceeding 3 years old—1, R. Stubbs; 2, Mrs. Cass; 3, Crosland Brothers. Cow or Heifer, exceeding 3 years old—1, 2, and 3, W. Walsh. Jersey, or other Channel Islands, Cow or Heifer (Open)—1, H. Dacre, Hawthornden; 2, F. H. Fawkes, Farnley Hall, Otley; 3, H. Dacre.

DAIRY CATTLE (Open).

Cow, in milk, for dairy purposes—1, E. Farrow, Rochdale; 2, F. Wood, Wakefield; 3, S. W. Hackney, Leeds. Cow, in milk, for dairy purposes, under 10cwt.—1, W. Turner, Menston; 2, J. Greenwood, Clifton; 3, M. Dunwell, Yeadon. Cow, in calf, for dairy purposes, any age or weight—1 and gold medal, F. Wood; 2, H. Mellor, Honley; 3, M. Rayner, Seacroft. Heifer, for dairy purposes, in calf or milk—1, J. Crabtree, Harrogate; 2, J. P. Rayner.

HORSES.

DRAUGHT AND AGRICULTURAL.

Yearling Colt, Gelding, or Filly, or Two-year-old Gelding or Filly, bred within a radius of 20 miles round Otley—1, G. Carver, Clifton; 2, W. H. Dawson, Otley; 3, A. A. Jagger, Hampsthwaite. Yearling Colt, Gelding, or Filly, or Two-Year-Old Gelding or Filly, bred by a tenant farmer residing within a radius of 10 miles round Otley—1, G. Carver; 2, C. Hodson, Harrowgate; 3, A. A. Jagger. Dixon, Silsden. Sow and Litter—1, P. Thompson, Otley; 2, W. Wood, Rawdon.

New Forest Ponies.

The eleventh annual show of the Association for the Improvement of the Breed of New Forest Ponies took place on the 23rd ult., at Lyndhurst, and was well attended by the public, as well as those interested in the breed. The entries numbered 101, as against 89 last year, and only nine failed to put in an appearance. Taken as a whole the ponies were a more even lot than before, the four years old and upwards in particular. These certainly made the best class, and gave the judges (Mr. Robert J. Bradford and Mr. F. Carleton Tuck) a great deal of trouble in arriving at their decision. The winter has been mild, which has been much in favour of the ponies who have had to remain out in the Forest, and it was quite evident that many of those shown had been well cared for by their owners. Lord Arthur Cecil was again a large exhibitor, sending no fewer than 17 of four years old and over, five in the three years old class, and five two years old, but his lordship was not represented in the yearling class, in which seven animals were shown for the ten premiums offered by the association.

The cup given by Messrs. Walter Perkins, W. F. Rawnsley, and Badcock was won outright last year by Lord Arthur Cecil, and his lordship then promised a cup for the best pony of three years old or over, to be the property of the owner of a pony winning it three years in succession. Lord Arthur has duly provided the cup, a handsome one, and it was on view in the committee tent, with a ribbon attached, denoting that it is the "Cecil" New Forest pony challenge cup. Nine animals were left in to compete for this, but they were speedily reduced to Mr. J. Bramble's (Avon, Christchurch) grey and his roan (8 years), Mr. Domoney's (Bramshaw) bay, and Mr. Wort's (North Ripley, Winkton, Christchurch) The Sirdar, while the final contest was between Mr. Bramble's grey and Mr. Domoney's bay, a horse which last year had no chance at all, but to-day came forward a wonderfully improved animal, and in remarkably good condition. These two gave the judges a lot of trouble. Ultimately Mr. Domoney's pony was declared the winner, and a white and blue rosette was fastened to the halter by Lady Manners, amidst much applause. Afterwards her ladyship presented the cup to Mr. C. L. Hall (the representative of Mr. Domoney, who was unable to be present), remarking that it was very kind of Lord Arthur Cecil to present the cup, and also to refrain from competing for it. The judges (Lady Manners said) had taken a great deal of pains in awarding the cup, and she heartily congratulated Mr. Domoney on winning it. Mr. Hall returned thanks on behalf of Mr. Domoney, who, he said, would do his best to win the trophy another year. The Polo Society gave two silver medals, and these were taken, one by Mr. A. H. Clough (Burley) with a two years old bay, bred at Burley, and the other by Miss Burden, of Beaulieu, with a bay yearling, by Lord Arthur Cecil's Lord Ebrington, and bred by the exhibitor.

Messrs. F. F. Lovell, J. Jeffreys, and H. F. Compton, three of the New Forest Verderers, were present to pass the stallions, which are to be allowed to run in the Forest, being assisted in this duty by Mr. G. F. W. Mortimer (their clerk), and Mr. Goodall, M.R.C.V.S. All the animals, with two exceptions, presented were passed. The judges were Messrs. R. J. Bradford, of Brockenhurst, and F. Carlton Tuck, of Lymington, and

their awards were as follow:—

FOUR YEARS OLD AND OVER.—Twenty-five premiums of £2 each: Mr. S. Barrow, Lymington; Mr. E. Pramble, Ripley, Ringwood; Mr. J. Bramble, Avon, Christchurch (four premiums); Mr. J. T. Burden, M.R.C.V.S., Beaulieu; Lord Arthur Cecil, The Mount, Sway (ten); Mr. A. H. Clough, Burley; Mr. W. Domoney, Bramshaw; Messrs. C. and E. E. Lander, Christchurch; Mr. G. G. Lander, Christchurch (two); Mr. T. Stovold, Winkton, Christchurch (three). Three consolation prizes of £1 each and ten additional premiums of £1 each were awarded thus: Mr. E. Bramble (two); Mr. J. T. Burden (one); Lord Arthur Cecil (seven); Messrs. C. and E. E. Lander (one); Mr. W. J. C. Moens, Tweed, Boldre (one); Mr. W. F. Rawnsley, Park Hill, Lyndhurst (one).

THREE YEARS OLD.—Fourteen premiums of £1 each: Lord Arthur Cecil (three); Mr. W. King, Bramshaw; Mr. G. G. Lander (four); Mr. W. J. C. Moens; Lord Montagu of Beaulieu (two) Mrs. A. Parnell, Fritham; Mr. H. Worth, North Ripley, Winkton, Christchurch (two). Two consolation prizes of £1 each, given by the Hon. John Scott Montagu, M.P.: Mr. Samuel Barrow and Mr. E. Bramble.

TWO YEARS OLD.—Fifteen premiums of £1 10s. each: Mr. C. Absalom, Christchurch; Mr. E. Bramble, Ripley, Ringwood (two); Mr. R. Brown, Sopley; Mr. A. H. Clough, Burley (two); Messrs. C. and E. E. Lander (three); Mr. G. G. Lander; Mr. G. Marchant, Burley; Lieut.-Colonel William Martin Powell, Brooklands, Lyndhurst; Mr. J. Strange, Lyndhurst; Mr. H. F. Compton, Minstead Manor; Mr. J. Thompson, Somerley Grange. Two consolation prizes of £1 each; Mr. J. Strange and Mr. S. Stride, Bartley.

YEARLINGS.—Premiums of £1 each, payable on their being shown as two-years-old: Mr. C. Absalom, Stanpit, Christchurch; Mr. J. Bramble, Avon, Christchurch; Miss Burden, Beaulieu; Mr. J. Evans, Eling; Mr. G. G. Lander; Mr. F. Payne, Emery Down, Lyndhurst; Mr. T. Stovold, Winkton.

SPECIAL PRIZES.—A challenge cup, presented by Lord Arthur Cecil, for the best pony in the show of three years or over, to be the property of the owner of a pany winning three years in succession: Mr. W. Domoney, Bramshaw. Two silver medals, given by the Polo Pony Society: Mr. A. H. Clough and Miss Burden.

Ayrshire.

The Ayrshire Agricultural Association's sixty-seventh annual show was held at Ayr, on Tuesday and Wednesday, under favourable climatic conditions. This fixture has long been recognised as a most important one in the North, and last week's show fully maintained its high reputation for the quality of the stock. Besides being in the heart of an immense agricultural district, Ayr includes a considerable industrial population, and the Society wisely includes in its programme various events that appeal to those other than agriculturists. The total value of the prizes offered was £1,866, and thos was apportioned as follows:—Cattle, £622; Clydesdale horses, £167 10s.; hunters, £103; hackneys and riding classes, each, £24; jumping competitions, £52; sheep, £85 15s.; pigs, £27; dogs, £310; poultry, nearly £100, and numerous other amounts for the minor sections. It must be added that, in addition to the sums given for dogs and poultry, about £200 was divided between the two sections in special awards. It will thus be seen that the departments were very varied, and that in each liberal prizes were awarded. As regards the number of entries, the show was well up to the average, although not so high as those of the last two years. In all, 2,654 exhibits were on view, as compared with 2,833 last year and 2,861 in 1900. It is satisfactory to note, however, that, with the exception of cattle, the decrease was mainly in other than the purely agricultural sections. Cattle were down from 346 to 293, a very considerable ard disappointing falling off. But the number last year was unusually high, and the last week's entry, though under the normal figure, was relatively not so bad as it seems by the simple contrast between this year and last year. Horses numbered 550, as against 545 a year ago, a modest increase of five, and there was an increase of two in sheep, which numbered 238, as compared with 236. There was a big increase in pigs, the number being 56, as compared with but 3 last year. Dogs numbered 769, as against 741, and poultry showed a large falling off at 661, as compared with 863. Other entries included 19 exhibits of cheese, as compared with 25, and there were 68 implement stands, against 74. As regards the quality of the stock, it has never, taken as a whole, been surpassed.

First Day's Judging.

The judging was spread over the two days, that of the first day being to the hackney and other light horses, dogs, and poultry, the principal sections thus being left to the second day. Hackneys and other light horses were more numerous than last year, and the quality was quite up to the average. In the class for brood mares, 15 hands and upwards, there was but one entry —Mr. Liddell-Grainger's well-known prize-winner, Ayton Sweet Nancy—and she was awarded the first prize. In the next class, that for brood mares under 15 hands, competition was confined to Mr. James Lindsay's and Mr. A. L. Simpson's exhibits, and eventually the latter's Moville was placed first. Fillies foaled in 1899 were headed by a good upstanding animal belonging to Messrs. W. C. Harvie and Co. (Glasgow), and sired by Lord Seaham. Mr. James Jardine (Glasgow) was second with Phyllis. There was better quality in the two-year-old class, Mr. Mirlees Chassels (Bothwell) coming out first with Clyde Beauty, the Kilmarnock winner. She is a filly of nice quality, and was well brought out. Mr. James Prentice was second with Bothwell Star, which last year was first at Ayr, second at Kilmarnock, and third at Glasgow. Yearling fillies made probably the best female class in the section. First prize went to Mr. J. S. Cuthbertson's Dora, which was only fourth at Kilmarnock, the winner there, Mr. Galbraith's Mercedes, not getting a place. The leading filly was not shown in such bloom as some of the others; but she has good action and promises well. Mr. Robert Forrest (Knockinlaw) was second with the third prize-winner at Kilmarnock. In a splendid class of three-year-old entire colts Mr. A. Gemmell, of Ayr, was first and third. The leader was Cossack, a particularly good goer, which was second at Kilmarnock; and the third ticket fell to Forest Fireaway, by Forest King. Dr. MacGill was second with Norbury Lightning, another fine goer, though rather slightly built. Probably the best stallion shown was Administrator, owned by Mr. C. E. Galbraith, and got by Garton Duke of Connaught. This colt headed the two-year-olds, as at Kilmarnock, and at London was second in his class as well as reserve for the junior championship. Mr. Liddell-Grainger was second with a daughter of Gentleman John, out of his well-known prize-winning mare, Lady Marsh. Among the yearling colts another of the Terregles stud came to the front. This was the Kilmarnock winner, Roosevelt, by Mackinley, who was again followed by Mr. Prentice's Bothwell Gent, Mr. James Lindsay coming third with a get of Danebury. For the Hackney Society's silver medal for the best female, a number of mares entered in the driving classes competed, and one of these, Zoba, by Garton Duke of Connaught, was the winner, Mr. Liddell-Grainger's Ayton Sweet Nancy being reserve.

The various driving and jumping classes were well filled with animals, the superior quality of which was generally acknowledged. Both the driving and jumping was witnessed on each day by large crowds, and afforded general interest. As to the dog and poultry sections, it may here be mentioned that both attracted considerable attention and formed interesting features of the show.

Second Day's Judging.

On the second day the judging was commenced with the cattle. There were classes for Ayrshire, Polled Angus, and fat cattle; but, naturally, the first-named predominated. They numbered fewer than last year, but the quality was up to the average, and competition, especially for the Derby, was as keen as ever. The Ayr Derby, for three-year-old cows, is unique in competitions of the kind, and the interest manifested in the event was as strong as in former years. The entries, however, showed a considerable falling off from last year, there being a total of 53 as against 75. Of the 53 entered, 32 were brought under the notice of the judges. These included representatives from the stocks of the best breeders of Ayrshires, and judges had a very hard task on awarding the prizes. By the unfortunate death of the fine quey, Gipsy II., belonging to Mr. Howie (Burnhouses), which was placed first in the Derby at Kilmarnock, the opportunity was lost of testing her merits against those of the front rank on Wednesday. The first prize was eventually awarded to Punch, of Hillhouse, a beautifully-coloured, thick quey, with a good vessel and well-placed teats, got by Prince Alexander, and shown by Mr. John Drennan (Hillhouse), whose exhibits were remarkably successful throughout the day. The second prize fell to Gay Lass III., a substantial brow quey, by Flora's Chief of Adamhill, and owned by Mr. Robert Woodburn. Mr. Alexander Cross, of Knockdon, was third with Fern II., an excellent, all-round animal of his own breeding, got by Yellow Squire, out of Flecky II., whilst the fourth ticket was awarded to Mr. Robert Paton for a handsome quey, Flora Macdonald V. of Trees, by Red Prince of Kyle, which later in the day was purchased by Mr. Andrew Mitchell (Barcheskie). Aged cows in milk were a superior lot, but Mr. John Drennan's Queen of Hillhouse, by Prince Alexander, was again without a peer. This is the third time she has won in this class, and on Wednesday she appeared to as great advantage as ever. Subsequently she was awarded the champion cup and special prize of the Herd Book Society as the best female of the breed. Queen of Hillhouse was closely followed in her class by Lady Finlay, the property of Mr. John M'Alister. A nice specimen, Mana, owned by Mr. John Murray, jun., was third, and Mr. Hugh Todd's home-bred cow, which was the third in calf at Kilmarnock, came fourth. Aged cows in calf were also a good lot. Mr. William Howie (Burnhouses) won easily with his well-known White Rose. The second prize went to Mr. James M'Alister (Kilmory) for a short-legged, beautiful type of an Ayrshire cow, which was first last year at Glasgow as a cow in calf, whilst third palce was assigned to Messrs. A. and W. Kerr (Old Graitney) for a typical representative of their herd, which was first last year in milk at Castle-Douglas. The leading cows in the Derby appeared again in the three-year-old milk class. Groups of three cows gave the judges some trouble, but a strong trio belonging to Mr. Alexander Cross were finally selected for the first position. In the sweepstake competition Mr. John Drennan's first-prize aged cow in milk was again first, followed by the second-prize animal in the same class. Third prize went to White Rose, the winning aged cow in cali. Mr. Drennan had an easy victory in the parish competition for a group of five cows.

There was an exceptionally level lot of bulls and yeld stock, and several of the animals were of outstanding merit. Four aged bulls were forward, the winner being found in Not Likely, belonging to Mr. James Howie (Hillhouse), which was first at Kilmarnock, and which on Wednesday was awarded the champion cup and the special Herd Book prize. There was a good second from the Crichton Royal Institution, Dumfries, in General White. He was first at Ayr as a three-year-old, and was bred by Messrs. Scott (Netherhall), being sired by Mr. Howie's bull, Prince Imperial of Netherhall. The third prize went to Messrs. J. and W. Ferguson (Auchenbeg) for a big, substantial bull. There was a much larger class of two-year-old bulls, which were of very equal merit. Mr. James Robb (Hindsward) was first with Full Bloom, which was looking as well as at Kilmarnock, where he also won. Lieutenant-Colonel G. J. Fergusson-Buchanan came next, with The M'Kinley, the winning yearling of last year, and the third place fell to Mr. James Howie for Gentleman Alexander of Hillhouse, a thick, well-made bull.

The bull stirk class formed one of the best collections of this age that has been seen at Ayr for a number of years; still, Mr. James Howie was an unquestioned winner, with Imperialist of Hillhouse, another son of Prince Imperial, bred by Mr. Scott (Netherhall). He was purchased in the showyard by Sir Mark J. M'Taggart Stewart, M.P., and goes to join the Southwick herd. Messrs. Wardrop (Garlaff) were second with Valentine, a stylish, well-proportioned bull of their own breeding. A very sweet bull, belonging to Messrs. Lindsay (Carsegowan) was third, fourth prize going to Mr. James Howie for Encore of Hillhouse, a stylish son of Koh-i-Noor. The two-year-old queys were placed as at Kilmarnock, Mr. Howie being first with Aileen Aroon. Messrs. Wardrop second with Vesta Tilley, the Highland Show winner last year, and Mr. Howie third with Queen of the Isles. Both Mr. Howie's queys were sold in the course of the day to Mr. Mitchell (Barcheskie). Quey stirks formed a big class, and the competition was very close. Sir Mark M'Taggart Stewart secured the first two tickets, the winner being bred by Mr. Lindsay (Carsegowan). The second quey was close up, and is a thicker and more substantial animal. The third prize was given to a stylish heifer belonging to Mr. James Howie, who also won in the two-year-old pairs class with Aileen Aroon and Queen of the Isles.

Although there were two classes for Aberdeen Angus cattle, the black polls do not seem to make much headway in the district, which is essentially one for dairy stock. There were only two exhibitors, Mr. Hamilton, of Sundrum, showing six animals, and Mr. Kennedy, of Doonholm, four all very meritorious specimens of the breed. The three bulls entered were yearlings, and they included two of the prize-takers at the recent Perth sale. Mr. Hamilton was first with Margrave of Ballindalloch, a stylish Eblito bull, which was purchased at Perth for 160 guineas. Mr. Kennedy's second bull, Prileno, which was also by a Ballindalloch sire, was similarly placed at Perth. He was bred by Mr. M'Laren (Auchnaguie) and was bought at Perth for sixty guineas. The third prize-taker from Doonholm was Inceptor, a bull of Mr. Kennedy's own breeding. Mr. Kennedy had the best of the heifers in a nice pair of two-year-olds, both sired by Mailbag, Mr. Hamilton being awarded the third ticket for May II. of Sundrum. Fat stock made a good display, but do not call for special mention.

There was a splendid display of Clydesdales, both in number and quality in fact it was generally considered that a better display of the breed has not been seen at Ayr. Most of the best-known breeders and exhibitors were represented, and the judges had no easy task in making their awards. Brood mares were first judged, and of the eight forward the best was undoubtedly Mr. Thomas Smith's (Blacon Point) Beauty's Queen, a daughter of that singularly successful sire, Baron's Pride, and out of the same mare as Royal Garthly. Mr. William Kerr, Houdston, was second with the Royal Gartly mare, Elsie Macdonald, which took the same position at this show a year ago. The third ticket went to Princess Shapely, belonging to Mr. John Lamont, Toward, and Mr. Thomas C. Lindsay was fourth with Lady Maggie, another of the progeny of Baron's Pride. Yeld mares were another good group. Mr. Alex. Guild, Aberlady, came to the front with Lady Margaret, a mare which has taken leading honours at the principal shows for the past two seasons, including reserve for the championship at the High-

land at Inverness. She was followed by Mr. David Riddell's Scottish Peeress, a Baron's Pride mare which was champion at the last Dumfries Union show. Mr. James F. Mudroch, East Hillside, was third with Lady Robert, and the fourth ticket went to Mr. St. Clair Cunningham for Minnie of Walkinshaw, a mare that has appeared in most of the leading Scottish prize lists for several years. There was an excellent class of thirteen three-year-old mares, and Mr. St Clair Cunningham had a popular winner in his beautiful Baron's Pride filly, White Heather, a well-known prize-taker at shows in the east of Scotland during the last two years. Mr. James F. Murdoch was second with Scottish Jess, the cup winner at the West of Scotland Union show in October; and Mr. Thomas Smith was third with Lady Primrose, which was first at Castle Douglas a few weeks ago. Two-year-old fillies also numbered thirteen, and the judges had no difficulty in selecting for the premier honour Mr. Thomas Smith's Baron's Pride filly, Royal Ruby, out of Royal Rose. She was afterwards awarded Sir John Gilmour's cup as the best female of the breed, as well as the Clydesdale Horse Society's medal for the first yearling or two-year old filly. Another of Baron Pride's produce from the same stud was placed second in the class. This was Jenny Lind, which was first here last year; while Mr. Park, Brunstane, was only fourth with his Kilmarnock winner, Florodora.

Mr. St. Clair Cunningham achieved a notable victory in the yearling filly class, where he carried off the two principal prizes with a pair of highly promising youngsters by Baron's Pride, and recently purchased from Messrs. A. and W. Montgomery. Both were bred in the Stewartry of Kirkcudbright, the first by Mr. Barré Cunninghame, of Hensol, and the second by Mr. John Henry, Chapel, Ringford. They were afterwards similarly placed in the Derby class. As has been stated, the female championship was awarded to Mr. Smith's Royal Ruby, the Blacon Point brood mare, Beauty's Queen, being reserve, and Mr. Guild's Lady Margaret third.

In the class for aged geldings, the first prize was gained by Mr. William Clark,—Messrs. Caulfield Brothers being second. These positions were reversed in the case of the three-year-old geldings, and in the class for two-year-olds the leading position was taken by Messrs. Hastie and Sons, Blantyre. There was a fair competition in the class for three-year-old colts. The first three prizes were taken by sons of Baron's Pride. Messrs. Montgomery were first with Royal Baron, bred by Mr. Bean, Ballochy, Montrose; the Seaham Harbour Stud (Limited) were second with Silver Cup; and Mr. Wiliam Dunlop was third with a colt out of a Lord Lothian dam, and bearing a striking resemblance to his sire. In the class for two-year-old colts, the Kilmarnock awards were confirmed. Messrs. Montgomery were first with Royal Edward, which subsequently carried off the championship. Mr. James Kilpatrick was second with Pearl Stone, bred by Professor M'Call, and a get of Cawdor Cup, whilst Mr. William M'Keich was third with Baron of Bucklyvie, which was first at Glasgow last year, and third this year at Kilmarnock. Messrs. Montgomery also won in the class for yearling colts, the winner being the colt which was first recently at Castle Douglas. He was, on the present occasion, reserve for the championship. Mr. James Gray was second with Gartly Again, a colt of his own breeding, and sired by Royal Favourite, whilst Messrs. Montgomery were third with a Baron's Pride colt, bred by Mr. Stirling, Balhearty, Tillicoultry. The Derby brought out no feature of fresh interest.

The display of hunters was rather above the average, and the show of young blood stock was specially good. There was an excellent class of farmers' three-year-olds, Mr. John Hutcheson, Newarkhill, being first with a get of The Mate. Mr. Hutcheson was also first and second for brood mares. The winner was Panoria, by The Baron, out of Panama. This mare was bought a year ago at Lord Lonsdale's sale at Tattersall's, and has won many steeplechases. She was also awarded the Hunter Improvement Society's gold medal as the best mare in the class. Her stable companion, Maid of Doon, which was reserve for the medal and second in her class, was by The Primate, of Grand National fame, and out of the same dam as the first-prize three-year-old. The hunt classes provided interesting competitions. The yearlings were led by Mr. J. A. Campbells' Top Ronald, which was second at Kilmarnock, the winner on that occasion, Mr. J. Harling Turner's get of Xury being second. Mr. Campbell also took first place among the two-year-olds with Ballylough, and Mr. David Muir was second with the animal got by Honfleur, which was third at Kilmarnock. Among the three-year-olds, Mr. J. Harling Turner's "Cessnock" showed the way. This animal, which was also first at Kilmarnock recently, was bred at Clipstone, and was got by Kilmarnock, out of Lady Grosvenor. Mr. Hutcheson's winner in the farmer's class was second. Among the four-year-olds, Mr. G. M'Cubbins's Dunree, by General Macinnes, was first. Mr. Hutcheson again came to the front in the class for brood mares with a half-brother of his first prize three-year-old. In the large open class for weight-carrying hunters, Mrs. Herbert Dixon, Cressbrook Hall, was first with Champion Royal Flush, and Mr. James Kennedy, of Doonholm, was second with Patrician. Mr. Weir, Kinloch House, topped the light-weight class with Sailor, out of Little Wonder, and Mr. Hugh Neilson, Stewarton, was second with Wait Now.

There was a capital display of sheep, especially of Blackfaces, of which there was a numerous entry. Mr. Howatson, of Glenbuck, took the chief sheer ram. Border Leicesters compared with some well-bred and admirably-brought-out sheep. The New Century Cup, which Mr. Howatson gave for the best Blackface shearling ram was gained by Mr. Mitchell, Hazelside; and the prize for the best-woolled tup went to Mr. M'Rae, Stenhouse, Dumfries-shire, for his second prize two-shear ram. Border Leicestershires compared favourably, both as regards numbers and quality, with previous years, and the special prize for the best wool was awarded to Mr. Pollock, Springside. Mr. Picken, Langside, and Mr. Dulop, Morriston, were the other most successful exhibitors in this section.

Pigs have generally been but few and unimportant at previous shows of this association; but last week there was quite a good display, a result due, no doubt, to the offering of special prizes by bacon-curers and tanners. This stimulus has evidently put new life into quite an important department of the show. There was close competition for the Bacon Curers' handsome prizes, and a good many of the awards went out of the county. The judges expressed themselves as highly satisfied with the size and quality of the exhibits, and their entire suitableness for the trade. They must also have been very gratifying to the donors of the special prizes, and it is to be hoped that farmers will strive to meet the wants of the trade in this respect. Pretty much the same remarks apply to the Tanners' special prizes. For their purpose a larger sort of pigs are required. Most of the exhibits were bought up before leaving the ground.

Mr. Hanbury on Agricultural Organisation.

The annual meeting of the Agricultural Organisation Society was held on Tuesday, at the Westminster Palace Hotel, amongst those present being Mr. Hanbury, President of the Board of Agriculture, the Earl of Stamford, and several M.P.'s. The chair was taken by the vice-president, Mr. W. Lancelot Charleton, the president, Mr. R. A. Yerburgh, M.P., being unable to attend through illness.

Among the letters read expressing regret at inability to attend was one from Mr. Horace Plunkett, in which the writer stated that, "As the new Department of Agriculture and Technical Instruction in Ireland proceeds with the work of agricultural development, it becomes daily more evident that State aid to agriculture must be preceded, or at least accompanied by the voluntary association of those to whom the aid is to be given if its administration is to be economical and efficient. You have yourself studied the whole question of agricultural combination well enough to know that the only kind of organisation which fulfils the condition precedent to State aid is that which your society is striving to introduce into England . . . . . Having had long experience in agricultural organisation, and being now responsible for the administration of State aid to agriculture, I have no hesitation in saying that at this stage in the development of the industry every pound expended by your society in the furtherance of its special work will do more good than £10 spent by any Government department for the assistance of agriculturists."

The chairman, in opening the proceedings, said that the question had been asked as to whether the Agricultural Organisation Society had justified its existence. He, at any rate, was perfectly confident that it had. Its sole object was to bring about an effective organisation of agriculturists of all classes, and thereby of their industry, without which Englishmen could in no wise hope to compete with foreigners in the home markets. They had now 36 affiliated societies, and seven others are being formed.

On the motion of Mr. Round, M.P., seconded by Mr. A. Williams, a resolution urging that the society was worthy of the support of all interested in the welfare of agriculture, was agreed to.

Mr Hanbury, speaking to the resolution, said he was pleased to support a society of that kind, because it was engaged in an attempt to train and equip men who were engaged in a real war—an industrial war — which on one side was being carried on against the greatest industry of the country. The war against the farmer had been going on longer than any other against industry in this country. This society had grasped the main issue in seeing that training and organisation were required to repel the invader. This war was not to gain fresh territories, but was in defence of our home market, to save our home trade, and to enable our farmers to live in their own country. It was a war, not against one foreign invader, but against a concentration of forces—a regular European league. Our opponents had a tremendous advantage, because this country was practically the only country in the world which allowed imports to compete so freely with its own products. He was sorry to say that the British farmer had not only enemies abroad, but some in his own country. (Hear, hear.) He had sometimes to fight against opponents who would take away the fair name of his produce, and sell under the name of his choicest productions articles which were calculated to throw discredit on him. (Hear, hear.)

He did not believe for one moment that when Mr. Cobden, with a very right purpose, as he (Mr. Hanbury) thought (although the wind was now turning round in the opposite direction), carried Free Trade he foresaw that the farmer would have to fight all these enemies. He did not believe that it was the farmer who would first cry out for Protection. If Protection came, he thought it would come to their large industries. The farmer was perhaps more fitted to fight than our large industries, because he had been longer in competition, and had had a greater opportunity of adapting himself to the times. How was it that the farmer in foreign countries managed to invade this country as he did? It was to a great extent because the British farmer was lacking in organisation and combination where his opponent was organised. Farmers in England, as a rule, were small men with comparatively small holdings, living isolated lives. Attacked as they were, both in front and on the flank, they were as yet without system, without mutual support, without the weapons that their opponents had found so invaluable. Unfortunately, they fought singly, and fell singly. It was only by being brought into touch with one another, and working together under societies like the Agricultural Organisation Society, that the battle could be carried on successfully. (Hear, hear.) He admitted the pre-eminence of the huge farmers of this country. There were, he supposed, no farmers in the world so advanced as the big farmers in this country. But what was needed was to try and level up the small farmer into the same position of advantage. They had to consider the industry as a whole, the industry which was not only the greatest in the country, but was of the most vital consequence to the nation in providing strong men and strong women as the recruiting ground for our army and navy. Even our largest farmers were small men in comparison with some of the great firms in other industries.

The big feature of industry in our day was producing and marketing on a large scale, and there the large producer had an enormous advantage. It was only by co-operation, by joining forces, that the weakness of the many could be turned into strength. There existed a latent force among small farmers which had to be brought into active life, and this could only be done by the small farmers becoming one body, and obtaining that knowledge, wealth, and greater security which could not belong to the small men unless they did so combine. He did not want to be told that this idea of co-operation was some foreign fad. Co-operation had its first origin in this country. It had been applied to nearly every other industry except agriculture. Co-operation abroad had been the secret of the success of agriculturists. It had also been successful in our Colonies, and in Ireland it had caught on under Mr. Plunkett, and was now flourishing in practically every part of Ireland. In England also co-operation had caught on to a considerable extent. It had been a great success in Wales amongst the small farmers. This was a very hopeful feature. It had caught on in Worcestershire and in Yorkshire.

There was another feature. These were days, not only of large transactions, but of open markets. It was impossible for the small farmer to retain his local market. In these days of transit facilities he had to compete with the whole world. Again, science to-day was being applied to no other industry with so much success. One reason for the slow progress of co-operation in this country was that this society was not sufficiently known. They must take new means to ensure that the leaflets published by his own department reached farmers in outlying districts. It was no good to sit in London preparing admirable reports unless these reports got into the hands of the farmers. He would be happy to assist the society in issuing their leaflets side by side with those of his department. (Cheers.) He believed the society was being worked on practical lines. They must have nothing to do with faddists, of whom the farmer was more afraid than any other class.

The most useful purpose for which the farmers could combine was that of purchasing. The society could see that he got a guarantee with the materials he purchased, and thus prevent him from being imposed upon. Moreover, by combination big farming implements out of the reach of the individual might be obtained, and farm stock would be thereby improved. Then in the matter of dairying, the future tended towards creameries and factories, where produce of a uniform character would be turned out. This uniformity was of the utmost importance.

By Hordeum.

Brewers' Returns.

We are once more favoured with the Returns relating to Brewers' Licences, at an earlier date than hitherto. We are also given much fuller information than we have yet had at any previous time. Further columns have been added that at last permit of a better understanding of many of the facts. On one of the most important points of all we are no longer misled with official myths as to the amount of beer a common brewer is supposed to brew or credited with brewing. We are clearly told the number of "bulk" barrels he actually brews.

As we are also told the amount and quality of materials employed and beer-duty paid, we are at last able to be sure of many of the facts relating to the dilution of beer by brewers, and the loss of revenue this very reprehensible practice causes the State.

The "Bulk" Barrels Brewed.

Are given for the first time, so we have no means of deciding the actual amount of dilution resorted to in the past twelve months, as compared with the previous or any other year. But from the way the information is given, it does not need much experience or skill to see that very great efforts have been made by the vast majority of brewers to drown the extra war-duty of a shilling per barrel with water pure and simple. From a given quantity of materials more duty has been drawn, but much more beer has been brewed, so that not only has the whole of the extra duty been recovered, but a substantial profit into the bargain.

In 1901 (to September 30th) the amount of beer-duty paid by brewers was £14,052,843. This exceeded the payment of the year before by upwards of half-a-million sterling, but it was a great disappointment to the Chancellor of the Exchequer, as he had expected a much more substantial sum. He was too wary to expect an extra shilling per barrel duty imposed would yield a shilling or any thing like it on each barrel made. Minor increases of duty have always

Led to Dilution,

and with the existing absurd mode of charging the beer-duty they always will. The sheer simplicity of the thing makes its adoption by average brewers almost inevitable. But for the probity and honourable action of a few eminent firms, it would doubtless be pleaded, even in high places, that it was for the benefit of science, and to the advantage of consumers, that the light, bright, delicate beers now demanded should be made, and dilution should be sanctified.

Fortunately, we are able to meet this contention with a few facts that no sensible man who knows anything about the business will attempt to contradict.

The actual volumes of materials used in the two years 1900 and 1901 tell their own story, and it is a very regrettable circumstance that the additional column given in the latter year does not appear in the former. It has been demanded by the Central Chamber for some years past.

It is most desirable that this further information be promptly published.

Clear Comparison

of the actual amount of beer made before the new increased duty started and what is produced to-day would lead to some very surprising results of great interest to all beer-drinkers, and of some moment to the Revenue. It is absurd to allow brewers to continue the practice of defrauding consumers with a view to evading the payment of duty.

Yet that is the true position to-day, as clearly shown by the Returns now under comment.

The amount of malt used in 1901 was 56,577,059 bushels, against 57,113,112 bushels the year before.

This proves that the use of 536,000 bushels of malt was dispensed with. Raw grain suffered relatively a much greater loss, as 187,000 bushels in 1900 fell to 165,000 last year, and sugar also diminished by 120,000cwts., as 2,979,000cwts. in 1901 dwindled down to 2,858,900cwts. This was very nearly balanced by an

Increased Use of Rice

of nearly 124,000cwts., which material is seemingly fast growing in brewers' favour. Over 1,201,000cwts. were used in 1900, and this large amount rose in the following year to no less than 1,325,000cwts. The net result of all this means that, on the whole, there is a very slight decrease indeed in the total amount of substitutes for malt brewed, but the very substantial loss of malt of 536,000 bushels.

It is difficult for many who do not know the relative values of malt substitutes to quite comprehend what is the real displacement of malt by sugar, rice, maize, grits, raw grain, and the many other things now brewed. The total displacement of malt last year by all these nostrums was

16,085,000 bushels,

or upwards of 2,000,000 quarters of barley. But this is not the most serious aspect. Not only does this material adulterate our beer, but it seems to exert some malign influence upon the official minds of Excise officers. The Chancellor of the Exchequer spoke in the House of Commons when the ill-starred Beer Bill was the subject of debate, and stated that the prevention of the use of substitutes would be a serious source of loss of Revenue. He did not show how, and in the face of the last returns he would not come very well out of it if he tried.

The brewers who use malt solely are this year kept separate from their comrades who use any kind of substitute. In number they are very nearly one-half—2,905 all-malt brewers, against 3,063 adulterators. In the first slightly smaller half the one largest firm of all happens to be placed. This firm alone uses no less than 4,233,000 bushels of malt, from which they brewed over 1,800,000 barrels of beer, upon which they paid no less than

nine shillings and five pence

(9s. 5d.) beer duty upon every barrel.

All the pure-beer brewers, with few exceptions, paid more than the official duty of 7s. 9d., so that the average on the whole amount of 3,337,000 barrels so brewed reached 8s. 9d. per barrel, or a shilling over the official limit. If we turn to the users of substitutes we find the three classes of brewers who make from 1,000 to 20,000 barrels each per year paid on over 10,000,000 barrels they made an average of 7s .1d. per barrel, whilst the whole class of substitute users averaged only 7s. 5d. per barrel, although the amount paid by one firm on over 1,400,000 barrels was no less than 8s. 7d., and the next smaller firm (brewing 970,000 barrels) was 8s. 4d. per barrel.

The loss of Revenue

on the 33,800,000 barrels of beer brewed by the substitute users, as compared with the duty actually paid on all pure-beer brewers, amounts to the large sum of £2,250,000, whilst had all brewers paid the same rate as Messrs. Guinness the Chancellor of the Exchequer would have received last year no less than £3,350,000 more than he actually took.

If it costs more to collect duty from this firm than any other Sir Michael Hicks-Beach may justify his assertion, but unless he can show this to be the case he has once more misapprehended the facts, or he has been misled by officials who ought to know better. Dilution of beer by brewers leads directly and absolutely to loss of Revenue. It is not tolerated if attempted by publicans or poor retailers, and brewers can be prevented more readily and certainly than their underlings, the vendors. It is, further a

distinct fraud

upon consumers, who ought to be properly protected by the action of the officers of Excise. The position now reached may be very clearly summed up:—It is obvious the existing mode of charging duty incites a very large number of brewers to escape payment as far as possible, by reducing the amount of materials used. This disproportionately dilutes the beer which continues to be sold to consumers at former prices. The use of cheaper substitutes for malt is clearly a direct source of loss of Revenue to the State. It is equally certain (but not so clearly proveable) it most unfairly reduces the food value of beer. The use of substitutes also leads to disproportionate use of preservatives, not one of which should be allowed without clear intimation to the consumer. From the farmers' standpoint the use of substitutes deprives stock-keepers of a cheap and useful food, and, looked at practically, there is very little difference if two million quarters of malt be displaced by sugar and other like substances, or by 8,000,000 barrels of water. If we could get the actual

bulk barrels brewed

in 1879 it would be found that the unlimited and unfettered use of water by brewers has had more to do with the price of barley than anything else.

The returns disclose several very curious facts. Stourbridge has been for some years the pet spot of substitute use. Last year it showed a displacement of malt of 75 per cent. This year it disappears from the list, and has apparently been added to Burton-on-Trent, with the result that Burton now uses a larger proportion of substitutes. Warrington now stands at the bottom of the list with a displacement of malt by 55.3 per cent. of substitutes. This is closely followed by North London with 54.5 per cent.

Notable changes in the use of substitutes occur in West London of 30 per cent. to 36.7 per cent., and in Liverpool from 37.7 per cent. to 31 per cent.

Home Notes.

The Borough.

My record this week presents very few points of interest, and certainly cannot claim the attraction of any novelty. The trade keeps moving at about the same pace as we have experienced for the past few weeks. Occasionally a crop of inquiries is developed, and for a day or two a semblance of activity prevails. But when buyers find that there is but little opening for business in the best qualities they are looking after, their interest ceases, and dullness is resumed. I hear that a few transactions of a moderately important character have been carried through, but as the demand for the lower grades has apparently subsided, there is hardly sufficient general movement to keep values at the firm figures we have recently heard of. Worcester growers must be held responsible to a considerable extent for this regrettable reaction. They have continued to press their hops upon the London market, as they are now finding so small an outlet locally; and so long as their creditable hops are offered here at prices which are below the currency of the most inferior southern produce, the results must be disappointing to all concerned. It is very difficult to understand the obstinacy with which the planters in the Midland districts cling to their former customs, which the history of many seasons proves to be out of date and detrimental to their interests. While the London trade is active in the early part of each season, the majority of the Worcester men limit their operations to their own locality, and when their opportunity has passed they seem for the first time to remember that the most important centre of business is the Borough, and they then turn their attention to London. Being annoyed by their failure to find remunerative customers at such a time, they conclude that the whole thing is delusive, and relapse into their old habits. But the fault is their own; there is no one to blame but themselves, and I am confident that if they would but admit the reality of the facts which are constantly being forced home to them, and bring their methods of business into closer accord with those of their southern competitors, the isolation from which they now suffer would cease to attract them, and their satisfaction would be much more generally secured.

The New Growth

appears to be progressing slowly but favourably. The soil being in a condition that permits complete freedom for all the preliminary operations, the plantations are generally well forward. Poling and stringing are almost completed, and although the early shoots are somewhat held in suspense by the cold winds and occasional nocturnal frosts, they are strong and promising. Many experts are of opinion that another full growth is in front of us, but others are not so sanguine and predict an unfavourable summer, and only a moderate crop. But as all such forecasts must necessarily be speculative and unreliable, I am content to rest in hope that under any circumstances we shall only produce a very limited yield. We do not want many hops this year, and quantity beyond 200,000cwts. will be excessive. Although I am aware that the greater part of the last great crop has been sold, and that stocks of all kinds in the hands of factors or growers are reduced to an exceptionally low point, I am too clearly convinced that there has been an accumulation of vast reserves under the control of consumers, to desire that planters should be burdened with a heavy growth, by which their past and present troubles will be intensified, and their anticipations of better remuneration will be dissipated. It is perhaps ungrateful to wish for limitation of the earth's products, but considering the exceptional character and position of our industry, I think we are quite justified in taking measures to achieve

the desired end, which is, that those who till the land should be able to live by the land, for we have it upon the very highest authority that "the labourer is worthy of his hire."

Conference with Colonials.

Mr. George Arnold, of Frant, who is an advanced and very skilful hop-grower, has made an excellent suggestion to the Tunbridge Wells Farmers' Club. Taking advantage of the probable presence in this country of many visitors from our Colonies during the Coronation festivities, Mr. Arnold proposes that the farmers' clubs of Kent and Sussex should amalgamate for the special purpose of inviting colonial agriculturists to meet their English brethren in conference, and with them to discuss various points of common interest. A committee has been formed to give practical effect to the proposal, and as I believe that such intimate contact with our fellow-workers from the far-away parts of the Empire would be, not only enjoyable, but beneficial, I earnestly wish success to the movement, and shall be pleased to lend a hand in making the necessary arrangements.

Foreign Notes.

Nuremberg.

The position of the market remains unchanged. General business has been very quiet during the past fortnight, brewers being unwilling to entertain the poor samples, of which the bulk of the unsold stock seems to consist. They would gladly buy hops of good, sound quality, but as these are practically unobtainable, they will not operate to any extent, nor are they likely to do so until they are driven into the market by absolute necessity. Nevertheless, quotations are not reduced, as holders still have full confidence in the summer trade, which they expect will effect an entire clearance of their reserves of every quality. In the meantime, the news from the plantations is generally good. The young shoots are, with few exceptions, showing vigorous growth, though they are not advancing rapidly, being checked by the dry, cold weather. The tendency of present opinion is distinctly in favour of a full crop, especially as the enlargement of plantations in many German districts is confirmed.

Belgium.

With only a moderate demand, values are fairly well maintained, as practically the whole of the last crop has been passed out of first hands. The outlook for the new growth is sufficiently satisfactory, and good progress has been made in cultivation, the planters being assisted by favourable weather.

America.

The only notable change that has taken place in business at New York is the further development of firmness. Prices of best qualities have strongly hardened, and the value of medium and inferior grades are following up very closely.

False Milk Warranty.—At Worship Street Police Court on Tuesday, Thomas Henry Williamson and John Roberts, of the Heath Farm, Somersal, Doveridge, Derby, were summoned for having sold, under a warranty, of purity, milk which was adulterated contrary to such warranty. The evidence showed that the defendants supplied milk by wholesale to a dealer trading as Whitlock and Co., and the latter supplied small retailers in the district, among them one Elliott. A sample was bought from the latter, and found to be adulterated. Elliott asked that a sample be taken of the milk Whitlock delivered. That was done, and found to be adulterated, and Whitlock then requested that a sample be taken of the churns as they reached St. Pancras from the defendants. There again the milk was found to be adulterated. Defendant was said to have admitted watering the milk because it was of such good quality, and the solicitor admitted he could not go behind that. —The defendant firm was ordered to pay a fine of £20 and £5 5s. costs.

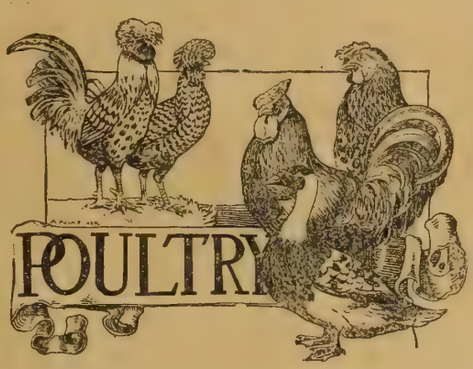
Iron Acton Fair.—This fair, which is held twice a year, took place on the 25th inst., and was very largely attended. There was a capital supply of store stock (for which the April fair is principally noted), and for prime quality animals a keen competition was experienced. his brisk trade was not, however, extended to the secondary and inferior beasts, which realised poor figures. Stirks changed hands at from £20 to £28 per pair, two-year-old steers fetched from £20 to £36 per pair, grazers from £12 to £18 each, yearlings from £10 to £17 per pair, cows and calves from £13 to £18, and springers realised up to £17 10s. each. The sheep pens were well supplied, and business in this department was good also. Two-tooths fetched 41s. per head, tegs, selling up to 44s. per head, whilst couples ranged from 55s. to 74s. The supply of horses, though not a large one, was evidently ample for the demand. The larger number of horses brought to the fair were of an inferior kind, and consequently but little trade was transacted, only a few animals changing hands at anything over £30.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appointment to H.M. THE KING

The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

Address—CHAS. HEARSON & CO., "D" Department, Ltd.,
235, REGENT ST., LONDON, W.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW, 1898, 1900, 1901.
SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901



TAMLIN'S . .
NONPAREIL
PATENT INCUBATOR

This is the only Incubator that ever hatched 95 per cent. in Competition for Hatching results open to the World.
Guaranteed Automatic.
Best planished Copper Tanks.
Packed ready for immediate use.

200 EGGS	from ...	£5 15	0
100 ,,	,, ...	3 7	0
60 ,,	,, ...	2 15	6
30 ,,	,, ...	2 7	0

TAMLIN'S SELF-SUPPLYING LAMP
Patent No. 20,182.
Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.
W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY
The Largest Manufacturer of Incubators in the World.

Rearing Turkeys.

The breeding of turkeys is on the increase, as the demand for fine English-reared birds is very large at Christmas time in all the large cities, as well as in country places. Those who do not indulge in the luxury of poultry to any extent during the year invest in a good turkey when the festive season to which all English people look forward comes round. To supply this demand there are quite a number of farmers' wives and daughters who make quite a special feature of turkey-rearing. It is believed by many that it is an extremely difficult matter to rear turkeys, and for this reason some of those who have very suitable accommodation for them are afraid to venture. In the first place it is no use for anyone who has many engagements away from the farm during the spring to attempt to rear turkeys, unless they have someone whom they can trust to look after them in their absence, as they require constant attention for the first two months. Those who live on farms where there is plenty of pasture land, or a wood or two, would do well to go in for turkey rearing, as when these young birds are hatched on a large scale they require ground to roam about over, and on farms there are good outbuildings which answer well for the young birds to sleep in at nights after they have left the hens, so that in two respects farmers have a distinct advantage over others in the matter of turkey-rearing for market.

There are two classes of turkey-rearers, those who bring up a good many broods for the purpose of selling the young birds for Christmas, and those who just rear a brood of birds, frequently on very limited space, for their own consumption, with the addition of one or two for friends who buy them at market price, and thus provide the amount expended on the food for the young birds. It has been said that it was impossible to rear turkeys in a back yard, but this statement has been disproved many times during the last two or three years, as quite a number of poultry keepers have gone in for a brood of turkeys. It is with the former class that we have to deal principally, those who rear turkeys on a large scale for market purposes. The trouble in rearing is much lessened when the young birds are bred from healthy unrelated parents. The habit of breeding from one's own mate bird—the best out of the flock reared the previous year—mated with related hens and pullets, is, fortunately, on the decrease.

Importance of Well-bred Stock.

Much of the difficulty experienced in rearing young birds might have been prevented had turkey rearers realised before that in order to be successful it is absolutely necessary to have an entirely unrelated male bird mated with their stock hens. Turkeys need to have all the stamina it is possible for them to have in order that they may thrive and grow to that large size which is so essential in order that they may be really profitable. Young birds hatched from healthy unrelated parents do not require nearly as much attention or cause the same anxiety to their owner as do those hatched from related birds, and which are soon found to have no strength or stamina to battle against the ailments which sooner or later they have to contend with. Young turkeys which are hatched from hardy parents thrive wonderfully if they receive the proper care and treatment, and they well repay the trouble taken with them; whereas those which have no constitution, owing to in-breeding, are very difficult to rear at all, and as a matter of fact, quite a large percentage of these die, and thus give colour to the theory that turkeys are delicate, whereas their loss is due to the neglect of the theory we have so long advocated, that poultry of all kinds to be really profitable, hardy, and easy to rear, should be bred from unrelated stock. The best layers in fowls, and the finest birds in turkeys, and the largest, quickest growers in ducks and geese are invariably those which have been bred from entirely unrelated stock—the fresh blood thus introduced means increased energy in the young stock.

Another mistake which was made by turkey rearers in the past was that of breeding from birds which, instead of being kept in store condition, had been fattened to get size and weight. Those who have been unfortunate enough to rear turkeys from this class of stock bird have had several serious features to deal with. First of all, the pullets and hens which have been thus fattened are invariably late in commencing to lay, due to the egg organs being embedded in fat, and thus prevented from becoming active, as they would otherwise be. In addition to late eggs, many shell-less or thin-shelled eggs are produced, as stock birds that are over-fat are generally deficient in shell-forming material, and not infrequently there are several deaths amongst the pullets owing to inflammation of the egg organs, due to the skins of several broken eggs, which could not be laid owing to the passage being so clogged with fat. All these casualties can be avoided by care being taken to select stock birds with large frames in preference to those which are heavy, and whose weight has been gained by fattening foods. All stock birds should be in breeding, not killing, form.

(To be continued.)

Death of Mr. Shepherd.—A well-known breeder of Shorthorns has passed away in Mr. Shepherd, of Shethin, Sarves, Aberdeenshire, whose death last week will be greatly deplored by northern agriculturists. Mr. Shepherd had reached his sixty-second year, and is survived by Mrs. Shepherd and a large family.

The Corn and Flour Tax.

Deputation to the Chancellor of the Exchequer.

On Wednesday afternoon the Chancellor of the Exchequer received at the Treasury a deputation of flour importers, including delegates from London, Glasgow, Liverpool, Belfast, Bristol, Dublin, Leith, and Hull, who desired to state reasons against the proposed tax on flour. Mr. Alban Gibbs, M.P., introduced the deputation, which included Mr. Lawrence, M.P., and Mr. Hunter Craig, M.P.

Mr. Klein (London Flour Trades' Association) said they wished to represent the injury that would be done to a large and important section of importers in the British Isles if the present tax on flour should be maintained. They recognised that the revenue was a necessity, but it would be impossible for them as importers to carry on the flour trade to the same extent as they had been doing if such a high differential rate as 5d. per cwt. were charged upon flour and only 3d. per cwt. on wheat. Taking the Chancellor's own figures, there was a preference against flour of 14 per cent.

Mr. Law (Glasgow), Mr. Clow (Belfast), Mr. Mahony (Dublin), and Mr. M'Ilroy (Bristol) having spoken

The Chancellor of the Exchequer, in reply, said the deputation related solely to wheat flour and wheat, and it was impossible for him to consider the grain and meal duties entirely from that point of view. It was absolutely impracticable, in imposing a duty on grain generally, to make any difference between one kind of grain and another. The duty on meal under the old registration duty was, of course, not a duty on fine flour only, but on all the products of grain. It was not a question between importers and millers merely, so much as between wheat and flour. The imports of flour compared with the imports of wheat had been enormously growing in recent years. He could only say that he would consider the arguments which had been addressed to him, together with the memorial with which he had been supplied, but he was bound to add that even accepting their estimate of 72 per cent. of flour out of 1cwt. of grain, leaving 28 per cent. offal, it seemed to him that now the duty on offals had been reduced it was absolutely on the same footing as the original duty, which lasted from 1864 to 1869, and about which no one from a flour point of view complained at the time. They altogether ignored the fact that under the old duty offal paid 4½d., which was as much as the finest flour, and now he was reducing the duty on offals. That affected the case very materially. They simply dealt with the question from the point of view of flour; he had to deal with the whole question; and he did not think it was for the benefit of the people of this country that imports of flour should be substituted for imports of grain. He could only add that, by their own showing, they were better off than they were under Mr. Gladstone's tax, but he was not satisfied that they ought to be better off still.

Farmers and the Budget.

The Warwickshire Chamber of Agriculture considered the Budget proposals affecting agriculture on Thursday. It was resolved that the corn and flour duties were an honest attempt to place the burden of taxation equally upon every section of the community.

The Worcester Chamber of Agriculture have carried a resolution congratulating the Chancellor of the Exchequer on his courage in reviving the "registration duty" on corn; but the increase of the price of bread and food stuffs which had not paid duty was condemned.

On Monday the Tadcaster and District Chamber of Agriculture passed unanimously the following resolution: "That this meeting of Yorkshire farmers thank the Government for the effort to restore some measure of prosperity to agriculturists, but that they are strongly of opinion that the duty on flour should be increased to 1s. 3d. per cwt."

Opinion of Mr. Beckett Faber, M.P.

Mr. E. Beckett Faber, M.P., addressed a large gathering of Conservatives of the West Hants Division at Grateley on the 26th ult., and in the course of his address referred to the corn duty. He said the duty was a very small one, and would not, he was afraid, help the farmers much, but it was put on to raise necessary revenue. He had been a Free Trader all his life, and had spent most of his time in the large towns. But he knew that at present things were far more prosperous there than in the country, and it was only fair that the more prosperous portion of the community should come to the help of those living in the country, and bear its fair share of the taxation. This was the more urgent responsibility because the large towns were recruited from the country districts, which in that way had become depopulated. So that if this small duty, besides raising the revenue which was needed, should be of any assistance to the country districts, the people of the towns should not regret that fact. (Cheers.)

Horse-Owners on the Grain Duty.

In the House of Commons on Thursday Mr. F. Wilson asked the Chancellor of the Exchequer if his attention had been called to a statement issued by the London Road Car Company, showing that the tax on corn would cost the company £83 15s. per week, equal to a tax of £9 11s. per annum on each of the 456 omnibuses run by the company; and whether, seeing the additional cost the tax would impose on horse owners, and the effect it would have on horse breeding in England, he could see his way to let in maize and oats free.

The Chancellor of the Exchequer in reply said: My attention has been called to the statement in the question, but it is clear from a letter I received from the company that their alarm is due to the recent exceptionally high price of maize, as compared with the price three or four years ago, and fear that this may continue, rather than the effect of the duty. I do not think the duty will have the effect on horse owners and horse breeding generally which the hon. member seems to anticipate; but, in any case, I cannot exempt maize and oats from the duty.

Lord Fitzhardinge's Views.

Speaking at his Ladyday rent audit, at Berkeley, on Wednesday, Lord Fitzhardinge said some people had got it into their heads that the tax on corn was going to make the fortunes of the farmers. Other people thought the landlord would immediately raise the rent, so that the farmers would be no better off, but if landlords tried this on they would not have such large gatherings of tenants as that which he was addressing. He thought the duty on corn would eventually do some good—it would slightly raise the price for those who grew corn in the country.

Trades Union Congress to hold a Conference.

The Parliamentary Committee of the Trades Union Congress, at a special meeting on Wednesday, after a long discussion on the corn tax, unanimously resolved to summon a conference in London for Tuesday, the 27th May. The committee were unanimous in their strong expressions of disapproval of the imposition of this tax as being destructive to the good sound fiscal policy of this country, contrary to the wholesome principles of free trade, and a determined attempt to drive in the thin end of the wedge of the old protective laws which deprive the working classes of cheap bread.

Liverpool Chamber of Commerce and the Duty.

At a meeting of the council of the Liverpool Chamber of Commerce, held on Tuesday, Mr. G. H. Cox brought forward a resolution condemning the proposal of the Chancellor of the Exchequer to impose a duty upon grain, on the ground of its injurious effects and that it was opposed to the free trade policy hitherto pursued. An objection was made to the resolution on the ground that it was political. It was resolved to refer it to the General Purposes Committee, by whom it will be discussed in private.

Milk-Blended Butter.—In the King's Bench Division on Wednesday, the Lord Chief Justice and Justices Darling and Channell heard a new point raised in regard to the "blended butter" of Messrs. Pearks, Gunston, and Tee, by an appeal from the dismissal by the justices of Aldershot of an information charging them with selling gargarine, the fat of which contained more than 10 per cent. of butter fat. The substance before them contained 73.5 of butter-fat and no other fat, and their worships came to the conclusion that it was not margarine as defined by the Act of 1887. Mr. Danckwerts, K.C., in supporting the appeal said the Act of 1887 described margarine as a substance prepared in imitation of butter. Justices Wills and Kennedy had held that Pearks' "blended butter" was not butter. It so became, he argued, something prepared in imitation of butter, and not being butter itself, it must be margarine within the meaning of the Act of Parliament. It could be nothing else. Mr. Asquith, for the respondents, ridiculed the argument advanced by the other side, which came to this, that whatever notice was given to the purchaser, and however much the purchaser might desire to get the mixture and consume it, and however wholesome the substance might be, yet it must not be sold. The Lord Chief Justice said that in his opinion the substance which was being sold was butter and milk, and he held that there was nothing in the Act of 1899 which forced him to say that butter and milk mixed together must be sold as margarine, or must contain less than 10 per cent. of butter fat. He considered that the magistrates had come to a right conclusion, and that the appeal must be dismissed, with costs. Justices Darling and Channell concurred.

Cumberland Agricultural Society.

The annual meeting of the Cumberland Agricultural Society was held at Carlisle, on the 19th ult. Colonel Irwin, of Lynehow presided, and there was a good attendance. The statement of accounts, which showed an increased balance in favour of the Society, was passed on the motion of the chairman. The council were re elected. Captain Standish was appointed president, and the Mayor of Carlisle vice-president, for the year.

The chairman announced that the Carlisle city surveyor had condemned the Society's grand stands on the showfield, and the Society would not be able to use them again. He did not know whether the condemnation of the grand stands was the result of the lamentable accident on the Ibrox Park, Glasgow. The Society are not holding a show this year, and have voted 150 guineas to the Royal, of which they have so far raised about £70. They made a profit of about £80 on the last show.

Suggested Northern Successor to the Royal Show.

Mr. Watt, of Knowfield, asked the Society to consider seriously whether it would not be desirable to move towards getting up a large exhibition—a rotating show covering the four Northern counties on the English Border and the three Border counties on the other side. Carlisle was this year to see the last of the peripatetic shows of the Royal, the prestige of which, so far as country exhibitions were concerned, had gone. In the Northern counties, where so much stock was produced, a large exhibition like the Yorkshire Show, or the Bath and West of England, or the Lancashire, would be an excellent arrangement. It could be held one year at Carlisle, the next at Durham, the next at Newcastle, and then at Kendal, and so on, on the other side of the Border, the local shows continuing as they are, except that on an ocasion like the visit to Carlisle the Cumberland Agricultural Society's Show would merge in it.

Mr. Bell thought they could get a show on the Border equal to the shows Mr. Watt had named. They had the material, and only energy on the part of those interested in agriculture was wanted to make it a great success.

The chairman said he would be very pleased to further the proposal, which had been in his mind a considerable time, but he thought the time was hardly ripe for ventilating the subject thoroughly. They should get the co-operation of other Societies, and he would go into the matter, and hoped to report what the council had done.

Mr. Tinniswood (Rosebank) said he had been approached by farmers with the same proposal. A conference on the subject in the Royal Show week would be opportune, but a great deal of work would be necessary before that.

Mr. Watt suggested that the secretaries of the various shows be written to and asked to bring the subject before their committees. He would like to see the Highland and Agricultural Society cross the Border and take in the old part of Scotland; but he feared some jealousy would arise, and whether the Highland would care to cross the Border or not he did not know. The matter was then allowed to drop.

FOR FINE HEALTHY CALVES USE
VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

IMPORTANT NOTICE.

TO CONTRIBUTORS & ADVERTISERS.

In consequence of Monday next being a Bank Holiday, the MARK LANE EXPRESS will be published on SATURDAY, MAY 17.

All communications for that issue, whether for the Editor or Orders for Advertisements, must reach this Office not later than the first post on FRIDAY MORNING NEXT.

LAND-AGENTS: GOOD, BAD, AND INDIFFERENT.

Our leading article of last week touched the fringe of a very big question—one replete of problems as yet unsolved by the legislature—involving the conflicting rights of landlords and tenants; the privileges inherited by the former from the not yet obsolete Feudal System; and the principles of moral right, class interests, and the social well-being of the community. All these influences weigh on the land-agent continually in the fulfillment of his duties, and it depends very much what he is in himself as to whether he be a blessing or a curse to the tenantry of the estate he has the management of. He is the landlord's *alter ego*, often, it is true, a mere machine hired to carry out the unseen will and purpose of the owner; but in a great many other cases the real arbiter of the tenant farmer's destiny. We are bound to assert also that there are cases, perhaps not a few, in which he reveals himself an officious meddler, as the agent alluded to last week was, who objected to a farmer selling flints which had to be picked off from the surface of the land by him, to prevent crops being injured.

There are land-agents, good, bad, and indifferent. His Grace the Duke of Portland revealed to the world a noble specimen of the good when, at the Welbeck Tenants' Show Luncheon, he presented a testimonial to his old, experienced steward, Mr. Turner, and made declaration before the large assembly that filled the Riding School, that the whole of the benefit his tenants has derived from valuable stud animals being placed at their service, together with every other practical means to aid them in their industrial pursuits, which had been adopted and had proved beneficent, he credited to the wise counsels of his old and esteemed friend, who had long been managing the estate when he, the Duke, came into possession, a young, inexperienced novice. Mr. Turner had suggested the tenants' show, and, indeed, everything else that had proved an advantage to the tenants of the Welbeck estate.

Alas! that there should be any reverse side to such a pleasant picture of social life, of which we are quite sure there are numerous *fac similies*, although none perhaps so marked and striking. The principle of "live and let live" is not only studied, and made to regulate the management of a great many estates, but the owners and land-agents of many of them have the well-being of the occupying tenantry entirely at heart. There are too many other cases, however, of agents entirely unfitted to have the management of agricultural tenancies entrusted to them, being over-officious to meddle with the business concerns of the farm-occupiers, when they think by so doing they can serve the interests of their employers in any way, and when the farmers are under such a one, and neither he nor the owner have any knowledge of practical agriculture, and only regard tenants as debtors who have stipulated to pay so much rent, and must be made to conform to customs of country or certain antiquated conditions, those who cultivate the land are often totally unable to make the best of it, and cases of cruel hardship and wanton injustice have sometimes been suffered.

An instance of this nature came to our knowledge not long since, of one of the best farmers of a very wide district being thus treated. He had entered early in the eighties on a very neglected farm, filthy and sadly impoverished, but he perceived that money was to be made by bringing it back to the state of high fertility the farm had been in before being subjected to bad management. He went to work regardless of expense, steam-cultivating the foul fields, and treating them in every respect as if the property was his own. When asked if he was not a little injudicious to enter on an enterprise of such magnitude, without a lease or the security of a tenant-right agreement, his reply was:—"I have one of the best landlords in the kingdom, one who has never been known to treat his tenants otherwise than well. Both my landlord and his intelligent, honourable agent have a long-standing reputation for assisting improving tenants by every means in their power, and I want no other security." So this enterprising man very soon transformed the wilderness into something like market-garden fertility, getting prizes for root crops in competition with those of three or four counties, and many premiums for live-stock as well. All went well for a dozen years or more, but then the property changed hands, and the new landlord placed the management of his estate into the hands of an agent of the worst kind—one who fanceid that a land-agent's duty was that of closely watching the tenants, to see that they consumed on the land the whole of their hay, straw, and roots, and made sale of none of it. He interfered with our improver in a most singular way. In a year of general turnip failure, the latter had a small field of young, sweet white turnips, that were worth ten times as much for human food as for stock-feeding. He therefore made sale of some of them to the market men who came long distances to obtain such an article of scarcity. This was sheer robbery of the landlord in the eyes of this over-scrupulous agent, the offence being magnified in his opinion into one of great magnitude. He even went so far as to order some of the costermongers to take the roots back. He was probably unaware that a few cwts. of artificial manure would restore to the soil a great deal more fertility than twenty or forty tons of such young turnips could have taken out of it; and, as the offending farmer was in the regular habit of employing large quantities of chemical fertilisers, as well as oilcakes and other feed-

ing stuffs, raising a storm in a teapot of such a paltry nature was, of course, one which no sensible agent, having a knowledge of the true nature of things, should have made. Indeed, most agents would be heartily ashamed to do so.

Does not this show, however, how careful landlords should be in the selection of agents? A great many of them in the old days were accustomed to entrust the gathering of their rents, and almost everything relating to the management of their estates, to the family lawyers, men who would insist on the old form of agreement, handed down from the times of the Tudors, being signed by tenants. Those who wanted farms did not object to attach their signatures to them, as they could not get possession of the holdings without doing so, but in nine cases out of ten they never fulfilled them to the letter. In present times there is by no means so general a delegation of land agencies into the hands of lawyers. Many of our old nobility and country gentry are excellent agriculturists themselves, and would not think of losing a good, improving tenant because of his demand to crop as he liked, and to sell whatever he deemed best. Indeed, the straw of a wheat crop is often of far more value to dispose of than the grain, and some farmers entirely reverse the ancient order of procedure by selling straw, and placing grain into the mouths of stock. If it is pre-eminently necessary that farmers should adapt themselves to the times, it is no less so that those who have the management of estates should follow their example.

By a Man of Mark Lane.

Some idea of the great grain crops of Canada is given by a telegram from Ottawa, on Monday, which stated that, according to official estimates, there are still 18,000,00 bushels of wheat in Manitoba and the North-Western Provinces available for market. The Canadian Pacific and Canadian Northern Railway will require from May to September 176 cars a day more to bring this quantity to Lake Superior. Last autumn 224,305 acres of new land were broken, equal at a low estimate to a million bushels increase over last year's harvest.

The New York correspondent of the "Standard" states that American millers reckon the English duty gives British millers an advantage of nine cents per barrel over American-ground flour, which has been exported upon a margin of three cents profit. Unless the British trade is to be abandoned, one of three alternatives is necessary. Firstly, freight must be cheapened. The Millers' Federation is promoting an effort to have flour carried as ocean ballast, instead of wheat, and without discrimination in favour of wheat, according to the custom of the American railways. On Tuesday the St. Paul Railway quoted an identical rate, 20½ cents, on the export of either flour or wheat, being a reduction of 2½ cents upon flour.

Secondly, flour should be regarded as an object of reciprocal tariff concessions. This promotes the pending reciprocity Treaties. Thirdly, the milling trade, which exceeds the iron trade in amount, might form a trust analogous to the Steel Trust. Then export prices could be reduced, and the domestic price maintained. This rather shocks American observers, who thought the new British duties would burden English industries rather than American, but find the tax being divided between American carriers and producers, with the prospect of American food becoming cheaper abroad than here.

In the second forecast of the wheat crop of the North-West Frontier Province of India, dated February 22, and issued by the Revenue Commissioner of the Province, it is stated that there has been no rain since the issue of the previous forecast, and further sowings could not therefore be made. The area under wheat is now estimated to be 833,600 acres, or 19,600 acres less than the previous estimate. The crop is suffering from the prolonged drought, and unless rain falls shortly there will be a general failure on dry lands, and on irrigated lands the outturn will be considerably reduced.

The receipts on account of revenue from April 1, 1902, when there was a balance of £8,566,947, to May 3, 1902, were £15,680,067, against £13,515,925 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £22,771,739, against £22,883,279 to the same date in the previous year. The Treasury balances on May 3, 1902, amounted to £4,045,775, and at the same date in 1901 to £3,967,445.

By a Lobbyist.

Sir Edward Strachey has reason to congratulate himself on his legislative achievement of this week. The young baronet has not yet secured a complete Parliamentary acceptance of his Outdoor Relief (Friendly Societies') Bill, but at least he has secured a renewed declaration in favour of the humanisation of our poor law system. Of course, Sir Edward was in his effort mostly moved by the experience of the rural districts; and I must confess that I, with him, have always thought it a grave anomaly that in giving relief guardians should take into consideration the amount a man may have received from his friendly society as sick pay. All Sir Edward asks is that, in spite of the fact that a man receives five shillings a week as sick pay, he should not be excluded in a time of distress from also receiving poor law relief. If he receive more than five shillings, then the sum should be taken into consideration. What is the value of the argument that to allow a man to enjoy five shillings a week beyond the relief from the public funds would create an inequality of treatment. Surely there ought to be inequality of treatment between the thrifty and the thriftless? To withhold outdoor relief in a time of stress from a poor fellow who may, by his own providence, have secured himself a pittance of five shillings a week, is simply to penalise thrift.

The fact that only nineteen Members could be found to support this penalsing policy is, in its way, a portent. I do not regard it so much as an indication of resentment against the Poor Laws, or their present administration, as I perceive in it a resolve to do naught to discourage, more particularly in the rural districts, association with friendly societies. I would go further, and say that I also perceive in it an anxious desire that any scheme of old age pensions should be carried out in alliance with these organisations. I must confess that I do not altogether sympathise with Mr. Long's assertion that the Bill does not propose to give preference to members of friendly societies as such. Of course, no legislator would give preferential treatment to a man simply because he belongs to any special organisation. What, however, the sane legislator should do is to encourage rather than penalise the man who, low as his wages may be, has not permitted himself to forget that there must come a time of trial and travail. Mr. Long justified my contention by his own emphatic declaration that "he would make the life of the man, who, by his own fault, made himself and his wife and children paupers, not an easy one in the workhouse." This may not please the prophets of maudlinism, but it should delight all who have any regard for the rates, and who desire to foster providence. Sir Edward Strachey's Bill was conceived in the interest of both.

I am persuaded that what has been described in the discussion on the Education Bill as the anti-rates party in the House of Commons is stronger than is generally comprehended. I do not believe that it is strong enough, as some critics have prophesied, to destroy the Bill, but I do believe it is strong enough—provided the Liberals and the Irish act in alliance with the dissentient Conservatives—to imperil the mea-

sure. I have myself thought, from the moment of the inception of the Bill, that a rate-impost would place a most ungenerous financial burden upon the counties—a burden, in fact, that may induce bitterness against the entire educational system. The purpose of the wise financier should be to moderate the burden of taxation. Let the burden exist, if you will, but let it be so borne as to press indirectly, and with no unnecessary heaviness. To impose the taxation by means of a county rate will, in my view, simply intensify the burden. I believe it would be wise policy to make the entire cost of education an imperial charge, and I am persuaded that if you did so you would go a great way towards popularising it in the eyes of the ratepayer. Major Rasch, who has as yet been the chief spokesman of the section advocating what I may describe as the Imperial Exchequer principle—I believe, by the way, that this section will be finally led by Mr. Chaplin—may not go so far as I do. At least, however, the gallant member will welcome the emphatic assertion that any further increase on the county rate will tend to the unpopularity of the educational system.

I hope these Conservative dissentients will not be chloroformed into acquiescence to the county-rates' proposal by Mr. Balfour's assurance that the Government is in favour of a reform of rating, and that any proposal dealing with such a question must include educational charges. We have been long a-waiting for this reform— so long that we are weried of our own anticipations. We shall have, I am fain to prophesy, longer still to wait before we secure any satisfactory redress. Apart, however, from this, I would remind these M.P.'s that precedents are a cheap influence in the House of Commons. If you can prove a precedent you can almost justify anything. The acceptance by the House of the county-rate proposal in the Education Bill will be regarded not as an encouragement to relieve the county ratepayer, but rather as a justification for placing more on his unfortunate shoulders. The eternal argument of Parliament is what has been done can be repeated. Hence this proposal should be resisted to the utmost. I would urge Major Rasch not to be turned aside from his purpose even by the assurance that it will imperil the prospects of the Bill.

We have now had a sufficient opportunity of gauging the depth of the agitation against the bread tax. It is confined almost entirely to the House of Commons, and even there it is but tepid and weak. The country has refused to be moved. It has gone on placidly indifferent to all the heroic apostrophies to the memories of Peel and Cobden and Bright. It has refused to believe in the lurid pictures which have been limned of a sure and certain misery should this tax be accepted. It has refused to follow the political sextons into the charnel-house of out-of-date anti-Protection orations. It has gone on its way unheeding, unconvinced, careless of the ranters of the House of Commons and the ravers of Hyde Park. The whole business has fallen flat and the first pass of an increase in the price of food has been followed by an assurance that that very price will readjust itself. The tax will be imposed, and in the end I doubt that anybody will be a penny the better or a penny the worse.

At all events, there is a growing conviction in the House of Commons—which it will be remembered I recorded last week—that the tax will not operate to the serious and immediate advantage of the rural community. I doubt more than ever now that it can be regarded even as a herald. The present tax has provoked no feeling but to emphasise it or to extend it would give colour to the feeble wishy-wash that a conspiracy is meditated against the cheapened food of the people. I repeat my view that the chief value of the tax lies in the fact that it indicates that a more sympathetic attitude wih the agricultural interest has been born. It is, in all sooth, an excellent broth. We may well rejoice in its advent if a friendly measure reforming the system and incidence of rating makes an early appearance. I wonder, though, if Mr. Balfour believes in his own promise. When I have put this question to M.P.'s they have shaken a doubting head.

PRACTICE WITH SCIENCE.

National Diploma in Agriculture.

As the result of the examination held this week at the Yorkshire College, Leeds, by the National Agricultural Examination Board (consisting of representatives of the Royal Agricultural Society of England and the Highland and Agricultural Society of Scotland), the following ten candidates, placed in order of merit, have become entitled to receive the National Diploma in Agriculture:—

1. Patrick Fowlie, The Agricultural College, Aspatria.
2. Thomas Milburn, Harris Institute, Preston.
3. William Maitland Findlay, Agricultural Department, The University, Aberdeen.
4. John Percival, Harris Institute, Preston.
5. Edward Porter, West of Scotland Agricultural College, Glasgow.
6. John Edwin Rigg, Harris Institute, Preston.
7. Abel Edwin Jones, University College of Wales, Aberystwyth.
8. James Bradshaw, West of Scotland Agricultural College, Glasgow.
9. John Forrest, Harris Institute, Preston.
10. Geoffrey Steele Henderson, West of Scotland Agricultural College, Glasgow.

The following twenty-six candidates, placed alphabetically, have passed Part I. of the examination, and are thus entitled to sit for Part II. of the examination within the two following years (1903 or 1904):—

Robert Charles Andrew, Harper-Adams Agricultural College, Newport, Salop.
John Bateson, Harris Institute, Preston.
Herbert Bowman Beddall, Kempston Manor, Bedford.
Francis Howard Billington, Cheshire Agricultural School, Holmes Chapel.

Mr. A. D. Hall, M.A.,

Principal of the South-Eastern Agricultural College, Wye, Kent, who has been appointed by the Lawes Agricultural Trust Committee to succed the late Sir Henry Gilbert, F.R.S., as director of the Rothamsted Experimental Station.

John Edward Bridges, Deighton Lane, Batley, Yorkshire.
William Frank Craske, South-Eastern Agricultural College, Wye, Kent.
John Ellis, Pantybarwn, Llangwyryfon, Aberystwyth.
Benjamin Leslie Emslie, Greenfield, Rothes, Morayshire.
Henry Brougham Hutchinson, Harris Institute, Preston.
Samuel Gilbert Isitt, Harper-Adams Agricultural College, Newport, Salop.
Percy Hutchinson Lamb, Clapham Vicarage, Yorkshire.
Alexander B. Lamont, West of Scotland Agricultural College, Glasgow.
John Miller Lonsdale, Harris Institute, Preston.
Hubert Martin, Cheshire Agricultural School, Holmes Chapel.
William James Mcgaw, 142, Clifton Park Road, Belfast.
Edward B. Osborne, 9, Cavendish Park, Barrow-in-Furness.
John Porter, West of Scotland Agricultural College, Glasgow.
Roger Prosser, Gerefordd, Talgarth.
Charles E. Randolph, Grove House, Helifie'd, Yorkshire.
Thomas Rule, Agricultural College, Aspatria.
Ferdinand P. Schweikher, University College of Wales, Aberystwyth.
Robert E. Severs, Scotton Fields, Richmond, Yorks.
Andrew Steedman, Royal College of Science, St. Stephen's Green, Dublin.
James G. Stewart, Nether Blairock, Dalkeith, Cullen, N.B.
William T. Stockley, Harris Institute, Preston.
James Wood Thompson, Harris Institute, Preston.

Mr. Andrew Scott, laird of Newton, Hawick, and the holder of several large pastoral farms, died on Tuesday at the ripe age of 80 years. He formerly transacted a great amount of business in Newcastle Cattle Market, being the tenant of Langshawburn and Dalgleish, two of the largest pastoral holdings in the South of Scotland, besides other farms. Latterly he resided at Borthaugh, of which one of his sons is the tenant. Other sons are farmers in Newton and Drinktone respectively.

CORN WEEVILS.

Their Life-History, and How they are Influenced by Heat and Moisture.

(By Fred V. Theobald, M.A., F.E.S., Etc.)

In the mediæval ages one could imagine people believing in special creations, in spontaneous generation, and other such-like weird theories, but that such people can be found in this twentieth century seems ludicrous to state. Yet it is a fact that there are men living who think that every grain of wheat has the germ (whatever they mean by that) of a weevil in it and that, however long it is kept, given proper conditions, heigh presto! the weevil will appear. I have even heard people say that heat and moisture will generate these insects. I should not like to take up any more of your space by referring to such antiquated and insane ideas. What I wish to bring before people connected with the marine transit of corn, granary-keepers and others, is the life-history of the two weevils that do the damage, and the causes which tend to check or facilitate their increase during transport and in the granary, in order that certain very erroneous impressions may be dispelled. This article deals with scientific facts which crush the practical man's erroneous theories held by a minority of people connected with the wheat trade. Science is fact, and unless the practical man's theory agrees with a scientific fact, who can deny but that his theory is wrong? One will find, however, that in nearly all cases the practical man's theory is correct, agreeing with the scientific facts of the case.

Two Kinds of Weevils in Corn.

There are two species of weevils found attacking corn, one the granary weevil (Calandra granaria), the other the rice weevil (Calandra oryzae). The former is a temperate-climate insect, its home being originally the Mediterranean area; the latter is tropical, its native country, seemingly, India. The corn-weevil is dark brown to rusty brown in colour, the part of the body called the thorax with oblong punctures, and it is devoid of wings; its head is prolonged into a beak or rostrum; in size it varies from 1-12th to 1-7th of an inch in length. The rice-weevil is very like the preceding, but it has an ample pair of wings, and is sometimes pale in colour, often having four rusty-red spots on the body (elytra); in length, it varies from $\frac{1}{8}$th to 1-12th of an inch. The former is by far the commonest in this country, and the only one I have succeeded in breeding in any numbers. I have only been albe to breed C. oryzae in a Hearson's incubator at 70deg. F. (no moisture that one could detect). It will be seen that there are differences of great economic importance in the two wheat-weevils.

Life-history of the Weevils.

The changes through which these two beetles pass are practically the same. The period of development is so elastic that one can only give approximate dates. Heat greatly increases their reproductive powers and hastens development; cold, on the other hand, retards growth and checks reproduction. The female weevils lay their eggs in a small hole, bored by means of the proboscis, the hole being subsequently closed by saliva. A single egg only is laid in a wheat grain, but several may be placed in a maise cob. The egg gives rise to a small white magot, fleshy and footless, which feeds on the endospermal (flour) part of the grain, never touching the germ or sprout of the seed. In this position it changes to a dormant stage—the pupal stage—in which the outline of the legs, wings, feelers, etc., may be seen. In this stage the maggot is changed to the beetle. The pupal skin bursts, the bettle emerges, and then eats its way out of the grain. The time taken by these stages varies according to climate and season. In England, I have found the development takes from 32 to 47 days in a room of ordinary temperature. In some cases development has been retarded to 13 weeks. In warm, dry grain, I have hatched C. granaria in 20 days, at a temperature of 70deg. F. Other observers have found three weeks the period of development, and I feel confident that in warm climates it may even take less. Thus, the warmer the climate the greater the increase of these pests; and thus, the longer the time taken by a vessel coming through the tropics the greater the damage to the cargo, especially when the rice-weevil is the enemy. From the way I have seen the weevils work during observations extending over 12 years I should say, given favourable conditions, i.e., plenty of

warm air and dry grain, that a cargo of wheat unless stored in bulk, would be completely ruined in eight months, standing in a tropical climate, if infested with weevils. Many samples I have kept in the warmth at my laboratory at the Wye College have been reduced to dust in a year.

Number of Broods.

In Great Britain the corn weevil may pass through two broods or generations a year in warm mills and granaries. The rice weevil I have never seen breeding. In warm climates the number of brood varies from four up to six or eight in the year.

Other Food Attacked by Weevils.

Practically all grain, rice, buckwheat, chick peas, beans are damaged by these two species, both maggots and beetles do the damage. The beetles themselves also cause harm to groceries, flour, meal, bread, cakes, and various other stored commodities, and they have also been known to attack ripe and ripening fruit.

Some Important Differences Between Corn and Rice Weevils.

The great differences between these two beetles is, first, that the rice weevil, being tropical in origin, will not breed to any extent except in a warm climate, but the grain weevil, coming from the temperate zone, not only breeds normally in that zone, but much more rapidly when in a tropical or sub-tropical climate; secondly, the rice weevil, being winged, can more freely invade masses of corn than the corn weevil. In the latter species the grain must be put near the beetle, or the beetles must be carried to the grain; in the former, quite clean grain may become invaded by the beetles flying to it, either when in the field, in stores, or when the vessel puts into some tropical part. No doubt some cargoes become infested in that way, but the majority are invaded in some extent before leaving the port of shipment.

The Rate and Conditions Favouring Increase of Weevils.

The former of these two subjects depends, as pointed out before, on temperature and season. Curtis estimated that in the South of France one pregnant weevil would account for an annual increase of 6,045. My observations on these beetles kept in a warm room tend to show a much greater increase. We can at once see how a few imported into a mill may cause great damage; we can thus understand how urgent it is that wheat in transit should be sent through tropical and sub-tropical belts with all haste. The longer the voyage, either through a slow boat or by checks from misadventures, the more the cargo suffers if the corn is well ventilated with hot tropical air, and the grain keeps fairly dry.

As to the conditions favouring weevils, there is no doubt warm air and dry grain are the most favourable factors. Ventilation of cold air, of course, checks the weevils, hence is good in this country. Weevils will not copulate in a temperature below 45 deg. Fahr.; they breed most freely between 60 deg. and 70 deg. Fahr. Absence of air is detrimental to them; in fact, they can soon be killed by putting weevily grain in an air-tight bin and a lighted candle inside on the top of the grain, a common Colonial plan for cleaning grain from such pests. The Indian ryot keeps his grain in pits, to keep it free from weevil; weevils are known to work most on the outer layers of corn, hence wheat shipped in gunny bags is more damaged than when shipped in bulk. Why, then is grain shipped in bags? Because, as a cargo, it is not so liable to shift, and so lessens the danger to the ship in heavy weather.

Excess of moisture is most detrimental to weevil increase. This fact a few people seem to take exception to; they need not claim any consideration, however, as their practical knowledge is evidently as chaotic as their scientific. They seem to think that, because you find a certain amount of moisture where weevils occur, the moisture created them. Of course, weevils create moisture by their excrements, and so we are sure to find some moisture where they occur. But between the small amount of moisture generated by weevils, or an excess of moisture due to ingress of sea or rain water, or to excessive precipitation of moisture from damp air is very great. If wheat get wet, mouldy, and black, one finds that weevils will not breed in it—i.e., excess of moisture means scarcity of the pests. Are cargoes of Calcutta wheat only weevily when wet? I scarcely think so. How much wet grain do you find in granaries and mills? Not much, I fancy, from those I have seen, but weevils I have seen working in them galore.

There may be a division of opinion on these points; but let those who believe that the more moisture and less air the more weevils increase try some simple experiments for themselves, and let them try to remember that weevils are like other animals, and create moisture, and not moisture animals.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

Nantwich Cheese Fair.

Mr. R. Challenor, secretary of the Cheshire Dairy Farmers' Association, reports as follows on the cheese fair held at Nantwich on the 1st inst:—"The pitch was about 40 tons. There was a good attendance of buyers. The market opened with a fair inquiry for fine lots, buyers preferring matured dairies. Best lots sold at prices from 58s. to 63s., and medium down to 50s. Prices and pitch about the same as last year's fair." It was officially announced that during the months of May, June, July, and August, which are the principal cheese-making months, two fairs will be held monthly.

Is Irregular Milking the Cause of of Poor Milk?

At Sunderland, on Thursday, several milk-sellers were summoned on charges of selling milk deficient of fat, and an important suggestion was made by the Town Clerk (Mr. F. M. Bowey), who prosecuted.

He said it was the local practice for farmers to milk in the morning, after an interval of 16 or 17 hours after the previous milking, and in the afternoons after a lapse of but seven or eight hours. He suggested that if the farmers would resort to a practice of milking at equal intervals of about twelve hours each the result would be that the public would get the article to which the law entitled them. It was a well-known fact that the milk obtained from a cow after a long interval such as 16 or 17 hours was, though more plentiful, much inferior in quality to that yielded when only a short interval, such as seven or eight hours, had elapsed since the preceding milking.

Mr. John Pattinson, analyst, who was called as a witness, cited a case in which milk taken after an interval of seven hours showed a percentage of 4.3 of fat, while that taken after an interval of 17 hours showed a percentage of only 2.7. If cows were milked at regular intervals there would be no difference between morning and evening milk.

The Town Clerk offered to adjourn the case if the trade would undertake to consider the question of altering their present system of a long and a short interval to a system of equal, or nearly equal, periods.

Mr. K. Storey, who appeared for the defendant whose case was under consideration, agreed to this course, as also did Mr. W. H. Bell, who represented the Northumberland and Durham Dairy Farmers and Milk Producers' Association, in other cases on the list.

Mr. Bell said it must not be taken that he admitted that regular milkings would yield the same quality; on the contrary, he was quite prepared to prove by statistics that the contrary was the case. In one instance cows that were milked four times a day at intervals of six hours gave milk at midnight and at six o'clock in the morning that was 1 per cent. less in fat than that yielded during the day; and in another instance it was found that the milk yielded by a herd of 22 cows at 7 a.m. contained 2.69 of fat, while that yielded at 5 p.m. contained 4.09.

It was agreed to adjourn the cases for a month, Mr. Bell intimating that in the meantime his Association would discuss the Town Clerk's proposal.

IN PARLIAMENT.

HOUSE OF COMMONS.

Water in Butter.

On Monday, Sir E. Strachey asked the President of the Board of Agriculture, whether he was aware that by a recent decision of the High Court butter may be sold to the public which had been adulterated with a large percentage of moisture without infringement of the Margarine Act; and whether he would introduce a Bill to put a stop to the sale of an article which was prejudicial in the interests of the dairy industry of Great Britain and of the retailers and consumers throughout the country.

Mr. Hanbury: I am aware of the prejudice done to the makers of genuine butter, both in this country and the Colonies, by the sale as milk-blended butter, of an article artificially loaded with 25 per cent. of water. The recent introduction of an authorised standard of butter will, it is to be hoped, if standards in such cases are to be of any real value, have the effect of preventing such an article being so sold, but should that not prove to be the case, further steps ought, I think, to be taken without delay to remedy the injustice done to both British and Colonial farmers.

Later in the day, Mr. Joyce asked Mr. Hanbury if Irish salt butter containing over 16 per cent. of water could legally be sold in England provided the amount of water were declared to the purchaser?

Mr. Hanbury: In fixing the standard I gave no effect to the portion of the report bearing upon this question, and I cannot possibly say what the legal decision may be on the point. I cannot suppose that Parliament intended to set up a standard which could be so easily evaded as the hon. gentleman suggests.

The Short Supply of Cattle.

Captain Norton asked the President of the Board of Agriculture, on Monday, whether, in view of the present and prospective short supplies of beef, and the desirability of augmenting the food supply of the country, he would consider the advisability of allowing South American cattle to be landed in this country under the same conditions as those from the United States, and also of removing the existing restrictions on Canadian store cattle.

Mr. Hanbury: In the case of Canadian store cattle the answer is in the negative. With regard to the Argentine cattle, I am bound by Statute to consider not only the existence or absence of disease in the exporting country, but also how far the laws regulating the importation of cattle in that country, and the administration of such laws, secure it against the introduction of disease from outside. With regard to the latter points, I have made representations to the Argentine Government, and I am now awaiting their reply.

Out-door Relief.

On Friday Sir E. Strachey moved the second reading of the Out-door Relief (Friendly Societies) Bill, which, he explained, was introduced at the request of the conference of friendly societies with the object of amending and extending the Bill carried in 1894. It was intended to provide assistance for those who had been thrifty, and to show that it was an advantage to become a member of a friendly society, and, at the same time, to prevent members being penalised by the guardians because they had themselves provided against sickness and accident. Last session the measure passed all the stages to the last without opposition, and the only objection to it from any organised body came from the Charity Organisation Society.

Mr. Gibbs, in moving the rejection of the Bill, said that he objected to it as an independent mem-

ber, regarding his position as a trust and not as the spokesman of any society.

Sir J. Dorington seconded the motion for the rejection.

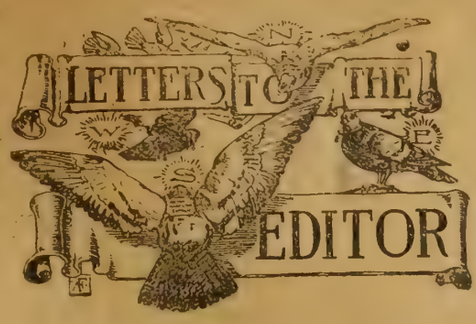
Sir W. Foster said it would be a poor reason for voting against the Bill that it did not recognise all forms of thrift. He should be glad to see it extended so that any form of thrift brought before boards of guardians and tested, up to 5s. a week, should be recognised by them in granting out-door relief.

Sir T. Hoare, Captain Norton, and Sir A. Rollit supported the Bill.

Mr. W. F. Lawrence agreed that the Bill would encourage thrift up to 5s. a week, but it would encourage applications to the poor law with a view of turning that 5s. into 10s.

Mr. Long said he gave his support to the Bill, both as a private member and as the Minister for the time being responsible for the administration of the Poor Laws. He was justified in asking the House to look at the Bill as it really was. It proposed a very small change in the law. The real question before the House was, not whether they were going to make an exception in favour of a particular class of applicants for poor law relief, but whether they would give to such applicant, who, in his days of prosperity, had made an effort to save for himself, but had been overtaken by ill-health and old age, a statutory right to better treatment than that accorded to his neighbour, who had made no such effort. (Hear, hear.) This Bill was an amendment to the Act of 1894, which recognised that especial thrift was deserving of especial treatment at the hands of Parliament. It would be a mistake to offer a negative to this Bill simply because it did not deal with the larger view of the matter. The measure did not propose to give special advantages to members of friendly societies as such, and, in fact, no one could take any advantage under it unless he had put aside from his earnings sufficient to justify the rendering to him of assistance when he became sick or broken down by age. This Bill took the form of a savings bank, the purchase of property, or of any other kind of thrift. If he thought that the proposals were likely to undermine the foundations of the poor law system he would be the last man to support it, but because he took an entirely different view of the case he would vote for the second reading. He would treat a pauper who, owing to his own degraded habits, made his life a burden to himself and those dependent upon him, in a manner that would cause him to realise that if they were bound to keep him in the workhouse it would be only with a certain amount of discomfort. There was nothing in the Bill which could tend to weaken the administration of the poor law, but, on the contrary, he believed that it would strengthen that administration and the position of the boards of guardians. This Bill was undoubtedly a step in the right direction, and as such deserved the support of the House.

The House divided.



For the second reading	262
Against	19
Majority for	243

The Bill was then read a second time.

Dameges to Crops by Noxious Fumes.—The Hon. Cecil Parker, agent to the Duke of Westminster, and the referee appointed by the High Court of Chancery to assess the damages sustained by two tenants of the Dean and Chapter of Chester by the injurious effect on crops and stock of noxious fumes emitted from the works of the Smelting Corporation, Limited, Ellesmere Port, near Chester, has now given his award. The tenants have been awarded sums of £1,951 and £1,534 respectively, and the Dean and Chapter, as landlords, £405.

The Late Mr. Richard Moody.—A very large number of Somersetshire agriculturists attended the funeral of Mr. Richard Moody, of Shepton Mallet, secretary of the Mid-Somerset Agricultural Society. The deceased had been actively associated with that society for over a quarter of a century, being treasurer from 1877 till 1881, and from that as secretary up to the time of his death. He was consequently widely known, and his genial manner endeared him to all with whom he was brought into contact. He was also for thirteen years surveyor of highways to the Rural District Council of Shepton Mallet.

Thirsk May Hirings.—The first of the May term statutes at Thirsk took place on Monday in the Market Square at Thirsk. There was an average attendance of both male and female servants. Farmers were not anxious to make engagements. Good managing farm men, able to do any kind of work and take entire charge, obtained £25 to £26 a year, and cottage found; first hands for farm service £20 to £21, second hands, or good strong plough boys, £15 to £16; and farm boys got £1 for every year of their age. Head farmhouse female servants received £20 for the twelve months, and second girls £19 to £16; cooks and town's places, £18 to £20; general servants, £13 to £15.

Some Recollections of Wiltshire

Sir,—I am extremely obliged to you for the admirable "Seventieth Birthday Number," which reflects the greatest credit on yourself, your staff, and all who were concerned in its production. As my memory—being in my eighty-sixth year—extends far earlier than the birth of the MARK LANE EXPRESS, I will trouble you with some of my reminiscences, and the information I have acquired. Of course, I do not remember the disastrous seasons which came immediately after the close of the war, when rents were so high; but I have copied from the original some interesting particulars of the weather kept by a neighbour, from 1803 until 1821. From it I find that in the year 1816 it rained da yor night from the 6th July until the 20th August, and no hay was made in that time. For the next year, 1817, the weather was nearly as bad, as it rained either in the day or night from the 27th June until the 31st July—31 days; on the 4th July there was very heavy rain, thunder and lightning, and a deep flood. In the next year, 1818, it is recorded that there was no rain from May 24th to September 5th—15 weeks. Hay was £9 per ton. The autumn was splendid.

During the next two years the summers were ungenial, and the war rents, with swarms of unemployed labourers, many of whom then received pay from the poor rates, must have made farming a poor pursuit, and the trials were further aggravated by the "terrible depression" in the end of 1821, all 1822, and part of 1823, from the alteration in the currency. This I can remember; but my earliest recollection is the most fearful storm of thunder and lightning ever known in these parts, on the 30th July, 1819. It occurred about 1 p.m., just at the very time when a man of Wootton Bassett, Robert Watkins, was being hanged for murder and highway robbery by the side of the road where it was committed, between Paiton and Cricklade, a few miles from Swindon. Except for the smash among the country banks about 1825, when many collapsed and a hundred millions of money was lost to the country, the times for farmers, but for the excessive pauperism, were tolerably good until 1828, when a very wet summer and autumn occurred. This was also the case in 1829 and 1830, and except on very dry soils, most of the sheep were more or less affected with fluke in the liver, and the losses to farmers were enormous. To this was added the distress among the labourers from non-employment, which culminated in the agricultural riots in November, 1830, when 300 poor fellows were tried at Salisbury, and about the same number in Hants and Dorset. This disaffection extended nearly all over the country, commencing in Kent..

Times for farmers continued bad until 1836, when the new Poor Law somewhat lessened the rates, which in this parish in the year ending Lady Day, 1832, reached 9s. 9d. in the £1. Until the panic from Peel's Bill, in 1842, the times were pretty good, when a reaction occurred, which was aggravated by the remarkable drought of 1844, although the crop of wheat was probably the heaviest ever known in this country. Times were then very good until 1848. The summer of 1846 was a magnificent one, but the rains in the latter end of July destroyed the potato crop, which first appeared about the 23rd or 24th of July in the previous year. After 1848 the distress was very acute, and there was a great agitation for a return to Protection among the farmers; but the Crimean War soon put matters to rights, and for no less than 25 years the occupiers of pasture farms had "halcyon" days, with but few bad seasons, but the arable farmers for several years less, until the unexampled wet season of 1879, with low prices also prevailed. This immediately led to a revision and great lowering of rents, and as the times continued bad, in many cases, about 1886, a still further reduction took place. Since this time matters have gone on tolerably smooth in this district; the seasons have lately been better, and the times for farmers at present will not compare unfavourably with some of those which occurred formerly.

Several years ago, I wrote to the Board of Trade pointing out that it would be better to substitute in the census of cattle, "cows and heifers in milk or in calf," for "milking cows," which was done, and the other day I wrote to the Chancellor of the Exchequer informing him that 50 years ago stamps were affixed to cheques, as to letters, and suggesting that the same could be done now. I have two vols. of "Bell's Weekly Messenger" for 1804 and 1805, and find beef was at exactly the same price as now; rents were higher. P.

May 5, 1902.

Charlock Destroying.

Sir,—At the present time I have numerous inquiries as to what height the charlock is most easily killed by spraying with sulphate of copper.

You will confer a considerable boon to farmers if you will make known the following observations in your valuable paper:—

The height of the charlock is not a safe guide as to the best time to spray it. In many districts both in England and Scotland last season, I saw charlock only about 2 or 3 inches high, but that was old and tough as wire, and just coming into flower. Owing to the cold and unfavourable season it has grown slowly, and should have been sprayed weeks earlier.

When the weather is favourable and the plant grows away quickly, it may be successfully destroyed up to 6 or 8 inches high.

The only safe guide that I know of at present as to the best time to kill the charlock is when the plant is young and soft in fibre, after it has put out a few rough leaves. Under such conditions every plant that receives its proportionate share of 50 gallons of 3 per cent. solution of copper sulphate per acre will be destroyed, i.e., 15lb. in 50 gallons of water.

I have just had an opportunity of superintending some field spraying under these conditions, and am now informed that 95 per cent. of the charlock is already dead.

I have adopted a practice which I would recommend to all who spray charlock. Have two or three old manure bags and lay them down over the charlock in the track of the spraying machine. The plants covered by the bags will have been protected from the spray. These plots will show a sharply-defined contrast between the sprayed and unsprayed charlock, and give a clear decided lesson as to the value received from spraying.

Thanking you in anticipation for giving space to this.—I remain, Sir, yours faithfully,

G. F. STRAWSON.

71a, Queen Victoria Street, London, E.C.
May 8th, 1902.

Leather-Jackets in Clover.

Sir,—Can you, through the medium of your valuable paper account for the condition of my red clover of last year's sowing which is now dying in patches? Specimens of affected plants are enclosed. The grub (also enclosed) was found at the root of one of the plants. Would it be the cause? If so, is there any method of destroying the larva without injury to the plants? AGRI.

[*** The grub is the larva of the crane fly, or Daddy Longlegs, and these larvæ are usually known as "leather-jackets." They are very destructive to vegetation, although perhaps less commonly so to clover than to other crops, and as they are extremely tenacious of life they are difficult to deal with when attacking a growing crop. From the appearance of the grub, I should think yours is a dark soil and inclined to peat, and if this be so, it may in some measure account for the attack, as these pests are rather prone to affect damp, loose land. The usual remedy for an attack is the free use of the Cambridge roller and the application of forcing manures; but it is now getting too late to use the roller on clover, and I should advise you to graze the herbage as closely as possible (if it be pastured), and treading by sheep will tend to kep down the ravages of the pests. Nitrate of soda and soot might be of some service, but if the and is intended for grazing this summer these applications will be untimely. The best thing to do is to graze as closely as possible, and to gaslime in the autumn and to plough up fairly early. Of course, if gaslime is applied, wheat must not be sown in the autumn, but oats or barley might be sown next spring. The condition of the clover is not entirely due to the leather-jackets: I found a young wireworm (dead) amongst the plants, and there are signs of clover-sickness or of the presence of stem-eelworms. Nothing can now be done to ward off the clover-sickness.—M. Y.]

Profit from Poultry.

Sir,—That the industry of the poultry farm is of very great concern, not only to the individual, but to the nation, cannot be denied when our revenue returns show the many millions sterling we send to foreign countries to import to us their eggs and poultry, which, on good authority, it is maintained, could be raised on British farms. In your journal of the 28th ult., "R. B." writes very confidently, "Give fowls a healthy grass run, and house and feed them properly, and they will pay more for the time and money invested

in them than any other stock on the farm. This is our experience after keeping a hundred and more head, and keeping a correct account of income and expenditure."

Would that "R. B." had set the balance sheet seal to his statement, it would have very greatly promoted an important national industry. It is to be hoped that he will do the country this service. "R. B.'s" experiences may be said to be "limited," but eminent authorities on poultry farming agree that there is comparatively a far better result to be obtained in keeping a far larger stock of fowls.—Yours truly,

ALFRED WELCH.

Southall.
May 5, 1902.

Forestry: Board of Agriculture Committee.

The Departmental Committee appointed by the President of the Board of Agriculture to inquire into and report as to the present position and future prospects of forestry in Great Britain, and to consider whether any measures might be taken, either by the provision of further educational facilities or otherwise, for its promotion and encouragement, held sittings at St. Stephen's House, Westminster, on the 6th and 7th May, 1902. Mr. R. C. Munro-Ferguson, M.P., was in the chair; and the other members of the committee were also present, viz., Sir John Rolleston, M.P., Mr. E. Stafford Howard, C.B., Dr. W. Schlich, C.I.E., F.R.S., Lt.-Col. F. Bailey, Professor J. R. Campbell, Mr. J. Herbert Lewis, M.P., Mr. George Marshall, and Dr. W. Somerville.

The following witnesses gave evidence:—

On the 6th.—Lt.-Colonel F. Bailey, Lecturer in Forestry at Edinburgh University; Mr. J. T. Maxwell, of the Local Government Board for Scotland; Major P. G. Craigie, Assistant Secretary to the Board of Agriculture; Dr. W. Somerville, Assistant Secretary to the Board of Agriculture; Mr. C. O. Minchin, of the Board of Inland Revenue, and Mr. A. D. Webster, representing the Royal Horticultural Society.

On the 7th.—Mr. James Michie, representing the Highland and Agricultural Society of Scotland; Dr. H. Marshall Ward, F.R.S., Professor of Botany in the University of Cambridge; Mr. Joseph Parry, M.I.C.E., Water Engineer to the Liverpool Corporation; and Mr. M. F. Roberts, Assistant Engineer to the General Post Office.

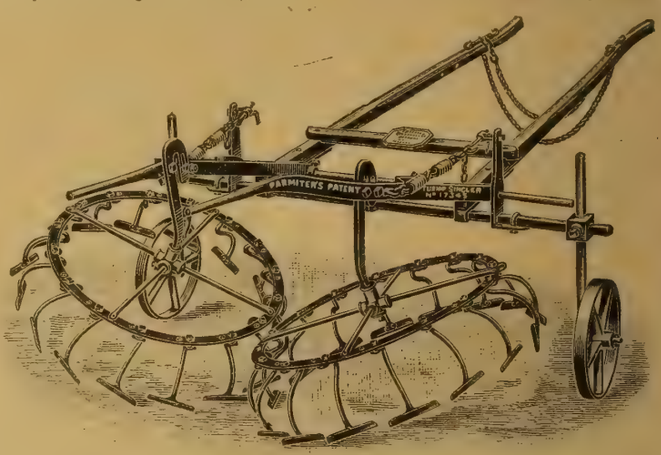
NEW AND IMPROVED IMPLEMENTS.

Trial of the "Ohio" Hay-loader



An interesting, and very successful, trial of the "Ohio" hay-loader with some important and patented improvements took place near Shaftesbury on Friday last on the farm of Mr. Arthur Hiscock, jun., Motcombe, and was witnessed by a number of the leading agriculturists of the district with expressions of hearty approval and satisfaction. A large load of last year's hay provided by Mr. Hiscock was spread in a grass field adjoining the road to Motcombe, and after being turned, first by the "Bamford" and then by the "Jarmain" swathe-turners, to show the excellent capabilities of these machines, part of it was gathered into good-sized windrows, and the "Ohio" hay-loader was then attached to a waggon drawn by one horse, and with one man leading the horse and another in the waggon, a large load was elevated and formed on the waggon in a few minutes, without a hitch of any kind, the ground in the 7ft. track of the loader being raked clean. After the company present had partaken of light refreshments in the field (provided by Mr. John Farris, agricultural engineer, of Shaftesbury, the local agent of Messrs. F. C. Southwell and Co., 75, Southwark Street, London, S.E., who are the sole importers), the load of hay was again spread on the ground, some as it would be left by a tedder and the rest in windrows, and, to test the loader severely, Mr. Hiscock, with his usual thoroughness, got into the waggon alone, and, taking the reins (without anyone leading the horse), drove over the hay, and before he stopped the loader had, by itself, picked up clean and elevated into the waggon over 10cwt. of hay, without a hitch, in about five minutes, including the time taken to turn once at the end of the field; and then, with the assistance of a man to lead, Mr. Hiscock built the front of the load, and in five or six more minutes a load of over 20cwt. was well loaded, the hay on the waggon being from 2ft. to 3ft. higher than the top or delivery end of the loader. All present said nothing of the kind had been ever before witnessed, and was a most marvellous performance for any machine. It was thus demonstrated that, with two men, only one being on the load, hay could be loaded with less effort to the man on the load and in half the time required with manual pitching, as well as dispensing with at least two men; but the saving of time is perhaps even more important in unsettled weather than the evident great economy in labour. After the trial many of Mr. Hiscock's friends stayed to make a tour of inspection of his splendidly-arranged farm buildings, which house ten of his famous Shorthorn bulls and over 130 cows, besides young stock and calves, and about 300 of his world-renowned Berkshire, and Large, Middle, and Small White pigs, for all of which he has, in about the last ten years only, won over 1,113 champion first prizes and breed cups. We do not think that anyone will wish to dispute Mr. Hiscock's statement that "that is more than any other exhibitor can say." It was a great treat to witness such up-to-date methods of rearing and feeding such a large herd of cattle and pigs and to see such a fine collection of champion animals, as well as the young ones coming on in such fine form, evidently destined to bring to their genial and hospitable owner further numerous honours. We saw a fine lot of eight Middle White pigs, going next week to Odessa, and others ordered for Argentina, the Cape, and elsewhere, and were not surprised to hear that for both Shorthorns and pigs the demand greatly exceeds the supply.

We were also extremely interested in going over Mr. Hiscock's noted dairy of Cheddar cheese, from which over 15 tons had just been sent away in large and small consignments to various parts of the country, and after testing several samples we can quite understand the secret of his success in this department, viz., all that comes from the cow is put into the cheese-making apparatus, and the most perfect appliances, together with Mr. Hiscock's thoroughness, do the rest.

If these lines should lead to the desire on the part of anyone interested to see Mr. Hiscock's herds and dairy, we are assured they will always be welcomed.

Parmiter Patent Turnip Singler or Thinner.

From time to time many attempts have been made to produce an effective machine for gapping or thinning roots, but the work is more difficult than at first appears, and nothing as has yet come into general use for the purpose. Mr. P. J. Parmiter, of Tisbury, has now invented a machine which, from the reports we have seen, promises well. It will be seen from the illustration that the implement is very simple, and consists of two discs with hoes carried on a frame, each disc cutting one rank of roots. As from the angle of the disc and set of the hoes, it is made to revolve simply by contact with the ground without gearing of any sort, the hoes being drawn by this means through the rank of roots. This gives a steady clean cut, as with a hand or horse hoe, and not a chop or scuff, as with many of the geared machines tried, which is very liable to disturb the space left for the plant, and work very unevenly in stony land. The hoes are adjustable, and in a strong plant on a firm soil, can be set very close, and on loose soil with a weak plant can be set as open as necessary.

PARMITER PATENT TURNIP SINGLER OR THINNER.

The discs are carried on a spring that regulates the penetration, and lifts them over thin patches. As the disc stops at once when lifted clear of the soil, there is no danger in bruising the plants left.

Mr. Parmiter calls his machine a singler, because, in an average crop, he has found, it will single at least 50 per cent. of the plants, but it is not to be supposed that it can equal hand singling, but as it makes clean, regular gaps, cutting 85 per cent. of the soil, it will do all the heavy work of the hoeing, and is good enough for rape or kale, turnips to be fed off, or the first time in swedes or a thick mangol plant; and if, as the inventor says, six acres a day can be well gapped or cut out by one man, it is certainly worth the careful attention of farmers.

Bridgnorth Store Stock Sale.—Messrs Nock, Deighton, and Kirby's annual stock sale at Bridgnorth May Fair took place on the 1 t inst. in Bridgnorth Smithfield, the catalogue comprising upwards of 600 fat and store cattle, 30 fat and store bulls, 700 sheep, and a quantity of pigs and calves. There was a very large attendance of butchers and dealers present from all parts of England, and the trade throughout was brisk especially for fat cattle, which made exceptional prices and realised up to £24. There were several grand bulls offered, and one from Mrs. Mapp (Old Park) made 28gs. Cows and calves numbered nearly 50, and made up to £18 15s. In-calvers made up to £15 5s. Ewes and lambs made up to 57s.; store sheep, 40s.; fat sheep, 50s.; fat lambs, 32s.; fat calves, 60s.; fat pigs, £8: stores, 40s.; small stores, 25s. The prices were as follows: Beef, 6½d. to 7d. per lb.; mutton, 7½d. to 8d. per lb.; veal, 8d. to 9d. per lb.

Mr. Hanbury at Norwich.

On Saturday the President of the Board of Agriculture addressed a special meeting held at Norwich under the auspices of the Norfolk Chamber of Agriculture. There was a very large attendance, and Mr. Hanbury had a most enthusiastic reception. Mr. George Cobon (president of the Chamber), who presided, expressed the pleasure which they all felt at the honour of a visit from the Minister of Agriculture, and said he desired to move the following address of welcome:—"That this meeting, held under the auspices of the Norfolk Chamber of Agriculture, heartily welcomes the Right Hon. R. W. Hanbury, M.P., on the occasion of this his first visit of a Minister ofAgriculture to Norfolk. (Applause.)

Mr. Clare Sewell Read, in seconding the motion, said the one especial want they had in the county of Norfolk was, he thought, a better quality of store stock. (Applause.) They remembered some ten years ago the thousands of Canadian store cattle that were grazed in this county. He himself had over 200, and he could truly say that there was not a single instance of any contagious disease among those cattle. The worst of it was that in consequence of increase in the milk trade the quality of the store cattle that they had in this county certainly deteriorated. As far as Ireland was concerned, it was a trifle better, but if they took the English store stock of the present day, he said that it was worse than it was twenty years ago, and, therefore, although they contended as strongly as anyone that it would be dangerous to admit any live stock from the Continent, and even from Argentina, they did not know very much about the internal regulations with regard to the healthy cattle in the United States, yet they did know that Canadian cattle were among the healthiest in the world. (Hear, hear.) Norfolk was the greatest producer of malt and barley of any county in England, and most of them were in favour of pure beer. (Applause.) It was grateful, therefore, to the present Minister of Agriculture for voting in support of those two measures, which had recently been before Parliament. Passing on to speak of the Education Bill, Mr. Read said he believed they were as a rule in favour of the main principles of that measure. He expressed the opinion that if this country insisted upon education being free and at the same time compulsory, then it was the duty of the State to pay for that education, and the cost of it ought not to be levied on local rates. (Loud applause.)

Education.

Mr. Hanbury, who was loudly cheered on coming forward, thanked the meeting for the cordial reception they had given him. He appreciated, he said, the resolution all the more because it had been moved by their Chairman and seconded by his old friend and colleague in the House of Commons—Mr. Clare Sewell Read. (Applause.) There were certain questions which did not require local special knowledge; they were questions of great national policy, and so far as farmers as a class were concerned, the questions that interested them most were these. In the first place—and after all, it was a question of pounds, shillings, and pence—it was in regard to their rates and taxes. He ventured to say the farmers wanted a much clearer line drawn between the burdens that the locality ought to bear and the burdens the nation ought to bear. They wanted a fairer distribution between real and personal property. It might be said that the Education Bill was throwing upon them a fresh charge. That he perfectly admitted, and until the whole system of local taxation was properly dealt with, as it must be dealt with soon, there is no possibility of separating the rates of the Board Schools from those of the Voluntary Schools. But he ventured to say that when the time came for distribution between local taxation and Imperial taxation, then there were at any rate two subjects which in the country districts there would be a great demand for having them put more than now on the Imperial Exchequer. Three-fourths of the money for education was at present falling upon the Imperial Exchequer, and when this great division takes place there would be a great demand for the other fourth to fall upon the Imperial Exchequer also. The Imperial Exchequer was at present loaded with the burdens of this great war. When it was over they might depend upon it this cry would arise, especially in the country districts, because it was the undoubted fact in their country villages they were educating the children to a large extent out of local pockets, and was not utilised in the country villages, but in the towns, which got the benefit of the education. (Applause.) The same remark might perhaps apply to the main roads. The main roads in this country were far behind the main roads of France, whose internal prosperity had been in a way due to the main roads through the length and breadth of that land. As the means of locomotion increased, so they would find the main roads would become more and more unfit for them in the country districts, and they would demand the State should do more for them in this respect than at the present moment.

Farmers' Grievances Against Railways,

Passing from the local and Imperial burdens to the question between owner and occupier, Mr. Hanbury warned them that it would not be a good thing either for the landlord or for the tenant in England if we went far in the direction that had unfortunately been followed in Ireland. But, after all, what was the real national question that remained? It was the question between the home producer and the foreigner; it was the question of competition; it was the question of prices. That question was not a matter of legislation, because the policy of the country had been settled for the last fifty years. The policy of the last fifty years had brought great wealth to this country, but it had not brought wealth to the agricultural interest. He was afraid tin this matter the agricultural interest would not be considered. If any change happened in the commercial policy of the country it would emanate from those great industries in whose favour it was inaugurated; if any change were made it would be the result of the demand of the towns, and not of the country districts. But in any case, all that was possible ought to be done to modify foreign competition. Cheap sea transit brought the foreigners' produce very near to our markets, and they ought not to be further assisted by special railway rates. He was asked in the House of Commons the other day by one of the agricultural members as to what might be done with railway rates. He was sorry to say the Board of Agriculture in England, unlike the Board of Agriculture in Ireland, had practically no voice in the question of railway rates, even for agricultural produce—a power he would like to get. (Applause.) But at any rate he could express his opinion upon the matter, and when he was questioned in the House of Commons he said distinctly that an inquiry might very well be held into at least three points. In the first place, there was the enormous difference in the rate charged for small consignments, and that charged for large consignments. The English farmer, as a rule, sent small consignments, while the foreigner sent large consignments, and this was very much in favour of the foreigner and against the English farmer.

Then, again, the English farmer suffered from

Terrible Delays in the Goods Traffic

in this country. That was a matter that ought to be looked into. There was no control over the goods traffic of our great railways. We knew when passenger trains ran, but nobody knew when he would receive a consignment sent by goods trains. There was a fixed tariff for traffic by goods trains, but none for the steamships owned by the great railway companies, and it was quite possible for an English railway company to bring goods from a foreign port to London—from Rotterdam to Harwich, and from Harwich to London—for exactly the same price as they would charge for taking the same goods from an English port to London, because while they must render an account of their charges by rail, they were under no such obligation with regard to their steamships, and could charge practically nothing for bringing goods from Rotterdam.

This was a thing that ought to be inquired into. Another drawback was the irregular charges of railway companies. He could not go into the question at length, but he had had some figures worked out for him by the Board of Agriculture. The Great Eastern Railway Company, he noticed—and he said it to their honour—carried dairy produce at a rate which was very much below that charged by five other great companies: that was to say, where the Great Eastern Raiway Company charged 6d., four other companies charged 9d., while one charged 1s. Such a difference ought not to be allowed.

He had dealt with what were the main questions of policy, and, after all, as he had said, it resolved itself principally into that

Great Question of Competition

—the great question between the home producer and the foreigner. Apart from these large questions, he was struck by the smallness of the charges which their Chambers of Agriculture and agricultural representatives in the House of Commons evidently thought it possible to bring about by legislation. He was struck by the smallness of the Bills that were introduced. They were good bills as far as the ywent, but they only touched the agricultural question to a very small degree indeed. Mr. Hanbury named some of these small measures, and proceeded to point out that the great difficulty they as farmers experienced was in getting a fair price for the articles they produced. After all, that was business, and they would agree, therefore, that self-help was the first thing to be considered. They had got to do everything as men of business, and help themselves as all business men had.

They had a fair right to demand that, having a Government Department all their own—the Board of Agriculture—that Department should be a practical one, and that it should do everything it possibly could to help them. He was sorry to say that there had been an adhering to the old idea that came in with the doctrine of Free Trade, but which had no necessary connection with them at all, that the Departments might let things slide—that it was not their business to do anything very active in matters that came before them. But the Government Departments had got to be more active in the future than they had been in the past. They had got to study the needs of those whom they represented. (Applause.) The Government Departments of other countries were doing it. Those of America, Germany, France, and our colonies were doing it, and those of this country ought to follow suit. (Applause.)

How Farmers Change with the Times

He was struck by the wonderful way in which the farmers all through the country had adapted themselves to the necessities of changing times. But, after all, they had to ask themselves, "Do we each do all that we might to help under the circumstances in which we have to continue this fight?" What was the battle? It was a competition with new countries brought very close to our doors. As he had said, it was a question of prices, and very low prices, in competition with these other countries. Now, after all, were there any advantages which we still had in spite of this vigorous competition with new and distant countries? Proximity to great markets, and to the richest markets in the world, must count for something; and therefore it was their duty to give their attention more and more to those products which could not be transported so readily from these distant lands—and especially they ought to aim at producing the best. He believed this was the only way to get anything like success in these days—not to deal in rubbish, and not to produce rubbish, but to produce the very best that the English farm could. (Applause.) In that respect they had an unlimited market, and a market in which others could not compete. But for second and third-grade things they had the foreigner to compete with, and he could compete with them at a considerable advantage. Mr. Hanbury mentioned certain advantages that an old country had over a new one. They had all the accumulated experience that good farming had taught the English farmer. Another advantage lay in the cheap bread, of which the labouring classes had the benefit, and the higher wages that they received owing to the prosperity of the industries in our large towns, the result being that the demand for meat had increased to an unparalleled extent. The demand for meat on the part of the working classes was growing by leaps and bounds, and the farmer had, therefore, an increased market at his very doors. Again, they had cheap feeding stuffs, which, of course, was a considerable advantage.

He was glad to hear that remark which had fallen from one of the previous speakers in regard to the question of the duty on flour. There was often a good deal of nonsense talked about taxes on food. We already taxed food, for sugar and tea were necessaries of life, almost as much as bread. But this tax on flour was not a tax on food. We allowed wheat to come in just as it did before. And, while the tax was not a tax on food, it would have this effect—it would revive the milling trade of this country. (Applause.) A tax on flour had a double advantage, and to call it a tax on food was perfectly preposterous. (Applause.)

He wanted to be perfectly frank. It was not

The Business of a Minister of Agriculture

to come and speak smooth things. If he did so he was a humbug, and he was not an honest man. (Laughter.) And, therefore, he wanted to speak to the farmers straight. He wanted to examine how far farming in England, even under the conditions mentioned, had still great opportunities of improvement. Were they using these advantages fully? Well, they had got to arrive at a settled policy as to whom their customers were to be, and for whom they were going to produce. Were they going to produce the best things only, or were they going to compete with the third grades of the Argentine, or Canada, or the serf labour of Russia? They must produce the best, or their farming would not pay. No Minister ought to induce the production of rubbish. That was one of the reasons why he was carrying on a fight at the present moment against a new production in our dairy produce this blended butter. They could not afford to have encouragement held out for the production of a bad class of butter. (Hear, hear.) It would only pay the farmer to produce the very best. And he maintained, also, that in these days we had to go further than we had yet done in the matter of adulteration. There was a time when adulteration was regarded as a legitimate form of competition. There was a time when only the customer had to be considered, and he had to be protected against adulteration on the part of the vendor. They ought to go further, and protect the ordinary producer of a good article against the man who took the name of that article in vain. (Applause.) He had a right to his trade name. He had a right, if he was the manufacturer of genuine butter, to have the name confined to genuine butter. (Applause.)

As regards pedigree stock, undoubtedly this country stood foremost in the world. It was the nursery of fine stock, and, he was glad to say, we had a good market open to us in the Argentine. But, taking the average statistics of this country as showing what was the fair work done by the average farmer, he ventured to say there was still

Opportunity for more self-help and improvement.

—and especially in the newer branches. But he would take the older branches first. In regard to corn, he found, on looking over the statistics of ten years, that in England—from which he excluded Wales, because it was a poor country—the production of wheat per acre had been 30 bushels only, whereas in Scotland it had been 37, and in Ireland 32. In regard to barley, there had been produced in England 33 bushels, in Scotland 36, in Ireland 38; and in regard to oats, England 40 bushels, Scotland 36, Ireland 44. Going to Denmark, he found that the produce of wheat there had been 39 bushels. Belgium had produced 40 bushels of barley and 47 bushels of oats. But he was glad to acknowledge our debt of obligation to some of our scientific men, who were bringing the methods of science to bear upon agriculture. There were large firms in England which were working in that direction, and were producing fertilisers for corn, and especially of oats, which were destined, he hoped, to give us much larger crops than we had ever yet been able to gather.

Suggested Improvements

Our dairy cows, too, only averaged 420 gallons of milk, as compared with 590 in Denmark, and our store cattle were not so good as they were twenty years ago. No doubt a great deal of good butter was made, but it varied from farm to farm, and often from week to week, and where the foreigners beat them in this respect was in the matter of uniformity. That could only be got by combination among the farmers themselves; and he strongly advocated it, pointing out that as one result it had had the effect of raising the price of milk in his own county of Staffordshire. He also recommended the establishment of commercial banks as in Ireland, and then went on to inquire whether the Board of Agriculture had not something to learn. It might be of some use in bringing before, for instance, the farmers of Norfolk, not only the results of experiments in their own country, but of those conducted at the cost of the nation in other countries. Government departments were at present not sufficiently in touch with each other, and he had therefore, in the matter of education, endeavoured by a Joint Committee to see whether they could not supply a more practical education in rural districts in place of that which disqualified the children for country life. (Applause.) But it was not sufficient for the Board of Agriculture and the Board of Education to make this possible; it rested with those who managed these village schools. (Hear, hear.) He did not want to make his Department a political machine. What he rather desired was to make it a business machine, and he had no desire that they should come to him as party men with political nostrums or schemes for catching votes. He wanted them to come to him explaining their local wants, and as business men with practical remedies for existing evils. (Hear, hear.)

Speaking of trusts, Mr. Hanbury said he did not know how much longer this country was going to stand these American trusts. At the present time our meat supply, as far as America was concerned, was in the hands of four men, so that at any moment prices might go up and down in a remarkable manner, and he did not think the country would put up with such variations much longer. (Applause.)

Referring to the question of the

Importation of Canadian Store Cattle,

he said there seemed to be a general idea that Canadian farmers were longing to revive the old trade, and send store cattle to this country. But the opposite was the fact. Since the importation was prohibited in 1893 a new trade had sprung up between Canada and the States, and it was found more profitable to send the cattle away fat than as stores. It would only be from the West that stores could be obtained, and there only for a short time, because the supply of fat cattle in the United States was falling off, and the States would take any quantity that Canada could send. The question of the importation of Canadian stores was talked of as if it were a large one, whereas it was but a small matter, and the number was but two per cent. of the store cattle in this country. Since 1893 the importation of stores from Ireland had increased so largely as to represent a great deal more than the falling-off in Canadians, and the gap was thus filled up. He asked them to take these arguments, and they would see that he could not do what they required.

Mr. H. Evans Lamb moved a hearty vote of thanks to Mr. Hanbury for his excellent address. Mr. George White, M.P., seconded the proposition, which was carried amidst applause, and briefly acknowledged by Mr. Hanbury.

Darwen.

The twelfth annual exhibition of the Darwen Agricultural Society was held on Saturday, in a most convenient field, on the outskirts of the town. It was a most successful show, the entries being more numerous than ever, and the quality quite up to the average, a most commendable one. The most successful exhibitor of Shorthorn bulls was Mr. John Handley, of Milnthorpe, who carried off three prizes with his bulls, which included the magnificent Maréchal Neil and the younger Pearl King, and the three as a group won easily the premium for the best three animals in the cattle class. Dairy cows were an exceptionally nice lot, and the Messrs. Harrison, of Hoole and Much Hoole, were chief prize winners among the heifer classes. Local cattle exhibits, too, were noteworthy, particularly among milkers.

The display of horses was a good one. Mr. Yerburgh, M.P., was one of the leading exhibitors of heavy horses. His Woodford Royal Harold, a winner at Poulton and also at Bolton this year, was shown in the class for stallions for draught purposes, and was beaten by Messrs. J. Forshaw and Sons' noted Woodhall Pioneer. Mr. Yerburgh, however, won the first prize in the class for mares most likely to breed a foal, with Lilly of the Valley, who thus made her first appearance at a Lancashire show, although she has previously been seen among the Shires in London. In this instance she beat Mr. R. Lancaster's six year old chestnut, a descendant of Mr. Forshaw's noted Horbling Squire. A fine roan gelding, Red Lynch Duke, belonging to Mr. Thomas Edwards, of Litherland, was the winner among heavy mares and geldings. He is a massive animal, has won in several showyards already this season, taking the Coronation Cup at Liverpool a week ago, and fairly out-distanced a handsome mare Lily, belonging to Mr. Yerburgh. In the colt or filly class the hon. member for Chester was deservedly first with a foal by Combination, a youngster full of promise. Draught horses generally were a very useful lot, without containing extraordinary merit. They were for the most part well set-up animals with plenty of bone, and of a size suitable for horses having to work in a hilly country. Light horses were largely made up of competitors which have been going from show to show for a couple of seasons or more. There was, however, an interesting new class in the section. Last year's president of the society, Mr. J. C. Potter, offered £10 10s. as a prize for the best mare or gelding for mounted infantry and Imperial Yeomanry purposes. The qualifications for the guidance of the judges were precise and somewhat numerous. Half a dozen animals which seemed to answer the desired object were taken into the ring, and the prize went to Mr. J. E. Anderton, of Cadley, for a well-built chestnut gelding bred at Adlington, near Chorley, and two others obtained distinctions of reserve and highly commended. Mr. Potter's prize will be repeated at the shows of 1903 and 1904, and increasingly interesting competitions may be looked forward to.

Other sections which helped to make an altogether interesting show, included a capital display of dogs, particularly of collies, and a number of classes for poultry, pigeons, rabbits, cavies, etc., which were well filled. The awards in the horse, cattle, and pig classes are appended:—

HORSES.

OPEN CLASSES.

Heavy Horses.—Stallion for draught purposes: 1, Jas. Forshaw and Sons, Carlton-on-Trent; 2, R. A. Yerburgh M.P., Blackburn. Mare likely to breed a foal: 1, R. A. Yerburgh; 2, Robert Lancaster, Church. Mare or gelding, for draught or agricultural purposes: 1, T. Edwards, Litherland; 2, R. A. Yerburgh. Colt or filly ditto: 1, R. A. Yerburgh; 2, James Holden, Hurst Green.

SOCIETY'S DISTRICT ONLY.

Mare to breed a foal for draught or agricultural purposes: 1, R. A. Yerburgh; 2, William Lindsay, Bury. Mare or gelding, for draught or agricultural purposes: 1 and 2, Robert Lancaster. Ditto foaled in 1899: 1, Wm. Lindsay, Bury; 2, Richard Blackburn, Lostock Hall. Ditto foaled in 1900: 1, W. O. Smethurst, Elton; 2, John Smith, Darwen. Colt or filly ditto: 1, R. A. Yerburgh; 2, Richard Tomlinson, Langho.

LOCAL DISTRICT CLASSES.

Mare or gelding: 1 and 2, Lancashire and Yorkshire Railway Company, Blackburn. Mare or gelding, in working gears: 1, Lancashire and Yorkshire Railway Company; 2, H. Baldwin and Co., Darwen; 3, G. B. Leach and Sons, Darwen.

HACKNEYS (OPEN).

Stallion: 1, R. and P. Hartley, Balderstone; 2, James Worsley, Darwen. Likely mare to breed a foal: 1, Levi Fish, Barton; 2, Thomas Bailey Sykes, Poulton-le-Fylde. Foal of 1902: 1, William Cotton, Belmont; 2, W. Stothert, Blackburn. Colt or filly, 1901: 1, Alfred A. Haley, Malton; 2, James Mayoh, Darwen. Mare or gelding, exceeding 15 hands: 1, Thomas Bailey Sykes; 2, Joseph H. Jones, Liverpool. Cob not exceeding 15 hands: 1, Jos. H. Jones; 2, J. W. Astley, Nelson. Cob not exceeding 14 hands: 1, William Foster, Moseley; 2, A. D. Oates, Halifax. Pony: 1, R. Harrison, Chorley; 2, William Foster. Girl or boy rider on pony: 1, A. D. Oates; 2, Edward Holmes, Bootle.

SOCIETY'S DISTRICT ONLY.

Most likely mare to breed a foal: 1, Herbert T. Parke, Withnell; 2, Dr. Andrew Baxter, Darwen. Mare or gelding, to be ridden: 1, Richard Smith; 2, Alfred Nuttall, Billington. Mare or gelding, 1899: 1, R. and P. Hartley, Balderstone; 2, Thomas Smith, Hoghton. Ditto, 1900: 1, Alfred Nuttall; 2, H. Rayton, Blackburn. Cob not exceeding 15 hands, used for farm or trade purposes: 1, Robert Draine, Blackburn; 2, D. Greenwood and Son, Blackburn.

HUNTERS (OPEN).

1, Edward Hoyle, Bacup; 2, Arthur Sowler, Manchester. Army horses: 1, J. E. Anderton, Cadley; reserve, Henry Rayton, Blackburn.

CATTLE.

OPEN COMPETITION.

Bull, two years and over: 1, John Handley, Milnthorpe; 2, James Barnes, Lower Darwen. Under two years: 1 and 2, John Handley. Under one year: 1, R. and T. Harrison, Much Hoole; 2, Executors of T. Horsfall, Clitheroe. Cow: 1, Esaias Cowell, Blackburn; 2, J. and W. Lord, Healey. Dairy cow: 1, Edmund Farrow, Rochdale; 2, Wallpaper Manufacturers, Limited. Dairy cow, in calf: 1, James Eddleston Pleasington; 2, Henry Fielding. Heifer, under three years: 1, John Harrison, Hoole; 2, R. A. Yerburgh. Under two years: 1, R. and T. Harrison; 2, Thomas Adamson, Radcliffe. Under one year: 1, R. and T. Harrison; 2, Thomas Adamson, Radcliffe. Three animals: 1, John Handley. Holcombe Hunt District.—Pair of cows: 1, H. Horsfield, Tockholes; 2, John Smith.

LOCAL CLASSES.

Bull: 1, Knowles Brothers, Edgworth; 2, James Eddleston. Dairy cow: 1, Esaias Cowell; 2, Wallpaper Manufacturers; 3, H. Horsfield. Heifer: 1, John Smith; 2, William Haworth, Entwistle. Calf: 1, Robert Fish, Turton; 2, Joseph Tripper, Blackburn. Three animals: 1, H. Horsfield; 2, Wallpaper Manufacturers. Special prizes (District only).—Dairy cow: 1, H. Horsfield; 2, James Eddleston. Fat cow: 1, Wallpaper Manufacturers; 2, John Smith.

PIGS.

Breeding sow: 1, Thomas Veevers, Briercfield; 2, James Haydock, Tockholes. Store pig: 1 and 2, John Blackburn, Bacup. Boar: 1 and 2, Thomas Veevers.

GARDEN.

My forecast for a cold May has, so far, proved only too correct. If the weather last week was wintry, it is positively arctic this, and in the north it has been still worse than here, in the metropolitan area. Within the last few days we have had thunder and lightning, heavy and cold rains, hail and snow, with a bitterly cold north to east wind blowing the greater part of the time. For gardening anything worse could hardly be imagined; nothing grows, and most people are glad to sit by a good fire rather than turn out into the January weather outside.

Forward potatoes, already through the soil, should be kept earthed up as closely as possible, to protect them from the cold, and where the haulm has attained to a height of a few inches it would be very advisable to throw some dry litter or fern (bracken) all over the bed, or scatter it along the rows, until the conditions improve. Keep those now coming through well covered with soil. Breadths of potatoes that were planted late will probably succeed the best this season, certainly where the position is at all open or exposed.

Draw up a good ridge of soil on each side of rows of peas just through the soil, or beginning to grow, as this will protect them to a considerable extent. The sticks should also be put to them in good time, and where much exposed to the wind a row of twigs of some evergreen tree or shrub, such as yew or box, should also be stuck in on the windward, if not on both sides. Even the dwarf kinds will be the better for something of the kind.

I have seen no peas in bloom yet, but those who are fortunate enough to have any may obtain gatherings a little earlier by pinching out just the points of the plants as soon as they are well in flower. Broad beans may also be forwarded slightly by the same means, and should the black or dolphin fly appear in the points of these plants, pinch them out at once.

No dwarf or French beans will be through yet, even on the warmest of borders, probably, but should any that were raised under glass have been planted out they should be covered with spare frame-lights or something of the kind. Some light wooden frames covered with oiled calico are very useful in the garden for such purposes as this. Little or nothing will be gained by sowing more seed of either the dwarf or runner beans until the temperature of both the soil and the air increases.

Vegetable marrows, outdoor cucumbers, gourds, etc., must also be carefully protected for the present. If any more seed is to be sown, get it in at once, over a slight hotbed, and cover it closely; or sow the seeds singly in small pots and get the plants up in a warm house or pit. A batch of runner beans may be raised in the same way. Continue to thin out onions, parsnips, carrots, and other root crops. Leeks may be planted out now, as they are very hardy, but forward celery had better be kept inside until the conditions improve.

Indoor cucumbers and melons must have enough artificial heat to maintain a minimum temperature of 60deg. to 65deg. Give no air, but keep the atmosphere regularly moist.

Essex.

Everything, of course, backward, but I don't think the late cold winds have done any harm, and the rains have been very welcome, and should ensure at least fair crops. Stock healthy.

The action of the Government in placing the small tax on grain and flour is very much appreciated. Many would have liked a further 5s. per sack on foreign flour, which might have enabled some of the small country mills to re-start, and so have given the labourers an opportunity of getting more wholesome bread, and so lessened their craving for beer. The bread made by country bakers from foreign roller flour is very white, and pretty to look at, but does not satisfy or give strength, and cannot be got down without copious draughts, and water does not go well with it.—E. R. C. (May 8th.)

Gloucester.

Farm prospects for this neighbourhood are not of the brightest, for, although we are well into May, there is very little bite for the cattle, and they all want a little hay, although in many cases they don't get it, and the reason, there is none on the farm for them without buying. We have had some very cold winds of late, and altogether a very ungenial season for anything like luxuriant vegetation. Stock seems to have been fairly healthy this winter, but quite a lot have abhorted, and many have gone to the fields (to use a provincialism). "Low in flesh and high in bone," and the late cold season has not been good for them. Wheats are looking strong and healthy. Spring corn late. The apple trees are promising well. Beef and good young graziers are now sought by butchers and grazing men. Pigs are plentiful and selling fairly well.—J. W. (May 8th.)

Leicester.

Farming and grazing prospects I cannot see a very bright side at present; wheats are looking fairly well, spring-sown corn come up well. We have these spring prospects before, but at the finish very disappointing. In a many instances the soil is poverty-stricken. How is this to be remedied? A good dressing of lime would improve it; three years' lay down would assist it to bring it back to its former fertility. We have had a fairly successful lambing season. We have a great many very poor cattle. The bulk of the hay is most part consumed; prices of that commodity, £6 to £7 per ton, looks very tempting. Several have sold through this cold weather, and pastures very bare. It would be better consumed at home. At our weekly markets we have a good many screw beasts. If we get a rapid-growing time, a great many will die. My opinion, both farmers and graziers do not make any calculation of what produce they have got to consume in the autumn, and the number of stock it will take to consume it; a little surplus then should be left over.—W. C. (May 8th.)

Salop.

With a rainfall yesterday evening, followed by a catch of frost this morning, barley, oats, and clovers get a good seed bed. The potato crop, which is regaining its old position, is nicely got up, and cleared off to meet the demand. Cold winds check the growth of the grasses, but the warm sunshine is daily gaining ground.—J. G. (May 9th.)

Warwick.

In the Atherstone district farmers have got through all their fodder, and, being a late spring, live stock have been a great expense, as farmers have had to lay out more money in artificial food than they otherwise would have done. Wheat looks well, and the spring corn has come up very satisfactorily, but wire worm is somewhat prevalent. Lambs have done well, and meat is selling better. W. H. S. (May 8th.)

West of England.

Ordinarily there is a great deal of special importance in the reports of farming experts as to the position of agriculture in the West of England; but on the present occasion, owing to exceptional circumstances, the agriculturists who have again favoured us with their experiences of the past season, and their opinions as to the outlook for the future, deal also with the rise in the price of beef and the corn tax, in regard to both of which the townsman has, for obvious reasons, more than a passing interest. It is worthy of notice that, even in regard to these topics, there are divergencies of opinion, both in regard to beef and bread. Some think, for example, that the duty on corn is calculated to benefit the home producer; others regard the alteration as not sufficiently complete for the purpose, for, as one writer remarks, "when the Chancellor of the Exchequer decided to tax imported food stuffs, he did not take into consideration the fact that a tax of 3d. per cwt. on feeding stuffs means practically 2s. per cwt. extra expense in the production of beef and mutton." It would, he adds, "have been only just to put a registration duty, equivalent to 3d. per cwt. on corn, on imported beef, mutton, pork, and dairy produce." . . . . With regard to the reports as to the state of the crops, although in such a case absolute unanimity cannot be expected, it must be admitted that the general tenor of our correspondents' remarks shows that the past season, taken altogether, has not, at any rate, been worse than that of the corresponding period of last year. The cold weather has naturally had the effect of throwing back crops and impoverishing fruit trees, and the spell of dry weather has affected, to some extent, the prospects of the season's crop.—"Western Daily Press."

Worcester (South).

All crops are suffering from the cold winds and frosty nights we have had during the last fortnight. At that time grass and corn looked very growing, but now both seem at a standstill, and on cold land wheat is losing colour, and early planted barley looks badly. Beef sells well, and mutton is a better trade than the last two months. Work on the land is fairly forward, and a good breadth of mangolds planted well.—(May 8th.)

Foreign Prospects.

FRANCE.—The crop outlook has been marred by continuous and excessive rain over most of the wheat-growing country. Nights, too, have been cold and occasionally frosty. In some districts the wheat and rye fields are laid by the heavy downpour, but warm, dry weather would speedily put matters right.

GERMANY.—Wet weather and a low temperature cannot be regarded as conducive to the welfare of the crops, and some injury is reported in the eastern districts, where frost was most severe.

BELGIUM.—Weather unsettled, but not deleterious to autumn crops.

SPAIN.—In most parts of the Peninsula the condition of the grain crops is satisfactory. Locusts have appeared in some provinces, and damage therefrom is feared.

ROUMANIA.—At the end of the last month rain fell, to the benefit of the crops, which in general present a fine appearance.

HUNGARY.—Cold, frosty, and unsettled weather has done autumn wheat no harm, but complaints are heard of injury to spring corn, rye, and rapeseed.

RUSSIA.—Odessa advices state that weather continues cool and wet, sharp frost in the south-east is reported to have injured the earlier-sown spring crops, particularly linseed. Autumn crops of wheat and rye appear on the whole to be doing fairly well.

UNITED STATES.—Winter wheat is maintaining a fairly good promise, and weather conditions are favourable. Oats have improved and have now fair prospects. Maize is starting auspiciously. In California the rainfall to date is barely 18 inches, compared with over 20 inches same time last season.—*Dornbusch.*

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

9572.—Frederick William Follows, of Manchester, for "Improvements in lawn-mowing machines."

9637.—Philip Joseph Parmiter, of Finsbury, for "Improvements in implements or machines for turning hay and like crops."

Patents Sealed.

734.—H. Brockschmidt, of Prussia, Germany, for "Thrashing machines."

749.—H. H. Lake, of Chancery Lane, London, for "Harvesting machines."

MONDAY (May 5th).—Cool showery weather continued to prevail over the whole of the United Kingdom. The wind was everywhere moderate to fresh from the northward or north-westward, and it was only in the Scilly and Channel Islands that the thermometer managed to rise even to a maximum of 55 degrees. At most places in the northern and eastern parts of the country the mid-day temperatures were below 50 degrees, and in some localities the thermometer did not get above 45 degrees.

TUESDAY (May 6th).—A cold northerly wind was blowing over our Islands, and it was rather strong at several places on our coasts. Showers of cold rain, sleet, or hail had fallen over a large part of the country since Monday, but the amounts measured in the morning as the result of the fall in the preceding 24 hours were not large. Showers of rain and sleet were experienced again during the day. Monday night was cold in the northern and eastern districts, and at some of the eastern stations the highest temperatures during the day only slightly exceeded 40 degrees.

WEDNESDAY (May 7).—The weather was again very cold for the time of year, and the conditions continued decidedly unsettled. Rain, hail, sleet, or snow had fallen generally since Tuesday morning, but the amounts measured were not large, and there was very little rain during the day, except over the Eastern portion of the kingdom. The winds continued northerly over the entire country, but there was a tendency for north-east winds to set in, and in the Hebrides a moderate north-east gale was blowing. The highest temperatures during the day were not generally above fifty degrees.

THURSDAY (May 8th).—A cold northerly wind was still blowing over the whole of our islands, and the weather continued very unsettled. The type ow weather was anticyclonic, and a region of high barometer readings embraced our entire area, the mercury being highest in the west. Regions of low barometer were situated over the Baltic and in the Mediterranean, and these occasioned a continuance of northerly winds in the United Kingdom and over the north sea. Rain had fallen since Wednesday in most parts of England and Scotland, but the amounts measured in the morning were not large, and there was not much rain during the day. The temperature was everywhere low, and the highest readings were only about 50 degrees.

FRIDAY (May 9th).—The weather was again very cold over our islands, and temperatures were unusually low over the whole of Western Europe. The winds were north-easterly over Great Britain, but they were chiefly north-westerly in Ireland, and they were, for the most part, light. Small amounts of rain were measured in the morning, as the result of the fall in the preceding twenty-four hours, in different parts of the kingdom; and rain again fell at many places during the day. The mid-day temperatures failed to touch fifty degrees in the north and east, and they were very slightly above that reading in the south and west.

SATURDAY AND SUNDAY (May 10th and 11th).—Fine weather prevailed on both days in most parts of England, but the temperature remained unusually low. Rain fell in Scotland and Ireland, but the amounts measured were not large. The winds had become chiefly westerly, and they were everywhere very light. The highest temperatures reported on Saturday were very slightly in excess of 50 degrees, and the weather on Sunday was very little warmer, the thermometer readings in the west being slightly higher than over the eastern portion of the kingdom. In London the weather remained dry, but the air continued cold, the highest temperature on each of the two days being 52 degrees, which is 11 degrees below the average.

Mr. James Wagstaff, of Derby, a prominent member of the Derbyshire Agricultural Society, and a successful exhibitor at shows in different parts of the country, died on Saturday. Before residing in Derbyshire he resided at Penrith, and was famous throughout Cumberland as a breeder of Shorthorns.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—We beg to hand you the following report of to-day's market:—Malt.—We continue to have a quiet trade. Barley was rather dearer. Wheat advanced 3d to 6d per qr on the week. Oats improved 3d per qr. Maize remains firm. Flour made 6d per sack more money.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—At Mark Lane to-day the attendance was very limited, and the market for wheat and flour ruled firm at late rates, but very quiet. Maize steady, but slow. Oats firm, with a fair inquiry for common kinds at late rates. Barley, grinding sorts scarce, and held firmly. Beans and peas quiet.

Mark Lane, Wednesday.—At to-day's market sellers once more had no difficulty in dictating terms, both respecting bread and feeding stuffs, despite the attendance being of only moderate extent. English wheat is almost exclusively confined to the country, where the milling trade still willingly pay late enhanced rates, with scarcity becoming more and more felt. Good reds, 63lb on rail, 32s 6d to 33s 6d per qr., according to sample. American reds occasionally 3d easier. White wheats upheld, with a rather firmer tendency. South Russian is held for a premium. Flour still moves in sympathy with wheat, but immediate requirements are filled for the present. What comes up at the same time goes quickly into consumption, and sellers have no difficulty in securing late enhanced rates. Meanwhile American patents and bakers' grades remain very scarce, fancy brands being almost unobtainable. First patents quoted at 25s 6d to 26s 6d, and fancy brands up to 27s; second ditto, 23s to 24s. Of bakers', Iron Duke, 21s 6d ex store. Top price Town made 30s net; and No. 1 households 23s 3d per sack. The London Millers' Association quotations remain at 24s 6d per sack for households and 3s more for whites. Cascadias, 23s 3d ex store. Australian patents, 23s to 24s ex store, 280lb. Grinding barley 3d firmer since last Friday, with not much on hand, and only a reasonable quantity coming forward just now. English malting nominal, with the season now finished. Oats continue in small available supply, and with little being shipped at present, prices still move up, being 3d to 6d firmer on the week. English fully supported on persistent scarcity. Black winters, 25s 6d to 26s, 42lb; grey ditto, weighing the same, 24s to 24s 6d; and very fine Scotch potato, 27s. Maize unchanged. Egyptian split beans neglected at 23s 6d, and Mazagans, at 22s 9d, ex mill, 320lb; New Zealands, 38s to 39s ex store, per 504lb, being still nominal. White Canadian peas stationary. Indian white, fair to good, 35s 6d to 38s ex store. American maize germ meal can be bought on rather easier terms at £5 12s 6d to £5 15s, while English remains steady at £5 15s to £5 17s 6d.

COUNTRY.

Ashford, Tuesday.—Trade very firm all round, and wheat 6d per quarter higher on the week, best white samples reaching 35s, and reds 34s 6d. Oats also rose 6d, making the heaviest samples of whites 25s 6d. Flour was also raised 1s per sack; scaling 25s, seconds 26s; households, 29s; whites, 30s. All other corn was firm and fully as dear.

Banbury, Thursday.—Wheat, 27s to 28s; red ditto, 31s 6d to 32s; barley, 27s to 30s; beans, 34s to 35s; oats (red), 23s to 24s; peas, 32s per qr. Wheat a quiet trade at full prices of last week.

Boston, Wednesday.—Wheat, 33s; grinding barley, 24s; maize (old), 24s and 25s 6d; beans, 34s and 35s.

Bristol, Thursday.—There has been a moderate trade since our last. To-day English wheat was exceedingly scarce, and last week's full prices were maintained. Foreign, firm and unaltered. Maize, 3d lower. Barley and oats, unchanged. Flour trade has been dull during the past week, and prices are unaltered.—GRACE BROTHERS.

Cambridge, Saturday.—During the week our markets have been scantily supplied with wheat, farmers holding for higher prices than millers are willing to pay. At this market to-day there wa sa little better supply of wheat offered and sellers made last week's extreme rates. Not enough spring corn offered to test values. Wheat: red, 32s to 33s; white, up to 33s 6d per 504lb.

Canterbury, Saturday.—Wheat steady at the recent advance; other articles unchanged. White wheat, 33s to 36s; red, 32s to 34s.

Carlisle, Saturday.—Small supply of oats in our market to-day; good demand at full prices—23s 6d to 24s 6d per 336lbs.—THOMAS ROBINSON.

Chester, Saturday.—There was a small supply of English grain, and wheat and oats were firmer; beans and barley were quiet, without change. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 75lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 8d to 5s 10d per 80lb; oats, new, 3s 2d to 3s 4d; old 3s 4d to 3s 6d per 46lb; Indian corn, 13s to 14s 9d per 240lb.

Colchester, Saturday.—Small supply wheat, which sold steadily at the full prices of last week.—Beans, oats, and peas scarce, and good prices were obtained.—FRANCIS AND CO.

Croydon, Thursday.—White wheat, 33s to 35s; red ditto, 31s to 33s. Malting barley, none; grinding, 23s to 25s. Oats, 20s to 24s. Beans, 32s to 34s. Peas, 30s to 32s. Wheat very firm, only a few samples offering. Oats and barley, 6d to 1s qr dearer.

Glasgow, Wednesday.—There was the usual attendance at our market. Wheat and flour steady, with quiet trade passing. Mixed corn scarce on spot, and price nominal. Round corn firm at 1½d per boll dearer. Grinding beans, steady trade at 1½d to 3d per boll advance. Canadian pease firm at 1½d per boll dearer. Home and foreign oats, a quiet trade, with prices down. Barley steady. Bran and thirds, good demand at last week's prices. Oatmeal 6d per sack dearer, but slow sale.—GIBSON AND CLARK.

Leeds, Tuesday.—The weather continues cold and ungenial, and vegetation is making slow progress. The wheat market rules firm, and practically ignores the recent American decline. English is scarce, and held for stiff prices. Foreign meets a good consumptive demand at fully last week's rates. Maize quiet; beans 3d lower; oats firmly held.—DUNNS AND CO.

Maidstone, Thursday.—Sellers of wheat at market to-day did better than of late, and we note 1s per quarter advance from last week's prices, and in some instances a trifle more. No doubt the stock of English being small is quite as much the reason as the recent Budget decree. Barley a quiet business. Maize, no improvement. Oats continue at a high figure, only those persons who require for immediate use caring to buy. In other descriptions of grain, seeds, etc., no alteration.

Leicester, Saturday.—Good average attendance, but home-grown wheats were scarce. Trade steady, at 31s to 34s per 36 stones. Barley steady. Fine oats in good demand at firm prices.

Liverpool, Friday.—The market has had a fair attendance of millers, but the demand for wheat has been very moderate, but prices are well maintained at about last market day's currencies. Flour.—The demand has been very small, but holders of foreign brands are firm at previous prices, owing to the small stocks. No change is made in the limit for the home-milled bakers' grade. Maize.—Mixed is quiet and occasionally the turn lower to sell. European kinds have a steady inquiry, and a moderate business has been put through at prices the turn lower than Tuesday. Plate quiet, new crop being 3d below previous market quotations. Barley is steady, but quiet for malting. Feeding is quiet, but unchanged in price. Beans are again 6d lower for Saidis, owing to fresh arrivals, but meet a moderate inquiry at the decline. Peas steady, unchanged in prices; the demand is, however, inactive. Oats.—English are steady at about late rates, and foreign, although meeting with only a limited demand, are firmly held at about ½d per bushel advance on reduced holdings. Oatmeal is steadily held at late rates, but the demand is quiet. Oilcake quietly steady at last Tuesday's prices.—SEGAR AND TUNNICLIFFE.

Newcastle-on-Tyne, Saturday.—A fair demand for wheat at our to-day's market at last Saturday's prices. Maize, steady values unchanged. Beans, 3d per 504lbs cheaper for foreign. English, however, was held for last week's prices. No peas offering. Sellers asking more money for oats, which, however, prevents business. No change in the price of barley.—JOSEPH POLLARD AND CO.

Newport, Wednesday.—Wheat was very firm, sellers asking more money. Maize strong, at last week's prices. Barley and oats unchanged. Flour: Fines, 24s per sack.

Northampton, Saturday.—Usual attendance; limited number of samples of wheat, very firm in price, and dearer than last week. Limited business at the rise. Business rather dull, and buyers not inclined to meet the advanced rates. Flour dearer. White wheat, 30s. to 34s. red, 32s to 33s; grinding barley, 22s to 26s; oats, 20s to 24s; old fine, 26s; beans, 34s to 40s; flour, 23s to 24s; old fine, 28s.

Norwich, Saturday.—Wheat was only in limited supply at our market to-day, at 6d per quarter more money since last Saturday. Cold and wet weather still prevails, with north-west winds. Wheat, red, 32s 6d to 33s 6d per qr, weight 63lbs per bushel imperial. Corn inspector's return for the week ending 5th May, 1902: Wheat, 1,547, 29s 9d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat: Small supply; fair trade at late rates. Grinding barley in request at full prices. Oats scarce, and fully 6d. dearer. Beans: Small supply; full prices supported.—ROBERT HUBBLE.

Peterborough, Saturday.—Wheat to-day was quiet, but steady at last week's prices; supply keeps small. Oats still stiffer in value, and made 3d to 6d per quarter more money. Weather cold and ungenial.—THOMAS HILL AND SON.

Plymouth, Thursday.—English wheat, none offering. Barley, maize, oats, firm, unchanged.—ORLANDO DAVIS AND CO.

Reading, Saturday.—We had an excellent attendance to-day, but trade, on the whole, ruled quiet. There was only a small quantity of wheat on offer, inquiry for which did not prove by any means brisk. Despite this fact, prices remained firm, and where sales took place the recently advanced prices were well maintained, and in one or two instances higher figures were asked. Barley and oats were also scarce, and sold fairly well.

Ripon, Thursday.—A larger attendance, but no quotable alteration in prices. Only a light show. Wheat, English (new), 31s to 32s; ditto foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s to 26s per qr; beans, 1s per stone.

Rye, Wednesday.—White wheat, 27s to 29s; red ditto, 27s to 28s. White oats, 21s to 24s; black ditto, 21s to 25s. Tick beans, 35s to 36s; Mazagan ditto, 31s to 32s.

Sheffield, Tuesday.—The attendance was moderate. The supply of English wheat was very small, and sellers asked for 6d advance. Oats scarce and firm. There was a moderate demand for beans and corn at last week's rates. Quotations:—Wheat, white, 32s to 34s; ditto red, 32s 6d to 34s per 504lb; barley, grinding, 23s 6d to 24s; ditto malting, 30s to 32s per 448lb; oats, new white, 26s to 27s; ditto new black, 23s to 24s per 336lb; peas, grinding, 36s to 37s; ditto blue, 53s to 80s; beans, Egyptian, 34s to 35s per 504lb; ditto English, new, 37s 6d to 38s per 532lb; Indian corn, small, 23s 6d to 24s 6d; ditto American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—Wheats made 32s 6d per qr, an advance of 6d on the week. Oats firm, at 24s to 25s per qr. Beans firm, making up to 36s 6d per qr. A small market.

Stockton, Wednesday.—No farmers' wheat showing. Trade in foreign was firm, but with only a moderate inquiry from millers at last week's prices. Oats 3d dearer, and maize unaltered, with a slow sale. No malting barley showing.

Sunderland, Saturday.—Better supply of wheat, which sold at an advance of about 1s per quarter. Barley and oats firm. Arrivals, nil.—E. and F. RICHARDSON.

Wakefield, Friday.—There is no improvement in the weather; rain and warmth are urgently needed. Wheat remains in steady consumptive request, stiff limits from shippers alone preventing a more active business. Last week's prices are well maintained. Oats and maize held for 3d advance. Baltic limits for the former article are quite out of reach.—DUNNS AND CO.

Wakefield, Friday.—There is a poor attendance on to-day's market, and in the small business passing in wheats fully late rates are maintained. A few small lots of English malting barley still on offer, but maltsters are now fully stocked. Oats and maize 3d per quarter dearer. Other feeding stuffs unaltered.—MICHAEL SANDERSON AND SON, LIMITED.

Worcester, Saturday.—Wheat prices continued to exhibit a firm tone, although the demand was of a retail character. English oats rather dearer, and all feeding stuffs kept firm.

Wisbech, Saturday.—A very small supply of wheab at market; trade slow at late rates; prices, 32s to 33s. Oats, 24s. to 25s. Other articles unchanged.—JAMES FLETCHER.

Worksop, Wednesday.—Very small attendance. Wheat 6d to 1s per qr more money, and oats scarce and dear. White wheat, 31s 6d to 32s 6d; red wheat, 31s to 32s; grinding barley, 27s to 29s; white oats, 24s to 26s; black oats, 23s to 25s; round maize, 24s 6d to 26s per qr.

York, Saturday.—Farmers are offering very little wheat, and trade remains firm. Fine white, 31s to 32s; red and mixed, 30s to 31s per quarter of 36 stones. Oats scarce and very dear.

FOREIGN.

Paris, Wednesday.—Native wheat: The position remains about the same as last week; offers are just as limited, and there is no great activity in the market, for buyers consider that the crops are by no means compromised, and that with the return of fine weather offers will assume more importance. Millers on their part are still embarrassed by the poor sale of flour, and content themselves with purchasing for their immediate requirements. Transactions were, therefore, almost nil and confined to merely small lots, and prices may be quoted as almost nominal. Choice red wheat 37s 10d to 38s 3d, and white 37s 10d to 38s 9d per 480lb. Flour: Fleur-de-Paris—The market opened quiet, but closed with a decline of 10c. to 15c. at the following prices:—May, 26s 10½d to 27s 1½d; May, 27s 2d to 27s 5d; July-August, 27s 5d to 27s 8d; and September-December, 26s 4½d to 26s 7½d per 280lb. Consumption Marks Flour: Trade is still quiet and prices unaltered. Quotations are as follows:—Choice marks, 31f. to 32f. (31s 6d to 32s 5d); first marks, 30f.50 to 31f. (30s 11d to 31s 5d); good marks, 29f.75 to 30f.50 (30s 2d to 30s 11d); ordinary marks, 28f.50 to 29f.75 per 100 kilos (28s 11d to 30s 2d per 280lb). Rye: The tendency is quiet in sympathy with the decline in wheat, and, with a slack demand, the little on offer was readily absorbed. Under these conditions, prices remained unchanged, with a rather firm tendency at 25s 8d per 480lb. Oats: Advices respecting the growing crops are satisfactory, but warmer weather is required for the development of the plants. The feeling for this cereal is very quiet in the provinces. Here trade ruled exceedingly dull, with no appreciable change in values. Grey beauce, 23s 2d to 23s 6d; white, 22s to 22s 4d; red, 22s 11d to 23s 2d; black from the Central provinces, 24s 1d; white Libau is quoted 22s 7d to 22s 11d; black, 22s 11d to 23s 2d; and Swedish, 24s 4d per 320lb. Barley: Beauce still asks 24s 8d to 25s. Some business in Sarthe and Mayenne barley for forward delivery was done at 17f.25 (25s). Here rates were merely nominally quoted:—Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); grinding, 17f. to 17f.25 (24s 8d to 25s); and feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb). Buckwheat: This article, with scarcer offers, is still firmly held at previous rates viz., 28s 9d per 480lb.—*Dornbusch*.

Hamburg, Saturday.—In spite of heavy supplies of American wheat, our market remains firm, all that arrived being needed in this country and the North. Hard winter No. 2 is selling at 29s; Northern spring No. 1 is held at 28s 3d; Duluth at 28s 9d; red winter No. 2, July-August, at 29s 6d, 80 kr.; River Plate, prompt, at 28s 9d per 80lb. Walla Walla is selling at 29s 9d to 30s per 500lb. Rye firm; 9 15-20 South Russian prompt has been sold at 23s 3d; No. 2 American Western is offering at 23s 9d per 480lb. Malting barley quiet. We quote Pomeranian and Mecklenburg 24s to 26s; Saale and Bohemian 28s to 30s per 448lb f.o.b. Feeding barley firm, 60 to 61 kr. Russian prompt is held at 18s to 18s 6d; August-October shipments at 16s 9d to 17s per 400lb c.i.f. Maize is very firm; supplies are decreasing. Danubian, Turkish, and Odessa prompt and June July is held at 16s 9d to 17s 3d; mixed American at 24s 6d per 480lb c.i.f.—JOHN TATLOCK.

THE BALTIC.

New York cables wheat at 29s. 3d. winter, and 27s. 3d. spring. Maize is at 22s. 5d., barley nominal, oats 16s. per qr., and flour 14s. per barrel. Freights are 1s. 3d. to 1s. 6d. per qr. for corn, and 7s. 6d. per ton for flour. This news is in favour of buyers of spring wheat, of oats, and of flour for future shipment, but is opposed to trade in winter wheat and in maize. Reckoning 2s. 6d. on to New York prices for freight insurance, landing, and other charges, we get 31s. 9d. for winter wheat, 29s. 9d. for spring, 25s. for maize, and 18s. 6d. for oats, as the lowest prices showing profit here.

Actual values of the week have concluded cargoes of American spring wheat at 29s., and of oats at 20s., but no sales of winter wheat or maize. Sales of other than American cargoes include South Australian wheat, at 29s. 9d., Argentine maize at 21s. 3d., White Libau oats at 18s. 3d., and Roumanian rye at 23s. per qr.

The London Corn Trade Association notify us that the following standards of February shipments are now available for inspection:—Barley: Danube, Odessa, Novorossisk, Nicolaieff, Kustendj, Eupataria. Maize: Odessa, Gal.-Fox, Bessarabian, Danube Cinq., Yellow Odessa Cinq., Red Odessa Cinq., Varna, Bourgas, Dedeagatch. Rye: Danube, Nicolaieff, 72-73 kl.; Novorossisk, 72-73 kl.; Odessa, 73-74 kl.; Theodosia, 72-73 kl. And Salonica maize, January-February shipment.

HAY AND STRAW.

Leeds, Tuesday.—Hay and straw in the warehouses is in good consumptive demand, recent prices being firmly maintained. Quotations:—Meadow hay, 8d to 8½d; clover hay, 8d to 8½d; wheat straw, 6d to 6½d; oat straw, 6d to 6½d; rye straw (retail), 8d to 8½d per stone.

Lincoln, Friday.—Hay, 85s to 90s; and clover, 75s to 80s per ton at the stack; straw, 50s to 55s per ton on rail.

Manchester, Wednesday.—Hay, 6½d to 7½d; clover, 6½d to 7½d; oat straw, 5½d to 6d per stone.

Manchester, Friday.—Hay, 6d to 6½d; clover, 6½d to 7½d; straw oat, 5½d to 5¾d per stone.

Sheffield, Tuesday.—The supply of hay and straw was again small, and trade continued very quiet. Choice seeds £5 15s to £6; meadow hay, £5 5s to £5 10s; straw, £3 15s to £4.

Stockton, Wednesday.—Old land and new land hay £5 to £5 5s per ton.

POTATOES.

Borough, Saturday.—A good quantity available, with a moderate demand at about previous prices. Scotch maincrops (Dunbars), 80s to 90s; Blackland Up-to-Dates, 45s; Lincoln, 50s to 60s; Kent and Surrey, 50s per ton; New Canary, 15s to 14s per cwt; Lisbon, 5s per box.

Great Northern, Saturday.—Good supply, but trade very slow. Scotch maincrops, 90s; Blacklands, 40s to 45s; Lincoln Up-to-Dates, 60s to 65s; maincrops, 65s to 70s per ton; New Jersey, 24s per cwt.

Spitalfields, Saturday.—A much heavier supply, but demand not so good, although prices only varied slightly. Best Lincoln Up-to-Dates, 60s to 65s; Blackland, 45s to 50s; Wisbech, 55s to 60s; Scotch, 65s; Scotch maincrops (grey soil), 65s to 70s: Lincoln maincrops, 70s to 80s; Reading Giants, 40s; Blackland Gartons, 30s to 35s per ton; New Jersey (out grown), 3d per lb; Teneriffe and Canary, No. 2, 12s to 13s; No. 3, 10s to 11s; Maltese rounds, 10s; Algerian kidneys, 14s to 15s per cwt.

Southwark Waterside, Monday.—During the past week the arrivals have been moderate, the demand steady, and prices well maintained. The following are this day's quotations:—Essex, E. Kent, F. Challenge, 50s per ton; Essex, E. Kent, Up-to-dates, 45s to 55s per ton; Lincoln Up-to-dates, 50s to 60s per ton; Lincoln F. Challenge, 50s to 60s per ton; Blackland, B Queens, 45s to 50s per ton; Blackland, Up-to-dates, 45s to 50s per ton; Forfar and Fife, Up-to-dates, 50s to 60s per ton.

POULTRY AND GAME.

Smithfield, Saturday.—Supplies were on a light scale, and met a steady sale. Quotations:—Fowls, Yorkshire, 3s to 3s 6d; Essex, 3s to 3s 6d; Boston, 2s 9d to 3s 3d; Surrey, 4s 6d to 6s; Sussex, 4s to 5s; Welsh, 2s 9d to 3s; Irish, 2s 6d to 3s; turkeys (cocks), 6s to 7s 6d, (hen) 4s to 5s; goslings, 6s to 6s 6d; Aylesbury ducklings, 4s to 4s 9d; country, 3s 6d to 4s; Bordeaux pigeons, 10d to 1s; feathered, 8d to 10d; quail, 1s to 1s 3d; wild rabbits, 6d to 8d; tame, 10d to 1s 3d each; Australian, 8s 6d to 10s 6d per dozen; Dutch plover eggs, 3s per dozen; Russian game: Partridges, 1s to 1s 3d; ptarmigan, 10d to 11d; black game, 1s to 1s 2d; brown hares, 1s 2d to 1s 8d; white, 1s to 1s 3d each.

COLONIAL DAIRY PRODUCE

London Friday.—Butter.—The stocks of New Zealand butter on the market have been exhausted at last week's prices. The Gothic arrived yesterday with about 6,800 boxes of butter, which are meeting a ready sale at 102s to 104s for "Choicest" brands, and 96s to 100s for "Finest." The Copenhagen official quotation remains unchanged at 90 kroner, although the prices of Danish in the North of England are about 2s per cwt. below those of last week. Cheese.—There is a fair demand for Canadian cheese, and values have advanced 1s per cwt. on the week. "Choicest" white is making 61s per cwt., and coloured 62s. "Finest" quality makes 58s to 60s, but there is very little of this grade to be had. New Zealand cheese has shared in the advance, and "choicest" quality now makes 59s to 60s; "Finest" realises 56s to 57s.—W. Weddel and Co.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fair supplies of fruit, with a generally steady sale. Vegetables in fair supply, but demand slow. Tasmanian and Australian apples, 9s to 16s per case; English grapes, 2s to 4s; Belgian, 1s 6d to 3s per lb; Denia oranges, 12s to 24s; Valencia, 9s to 15s; Murcia, 7s to 10s per case; bananas, 8s to 12s per bunch; lemons, 7s to 18s per case; pineapples, 1s 6d to 5s each; Canary tomatoes, 3s to 4s per case; cabbages, 5s to 7s 6d per tally; spinach, 2s 6d to 3s per sieve; parsley, 2s to 4s; mint, 4s to 5s; leeks, 3s to 4s 6d; radishes, 8d to 1s per dozen bunches; horseradish, 1s 6d to 1s 9d per bundle. Egyptian onions, 9s to 10s per bag; spring ditto, 2s to 2s 6d per dozen bunches. Potatoes:—Maincrops, 80s to 90s; Reading Giants, 60s to 65s; Blackland Gartons, 45s to 50s per ton; New Canary, 12s to 14s; Teneriffe, 14s to 16s; Maltese, 10s to 12s per cwt; Lisbon, 4s 9d to 5s per case; Jersey, 2½d per lb.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, S.E., state that as usual at this period of the year a quiet feeling has begun to characterise the trade for field-seeds. The consumptive demand is naturally about over, whilst no speculation worth mentioning has yet sprung up. All kinds of grass and clover seeds, consequently, show this week no alteration in value. Some attention is being given to new French Trifolium for forward delivery. A few occasional orders still drop in for tares. Some business has been doing in mustard seed at the moderate rates now current; but rape seed remains dull and neglected. Lucerne has got into narrow compass. Bird seeds move off slowly on former terms. Blue peas have been in improved request at higher prices, whilst haricot beans are firmly held.

HOPS.

Canterbury, Saturday.—A fair amount of business has been done during the week; and prices of all the best hops continue to advance. Choice East Kent Goldings are now quoted up to 95s per cwt. In the plantations the hops do not grow away strong, owing to the ungenial temperature, which is also affecting the colour.

Worcester, Saturday.—Trade has been quieter during this week, with only an occasional inquiry for useful hops, for which prices are still very low. Choice sorts are about cleared off this market.—Piercy and Co.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

A more inclement week has seldom been experienced in England than that which on Saturday at midnight took its very welcome departure. The temperature at noon was as much as six degrees below the mean, and there were five night frosts on the grass. The rainfall exceeded the average, which is the one redeeming feature of an otherwise wholly untoward time. The rain was needed, and if we have an ordinary May geniality in the temperature, barley and oats, hay and clover, should come on apace. The wheat does not look very well anywhere, but May can yet do a good deal to bring it into a healthy state.

France, the centre of Europe, and Russia from the Baltic to the Black Sea, all report an evil combination of wet and cold weather; heavy rains for the most part, with a temperature at night which borders on the freezing point. American reports are rather better from a week ago. Official news of the Indian wheat crop is late in appearing, but it is known in trade circles that the yield is much below an average; Persia likewise has poor crops.

The arrivals of grain into London during April were small of wheat and barley, large of malt and oats, small of maize, and heavy of flour. The receipts of pulse were about an average.

LONDON ARRIVALS FOR APRIL.

	Qrs.
Wheat	151,000.
Barley	53,000.
Malt	129,000.
Oats	401,000.
Beans	4,161.
Peas	8,200.
Maize	116,500.
	Sacks.
Flour	393,000.

Sales of British wheat thus far into 1902 compare as follows with some preceding years:—

Qrs.	Jan.	Feb.	March.	April.
1902	569,000	681,000	782,000	360,000
1901	455,000	568,000	631,000	371,000
1900	582,000	712,000	825,000	586,000
1899	657,000	787,000	725,000	765,000
1898	602,000	593,000	516,000	570,000
1897	525,000	480,000	485,000	310,000
1896	270,000	514,000	340,000	280,000

Thus the sales of this last April have been much below the average, although not quite unprecedentedly so.

Shipments of wheat for the first third of 1902, i.e., January 1st to April 30th, are estimated as follows, and the returns being fairly full, there is little doubt that the truth is very closely approached. Of course, some of the minor items are always a trifle uncertain:—

	Qrs.
From Russia	2,743,000
Roumania	1,225,000
Bulgaria	250,000
Turkey	125,000
U.S.A.	5,330,000
Canada	400,000
Argentina	1,397,000
Australasia	905 000
India	350,000
Wheat: Total	12,635,000
All countries: Flour	2,000,000
Total	14,625,000

This is at the rate of 44,085,000 quarters yearly, a figure which affords an interesting line of comparison with previous years, for which total shipments of bread stuffs, wheat, and flour, were:—

	Qrs.
1901	47,793,000
1900	42,525,000
1899	47,110,000
1898	53,145,000
1897	40,550,000
1896	43,150,000

The American corn visible supply is returned as follows for the 10th of May:—

	1902.	1901.
Wheat, qrs.	7,898,000	8,553,000
Maize, qrs.	1,261,000	3,077,000
Oats, qrs.	695,000	2,080,000

This news is, of course, strongly in favour of those of our merchants who actually hold supplies of these staples, and it is clear that no cheap maize or oats can be expected from the United States this month, or probably for some months ahead.

Imports of bread stuffs this cereal year have been as follows:—

	Qrs.
Sept. 1 to April 30	14,376,000.
May 1 to 3	325,000.
Imports: Total	14,701,000.
Farmers' Deliveries	4,700,000.
Bread stuffs: Total	19,401,000.
Estimated requirements	19,845,000.

As the town line, that of the requirements, exceeds the higher, that of aggregate supply, we may assume that stocks are somewhat worse than they were at the beginning of the cereal year. The current estimate of bread stuffs in merchants' hands is now 2,379,000 quarters, and farmers are estimated to hold 1,363,000 quarters.

There are now on passage to the United Kingdom the following quantities of wheat:—

	Qrs.
Californian	2,250,000.
American	340,000.
Argentine	466,000.
Indian	73,000.
Russian	30,000.
Australasian	795,000.
Various	20,000.
Total	3,974,000.
A week ago	3,956,000.

These large expectations are the great obstacle to advancing markets, and it is naturally very difficult to place either Californian or Australasian wheat at the present moment. On the other hand, Russian and Indian sorts are very difficult to procure, and even American and Argentine sorts are rather bullish than weak. The quantity of flour on passage is 294,000 sacks only, against 450,000 sacks a year ago and 402,000 sacks two years since.

Linseed shipments from January 1st to April 30th were above the average, having been:—

	Qrs.
1902	2,010,000.
1901	1,732,000.
1900	1,427,000.

Since May 1st, shipments cabled include 60,000qrs. from India, 14,000qrs. from Argentina, and 5,000qrs. from Russia. The price of Calcutta linseed, which rose to 57s. 9d. in February, fell to 51s. at the end of April; but cottonseed, which on January 1st was at £6 7s. 9d. per ton, closed at £7 2s. a week ago, and to-day is held for seven and a half guineas. Linseed oil averages £30 6s. 6d., brown rape oil £25 11s. 3d., and cottonseed oil £23 11s. 3d. per ton.

Maize imports since September have been as follows:—

	Qrs.
1901-2	7,141,000.
1900-1	8,646,000.

We are, therefore, at the present moment just one-and-a-half million quarters short of Indian corn, and this in spite of the unexpectedly vigorous shipments of Russia and South-Eastern Europe.

The deficiency has been largely met by importations of feeding barley. The barley returns do not separate malting from feeding, which is a great drawback; but on the basis of the following figures we may perhaps assume an extra million quarters of feeding barley imported:—

	Qrs.
1901-2	5,259,000.
1900-1	4,135,000.

These returns "lump together" all barley imported.

The quantity of maize on passage is 580,000qrs., against 555,000qrs. on May 10th, 1901, and 560,000qrs. at the same date in 1900. The present expectations include 80 per cent. of round corn. Of barley, 310,000qrs. are now afloat, against 260,000qrs. last year. The present expectations are about equally divided between Californian and Russian. There is nothing coming from Persia, and only 8,000qrs. from Chilé.

In addition to breadstuffs imports already recorded, last week received 75,000qrs. of barley, 134,000qrs. of oats, 5,360qrs. of peas, 11,000qrs. of beans, 9,500qrs. of linseed, and 196,000qrs. of maize. The requirements were almost certainly in excess of these receipts, and feedingstuffs appear to be on the up-grade. Russian and American oats are held for 6d. advance, at most markets, and both beans and peans have gained in firmness on the week. Rye, dari, and buckwheat are minor articles, also tending to advance in value.

FEEDING STUFFS.

London, Monday.—Linseed cake: Demand is moderate, and prices are a little easier on the week, especially for English made. Decorticated cotton cake strong, and 2s 6d dearer. Meal firm at last prices. Undecorticated are not quite so strong, and are 1s 3d lower. Linseed still tends dearer; the market has got up a further 1s 6d.

English Linseed Cake	ex mill	7 15 0 to 7 17 6
American Calcutta Linseed Cake	ex quay

Clean Russian Linseed in bulk, per 416 lbs.	ex warehouse	2 17 6

ROBERT AND JOHN HEWETSON.

THIS DAY'S MARKETS.

MARK LANE, MONDAY.

[FIRST REPORT.]

English wheat to-day was scarce and dear, while British barley was hardly on offer at all, and even oats were decidedly hard to obtain in any quantity. The home crops, if we could judge from London alone, are exhausted extremely early in the season, but a good deal has to be allowed for good prices paid locally, and the high railway charges making it out of the question to send to London, where the margin of profit is not substantial. For foreign wheat last week's prices were not very readily made, but the amount of home competition helps merchants to maintain values. Maize was a little dearer for round corn, and oats were fully 3d up for Baltic sorts. Barley was firm, both for Californian brewing and for Russian feeding descriptions. Buyers complain of the dearness of oilseed, and particularly of cotton seed, in which a successful corner appears to have been effected. Some firms were said to be asking £8 per ton; £7 15s. was actually paid.

CLOSE OF THE MARKET.

LARGE SUPPLIES OF CALIFORNIAN AND AUSTRALIAN WHEAT ARRIVED IN THE THAMES ON SATURDAY MADE HOLDERS OF FOREIGN WHITE WHEAT ACCOMMODATING. MAIZE WAS A BIT DEARER FOR ROUND. YELLOW FOR JUNE DELIVERY WAS IN BUYERS' FAVOUR. THE MARKET FOR OATS AND FEEDING BARLEY CLOSED VERY FIRMLY.

THE FLOUR TRADE.

MARK LANE, MONDAY.

The dispute between bakers and millers over the new duty was satisfactorily settled, the bakers paying half of it, i.e., 6d. per sack, from May 1st. There was a fair trade done in American sorts, on which 3d. decline was allowed in order to effect sales. As less than usual is on passage, the buyers seem to have acted wisely. London household flour sales were prejudiced by this, but millers would not give way. A supply of Cascada flour is welcome; prices as under. Country flour was stiffly held. Culley, of Norwich, asked 23s. 6d. to 24s. for supers; Clarke, of Yarmouth, 24s. to 24s. 6d. for whites; and Cramphorn, of Braintree, 22s. 6d. to 23s. for roller whites. All English "straight" flour comes at 23s. to 23s. 6d., and this is about the price paid for Australian. Low-grade feeding flour was in request at 15s. per sack.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls		A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
May 5	noon.	6 2	6 2	6 5
	4 p.m.	6 2	6 2	6 5
May 6	11 a.m.	6 2	6 2	6 5
	4 p.m.	6 2	6 2	6 5
May 7	11 a.m.	6 2	6 2	6 4
	4 p.m.	6 2	6 2	6 4
May 8	11 a.m.	6 2	6 2	6 4
	4 p.m.	6 2	6 2	6 4
May 9	11 a.m.	6 1	6 2	6 4
	4 p.m.	6 1	6 2	6 4
May 10	noon.	6 1	6 2	6 4
To-day	noon.	6 2	6 2	6 5

Maize makes 4s. 5d. per cental for June and July, 4s. 8d. for September and October delivery. The market is a little firmer from last week.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the 18th inst. the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement the Acts of 1876 and 1901 throw the burden on the buyer.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—The market is steady; prices unchanged. Grain.—Maize is scarce on spot, and 1½d. dearer. American corn is practically exhausted. Beans are 3d. dearer. Barley and oats steady. Pease unchanged. Mill Stuffs.—Bran and thirds continue scarce.—McKINNON AND McDONALD (Glasgow).

Offals.—Owing to the continuance of cold weather and backward condition of the grass crop, the demand for bran has been fully maintained at late rates.—GREENHILL BROTHERS (Belfast).

Flour.—There is no further change to report in prices recent advances are fully maintained. Values on spot are as follows:—First spring patents, 25s. 6d. to 26s. 6d.; second spring patents, 24s. 9d. to 25s. 9d.; American winter patents, 25s. to 25s. 6d.; extra fancies, 23s. 6d. to 24s.—GREENHILL BROTHERS (Belfast).

Flour has met a fair demand to-day at the full prices of last Monday.—T. S. MEDILL AND SONS.

Wheat and flour arrivals the past week have been large. Demand is steady, and prices are fully supported. Barley scarce, and prices are 3d. per qr. higher. Maize prices supported. Oats, 3d. to 6d. per qr. dearer.—COVENTRY, Mark Lane.

The wheat market to-day is firmer, and the depression of the closing days of last week is well nigh removed. Prices are, generally, 3d. lower than last Monday, Americans; unchanged for other descriptions. Oats steady, and 3d. to 6d. higher. Maize tends in sellers' favour, and barley is 6d. dearer.—W. WOOD AND CO.

Middlings are firm and unchanged. Millers keeping quite clear, bran and pollard rather weak, and prices in buyers' favour.—JOHN BAWCOMB AND CO.

SEEDS.

London, Monday.—The seed trade has subsided into its usual summer quietude, though the demand has not entirely ceased. Stocks left over are exceptionally light. Rape and mustard seed meet an increasing inquiry, and spring tares are still selling. Bird seeds are neglected. Haricots and blue peas are firm.—JOHN PICARD AND CO.

HOPS.

London, Monday.—W. H. and H. Le May report:—The trade continues to be of a purely consumptive character. Stocks of the better qualities are in a very small compass.

CHEESE.

Berkeley, Wednesday.—There was an average quantity of cheese on offer, and prices realised were weaker, viz., 40s to 45s per cwt.

EGGS.

Tuesday.—Bedale: 14 to 16 for 1s. Gainsborough: 16 for 1s. Settle: 18 or 19 for 1s. Spalding: 16 or 17 for 1s.

Wednesday.—Barnsley: 13 or 14 for 1s. Boston: 16 to 17 for 1s. Colne 1s 4d per score. Goole: 17 for 1s. Kirbymoorside: 18 to 19 for 1s. Knaresborough: 14 to 15 for 1s. Louth: 18 for 1s. Market Weighton: 18 for 1s. Masham: 13 or 14 for 1s. Northallerton: 15 or 16 for 1s. Stockton: 14 or 15 for 1s. Worksop: 1s 3d to 1s 6d per score.

Thursday.—Brigg: 17 to 18 for 1s. Driffield: 18 or 19 for 1s. Kidderminster: 16 for 1s. Scarborough: 17 for 1s. Ripon: 15 or 16 for 1s. Wetherby: 15 or 16 for 1s. Wellington: 15 or 16 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Grimsby: Austrian, 4s 11d to 5s 6d; Egyptian, 4s 5d to 4s 8d; Danish, 7s to 7s 9d per 120. Heimsley: 16 to 18 for 1s. Leeds: Yorkshire, 7s 6d to 8s per 120; Irish, 6s 6d to 7s 6d; Danish, 7s to 7s 6d; Austrian blues, 5s to 5s 3d; ditto reds, 4s 7d to 4s 10d. Leyburn: 16 to 18 for 1s. Lincoln: 16 or 17 for 1s. Otley: 15 or 16 for 1s

Saturday.—Appleby: 16 to 17 for 1s. Berwick: 8d to 9d per doz. Carlisle: 16 to 18 for 1s. Doncaster: 15 to 17 for 1s. Grantham: 16 and 17 for 1s. Howden: 18 for 1s. Lancaster: 12 to 15 for 1s. Malton: 16 or 17 for 1s. Pontefract: 15 for 1s. Retford: 1s to 1s 4d per score. Richmond: 15 and 16 for 1s. Skipton: 14 or 15 for 1s. Stokesley: 16 or 17 for 1s. Whitby: 17 for 1s. York: 16 for 1s.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 2,593 bales bacon, and from foreign ports 11,031 bales bacon. The bacon market was steady last week, and although supplies were very heavy prices were again some 2s to 3s higher for certain selections, Irish ranging from 58s, 66s up to 67s, 69s; Danish, ranging from 54s, 63s, up to 65s, 68s; Canadian, ranging from 54s, 58s up to 60s, 63s. The butter market was quiet; French, 98s to 104s; Danish, 104s to 107s; Russian, 90s to 96s; New Zealand, 96s to 104s. Lard, steady: Irish, 50s to 64s; Danish, 56s to 59s; American, 51s to 52s 9d.—COURTNEY AND CO.

CATTLE.

Metropolitan Market, Islington.

METROPOLITAN CATTLE MARKET, Islington. Machine NINE. Monday, May 12th, 1902.

	British.	Total.	May 13, 1901.
Beasts	1,190	1,190	930
Sheep and lambs	8,740	8,740	9,010
Calves	10	10	30
Milch cows	40	40	60

Quotations per 8lb. (sinking the offal).

ENGLISH.	Interior. s. d.	Second. s. d.	First. s. d.
Beasts	3 4 .. 4 8	5 2	
Sheep	3 10 .. 5 0	6 2	
Lambs	5 8 .. 6 0	6 10	

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 6; Eastern Counties, 832; Midland, Home, and Western Counties, 295; Devon, 30; Ireland, 27.

There was an increase of 70 in the number on offer in the beast market, owing to larger arrivals from the midland, home, and western counties. Trade, taken as a whole, was of a slow nature, but rates were firm at an advance of fully 1d. per 8lb., a clearance being made. Trade for butchering cows and bulls was also firmer, both in regard to tone and value.

The following are top quotations per 8lb. (sinking the offal):—

	To-day.	May 13th, 1901.
Scotch	5s 3d to 5s 4d	4s 7d to 4s 8d
Devons	5s 0d to 5s 1d	4s 6d to 4s 8d
Norfolks	5s 1d to 5s 2d	4s 4d to 4s 5d
Lincolns	4s 8d to 4s 10d	4s 0d to 4s 3d
Irish	4s 8d to 4s 10d	
Fat cows	4s 4d to 4s 6d	3s 10d to 4s 0d

We note a decrease of 1,180 in the supply in the sheep market consignments from Norfolk and Yorkshire, both being shorter. Trade for wether sheep was firm, no alteation in value being noticeable, but ewes must be written fully 2d. lower. Choice quality lambs were a shade dearer, but heavy descriptions ruled in favour of the buyer. The total supply included 550 from Yorkshire, 3,090 from the Eastern Counties, and 440 Scotch. Undermentioned quotations are at per 8lb. (sinking the offal), and are for the best of each class penned:—

	To-day	May 13, 1901.
7½ to 8 st. Downs	6s 0d to 6s 2d	5s 8d to 5s 10d
9 st Downs	5s 6d to 5s 8d	5s 6d to 5s 8d
10 st Halfbreds	5s 2d to 5s 4d	4s 10d to 5s 0d
10 st. Yorkshires	4s 8d to 4s 10d	4s 8d to 4s 10d
12 st Lincolns	4s 8d to 4s 10d	4s 4d to 4s 6d
10 st Down ewes	4s 4d to 4s 6d	4s 2d to 4s 4d
11 st Halfbred ditto	4s 0d to 4s 2d	3s 10d to 4s 0d
5 st Down lambs	6s 8d to 6s 10d	7s 8d to 7s 10d
6 st Halfbred ditto	5s 10d to 6s 0d	7s 0d to 7s 2d

Calf trade nominal. No pigs on the market. Milch cow trade firmer.

London, Monday.—Moderate supplies; trade very slow. Beef carcases, 4s 4d to 4s 6d; hind quarters, 4s 8d to 5s. Roastings, 5s 6d to 5s 10d. Sheep: ewe, 3s 4d to 3s 8d wether, 4s 4d to 4s 8d; hindquarters, ewe, 4s 6d to 4s 10d; wether, 5s 4d to 5s 8d. Pigs, large, 3s 8d to 4s; small, 4s 4d to 4s 8d.

St. Ives, Monday.—Beasts, 793; sheep and lambs, 1,033; pigs, 617. Beef, 8s 6d to 9s 6d; mutton, 8s 2d to 9s 11d; lamb, 9s to 11s; pork, 6s 9d to 7s 9d; fat beasts sharp trade; stores fair; fat sheep, good demand; stores fair; fat and store pigs good demand; milch cows fair trade; prices £15 to £23.

FOREIGN CATTLE.

Liverpool, Monday.—Larger supply of cattle in market. Demand slow, and prices generally lower. Sheep shown in larger numbers. Trade slow for mutton, only handy weights maintaining late rates. Lambs also a slow trade. Beef, 5½d to 7½d per lb. Mutton, 6½d to 9d per lb; and lambs, 9d to 10d per lb. At market: 798 cattle and 8,767 sheep.

Deptford, Monday.—Beasts, 483. To-day's supply, compared with Monday last, showed a decrease of 110 head, and consisted of 366 from the United States and 117 from Canada, trade for which was of a firm and steady nature, both in regard to tone and value, an early clearance being made at following quotations per 8lb (offal given in):—Best States, to dress, about 680lb. 5s; Canadians, quoted at from 4s 9d to 4s 10d. No sheep on the market. On Saturday the supply consisted of 798 beasts from the United States, which sold freely at from 4s 10d to 5s per 8lb. On Monday, May 13th, last year, the following were the numbers on offer, with the current top rates per 8lb:—Beasts, 655, 4s 3d; sheep, 1,450, 4s 6d to 4s 8d.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat is rather lower both for prompt and future shipment. Maize and barley are quiet at Saturday's terms. Linseed and cottonseed are held for a slight advance. Cargoes of peas and of rapeseed favour buyers. Beans and oats are very firm, but buyers are few.

BUSINESS DONE.

WHEAT.—Australian, 30s, on passage; Argentine, 29s, on passage; Russian Azma, 30s 6d, prompt shipment; Russian Ghirka, 29s 9d, prompt shipment; Californian, 29s 3d, prompt shipment; No. 1 Manitoba, 30s, prompt shipment; fine Duluth, 29s 9d, prompt shipment; fine Duluth, 29s, June shipment.

MAIZE.—Roumanian, 20s 9d, June shipment.

BARLEY.—Azoff, 19s 3d, June shipment; (old crop), Californian, 24s 3d, on passage; (new crop), Californian, 23s, September shipment.

OATS.—Roumanian, 15s 3d, October shipment.

PEAS.—Canadian, 33s 6d, prompt shipment.

LINSEED.—Bombay, 56s 3d, June shipment.

RAPESEED.—Brown Cawnpore, 38s 3d, June shipment.

COTTONSEED.—Egyptian, £7. 15s, prompt shipment; Bombay, £5 1s 3d, June shipment.

The Chief Statute Hirings for the May term at Barnard Castle were held on Wednesday, but the engagements were not numerous. Agriculturists experienced great difficulty in securing female servants for farm work. Managing farmhouse women were difficult to engage at £19 to £22; first-class ploughmen received £17 to £23; good managing men, £25 to £27; and strong plough boys, £9 to £12 10s. per annum.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The trade for fat beasts at Islington, with a moderate supply, consisting chiefly of Norfolks, was of a firmer and steadier nature at a slight advance in value, there being on the chief market day of the week (Monday) a rather better demand, owing to the firmer tone of the dead meat market, a practical clearance being made. Fat butchering cows and bulls met with more inquiry by country buyers, both selling freely at an advance of from 1d. to 2d. per 8lb. The arrivals consisted of 3 from Scotland, 30 Ireland, 20 Devonshire, 882 from Norfolk, Suffolk, and Essex, and 335 from the midland, home, and western counties. At the foreign cattle market, owing to the larger supply, rates were a shade easier, the arrivals consisting chiefly of consignments from the United States, amongst which were some very good beasts of the polled Scotch and Hereford breeds. The total number offered for sale on both markets was 4,548, as against 3,234 during the previous week. The supply consisted of 1,270 British (increase 40) and 3,278 foreign (increase 1,274). These latter comprised 2,766 from the United States and 512 from Canada. The following were the top rates paid per 8lbs., sinking the offal: 80-stone Scotch, 5s. 2d.; 90-stone polled Norfolks, 5s. 1d.; 80-stone Devons, 5s.; 95-stone Shorthorn Norfolks, 5s.; 100-stone Lincolns, 4s. 10d.; 95-stone Irish, 4s. 10d.; 85-stone States, 4s. 11d. to 5s.; 90-stone Canadians, 4s. 9d. to 4s. 10d.; 100-stone fat cows, 4s. 4d.; 100-stone fat bulls, 4s. The sheep trade was practically confined to the Islington market, and so far as wethers were concerned was for holders of a disappointing nature, lower rates by 2d. per 8lbs. having to be accepted for all descriptions, ewes on Monday being in excess of requirements, met with forced sales at a decline of fully 4d. per 8lbs., but other Thursday somewhat recovered themselves. Of lambs there was a large number on sale, especially considering the cold weather. Trade consequently was of a very dull nature, even the very choicest being lower in price, whilst heavy descriptions were extremely low and difficult to cash. The total number penned was 12,653 (previous week, 11,723), consisting of 12,000 British (increase 1,080) and 653 American. Best pens made per 8lb. as follows (sinking the offal): 7½ to 8-stone Downs, unclipped, 6s. 2d.; 8-stone Scotch, clipped, 5s. 8d.; 9-stone Downs, 5s. 8d.; 10-stone ditto, 5s. 6d.; 10-stone Half-breds, 5s. 2d. to 5s. 4d.; 12-stone Lincolns, 4s. 10d.; 10-stone Down ewes, unclipped, 4s. 8d.; 4½ to 5-stone Down lambs, 6s. 8d. to 6s. 10d.; 6-stone half-bred ditto, 5s. 10d. to 6s. Calves numbered 115, and met a dull trade at less money. The best on offer to dress from 144 to 160lbs. were quoted at 5s. 8d. per 8lbs. No pigs whatever on sale.

Trade in the West.

In spite of adverse circumstances, the stock markets continue very firm, this being especially the case with grazing bullocks, and also for milch beasts, of which there is undoubtedly a great scarcity in the country. The boom in the beef trade is no doubt in some measure responsible for the present dearness of grazing beasts, which are eagerly sought after at all the local fairs and markets, at prices ranging from £24 up to £36 and £38 per pair for good fream condition beasts, and from £16 to £22 for older and poorer condition animals. Milch beasts also make high prices, young heifers with good udders selling up to £21 15s. each, and cows and calves from £15 to £17 10s. for the best, and in some cases more, as milk is as badly needed now as at any period of the season. Another thing, good bullocks are very scarce, and consequently those who happen to possess a really good cow can make their price anywhere. Prices are equally high for young stock, for which there is also a very ready sale. The fat beef trade, according to the opinion of many, is scarcely so strong as it was, except for the very best grades, which, in the way of neat weights in heifers, as well as steers, keep very scarce, and consequently fully maintain their value—11s. to 12s. per score. Fat cows, with fair deliveries, on offer at most markets, rather favour buyers, though we cannot quote the ordinary runs as making over 16s. 6d., some lots; whilst the rougher grades of contract bullocks meet a rather sluggish sale, at from 9s. to 10s. Mutton is by no means a fast trade, either for wethers or ewes, the recent briskness having again fallen off, to the extent of ½d. to 1d. per lb., leaving prices about as they were a month or six weeks since—6½d. to 7½d. per lb., only the very best light weights in Downs or Sussex wethers touching a higher figure. The weather, too, is against the lamb trade; from 34s. to 38s. is the very best price at sales this week, except in a few cases where there had been special preparation, this being about 9d. to 10d. per lb., whilst less choice breeds sell at 8½d. to 8¾d. The veal trade is still exceptionally good, especially for ripe, well-finished calves, which bring in round figures from £4 up to £6 a piece (or quite 8½d. per lb., if not over); whilst the plainer grades sell very freely at 7d. to 7½d., very little below this quotation. Rearers are in good demand still, and prices keep up to their old figure—27s. to 43s. for the best and likeliest-looking animals. Pigs market very well, though, on the whole, we hardly think they are quite as dear as they were, best porkers ranging in value from 65s. to 85s. (or 10s. 6d. to 11s. per score), and baconers up to 95s. (or 9s. to 10s.). The demand for most classes of stock continues. Store sheep, despite the "drop" in mutton, sell at fairly good prices, though these are from 3s. to 4s. under last year's rates. The shortage in numbers, however, will no doubt prevent prices declining below a certain value.

Trade in Ireland.

Business opened rather sluggishly in the beef department of the Dublin market last Thursday, though the supply of cattle was nearly 200 under that of previous market. The reason of this dullness was the absence of cross-Channel buyers, and the North of Ireland was also badly represented, so the local victuallers held off during the early hours, considering themselves masters of the situation. Sellers, however, held out firmly, and obliged purchasers to give the extreme rates of last day for anything really good, prime beef being scarce. Second class beef and half-meated dairy cows met with a very sluggish inquiry. Sales for such cattle were very slow at irregular rates, and a clearance could not be effected. Lord Drogheda had a lot of very fine bullocks, which sold at 42s. per cwt. live weight. Mr. Fox, of Tallaght, had a pair of exceptionally fine bullocks, which were taken by a local butcher at £30 each. Best ox and heifer beef made from 61s. to 66s. 6d. per cwt., and a few extra choice lots up to 71s. per cwt.; good second quality 56s. to 60s. 6d.; and other descriptions from 47s. 6d. to 54s. per cwt. In spite of an increase of 369 sheep on the week, trade was of a healthy tone, as shippers seemed more anxious to purchase than for some time. The demand was chiefly for shorn sheep of good finish, and as these were scarce, last day's extreme rates were well maintained. For common and coarse sheep the market was slow, and a number remained over unsold. Lambs were in very large supply, but, as usual, a great many were poor little thin things that were practically unsaleable. Choice lambs met with a fair inquiry, but as only home butchers were buying, the number taken was limited. Prime wether mutton (shorn) was worth from 7½d. to 8d., and about ½d. per lb. more in the wool; ewe, 6½d. to 7¼d.; and inferior sheep, from 6d. upwards. Small to medium hoggets sold at from 28s. to 38s. each, and heavy do. from 44s. to 56s. Lambs all the way from 18s. for small to 40s. for large fat. Best veal in good request at from 8d. to 9d., and rough at from 4½d. per lb. upwards. Prime milch cows scarce, and made from £17 to £20; common sorts from £9 up. In the pig department there was a good supply, but in the absence of shippers trade was very quiet, but though buyers tried hard to lower rates, prices were well maintained till just the close of the day. Nice lightweight pigs made from 47s. to 49s. per cwt.; coarse pigs from 34s. Number of cattle in market, 1,204; sheep and lambs, 6,470. Country fairs throughout Ireland show a general improvement, store cattle being sought for at a good rise in price.

LONDON.

London Central, Wednesday.—Fair supplies met with a rather quieter sale. Arrivals of beef included 80 tons of Scotch, 450 Liverpool sides, 1,600 hind-quarters, and 600 fore-quarters American killed. Quotations: —Beef, Scotch, short sides, 4s 8d to 5s; long, 4s 6d; English, 4s 2d to 4s 6d; American, Deptford-killed, 4s 4d to 4s 6d; Liverpool, 4s 2d to 4s 4d; American, refrigerated, hind-quarters, 4s 4d to 4s 8d; fore-quarters, 3s 5d to 3s 6d; Dutch sides, 4s to 4s 3d. Mutton: Scotch, 4s 8d to 5s; English, 4s 6d to 4s 8d; ewes 3s 8d to 3s 10d; English lamb, 5s 8d to 6s 4d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s 4d to 4s 10d; Dutch, 4s 2d to 4s 6d per 8lb.

London Central, Friday.—Fair supplies but trade quiet, and prices had a downward tendency. A fair amount of English and also Deptford killed American, 130 tons Scotch, 1,200 Liverpool sides, 300 hind-quarters and 1,200 fore-quarters American killed comprised the arrivals. Beef, Scotch, short sides, 4s 6d to 4s 10d; long, 4s 4d to 4s 8d; English, 4s 4d to 4s 6d; American, Deptford-killed, 4s 3d to 4s 5d; Liverpool, 4s 2d to 4s 4d; American, refrigerated, hind-quarters, 4s 4d to 4s 9d; fore-quarters, 3s 5d to 3s 8d; Argentine hind-quarters, 3s 10d to 4s; fore-quarters, 2s 10d to 3s. Mutton: Scotch, 4s 6d to 5s; English wethers, 4s 4d to 4s 8d; ewes, 3s 6d to 3s 10d; Canterbury, 2s 10d to 3s; Wellington, 2s 6d to 2s 8d; Sydney and River Plate, 2s 2d to 2s 6d. English lamb, 5s 4d to 6s. Veal: English and Dutch, 3s 8d to 4s 8d. Pork: English, 4s 4d to 4s 10d; and Dutch, 4s 2d to 4s 6d per 8lb.

Islington, Thursday.—Supplies of beasts fairly good, and met steady inquiry at about previous prices. Fat bulls quoted 3s 8d to 3s 10d per 8.b. Sheep in fair supply, evidenced quiet support, but prices for both wethers and ewes ruled steady, salesmen showing no desire to force trade. 7½ to 8-stone Down wethers (clipped), 5s 4d to 5s 6d; 9-stone ditto, 5s 2d to 5s 4d; 10-stone half-breds, 4s 10d to 5s; 10-stone Down ewes (unclipped), 4s 8d; 11-stone ditto, 4s 4d to 4s 6d. Lamb trade steady, a moderate trade prevailing. 4½ to 5 stone Downs, 6s 10d to 7s; 6-stone half-bred ditto, 6s 2d to 6s 4d. Calf trade unaltered, the best on offer making 5s 6d to 5s 8d per 8lb to sink the offal. No pigs were on offer.

COUNTRY.

Ashford, Tuesday.—Beef trade quiet, but firm, the top price being 12s 6d per score. Mutton met a very fair demand at late rates. Lamb was quoted at 1s to 1s 2d per lb. and veal at 5s 8d to 6s per stone. Pork dearer, small roasters making 10s to 11s per score, and large hogs up to 10s.

Basingstoke, Wednesday.—At Raynbird and Sons' sale yard there was a good attendance of buyers to meet a supply of 30 fat beasts, 102 calves, 1,002 fat and store sheep and lambs, and 138 head of dairy and store cattle, which realised the following prices: Fat Devon steers made up to £25 5s; two year old steers, £19 5s; Kerry steers to £35 15s the pair; shorthorn steers, £19 15s; heifers, £17 15s; Jersey bull, £18 5s; Hampshire Down wethers and young ewes from 42s to 57s; old Down ewes, 34s to 40s; rams, 45s to 54s; Dorset ewes, 38s; choice three months old Hampshire Down lambs, 32s to 42s; Exmors, 26s to 29s; Dorsets, 29s to 32s; fat calves, 85s to 87s 6d; smlaelr, 25s to 60s; dairy cows, £8 to £21. Fat beasts in good demand, and extreme prices realised for all sorts. There was a good show of fat sheep and lambs, both as regards numbers and quality; a clearance very nearly made, and prices well maintained, with an advance for prime quality ewes and small wether sheep. A good demand for all best class milch cows and heifers. Store cattle, owing, no doubt, to the cold weather, met with little attention from the buyers, several lots passing out of the ring unsold. Fat calves continue very dear, and sell readily. There were about 50 horses on offer, which met with a fair demand. Ruling values:—Best quality fat beasts, 7½d to 8d; 2nd ditto, 6½d to 7d; bulls, cows, and inferior beasts, 5½d to 6½d per lb; best quality fat sheep, 8d to 8½d, 2nd ditto, 7d to 7½d; old ewes, rams, and inferior sheep, 6d to 6½d; choice three months old fat sucking lambs, 9½d to 11d per lb. Fat calves, 7d to 9½d per lb.

Boston, Wednesday. — Small show; only 30 steers penned. Best beef fully 9s per stone; best wethers, 8½d; ewes, 6½d and 7d.

Cambridge, Monday.—Beasts, 534; beef, 7s 6d to 8s 9d; sheep, 1,001; mutton, 4s 8d to 5s 10d; lamb, 9½d to 11d per lb; pigs, 433; pork, 5s 9d to 6s 9d; horses, 1. Not quite so many store beasts, and all cleared. Fat beasts, short supply and prices higher. Fat sheep, a good brisk trade all round. Stores, some good lots to hand, and trade better. Stores not so good as last week. hand. Trade better. Stores not so good as last week. Hay, none to hand. Straw, good trade. Roots slow.

Calne, Friday.—Present prices for prime pigs, in l ots o not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb.	... Not exceeding 2¾ in....	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ld.

Canterbury, Saturday.—Increased supply of store cattle. Yearling beasts from £7 to £10 5s; two-year-old cows, £9 to £13 10s; a few good Sussex realising rather higher prices; working tegs, 25s to 30s; and better class at from 32s to 37s. Old sheep and lambs, 32s to 37s; good teeth ewes with lambs, 40s to 47s; useful two-year-old sheep, 38s to 41s.

Carlisle, Saturday.—The state of the weather, characterised by cold, wintry nights, shows little improvement, and trade in Irish store cattle has quieted down in consequence. The supply was smaller than usual, comprising barely 400 heifers and a few stripping cows. The attendance was below the average, and operations were restricted. Medium sized heifers realised £8 10s to £10 10s; best specimens, £14 10s. Stripping cows, £10 10s. A few young pigs met a slow sale at 30s each.

Dorchester, Wednesday.—Supplies all round came extensively to hand, both at Messrs. Ensor's and Mr. Sampson's sales, and with a full average attendance of buyers a spirited trade resulted in a good clearance in all the more important sections of the market. Prices were well maintained for beef, veal, and pork; but rates were considered hardly so strong for some classes of mutton. Fat bullocks, of the best class, made from £19 to £22 5s each (or 11s 6d per score); seconds, £15 to £18 (or 10s 6d to 11s). Calves brought high rates, some of the best selling from £5 10s to £6 10s each (or 8d to 8½d per lb); seconds, £3 to £4 10s (or 7½d); rearers making 20s to 35s. Fat wethers made up to 55s each (or 7½d per lb); fat ewes, 36s to 49s; and lambs, 28s to 38s (or 9d to 9½d). Porkers were a very dear trade, making up to 75s each (or 10s 6d to 11s 6d per score); baconers, up to 96s (or 10s to 10s 6d); and stores, 26s to 40s; sows, £5 10s to £8.

Dublin, Thursday.—Numbers in market: Beasts, 1,204 (decrease 190); sheep, 6,470 (increase 369); calves, 44 (increase 5). The choicer qualities of beef alone sustained last week's rates. Other descriptions were more difficult to dispose of, fat cows in particular being much neglected and prices in favour of buyers. A choice lot of Aberdeen Angus bullocks, fed by Mr. Ruttledge, of Carlow, and purchased by Messrs. McDonagh, Chatam Street, made about top quotation. Mutton in better request; best qualities a shade dearer. Lambs, except the very best, owing to cold weather, more difficult to place. Cattle.—Live weight, best, 37s to 41s per cwt. Other descriptions, 30s to 36s per cwt. Mutton.—Dead weight, 7d to 8¾d per lb.—GANLY, SONS, AND CO.

Hereford, Wednesday.—Bullocks and Cows, 1,090; calves, 262; sheep and lambs, 2,502; pigs (fat and sows), 6; sucking pigs, 31; pigs (stores, not more than ten), 182; pigs (stores, more than ten), 116; horses, 192; colts, 24; donkeys, 2. Prices of stock:—Beef, 6d to 7½d; mutton, 7d to 7½d; lamb, 10d; veal, 9½d; pork, 6½d to 8d, and bacon, 5d to 6d per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report there were not quite so many fat cattle penned. The majority of these were of excellent quality. Buyers were in strong force, and higher prices were obtained—from 8s 6d to 9s 3d per stone. Fat sheep were not so numerous, and prices again ruled against buyers, advancing fully 6d per stone. Several fat lambs, which sold without alteration. Grazing heggets with condition realized more money. Trade was fair for fat swine, and dearer; well-bred stores, of which there were several, were in request. Fat calves scarce and dearer. A large entry of grazing cattle, as many as 406 being penned. Buyers were well represented, and good, strong cattle were in fair demand. Young cattle, unless well-bred, were not much wanted, and sold slowly. Prices, as compared with those of the corresponding sale of last year, were about 10s per head lower. Cows and heifers were short, and sold without alteration. At the Drill Hall 125 horses were catalogued. A good trade was experienced all round, 80 per cent. of the horses changing hands at satisfactory prices. Numbers at sales and market: Cattle, 1,239; calves, 40; sheep, 1,913; swine, 1,492; horses, 271.

Leicester. Wednesday.—The supplies of home fed bullocks showed a considerable decline, but the bulk of the stock came to hand in very good condition. A good attendance, and trade ruled exceptionally brisk at an advance of 10s to 20s per head all round. Choice bullocks made 7¾d per lb; secondary qualities, 7d to 7¼d; cows, 6d to 6¾d; heifers, 7d to 7½d. Sheep were a fair delivery, and met with a very brisk trade at higher prices, choice weights making 8d to 8¼d; large sheep, 7d to 7¼d; ewes, 6d to 6¾d. Lambs firm at 11d to 11½d. Calves in request at 8d to 8½d.

Newport. Wednesday.—The supply of cattle was very short, especially best quality bullocks, which were nothing like equal to the demand. Bullocks were worth quite 30s per head more than last week. A clearance was effected of all cattle. There was, however, a large supply of sheep, lambs, and calves, which met with a brisk trade, owing to the scarcity of beef. Prices showed a distinctly upward tendency. Quotations: Best beef, 7¼d to 7¾d per lb; secondary quality, 6¾d to 7d; cows, 6d to 6½d; best wether mutton, 8¼d to 9d; ewes, 7½d to 8d; shorn wethers, 8d to 8¼d; veal, 7d to 8¼d; lamb, 10d to 11d; porker pigs, 11s to 11s 6d per score. Good attendance of buyers.

Norwich. Saturday.—There was a fair supply of store cattle here to-day; but although keep prospects have been improved by rains, farmers showed no great disposition to purchase, continued cold weather apparently checking business. Fat beasts ruled firm at 8s to 8s 6d and 9s per 14lb. Store sheep were offered to a moderate extent; trade was dull at barely late rates; keeping hoggetts were quoted at 30s to 44s per head. Fat sheep were in quiet demand at 8s to 8s 6d and 9s per 14lb.

Salford. Tuesday.—There was a smaller supply of cattle, and a better trade, and sellers obtained an advance on last week's prices. There was a large increase in the number of sheep and lambs penned, the increase being principally in lambs. Trade for sheep was brisk at from 1s to 2s per head more than last Tuesday. Lamb trade dull, and prices in favour of buyers. A large show of calves, and a slow sale at about late rates. Cattle, 6d to 7½d; sheep, 7d to 9½d; calves, 5½ to 6½ per lb; lambs, 25s to 46s each. At market: Cattle, 1,753; sheep and lambs, 10,241; calves, 193.

Sheffield. Tuesday.—Though the number of milch beasts was below that of last week, there was a good inquiry for best qualities, which soon changed hands at £18 to £22; secondary, £13 to £16; young heifers, £9 to £12.

Shrewsbury. Tuesday.—Store cattle slow at late rates. Store pigs slightly lower, with large supplies. Other stock firm at late rates. Quotations:—Lamb, 11d to 1s; beef, 6¾d to 7¾d; mutton, 7½d to 8¼d; and veal, 8½d to 9d per lb. Porker pigs, 10s to 10s 6d, and bacons, 9s to 10s per score. Cows, with calves, up to £22. Hay up to £6 15s and straw up to £4 per ton. Number offered:—531 lambs, 1,005 cattle, 72 cows with calves, 719 sheep, 135 calves; 29 fat, 118 porket, and 599 store pigs.—B. R. Croxton, Markets Inspector.

Spalding. Tuesday. Small show of beasts and sheep. Excellent prices were realised: best beef to 9s per stone; secondary, 8s. Stores continued dear. Mutton to 8½d per lb.

Stockton. Wednesday.—There were on offer 181 cattle, 10 calves, 317 sheep, and 50 lambs. Trade was rather brisker for beef at 9s per stone. Rougher kinds sold at 6s 6d to 7s. Calves fetched 6d to 9d per lb. Sheep were dearer.

Thame. Tuesday.—There was a short supply of beef, but mutton came to hand freely. With a good attendance of buyers, trade ruled very firm, at late high prices. The late Mr. Bond's sale comprised 41 fat beasts, 230 fat and store sheep, 53 fat and weaning calves, and 213 fat and store pigs. Fat bullocks made from £19 10s to £26 15s; fat heifers, £18 10s to £23 5s; strong tegs, 55s to 60s; fat ewes, 40s to 50s; fat lambs, 35s to 41s; fat calves, £3 to £4 15s; weaning cow calves, 20s to 65s; bull calves, 19s to 55s; fat hogs, 10s per score. Stores dear.

Wakefield. Wednesday.—The supplies of fat beasts and sheep were rather better than last week. Quotations: Best young heifers and bullocks, 7¼d to 7½d; secondary sorts, 6¾d to 6¾d; choice young sheep, 7¾d to 8d per lb; inferior sorts, 5½d to 6½d per lb; slightly less price than last week. Numbers at market: Beasts, 1,284; sheep, 5,033.

Whitechapel. Saturday.—Supplies again plentiful, but trade quiet at unchanged prices. Best clover, £5s to £10s; inferior, 80s to 90s; specially-picked hay, 117s 6d; good, 112s; inferior, 80s to 95s; mixture and sainfoin, £5s to £6 5s; straw, 30s to 45s per load.

Wolverhampton. Wednesday.—There was a fair supply of all kinds of animals, but the demand was only of a moderate character. Quotations: Beasts, 7¼d to 8d; cows, 5½d to 7d; calves, 7d to 9d; wether mutton, 7¾d to 8d; ewes, 6¾d to 7d per lb. There were only about a score of pigs on offer.

Worcester. Saturday. — Very moderate supplies of cattle, sheep, and pigs, and trade brisk. Best quality beef and mutton sold at full rates. More in pairy for perk. ADD HAY AND STRAW

Worksop. Wednesday. Fair attendance. Short supply of beef, and good supply of mutton. Best beef, 7s 6d to 8s 6d; secondary, 6s 6d to 7s per stone; best Southdown wether and long wools, 7d to 8d; ewes and other sorts, 5½d to 7d; fat lambs, 9½d to 11d; veal, 10d to 11d per lb.

FOREIGN.

Deptford. Wednesday.—Beast supplies were on a more extensive scale to-day, amounting to 1,887 head, which is an increase of 1,544 as compared with last Wednesday's figures, and consisted of 1,375 United States and 512 Canadian. Trade ruled slower at 4s 9d to 4s 11d, exceptionally 5s and 4s 6d, to 4s 10d per 8 lb, sinking the offal respectively. No sheep were to hand.

Yorkhill. Monday.—At the usual weekly sale of American cattle there were in the lairages 232 cattle landed by the Pomeranian (s.), from Boston. The animals as regards quality were fully up to those that have been exposed of late. There was the usual attendance of buyers, and trade was of a very satisfactory character, the values for all classes ruling high. The dead weight quotations were higher than those ruling last week, and may be given as follows: Bullocks, best quality, 64s. to 66s. per cwt; secondary and heavier, 62s to 64s; young cows, 60s to 62s; heifers, 62s to 64s, all are ruling to quality and finish. Bulls, best class, 56s per cwt, and in one or two instances up to 58s; secondary and heavier, down to 54s.

MANURES.

Liverpool. Friday.—The past week's temperature has been decidedly low, and with the cold weather and occasional frost at this period of the year, crops have generally made slow progress. With further imports of nitrate of soda, the market is erratic and again easier, and the nearest spot value of best quality is £9 15s per ton, and a good consumptive demand is experienced. Superphosphate of lime is in active request, whilst a few orders occasionally come in for basic slag. Kainit and Fast India bone meal unchanged in value, and are in seasonable request. The trade all round in feeding stuffs is quiet. The following are current rates:—Nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £9 15s per ton; East India bone meal, fair to prime, in bags, £4 10s to £4 15s per ton; kainit, prime 25 per cent. in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime £5 15s per ton; linseed cake, American thin oblong, prime, in bags, £7 1s 3d to £7 3s 9d per ton; linseed cake, English, in bulk, £8 2s 6d to £8 10s per ton; linseed cake, foreign, round, soft and oily, in bags, £6 2s 6d per ton; cotton seed cake, N.A. decorticated, prime, new, in bags, £7 2s 6d to £7 5s per ton; cottonseed cake, English do, prime, soft, in bags, £7 7s 6d to £7 10s per ton; cottonseed cake, English, undecorticated, prime, in bulk £4 10s to £4 15s per ton; cottonseed cake, Egyptian do, prime, in bags, nil; cottonseed cake (crushed) 20 to 25 per cent oil, prime, in bags; £7 2s 6d to £7 5s per ton; maize germ meal, prime, in bags, £5 17s 6d per ton; corn oil cake, 10 to 13 per cent oil, prime, in bags, £6 2s 6d to £6 5s per ton; rice meal, Rangoon, as imported, in bags, £5 to £5 2s 6d per ton; Indian meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb; linseed, fine bold feeding, in bags, £3 2s 6d to £3 5s per quarter, 416lb; N.A. Cloverseed, new red, fair to good, in bags, nil; D.N.S. Brand superphosphate of lime guaranteed 23 to 27 sol., in bags, £2 5s to £2 7s at depot do, do, 30 to 31 sol., in bags, £2 10s to £2 12s at depot; do, do, 35 to 36 sol., in bags, £3 to £3 2s at depot; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, nominal; do, do, guaranteed, 35 to 40 per cent. phos., in bags, nominal; finest do, guaranteed, 38 to 45 per cent phos., in bags, nominal.

BUTTER.

Wednesday.—Barnsley: 1s 1d to 1s 2d per lb. Boston: 7d to 8d per lb. Colne: 1s 2d per lb. Goole: 11d per lb. Keighley: 1s wholesale; retail, 1s 1d per lb. Kirbymoorside: 8d to 9d per lb. Knaresborough: 1s 3d wholesale; retail, 1s 4d to 1s 5d per roll of 24oz. Louth: (wholesale), 9d per lb. Market Weighton: 9d per lb. Masham: 1s to 1s 2d per roll of 24oz. Northallerton: 1s 3d to 1s 6d per roll of 24oz. Stockton: 11d to 1s 2d per lb. Worksop: 1s 1d to 1s 3d per lb.

Thursday.—Brigg. 9d to 10d per lb. Driffield: 9d per lb. Kidderminster: 1s 3d per lb. Scarborough: 17 for 1s. Wellington: 1s to 1s 2d per lb. Wetherby 9d to 1s 2d per lb.

Friday.—Easingwold: 1s to 1s 2d per lb. Grimsby: Danish, 107s to 108s per 112lb; Dutch, 96s to 100s; Siberian, 96s to 98s. Helmsley: 6d to 9d per lb. Leeds: Danish, 102s to 110s per 112lb; Irish creameries, 98s to 106s; Colonial, 102s to 108s; York lump, 13s to 14s per stone; ditto long rolls, 1½lb, 1s 5d to 1s 7d; fresh butter in 1lb prints, 1s 1d to 1s 2d per lb. Leyburn: 1s 1d to 1s 3d per roll of 24oz. Lincoln: 10d to 1s per lb. Otley: 1s 3d to 1s 5d per roll of 24oz.

Saturday.—Appleby: 9d to 10½d per lb. Berwick: 8d to 9d per lb. Carlisle: 10d to 1s per lb. Doncaster: 10d to 1s per lb. Grantham: 1s to 1s 1d per lb. Howden: 10½ per lb. Lancaster: 1s 1d to 1s 2d per lb. Malton: 10½ to 11d per lb. Pontefract: 1s 1d per lb. Retford: 11d to 1s per lb. Richmond: 11d to 1s per lb. Skipton: 1s to 1s 1½d per lb. Stokesley: 11d to 1s per lb. Whitby: 1s per lb. York: 10d to 1s per lb.

CHEESE.

Glasgow. Wednesday.—There were several lots of new Dunlops laid down at the Glasgow market this week, but buyers did not seem desirous to buy them. The price was off and on about 52s per cwt. New Zealands and Canadians being still reckoned good value, a fair trade was passing in them at late rates. Old home cheeses are over for the season.

Highbridge Caerphilly. Tuesday.—Upwards of 18 tons of cheese pitched to-day. Best dairies realised 50s per cwt., other dairies selling at 44s 6d to 48s 6d. A few inferior lots failed to reach more than 40s. A good attendance.

Newport. Wednesday.—A good attendance of buyers and an excellent pitch of cheese resulted in a capital market. Quotations:—Caerphillies, 38s to 44s; fancy dairies, 45s to 46s; Derbies, 61s to 63s; Cheddars, 61s to 65s.

WOOL.

London. Tuesday.—The third series of London sales of Colonial wool commenced to-day. There was a large attendance of both home and foreign buyers, and very spirited competition. Prices, as compared with last sales' closing rates, ruled for Australian Merinos and for Capes on the average 7½ per cent. and for Australian crossbreds 10 per cent. higher.—Helmuth Schwartzé and Co.

London, Saturday.—English, per pk. of 240lb: Fleeces S. Dn. hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s. Colonial, per lb: Vic., fleece super., 1s 7d to 1s 9d; scoured good 1s 7½d to 1s 8½d; scoured average, 1s 6½d to 1s 7½d; greasy average to fair, 10½d to 11½d: N.SW. Scd. average 1s 4d to 1s 4½d; greasy average 8d to 9d; S. Australia, greasy average, 6½d to 7d; N.Z. scoured average 1s 5d to 1s 6d; grease average 8½d to 9½d. Cape Scred. sup. 1s 5d to 1s 6d; fleece average, 7d to 7½d; greasy average, 6½d to 7d; Natal, scoured, 1s to 1s 1d; greasy average, 6¾d to 7½d. Crossbreds, Grs: Vic., good to superior, 11d to 11½d; New Zealand, fine, 8½d to 9½; medium, 5½d to 6d; coarse, 4½d to 4¾d.

Canterbury, Saturday. — There is a little more activity at recent prices.

COLONIAL WOOL SALES.

London, Friday.—At public sale this evening two catalogues, jointly totalling 14,376 bales, were offered, and consisted of 3,049 New South Wales and Queensland, 4,189 Victorian, 161 Tasmanian, 2,689 South Australian, 3,580 New Zealand, and 707 Cape. To-day's catalogue included some very superior Victorian grease. Good competition was forthcoming for these wools, which realised current rates. Very full prices were paid for washed Victorians, which were taken on home account. Several strings of speculators' wools were offered, and sold at current rates, only a few lots being withdrawn. Crossbreds unchanged. The following include some of the principal marks sold:—New South Wales, scoured—Bover Wallangra, merino, bellies, 1s 0½d to 1s 2d; pieces, 1s 3½d to 1s 5d; locks, 10d; greasy of the same mark—merino combing, 11d to 11½d; clothing, 11d to 11½d; broken, 9½d. Victorian, greasy—S. Wilson over Mount Bute, merino combing, 1s to 1s 2½d; lambs, 6¾d to 1s 3½d; clothing, 1s to 1s 1d; bellies, 8½d; pieces, 9½d to 11½d. S. Wilson over Ercildoune—merino combing, 1s to 1s 1d; lambs, 6d to 1s; broken, 11½d; bellies, 8½d to 8½d; pieces, 10½d; Dunrobin over A.S.M.—Merino combing, 11d to 1s 1d; clothing, 11½d; lambs, 10½d to 11d; bellies, 7d; pieces, 8½d; A.M. merino combing, 9d to 11d; bellies, 7d; pieces, 8½; A.M. merino combings, 1s 1d to 1s 1½d; clothing, 1s to 1s 0½d; pieces, 11d. South Australian, greasy—L.O. over K. over Marracoorte, merino combing, 9d to 1s 0½d; lambs, 8d; bellies, 8d to 9d; pieces, 9d to 9½d; locks, 4d; North Booborowie, merino combing, 9d to 9½d lambs, 4½d to 6½d; bellies, 6½d; and pieces, 6½d to 8d per lb.

FEEDING STUFFS.

London, Thursday.—Linseed: Prices have continued to advance owing, to a good demand and an active oil market. Calcutta to London spot, passage and April-June 53s 9d, June-July 54. La Plata on passage, 51s 3d. Hull has also improved. Calcutta, April-June 53s 9d buyers. La Plata, spot 50s 9d, May-June, 51s 10½d. To the Continent, Bompay May-June 56s. 9d, June-July 56s 7½d paid. Calcutta, April-June 54s. La Plata, May-June 52s. Linseed oil: After a further rapid advance, the market closes quiet, but oil is very firmly held, and there are no signs of a decline. We quote spot in pipes £31 15s, barrels £31 15s to £32, June-August £31 10s, September-December £30 2s 6d. Hull naked spot £30 15s, June-August £30 12s 6d, September-December £29. Linseed cakes are firm. We to-day quote London made £7 17s 6d to £8 ex mill. American Western £7 7s 6d to £7 10s, Russian £7 12s 6d to £7 17s 6d. Cotton cakes firmer, London made £4 10s to £4 15s. Rapeseed quieter. Brown Cawnpore, May-June 36s 6d; brown Calcutta, spot 35s, April-June 35s 6d. To the Continent we quote yellow Guzerat 41s 6d; yellow Cawnpore, May-June 39s 6d; brown Cawnpore, May-June 36s 9d; brown Calcutta, April-June, 36s 3d; Ferozepore, May-June 37s 9d; Jamba, May-June to Hull 31s 6d. Cottonseed is firm, but slow. Spot London £7 13s 9d, April-May, £7 13s 9d, sellers. Hull spot £7 12s 6d, April-June £7 12s 6d, November-January, £6 11s 3d, a considerable business done. Cargoes: May is held for £7 16s 3d, November-December and January £6 13s 9d. Bombay to Hull, May-June is held for £5, June-July £5 1s 3d.—The Produce Brokers Company, Ltd.

Hull, Tuesday.—Linseed.—The arrivals are 20 qrs. from Harlingen, 8,673 qrs. San Nicholas, 5,980 qrs. Villa Constitution; total, 14,673 qrs. The market opened slightly weaker, but quickly firmed up again, and shows at the close an advance of from 1s 3d to 1s 6d per qr. on the week. Calcutta, April-June, was done early last week at 52s, but closes firm with buyers at 53s, while re-sellers ask 53s 3d, and shippers want 53s 9d. River Plate is also a strong market, and while 49s was accepted early last week for seed ex store, sellers are now asking 50s 6d for this position; 58s 6d is now the value of May-June. Cottonseed.—After our last issue there was a further improvement to £7 15s spot, and £7 13s 9d paid May, but the market has been much quieter the past few days, especially for old crop, which now offers at £7 12s 6d spot, and £7 11s 3d May-June. A few hundred tons monthly, Nov.-Jan., changed hands at £6 12s 6d, but £6 10s subsequently accepted. Yesterday, however, £6 11s 3d was paid, and this to-day's value. Oils.—Exports for the week ending 28th April, 1902.—Linseed oil: 1 Belgium, 2 Germany, 4 Holland, 29 Norway; total, 36 tons. Cotton oil: 118 Belgium, 5 Denmark, 22 France, 126 Germany, 149 Holland, 1 Norway, 10 Sweden; total, 431 tons. The market is firm. Linseed oil: 30s 9d spot; 30s 9d May-August. Cotton oil: 25s 1½d spot; 25s 3d May-August. Crude: 24s spot; 24s May-August. Rape oil: Jamba naked, 24s spot; 1st quality, 24s 9d spot.—Keighley Maxsted and Co.

Mark Lane, Monday.—Linseed cakes: Business has been fairly active during the past week, there being a good inquiry, especially for forward positions, country dealers anticipating that values have about reached bottom prices. Russians sell steadily at unchanged prices. Americans are in good request, and, with higher c.i.f. quotations, tend upwards, present value being 2s 6d per ton more money. Calcutta-made, in bags, move off quietly at £7 10s to £7 15s. London-made continue to offer at last Monday's quotations. Cotton cakes: The demand has considerably fallen off of late, and consequently the tone of the market is not quite so strong. Egyptians may now be bought on slightly easier terms, while a parcel of more or less heated cakes offers at £4. English meet a slow sale at 2s 6d per ton less money. Decorticated are the turn dearer from scarcity, while the demand is quite of a retail description, best brand making 2s 6d per ton more money, and meal unchanged. Rape cakes: Quiet. East India, £3 15s to £4. Maize germ meal: Arrived parcels of American sell slowly at 5s per ton cheaper, with shippers asking even more money. English is in good demand at £5 15s to £5 17s 6d. Rice meal: Shippers having withdrawn from the market holders ask a slight advance at £4 7s 6d to £4 10s ex ship for near at hand parcels, while landed lots are firmly held at £4 15s.

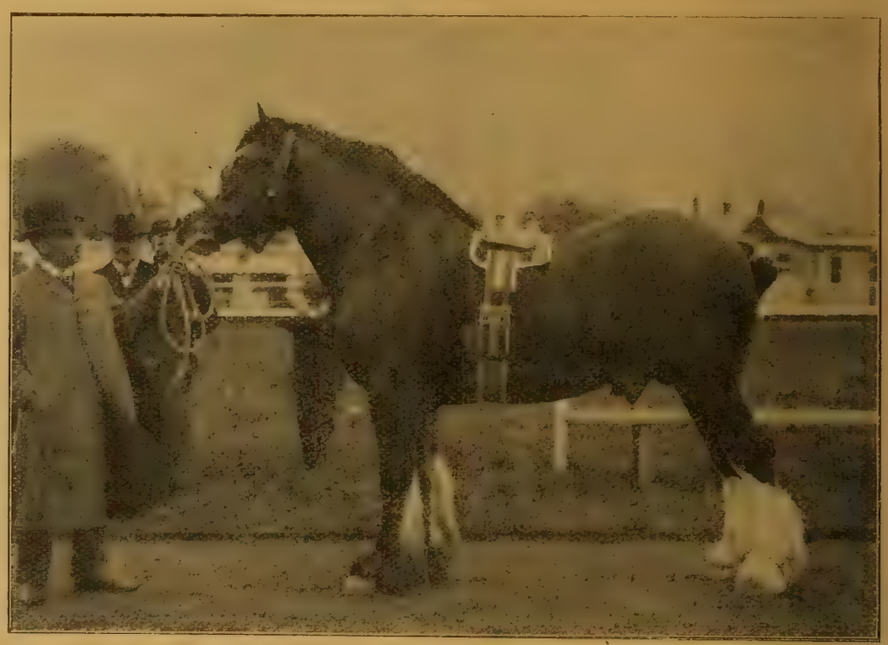
STOCK AND SHOW NOTES.

By Herdsman.

The entries of live-stock for the Royal Counties Agricultural Society's Show at Reading, on June 10th, 11th, 12th, and 13th next, have now closed, and as will be seen from the table given below, they are considerably in obtained on the last occasion on which the excess of those of last year, and also on those Society visited Reading, but a comparison between the Reading Show of the same Society in 1887 and the present year shows the total entries to be almost identical. An especial point of congratulation is the increase in the horses department, and this is no doubt largely accounted for by the fact that the Society has made special arrangements so as not to clash with the Richmond Show, which takes place in the same week. The entry of hunters and harness horses is quite an exceptional one.

In consequence of the prevalence of swine fever in the County of Berks, and the fact that the show-yard is in itself an infected area, a case having recently occurred within 200 yards of the entrance, the Council have decided to abandon the show of pigs at Reading, which, although unavoidable, is much to be regretted, on account of the excellent entry received. The entries of butter, poultry, etc., closed on Saturday, and no doubt will go to make up what may be regarded as a record total. The promised visit of T.R.H. the Prince and Princess of Wales, on June 12th, is being looked forward to with great pleasure, and should materially help the success of the show.



The following table shows at a glance how the entries for this year's show compare with those of last year, and also the two other years in which Reading was visited by the Society :—

	Reading 1887.	Reading 1897.	Weymouth 1901.	Reading 1902.
Sheep	292	242	238	251
Horses	190	180	152	242
Cattle	605	507	388	600
Pigs	100	84	78	93
	1187	1013	856	1186

The Warwickshire Agricultural Society have now issued the prize list for their Show at Warwick, on August 27th and 28th next. I see that the cash prizes amount to over £1,200, including the handsome list of the Warwick Local Committee, which is £381, and mainly confined to tenant farmers occupying land in the County of Warwick. The sum of £223 16s. is allotted to agricultural horses, the special prizes including the "Roberts" challenge bowl with £5 added prize, a silver cup, and two of the Shire Horse Society's silver medals. A new feature this year is the cart horse parade, which is arranged to take place on the second day of the Show. For hunters, hacks, and ponies the prizes amount to £245 10s., and there are numerous special prizes, including the gold and silver medals of the Hunters' Improvement Society. The driving and jumping classes, as usual, are very attractive, the sum of £68 being devoted to driving, whilst there will be jumping classes each day, with £91 5s. in prizes.

In the cattle classes the sum of £236 is provided, including the Shorthorn Society's District prizes for the best bull in Warwickshire, calved in 1901, and for encouragement of pure-bred milking Shorthorns, also for Longhorns, Herefords, Channel Island cattle, and cattle best adapted to dairy purposes, special prizes being given by the Longhorn Breeders and others. The sum of £127 10s. is allotted to sheep classes, and £54 for pigs, and two silver medals of the National Pig Breeders' Association. £20 is provided for award in the implement department, with five of the Society's silver medals, including a special class for implements patented or invented after Jan. 1st, 1901. For dairy produce, eggs, and dressed poultry the prizes amount to £40 10s. There will be weight estimating competitions each day, with £12 in prizes. The schedule also contains classes with prizes amounting to £47 for the encouragement of labourers in their service, and for rearing of lambs by shepherds, together with a cottagers' class for the best kept cottage and garden in the Warwick and Kenilworth Petty Sessional Divisions, given by Lord Leigh. Also field competitions for ploughing, hedging, draining, and thatching, to which £41 is devoted, including special prizes. Schedules and entry forms may be had on application to the Secretary, Mr F. H. Moore, Warwick.

In the course of an interesting article in the current number of the "Leisure Hour," Mr. W. J. Gordon says :—"If the European Powers decided to mount all the men in their armies, they would not be able to find two horses apiece for them, while Russia could find eight horses for every man. This predominance of Russia in the horse world is a significant fact that has not received the attention it deserves. For some years now the importation of Russian horses into this country has been increasing, and at the present time, in the ordinary way of business, Russia sends us about a sixth of our foreign horse supply, and is only exceeded in numbers by the United States. The horse it sends us is not a taking animal to look at, as may be judged from its average import value, being only £11, but it is as good a thing to get about on as any of its more advertised relatives."

THE DRAUGHT STALLION "MODEL," which forms the subject of the above illustration, was exhibited by Mr T. O'Malley, Woodlands, Raheny, Dublin, at the North-East of Ireland Agricultural Society's Show at Belfast on the 1st and 2nd inst., when it was awarded First Prize in the class for Draught Stallions foaled prior to January 1, 1900.

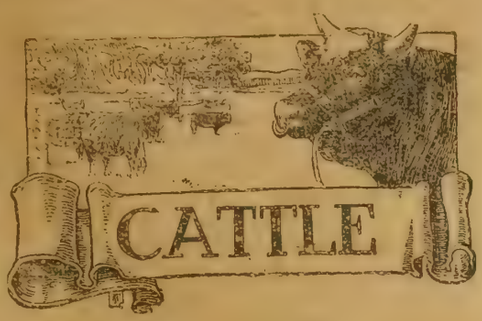
On Friday evening a meeting of horse-owners—representing altogether an ownership—was held at Aldridge's Repository, for the purpose of opposing the proposal to tax imported corn. The Chairman (Mr. C. W. French) said they did not desire to be offensive, but defensive. The effect of the new tax would be to increase the cost in horse keep by about £1 per horse per year. Colonel Colvile (Director of the London Road Car Company) moved :—"That this mass meeting of London and Provincial horse-owners views with dismay the proposal of the Chancellor of the Exchequer to impose a tax on imported corn and other feeding stuffs, and pledges itself by every legitimate means to oppose and defeat this new impost, which is partial, and obviously unjust in its incidence, and will most disastrously affect the horse-owning interests." He said the proposed tax would be very hard on omnibus proprietors. The Omnibus Companies in London carried yearly 400,000,000 persons. He felt, therefore, that the omnibus trade ought to be considered, and not unduly and harshly legislated for. They had been having a bad time, and just as their hopes were being raised with the approach of the Coronation, down came this proposed tax. The proposal was carried unanimously, and it was resolved to send copies of the resolution to Members of the House of Commons and the Chancellor of the Exchequer, with a request that he would receive a deputation.

An outbreak of foot-and-mouth disease having occurred in Guernsey, an Order (by the Board of Agriculture) has been issued, prohibiting the landing in Great Britain of animals from all the Channel Islands.

The Reigate and Redhill Horse and Hound Show will take place at Reigate on Wednesday, the 21st inst. I understand that the various classes have filled well, and everything points to another success, especially as many very well known exhibitors have signified their intention of competing in the open classes. No fewer than 20 different packs of hounds have been entered, so that the show in this department will be a very good one. A plan of the seats in the pavilion can be seen, and tickets obtained therefor, upon application to Mr. C. Allingham, Reigate, or Mr. T. K. Pearce, Redhill.

The action of the Board of Agriculture in continuing to prohibit the importation of cattle from Argentine was recently brought before the City of London Court of Common Council by Mr. William Cooper, who moved a resolution, which was adopted, instructing the Cattle Markets Committee to interview the President of the Board in order to obtain a relaxation of the restrictions.

Messrs. Alfred Mansell and Co., of Shrewsbury, recently shipped, per SS. "Highland Scot," from Liverpool, for Senor Ricardo S. Zimborain, of Buenos Ayres, 32 Shropshire ewes and two rams, selected at the Harrington Dispersion Sale by Senor Lisandro Sanchez Llovares. This grand lot of young ewes, which included an own sister to the famous stud ram, Rose Bush 10,104 (sire of Lord Cardiff, sold for 400 guineas), were sired by the best rams of the day, such as Ulster Rose 9,734 (sire of Rosarium, winner second R.A.S.E., and sold to Australia at 60 guineas),



Fortification 9,498 (a royal winner, and the sire of the royal winner in 1900, sold for 240 guineas, also of the 180 guineas ram lamb at the Harrington Dispersion Sale), Montford Kaiser 10,806 (a most successful sire, bred by Mr. T. S. Minton), Bright Eye 10,643 (from the Sherlowe flock), and True Treasure 10,930, by Fortification. The two high-class sires which accompanied these ewes were a son of Fortification, from a ewe by Old Harry, and a son of Bright Eye, from a Dream Star ewe. Altogether Senor Zamborain has a most valuable nucleus for the foundation of a high-class Shropshire flock, and it is to be hoped his efforts to push the breed in South America will meet with success.

The above firm also shipped to the Argentine, on the 26th ult., on behalf of Mr. H. T. Harding, three high-class Herefords and the same number of Shorthorn bulls, from leading breeders, and a choice selection of Shropshire and Hampshire sheep, including a valuable Shropshire ram from Mr. J. Harding, by the 150 guineas P.D.Q., and another equally good sire by Maidstone Juvenal, second R.A.S.E., Maidstone. Mr. Harding had also been fortunate enough to secure from Mr. A. E. Mansell's famous flock four well grown rams, got by Strong Bone and Bright Eye, which can be characterised as equal to anything exported to the Argentine.

At public auction 28 Russian Orloff horses were sold in New York, on Thursday, April 10th. These horses were imported to the United States by the firm of Bergh and Co., and the average price obtained was 1243 dols. for the entire offering, the bidding being at all times spirited. Comment, says the "Chicago Breeders' Gazette," on these imported Orloffs is universally favourable, and most of the best known fanciers of high-class carriage and coach horses were on hand at the ringside. Their heads and necks were clean-cut and full of quality, top lines "well-nigh perfect," and the substance and general contour admirable. Some little fault is found with the action displayed, as well as the speed. There was not the high, folding, circular sweep of the Hackney, nor yet the lengthy, speed-suggesting stride of the standard-bred trotter in front, while only one or two could be said to have an all brilliant hock action. Nevertheless, as a whole, they please the critics, which fact is well enough set forth by the average price reached. Judge William H. Moore was the buyer of the highest-priced pair, at £1,280—a very high price for any pair of carriage horses. The same purchaser also took Saltan at £350, the last being so like the other two that any pair of the three were excellently matched. A black four-in-hand was taken, wheelers at £540, leaders at £525, and from these figures prices ranged down to £100.

The Kerry and Dexter Cattle Society have issued Vol. 10 of their Herd Book. The entries comprise 171 Kerries (134 cows and heifers, and 37 bulls), making in all 321 animals. The Herd Book numbers of Kerry cows and heifers are carried on from 2871 to 3004, Kerry bulls from 493 to 529, Dexter cows and heifers from 1684 to 1819, and Dexter bulls from 443 to 456.

Recent cattle sales in the United States seem to have been devoted exclusively to Shorthorns. Animals of this breed have certainly been attracting buyers, and making good prices during April. At a sale at Chicago on April 14th, the animals were offered by Mr. Bothwell, and consisted of American-bred Shorthorns, crossed with imported Scotch. One or two imported animals were offered, and gained some of the best prices. Top price was made by Nonpareil of Clover Blossom—out of Nonpareil Victor—a home-bred bull, which went to Messrs. G. Harding and Son for £342. Another son of the same sire was bought by Mr. H. Hagenfeldt at £320. From the females top price was made by the imported cow Collynie Wimple, which was sold for £221, while the home-bred Queen of Beauty sold for £200. A large number of the animals sold realised £100 and over. Another sale of Shorthorns held by G. W. Brown, at Indianola, Indiana, on April 17th, was eminently successful. Top price realised was £700, made by Victoria of Village Park, while the imported cow Gazelle realised £421. The average obtained for 42 females was £127, while seven bulls made an average of £52.

Sale of Jerseys at Roehampton.

A selection from the choice herds of Jersey cattle bred by Mr. H. C. Smith, of Mount Clare, and Mr. R. H. Cobb, of Esher, was offered for sale by auction on the 3rd inst., at Mount Clare, Roehampton, by Messrs. Thornton and Co. There was a heavy thunderstorm during the morning, consequently there was only a small attendance of purchasers, and some good cattle went very cheaply. Merrie Lassie, a bonny three-year-old cow that was very highly commended at the Guildford Show, realised 51 guineas (Sir J. Gooch, Bart.). Owing to the inclement weather several lots were passed through the ring.

We give below a few of the principal lots, with purchasers' names and prices:—

COWS AND HEIFERS.

Sale of the Orchardmains Shorthorns.

The Orchardmains herd of shorthorns, the property of Sir Walter Thorburn, M.P., was disposed of on Wednesday, owing to the lease of the farm having terminated. The herd was founded in 1899 by the purchase at the Hon. Baillie Hamilton's sale of the cow Red Rose of Langton II., which proved an excellent breeder, and further additions were made from the herds of the Duke of Buccleuch, Mr. Muir, Dryhope, Selkirk; and Mr. Ingram, Troup, Banffshire. The bulls, which were at the head of the herd last year, and which were sold yesterday, were the Balnakyle-bred bull, March On, which was bought for 80 guineas at the Perth spring sale last year, and Banker, which was bred by Mr. Chalmers, Aberdour, Fraserburgh. Sir Walter Thorburn has never been much of an exhibitor at shows, preferring to keep his animals for breeding purposes rather than feed them up to showyard condition. The stock was therefore offered in natural condition. The cows have been good breeders and milkers, there being not a single yeld animal in the herd this year.

The sale (which took place at Orchardmains, Inverleithen, Peebleshire, and was conducted by Messrs. Macdonald, Fraser, and Co.), was well attended, and a large company sat down to the luncheon which preceded it. The bidding was not particularly brisk, but the prices generally were good, considering the condition of the stock, and the sale was, on the whole, very satisfactory. An average of close upon £31 for cows, and £21 for heifers, and nearly £28 10s. for young bulls was, in the circumstances, quite as much as could have been expected, although in most cases the animals were good value for the money paid for them. Mr. Maxtone Graham, of Redgorton, bought two of the best cows. One was Lady Maud, a six-year-old by Bell-the-Cat, with a bull calf by March-On, which sold at 48 guineas; and the other was Lily VII., a three-year-old by the Craigwillie-bred bull, Magistrate, which realised 52 guineas, the top price of the sale. She is a handsome cow, and had at foot a very young roan bull calf by the stock bull March-On. Another cow by Magistrate, out of an Edgar dam, was the three-year-old roan Fannie, and she and her bull calf, by Banker, sold at 50 guineas to Sir John Gilmour. The highest price for bulls was realised by March On, bred at Balnakyle, and sired by Fortune, an animal with good quarters. He was started at 30 guineas, and was bought for the Duke of Buccleuch's herd at 46 guineas, or a little more than half his cost at Perth a year ago. The other stock bull, Banker, a well-built roan, bred by Mr. Chalmers, Aberdour, and sired by Cornelius, was bought at 40 guineas by Mr. Taylor, Pitlivie. Billy Punch, a neat little roan by Bell-the-Cat, was, after a spirited competition, sold at 40 guineas to the Duke of Buccleuch; but his twin brother only brought 14½ guineas.

Below we give a list of the principal prices realised, purchasers' names, etc.:—

COWS.

	Gs.
Last Rose, red and little white, c. April 17, 1897, s. Edgar 67002 ..... Duke of Buccleuch	32

Sale of Mr. P. H. Chester's Shorthorns.

The entire herd of pure-bred Shorthorns belonging to Mr. P. H. Chesters, of Coole Lane, Nantwich, was dispersed on Friday, by Messrs. Thornton and Co. The well-known dairy properties of the herd attracted a very large company, and it is seldom that such a grand lot of cows are offered for public auction. Most of the animals had been selected from first-rate herds in the North of England, great care having been exercised in securing only those with large frames and capacious udders. Some of the two-year-old heifers were especially promising, and realised good prices, the biddings both for these and the cows being brisk and often exciting. The local farmers, knowing the value of the stock, bid well, but the prices were generally beyond them, and not many of the animals remain in the county. The highest prices were 91 guineas for French Rose 3rd, and 72 guineas for Czarina 31st, both of which were purchased by Mr. Chirnside, of Australia. The agents of the Duke of Northumberland, Mr. J. W. Larnach, Mr. J. T. Hobbs, Mr. Portridge, and Mr. Riddock all secured good specimens. Altogether seventy-nine animals were sold for £2,247, or an average per head of £28 8s. 10. The folowing is a list of prices and buyers:—

Particulars of Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland)

At the fair held at Thurles, co. Tipperary, on Tuesday, there was but a small supply of cattle and sheep. A good demand for cattle with quality and condition, but thin animals sold slowly, and a good many of this class failed to find purchasers. Springers met a fair demand. Sheep consisted chiefly of hoggets, which were in moderate demand, but all were not sold. Prices:—Calves: First class, £2 2s. 6d. to £2 10s.; second class, £1 10s. to £2; yearlings, first class, £7 10s. to £9; second class, £5 to £7 third class, £4 10s. to £4 17s. 6d.; two-year-olds, first class, £10 to £12 10s.; second class, £8 to £9 15s. 8d.; third class, £5 to £7; three-year-olds, second class, £9 15s. to £12 5s.; springers, first class, £15 to £16 10s.; second class, £10 to £14 10s. Sheep: Over 12 and under 24 months old, first class, £1 15s. to £1 17s.; second class, £1 8s. to £1 12s. There was a large supply of young pigs, which were in good demand, animals from 8 to 10 weeks old selling at from 20s. to 25s. each.

The sheep fair at Ballinaslo, co. Galway, on Tuesday, was smaller than usual, and demand was slow, especially for two-year-old wethers and aged ewes with lambs at foot, a good many of which remained unsold. A fair demand was experienced for first and second class hoggets, a good clearance of which was effected. Prices:—Over 12 and under 24 months old, first class, £1 8s. to £1 15s.; second class, £1 2s. 6d. to £1 7s.; third class, 18s. 6d to £1 1s.; two years old and upwards, first-class, £2 1s. to £2 3s.; second class, £1 11s. to £1 15s.; third class, £1 3s. 6d. to £1 7s.; young pigs, eight to ten weeks old, sold at from 23s. to 28s. each.

Ballinasloe Cattle Fair was held on Wednesday. The supply was smaller than usual, and composed to a great extent of first and second-class three-year-old cattle. An animals short of condition met a slow sale, and a large number of cattle failed to find purchasers. Prices:—Calves, first class, £4 7s. 6d. to £5; second class, £3 10s. to £4; yearlings, first class, £7 to £7 10s.; second class, £5 10s. to £6 5s.; two-year-olds, first class, £10 5s. to £11 12s. 6d.; second class, £7 10s. to £9 10s.; third class, £6 5s. to £7; three-year-olds, first class, £13 10s. to £17 10s.; second class, £10 10s. to £13; third class, £8 to £9; springers, first class, £15 5s. to £16; second class, £11 to £12 10s.

There was a large supply of stock at Bandon Fair (Co. Cork), held on Wednesday, and good prices were obtained for cattle in condition, but thin animals were hard to sell. An average supply of sheep met a slow demand. Prices:—Calves, first class, £4 10s. to £5; second class, £3 12s. 6d. to £4 2s. 6d.; third class, £2 10s. to £3 5s.; yearlings, first class, £7 10s. to £8 10s.; second class, £5 15s. to £7 2s. 6d.; third class, £4 15s. to £5 7s. 6d.; two-year-olds, first class, £10 to £11 12s. 6d.; second class, £7 10s. to £9 5s.; third class, £6 to £7; springers, first class, £15 5s. to £16; second class, £13 to £13 10s.; third class, £10 to £10 10s.; sheep, over 12 and under 24 months old, first class, £1 10s. to £1 12s.; second class, £1 5s. to £1 7s. 6d.

At Belfast Fair, held on Wednesday, demand was slow. Prices:—Calves, second class, £3 17s. 6d. to £4 5s.; yearlings, first class, £7 15s. to £8; second class, £5 5s. to £7; third class, £4 12s. 6d.; two-year-olds, first class, £10 16s. 3d. to £12; second class, £8 10s. to £9 10s.; third class, £6 10s.; springers, first class, £16 10s. to £19 10s.; second class, £12 to £14 2s. 6d.; third class, £9 2s. 6d. to £9 5s.; young pigs, eight to ten weeks old, sold at from 22s. to 28s. each.

A spark from a passing motor van set fire to a farmhouse at Five Bridges, near Tiverton. The house, which was five hundred years old and contained some fine black oak was burned to the ground.

Horse Sales at Ipswich.

Messrs. Robert Bond and Sons held a sale of cart horses, colts, and hackneys, at the Drill Hall, Ipswich, on Tuesday, the catalogue consisting of one hundred and twenty-five animals. There was a large attendance of buyers, and a good trade was experienced all round, 80 per cent. of the horses changing hands at satisfactory prices. A number of shearling colts from the Bramford Farm of Messrs R. Bond and Sons were offered, and attracted a good deal of attention. The top price realised for one of them was 28 guineas, the others selling at prices ranging from 24 guineas to 16½ guineas. The best price obtained for a cart horse was 48 guineas, given for Mr. T. Dedman's (Somersham) Boxer, a five-year-old chestnut gelding. Others sold from 42½ guineas downwards, whilst the harness horses realised from 40 guineas.

On the same day Messrs. Spearling and Sons held their annual May fair horse sale, which attracted a good company of buyers, and for which some really good animals were entered. The auctioneers, as a new departure, and to encourage the entry of better class horses, offered prizes to be awarded to those animals making the highest prices under the hammer, as follows: Three guineas for the first and two guineas for the second highest priced cart mare or gelding of any age, and two guineas and one guinea for the best hackney under the same conditions. Mr. Wm. Long (Winston) and Mr. E. Ford (Crowfield) took the former, the selling price being 50 guineas in each case, other good prices being 44½ guineas for Mr. J. V. Francis' five-year-old, 40½ guineas for Mr. Rush's four-year-old, and 40 guineas for a good black mare, from Mr. C. W. Haward, Wenham. Others sold at prices ranging down to as low as 10½ guineas.

Sales at Wrexham.

Messrs. Frank Lloyd and Sons held a three-day's sale of horses at their North Wales Repository, Wrexham, commencing on April 30th, which close on a thousand animals were offered and a good clearance effected. Over 170 horses were bought for London, six firms alone paying over £5,000. The following were the prize winners and some of the best prices:—Mare orgelding over 15-2, 1 and reserve, Mr. A. E. Evans, Bronwylfa, sold as a pair at 215gs., the same buyer securing a fine team of well-matched bay geldings, the property of Mr. J. Jones, Whitegate Stud, at 470gs.; mare or gelding under 15-2, Mr. J. T. Oliver, Carnarvon, 76gs.; mare or gelding over 14-3, Mr. A. E. Evans, Bronwylfa, with his grey cob Sensation, which afterwards won the cup for the finest goer and realised 120gs.; reserve, Mr. Darlington, Malvern, 75gs.; cob over 14 hands, Mr. F. Hermon, Chester, 60gs.; cob over 13-1, Mr. W. Conwy Bell, Rhuddlan, 80gs.; reserve, Mr. George Ledson, Bromborough, 74gs.; pony under 12-2, Mr. F. Hayes, Bebbington, 75gs. The North Wales Challenge Cup for the best horse for town work was won by Mr. J. Williams, Bryn Cariwch, Colwyn Bay, who sold for 120gs.; mare or gelding under 16 hands, Mr. D. Evans, Gwernybiellead, Llandysilio, with a grey gelding under 15-2, and sold for 80gs.; clean-legged lurry horse, Mr. J. Owen, Llanrwst, 72gs.; parcel-carter, Mr. A. Read, Northop Hall, 65gs.

Other high prices were:—Mr. R. Jay, Middlesex, pair of cobs, 275gs.; Mr. F. Baguley, pair of cobs, 160gs.; Mr. D. Robinson, pair of browns, 152gs.; the Hon. Mrs. Ward, pair, 140gs.; Mr. J. T. Oliver, two pairs, 238gs.; Mr. J. Jones, two chestnuts, 86gs. and 75gs.; Miss Baxter, pony, 115gs.; Mr. Edgar Baxter, cob, 95gs.; Mr. W. Parker, roan gelding, 70gs.; Mr. A. Read, four geldings, 272gs.; Mr. Hy. Lea, two geldings, 120gs.

Sale of Mr. Foster's Hackneys.

The small stud of pedigree hackneys belonging to Mr. John Foster was dispersed at the Limes, Saltend, Hedon, near Hull, on Thursday, in consequence of Mr. Foster having given up breeding, owing to ill-heath. Mr. Foster has been a breeder of hackneys many years at his former resi-

dence, the Grange, Sheffield, and latterly at the Limes, Saltend, Hedon. His small but select stud represented some of the best blood of Yorkshire, and as each season came round substantial prizes have been awarded to these animals. The following prize-winners from this stable will be fresh in the minds of many who are interested in the hackney breed:—Comrade II., Seabreeze, Golden Pippin, Golden Bells, Lady Amazement, and Golden Blossom. The catalogue also included a few horses belonging to other gentlemen of the district, making a total of just over twenty. There was a large company of buyers present, and some satisfactory prices were made. A two-year-old, Dorothy Vernon, a bright chestnut, sire Garton Duke of Connaught, dam Dark Polyanthus, made the top price of the sale, namely, 210 guineas. The bidding commenced at 80 guineas, and made rapid strides to the above figure, Mr. Cockayne becoming the purchaser. This animal has a long pedigree, and has won several prizes. The well-known stud horse Comrade II. was sold to Mr. Troope, of Hedon, for 126 guineas, whilst the black brood mare, Golden Bells, brought 115 guineas, the purchaser being Mr. Rowntree, of Hessle Common, Hull. A list of the principal prices realised is appended. The auction was in the hands of Messrs. Robert R. Leonard and Son:—

BROOD MARES.

Comrade II., s. Canvasser .....Mr. Troop	120

Wilton Fair.

The annual spring fair at Wilton—one of the most important of the early Hampshire Down sheep fairs—was held at the Fair Ground, Wilton, on Monday, when about 15,000 sheep were penned, a number considerably in excess of recent years. The supply of cattle and horses, too, was greater, and the fair, as a whole, was larger than usual at this time of the year. Trade was not anything so good as was anticipated; in fact, at the opening of the market it was decidedly bad. After the successful lambing season the outlook was good for the sheep breeder, but during the past few weeks cold rains, cold nights, and frosts have seriously affected keep prospects. It was not surprising, therefore, that the prices obtained on Monday fell far short of those recorded at this fair for some two or three years past. Not only did the prospect of shortness of keep interfere with the trade, but the number penned was in excess of the demand, and it was generally estimated that the sales were quite 3s. to 4s. per head less than last year, although last year's prices were slightly above the average for this fair. The majority of the sheep, as usual, were in the hands of the auctioneers, the number in the open fair being about the same as last year, though in the latter trade was very bad.

The Corporation of Wilton, as is their custom, gave a silver challenge cup, valued at £5 5s., for the best pen of 100 ewe tegs penned for sale, and a cup of a similar value to the best 100 wether tegs penned under like conditions. In the ewe teg class there were two competitors, Mr. J. Thatcher, of Wishford, and Mr. Hitchings, of Broadchalke, while in the second class there was only one entry, that of Mr. F. Rawlins, of Fighledean. The sheep penned were quite up to the average standard. Mr. Thatcher's pen well merited the first prize, and Mr. Hitchings' pen thoroughly deserved the h.c. card awarded to it. Although Mr. Rawlins was the only competitor in the wether teg class, the judges considered the entry worthy of the prize. The judges were Messrs. T. K. Harding, C. V. Read, and J. Futcher. It was generally considered that fat tegs averaged 46s. to 53s., the latter price being offered at public auction for the highly commended pen of Mr. Hitchings, of Broadchalke, which were bought in. Store tegs fetched from 35s. to 45s., while couples realised up to 53s. to 54s. Cattle met with a fair demand, and sold at times prices. Prices were also good for the better class of horses. At midday the prizes were distributed in the Fair Cottage by the Mayor (Councillor H. Street).

Messrs. Waters and Rawlence held their accustomed sale by auction, the entry comprising 4,620 head of sheep, 250 head of horn stock, and 15 cart and nag horses. Although trade ruled slow throughout in common with the fair generally, only six lots of sheep out of a total of 72 and 12 lots of cattle out of a total of 66 remained unsold, a much better clearance than the trade seem to warrant being effected. Ewe tegs made from 34s. to 51s., Mr. J. Carpenter making 51s. and 49s. 6d. respectively of his two hundreds; Mr. E. L. Melsome, 47s. 6d. for 110; Mr. W. J. K. Waters, 46s. 6d. for 40; several other lots making 42s. 6d., 42s., 41s. 6d., and 40s. 6d.; store wether tegs made from 34s. 6d. to 42s. 6d.; fat ditto, 44s. 6d. to 49s. 6d.; fat wether sheep, 44s. to 46s.; meaty ditto, 40s. 6d.; mixed tegs, 29s. to 38s.; ewe couples, 45s. to 59s.; teg ditto, 35s. 6d. to 42s. Of the cattle, barreners made from £10 10s. to £13 5s.; meaty ditto, £15 to £20 10s.; coming three-year-old steers, £12 15s. to £15 5s.; coming two-year-old ditto, £8 15s. to £11 10s.; yearling ditto, £8 10s. to £9; coming three-year-old heifers, £13 5s. to £19; coming two-year-old ditto, £8 15s. to £11 15s.; yearling heifers, £6 to £9. Cart horses made 42 guineas, 40 guineas, 38 guineas, 31 guineas, 28 guineas, 27 guineas, etc.

Keighley Spring Fair.—There was a large supply of stock at this fair, held on Thursday, and good business was done. Calvers made £16 to £20; laying-off cattle, £12 to £17; geld ditto, £9 to £14; heifer, £7 to £10; stirks, £4 10s. to £6 10s. Lonk ewe, with two half-bred lambs, £2 to £2 2s.; half-bred hoggs, £1 5s. to £1 15s. each. Pigs: Small stores, 21s to 24s.; medium, £1 5s. to £1 10s.; stronger, £1 11s. to £2; pork, 6d. to 6¼d. per lb.

Windmill Destroyed by Lightning.—An extraordinary effect of the storm was reported on Thursday from Walsham-le-Willows, in Suffolk, where a windmill was struck by lightning and completely wrecked. The sails were smashed to fragments, and the machinery inside was distorted out of shape, beams dislodged, and the premises strewn with débris. The house of the owner, Mr. T. O. Clover, 70 yards from the mill, had all its windows shattered and walls and ceilings cracked.

Death of Captain Machell.—A well-known sportsman and landowner has passed away in the person of Captain Machell, who died at Hastings on Sunday night after a long illness. Captain James Octavius Machell was the son of a clergyman, and grandson of Lieut.-Colonel Machell, of Crackenthorpe Hall, Westmoreland, but spent his young days in Yorkshire. He was born in 1838. He felt a keen desire to regain possession of the famous estate, and visitors to his place at Newmarket will remember a painting of Crackenthorpe Hall, "rebuilt by Hugh Machell in 1629, sold by Launcelot Machell in 1786, repurchased by James Octavius Machell in 1877." He entered the Army at the age of 18, and with the 14th Foot went to Malta. The regiment returning to Ireland, Lieutenant Machell enjoyed seven years of racing in that country, and there gained sufficient knowledge of the Turf to enable him to acquire a fortune by subsequently dealing in and running thoroughbreds.

Farmers and the Truck Act.—At a meeting of the business committee of the Worcestershire Farmers' Association, at Worcester, on the 3rd inst., Mr. A. J. Davies presiding, the decision in the recent appeal by Messrs. Jones Bros., of Northingtown, near Worcester, against a conviction under the Truck Act came up for discussion. The chairman congratulated farmers upon the resulting dictum of the Lord Chief Justice that cider could be given as a gift, though the appeal was in itself unsuccessful. He failed to conceive any higher indictment which might be brought against the local magistrates who inflicted the maximum penalty. He hoped this would be the last of these vexatious prosecutions, and that the authorities would devote their attentions to detecting real offences against the law, and not imaginary ones. It was decided to start a voluntary fund to assist Messrs. Jones to defray the costs of the appeal, which had secured so valuable a definition of the position of agriculturists.

Re-opening of the South Lincolnshire Pig Market.

The Board of Agriculture have issued an order withdrawing the swine fever restrictions in the Holland Division of Lincolnshire from to-day (Monday). The effect of the order is that the markets at Spalding, Boston, Holbeach, Long Sutton, and Donington will be re-opened this week for the sale of both fat and store pigs, which may now be moved without restriction within the Parts of Holland. The markets have been closed since the beginning of August last, while restrictions on movements have been in force since June.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending May 6, 1902:—

Swine Fever.	Swine Slaughtered as Diseased or Exposed to Infection.	No.	93	661	457	902	2,754	5,878 / 7,561 / 11,866

	Corresponding period in ...			1901	1900	1899		

NOTE.—The figures for the current Year are approximate only.

Spalding May Hirings took place on Wednesday, at which plough boys were hired at £5 to £8, horsemen £14 to £18, head waggoners £17 to £22. There was a scarcity of domestic servants, and wages showed an upward tendency. Young general servants obtained £10, experienced generals £12 to £14, plain cooks £16 to £18, young housemaids £8 to £10, and experienced housemaids £14 to £16. These wages were for local service, and when servants were hired for London and large towns from £2 to £4 a year more was obtained.

Flour and Corn Tax Demonstration.—A demonstration, organised by the National Democratic League, took place on Sunday in Hyde Park, to protest against the proposed taxes to be imposed upon flour and corn. Speakers on all the platforms followed each other in rapid succession, and were unanimous in condemning the taxes, scouting the idea that they were merely a registration duty. In some cases the hope was expressed that the Boers would, in the result, be successful in the present war, and the English working men were urged to take the inhabitants of the Transvaal and Orange Free State as an example in resisting oppression. At 5.30 the a resolution, condemning the tax, was put from all the platforms. The resolution was in every case carried unanimously. Throughout the proceedings were of the most orderly character, and it was evident that a large proportion of those present had merely come out of curiosity.

SOCIETIES.

Royal Agricultural Society of England.

Prince of Wales accepts the Presidency.

A monthly Council was held on Wednesday, H.R.H. Prince Christian, K.G. (President), in the chair. The minutes of the last monthly meeting of the Council, held on April 9th, 1902, having been taken as read and approved, the election of the following thirty-seven members was proceeded with:—

Aitchison, George, Brieryhill, Hawick, N.B.
Allen, Henry, Firwood, Bolton-le-Moors, Lancs.
Bell, Charles, Norley Hall, Norley, Cheshire.
Blake, Lieut.-Colonel Malachi Locke, Bridge, South Petherton.
Brettell, Henry Gordon, The Grange, Chertsey, Surrey.
Brouncker, Francis, Boveridge, Cranborne, Salisbury.
Brown, J. W. H., Beeleigh, Cecil Road, Wealdstone.
Buttar, Thomas Alexander, Corston, Cupar Angus, N.B.
Davis, Herbert I., Hurlingpot, Shepton Mallet.
Duncan, Alexander Lawson, Trevallyn, Rossett, Denbighshire.
Elliot, T. R. B., Holme Park, Rotherfield, Sussex.
Ellis, Frederick George, Ystrad Dairy Farm, Denbigh.
Fleming, S. H.—le, Rydal Hall, Ambleside, Westmoreland.
Fletcher, Bernard, Rydal Farm, Ambleside.
Glover, Isaac Caton, Warrenhurst, Blundellsands, Liverpool.
Goodman, William Lawton, 35, Hardman Street, Liverpool.
Graham, George P., Ashington Colliery Farms, Morpeth.
Graham, Robert, Auchengashel, Twynholm, Kirkcudbright.
Grinling, Gibbons, Fairfield, Harrow Weald.
Johnstone, Robert, The Auction Mart, Penrith.
McKibbin, Thomas C., The Heaning, Windermere.
Marriner, C. F., Thorpe Hall, Hasketon, Woodbridge, Suffolk.
Marshall, George, Broadwater, Godalming, Surrey.
Marshall, George, Hardres Court, Canterbury.
Neill, Robert M., Norton House, Fallowfield, near Manchester.
Parr, Roger Charlton, Grappenhall Heyes, Warrington.
Ridgway, Charles Arthur, 180, East Town Street, Columbus, Ohio.
Ratcliff, R. H., Stanford Hall, Loughborough.
Robertson, George Hunter Finlay, Gladwyn, Gresford.
Robertson, Leonard, 5, Castlegate, Penrithshire.
Shepherd, Robert, Parkside, Aston, near Warrington.
Summers, James W., Cam-yr-Alyn, Rossett, Denbigh.
Sykes, John Thorley, Croes Howell, Rossett, Denbighshire.
Villar, Alfred Edwin, Mayshiel, Duns, N.B.
Ward, R. Bruce, Westwood Park Droitwich.
Wilkinson, Thomas, Cold Harbour, Easingwold.
Wilson, George Murray, Dale End Grasmere.

The reports of the various Standing Committees were then presented, and adopted as below:—

Finance.

Mr. Percy Crutchley reported that the accounts for the month of April, 1902, as certified by the Society's Accountants, showed total receipts amounting to £2,583 3s. 8d., and expenditure to £1,808 12s. 5d. Accounts amounting in all to £3,150 12s. 1d. had been passed, and were recommended for payment.

Journal.

The Earl of Jersey reported the receipt of numerous tenders from leading firms for the printing, paper, and binding of the Society's Journal, and stated that the tenders sent in would be further considered by the Committee at their next meeting. Various suggestions for articles in the next volume of the Journal had been discussed. Applications for permission to reproduce illustrations from the last volume of the Journal had been acceeded to, subject to the usual conditions as to acknowledgment.

Chemical and Woburn.

Mr. Reynard reported that the experiments at the Woburn Farm were proceeding satisfactorily, and various matters connected with the farm and with the chemical work of the Society generally had ben discussed and instructions gven thereon.

Botanical and Zoological.

Mr. Wheeler (Chairman) reported that two acres at the Woburn Farm had been sown in twelve plots with British and American clover seeds, for the purpose of determining the relative value of the different kinds as to the amount of yield and hold on the ground. The Committee were engaged in the consideration of the issue as one of the Society's publications of a pamphlet prepared by the Society's Zoologist, on "Orchard and Bush Fruit Pests, and How to Combat Them," for which they asked for authority to incur the expense necessary to prepare proper woodcuts for the pamphlet. The Committee had arranged for a conference, on the 5th June next, with representatives of the Highland and Agricultural Society of Scotland, for the purpose of ascertaining whether it would be possible for the two national Societies to agree upon a common line of action with reference to the general question of testing farm seeds, and upon a uniform method of testing seeds and reporting results. The Committee had considered a letter from the Departmental Committee on Forestry, appointed by the Board of Agriculture, inviting the Society to nominate a representative to give evidence before them on the subject of their inquiry, with more particular reference to the possibility of improvement of forestry by education or other means; and had decided to reply that whilst the fungal diseases of trees and the insect pests that injure them received the constant attention of the Society's Botanist and Zoologist, and papers on the subjects connected with forestry had appeared from time to time in the Society's Journal, the Society had no special information or views on the question of the improvement of forestry by education or other means that it desired to bring under the notice of the Departmental Committee.

Veterinary.

Sir Nigel Kingscote presented a report which had been submitted to the Veterinary Committee by the sub-committee appointed in July last to supervise the experiments conducted at the Royal Veterinary College as to the possibility of infecting bovine animals with tuberculous material from the human subject. These experiments were carried out on a cow, two young calves, and two yearlings. In the case of the cow the tuberculous material was injected into the udder, in the calves it was given by the mouth, and in the yearlings it was injected into the veins. The experiments proved the possibility of infecting cattle with human tubercle bacilli, for at least in the case of the cow the human bacilli had multiplied in the body, and had induced a manifestly diseased condition. In other cases also reactions to tuberculin after the attempt to infect with human bacilli would appear to indicate that infection had actually taken place. On the other hand, the absence of distinct evidence of tuberculous disease when the animals were killed would indicate that infection was of a temporary nature. It ought to be noted, however, that in the case of the cow the recovery was not complete six months after infection. Taking all the facts into account, the experiments indicated that the risk of cattle becoming infected naturally from consumptive human beings must be very slight. The sub-committee did not feel justified in drawing from the results of the experiments any conclusion as to the risk of infection in the opposite direction—viz., from cattle to man.

Pig Regulations at Carlisle.

As the existing swine-fever regulations of the city of Carlisle and county of Cumberland would have precluded the holding of an exhibition of pigs at the Carlisle Meeting, the executive committee of the local authority had so modified their regulations as to provide that for the purpose of exhibition at the society's show swine not from an "infected area" would be permitted to be moved from any district into the show-yard, provided that such animals were free from disease, and were accompanied by the "official admission order" of the society.

Stock Prizes.

Mr. Sanday (chairman) reported that various matters in connection with the entries for the Carlisle Meeting had been discussed, and instructions given thereon.

The committee had considered the terms of regulation 58 of the Carlisle Prize Sheet with reference to the date by which it would be necessary for cows or heifers entered as in-milk to calve; and having regard to the fact that the show will this year be considerably later than usual, they recommended that in the case of cows due to calve before the show the entries should be accepted in the ordinary way, provided that the calving took place at least ten days before the show. The papers entitling the animals to admission to the show-yard would be retained by the secretary until the certificate of calving had been received.

Judges Selection.

Mr. Sanday (chairman) reported that the list of judges had been completed and published in the agricultural and other papers.

Implement.

Mr. Frankish (chairman) presented the recommendations of the committee with regard to the various appliances entered "New Implements," at the Carlisle Meeting, and announced that the committee had had under consideration the question of competitive trials next year of wind engines for prizes to be offered by the society.

General Carlisle.

The Earl of Feversham reported that the committee had discussed the question of the provision of early trains from the surrounding district of Carlisle, to enable the judges to reach the show-yard in time to commence the judging at nine o'clock on the morning of Monday, the 7th July; and the local committee had kindly undertaken to approach the railway companies with a view to the required facilities being provided.

The committee recommended that the time for the closing of the entries for the butter-making competitions should be extended until the end of the present month, under the ordinary conditions of the payment of a deposit of 10s., returnable to a candidate who attends the competition. An application made by the Mayor of Carlisle for permission for the Cumberland County Council travelling dairy van to be placed in the show-yard was granted, on the understanding that no practical demonstrations or operations would be carried out in the van.

Showyard Works.

Sir Jacob Wilson (chairman) reported that the erection of the show-yard was now in a forward state, and that the new bridge across the river would in all probability be completed by the end of the month. An application from the Catering Syndicate for permission to provide a special luncheon and tea room for the County Club had been granted. The committee had accepted, with thanks, an offer from Messrs. Robinson Bros., of Carlisle, to decorate and furnish the Royal pavilion in the Carlisle show-yard.

Prince of Wales President Next Year.

In presenting the recommendations of the Committee of Selection, Sir Nigel Kingscote said that the time had now arrived when it was necessary to consider the question of the nomination of a President for the ensuing year. The Committee of Selection had arrived at a unanimous recommendation on this point, which it was now his privilege to read and to submit for the confirmation of the Council by a formal vote:—

"That his Royal Highness the Prince of Wales be respectfully approached with an expression of the unanimous desire and earnest hope of the Council of the Society that his Royal Highness will be graciously pleased to accept the office of President of the Society for the ensuing year."

His Royal Highness the President said he was sure Earl Egerton of Tatton having cordially seconded the resolution,

His Royal Highness the President said he was sure the Council would be quite unanimous in adopting the resolution. They all knew the great interest which his Royal Highness took in every matter connected with agriculture, and with their shows, at which he had been a successful exhibitor. He felt that it would not be possible to have for their meeting of the ensuing year a better President than his Royal Highness the Prince of Wales. (Applause.)

The resolution was then carried by acclamation.

The following letter has been received from H.R.H. the Prince of Wales in response to the above resolution:—

York House,
St. James's Palace, S.W.,
7th May, 1902.

GENTLEMEN,—I have received with much gratification the Resolution which you have unanimously passed at your Meeting held today, requesting me to accept the Presidency of the Royal Agricultural Society for the ensuing year; a request to which I feel it both my duty and pleasure to at once accede.

During my previous Presidency of the Society, I received from the Council and from the general body of Governors and Members so much valuable assistance and so many marks of cordial good-will, that I feel confident I may rely, in accepting the office of President for a second time, upon a continuance of that suport.

In thanking the Council for their Resolution, I desire to express the hope that the first Exhibition of the Society to be held in June of next year on our new Permanent Showyard in London, may be as successful in every respect as the Manchester Meeting of 1897, over which I had the pleasure of presiding.

Yours faithfully,
(Signed) GEORGE P.

The Council of the Royal Agricultural Society of England.

Dairy.

In view of the resolution which was passed by the Council at the instance of the Dairy Committee on March 5 last, the Committee regarded with satisfaction the action of the Board of Agriculture in this matter.

Site.

Mr. Crutchley (chairman) announced that arrangements were in progress with the local authorities with regard to the question of roads and sewers at the Society's new permanent showyard, and the Committee recommended that the seal of the Society be affixed to a lease (with option of purchase) of certain extra land to the the north-west and west sides of the site, which had been arranged with the owners.

Queen Victoria Gifts.

Sir Ernest Clarke announced that the annual meeting of the Trustees of the Queen Victoria Gifts Fund had been held, and that the Trustees had decided that the grant to the Royal Agricultural Benevolent Institution for 1902 should be of the same amount (£250) as in the four previous years, to be distributed as twenty-five grants of £10 each to the unsuccessful candidates at the next election of that institution, in the following proportions: Five grants to male candidates, five to married couples, and fifteen to female candidates.

Miscellaneous.

The Secretary reported that the third examination for the National Diploma in Agriculture was now proceeding at Leeds. He submitted a letter

from the German Agricultural Society, inviting the Royal Agricultural Society to send delegates to the show to be held at Mannheim from June 5 to June 10 next; and H.R.H. the President was requested to thank the German Society for their invitation, and to say that, whilst the Council were unable to accept an invitation to send delegates this year, they hoped that it would be possible on a future occasion for representives of the Society to pay a visit to the show of the German Agricultural Society in reciprocation of the compliment paid to the Royal Agricultural Society by representatives of the German Agricultural Society attending the show held at Maidstone in 1899. An invitation was also tendered to delegates from the Deutsche Landwirtschafts-Gesellschaft to honour the Society with a visit to its exhibition of 1903, which will be held in June of next year on the Society's new permanent showyard in London.

Date of Next Meeting.

The report of the Council to the anniversary general meeting to be held at twelve noon on Thursday, the 22nd inst., having been prepared, and other business transacted, the Council adjourned until 10.30 a.m. on Wednesday, June 4.

Bath and West.

A council meeting of the Bath and West and Southern Counties Society was held at the Grand Hotel, London, on Tuesday. The president (the Earl of Motley) was in the chair, and, in opening the proceedings, alluded to the loss which the Society had sustained by the death of Earl Temple, and moved the following resolution, which was seconded by Captain Best, and agreed to:—"That this council desires to place on record its sense of the loss which the Society has sustained by the death of one of its vice-presidents, Earl Temple, who had also filled the office of president with much advantage to the Society, and begs to tender to the Countess Temple and the other members of the family its deep sympathy with them in their bereavement."

Elections.

The following new members were elected:—

Mr. W. Lethbridge Wood, Okehampton, was elected a Governor, and four ordinary members were also elected.

Mr. Collins, as chairman of the Finance Committee, brought up the audited quarterly statement of accounts, and moved its adoption, which was seconded by Col. Best, ad agreed to. Mr. Collins further reported that the committee, to whom the matter had been referred by the council, acquiesced in a recommendation of the Agricultural Education Committee that the Society should make a contribution of £50 a year for two years for research work in cider-making, if the Board of Agriculture would supplement this by a sufficient grant to defray the remainder of the cost which the work would involve.

The adoption of the report was moved by Mr. Collins, seconded by Lord Heytesbury, and agreed to.

Plymouth Meeting.

On the motion of the president, seconded by Sir E. Strachey, M.P., it was resolved that the Mayors of Plymouth and Devonport and the chairman of the Stonehouse District Council be requested to kindly inaugurate the Society's Plymouth meeting by visiting the show in state on the opening day.

The secretary submitted the programme of daily proceedings proposed for the Plymouth meeting, commencing on May 27th and terminating on May 31st. The charges for admission to the show will be 5s. for the first day, when the judging will take place, 2s. 6d. for the second and third days, and 1s. for the last two days. Season tickets for the week will be issued at 7s. 6d. each. In addition to all the usual features of an Agricultural Show there will be jumping, driving, shoeing, shearing, milking, and butter-making competitions, an Art Manufacturers Exhibition, Science and Art Collections, a Flower Show, a Poultry Show, and a working dairy on an unusually large scale. The band of the Royal Marines (Plymouth Division) will perform on each day.

On the motion of Col. Llewellyn, M.P., seconded by Col. Napier, the programme was approved.

The secretary reported that there was a very large entry of implements, machinery and live stock; but that as the entries for the driving, trotting, and jumping competitions do not close until May 10th, the number of entries in these classes was not yet ascertainable.

Journal.

Sir C. T. Acland, as chairman of the Journal Committee, reported the publication of the Society's Annual Journal and its issue to all members of the Society not in arrear with their subscriptions, and expressed his belief that the current volume well maintained the standard of its many predecessors.

Monmouth Agricultural School.

On the motion of the Rev. F. F. Buckingham, seconded by Col. Skrine, Mr. C. D. Phillips was re-appointed as a representative of the Society upon the governing body of the above-named school, the term for which he had been previously elected having expired.

The Central Chamber.

The monthly Council meeting of the Central and Associated Chambers of Agriculture was held on Tuesday at the Society of Arts, Adelphi, London. Sir Edward Strachey, M.P., the chairman, presiding. There were also present Lord Lichfield, Mr. Jas. Lowther, M.P., Lord Harris, Mr. F. A. Channing, M.P., Mr. M. D'Arcy Wyvill, M.P., Mr. W. H. Wilson-Todd, M.P., Mr. A. F. Jeffreys, M.P., Mr. Lawrence Hardy, M.P., Mr. Jasper More, M.P., Mr. R. L. Pearce (Darlington), Mr. R. S. Balden (West Riding), Mr. C. Middleton (Cleveland), and Mr. W. Lipscomb.

Education and Local Taxation.

Sir John E. Dorington presented the report of the Local Taxation Committee. The report stated that the assumption on which the great change contained in the Education Bill is proposed is that it is impossible to carry on the present system of Voluntary education in competition with the Board schools, whilst it is equally deserving of national support. The most important portion of the report on this subject deals with the question of the probable effect of the bill on the county rates. It says:—

"The assumption on which this great change is proposed is that it is impossible to carry on the present system of Voluntary education in competition with the Board Schools, whilst it is equally deserving of national support, the school population under the two systems being approximately 2,525,968 in the Voluntary schools, and 2,132,201 in the Board schools, for the year ending August 31st, 1899."

"Having sketched the general scope of the Bill, the report stated that the aggregate sum represented by all existing School Board rates other than interest on building debt, and by the amount now raised by subscriptions for the maintenance of Voluntary schools other than the cost of provision of buildings, will be transferred to the county rate, and this aggregate sum amounts to £3,522,392, of which £2,581,445 is already raised by School Board rates, and so far, therefore, there will be no additional charge. The difference between these two sums, £940,847, represents the voluntary subscriptions and other sums, at present raised locally, which the county rate will now have to replace. Shortly, then, the effect of this charge, if it was evenly spread over the whole of England, would be to create a 5d. county and borough rate, which, if equally spread, would be about 3½d., and a voluntary subscription equal to about a 1½d. rate.

"Your Committee as a general rule have always objected to any new charge being imposed on local rates; but we have to look at the present position as it now stands, and to judge what is best for the payer of local rates. If the scheme contained in the bill which is now before us is not carried out, it is to be apprehended that before long, under the existing law, we shall have established everywhere School Boards levying School Board rates far exceeding—if we may judge from past experience—this 5d. rate.

"This figure of 5d. would not, of course, be the same in all counties. In some counties which were largely under School Boards it would probably be higher, but there it would simply mean the transfer of a rate which was already levied by School Boards to the county rate, with some possibilities of economy, whilst to counties where there were few School Boards the rate on the county would represent the transfer from private resources to the public, and would probably be materially lower. It was impossible to say with certainty what increase might take place beyond the present expenditure when this rate had come into operation. The committee opposed the proposal to levy an additional 1d. rate for technical education, and in conclusion, urged that education authorities to be constituted should have powers sufficiently ample to enable them to control the expenditure and management of elementary schools."

Sir John Dorington, M.P., chairman of the committee, moved that the report be received.

Mr. Kidner (Taunton), on the consideration of the report, regretted that the report departed from the great principle which they had always held of resisting any additional charge on the local rates for purely national purposes. The local rates were not the proper source to supply the expenses of education, which was a national question. It should be paid for by national funds. (Hear, hear.) He moved that the report should be referred back to the committee for their reconsideration. (Applause.)

Mr. Hope seconded the amendment.

Mr. Williams (Monmouth) expressed his approval of the report of the committee. He felt, in the present state of public opinion, that if the scheme were not carried out there would be School Boards in every parish at a far larger cost than that proposed.

Lord Harris said that for the Council to attempt, notwithstanding the report of the Royal Committee on the subject of local taxation, to throw off the burden which they for a long time had had upon their shoulders in the shape of a rate for elementary education, and as regarded the 1d. rate imposed in 1889 for technical education, would be beating the air, inasmuch as it would be highly improbable that they would be successful in anything they attempted to do in Parliament. But the proposed additional burden of 1d. for the purposes of secondary education was quite a novel burden, and it afforded them the best possible ground for opposing the Bill (hear, hear).

Mr. Latham suggested that if they deferred the discussion until June it would be too late.

Mr. St. John Ackers said the action of the Council had always been opposed to the recommendations of the report. It had always considered that national education should be paid for from national funds. If they adopted the report they would stultify all their previous policy.

Mr. James Lowther said the County Councils were the culprits in the matter in with-holding from the ratepapers the moiety of the Excise duties which it was always intended should go to the relief of local taxation. He could remember Mr. Forster in proposing his Bill spoke of a maximum rate of 3d. Where were they now? (Applause.)

Sir John Dorington, in reply, said they had to regard things as they were, and it was impossible to free themselves from local taxation. At present two-thirds of the funds were provided from national and one-third from local funds. The rate proposed was not a new rate, only a new form of rate. (Laughter, and a voice: "A distinction and not a difference.") There was a difference. In future the County Council would only find the money found at present by benevolent landowners and the benevolent farmers. The voluntary contribution would cease, and all would pay alike. It was doubtful whether the cost would be higher, for under the stronger financial control of the County Councils they would sweep away many of the establishment expenses of the School Boards.

A member suggested that, as to endowments, it would be very hard if the parishes had to hand over the endowments to the County Councils and pay a sixpenny rate.

Sir John Dorington said he agreed that the endowment question would have to be cleared up.

On a division the report was referred back to the committee by 24 to 22 votes.

Cattle Diseases.

Mr. B. St. John Ackers introduced the report of the Cattle Diseases Committee. An outbreak of foot-and-mouth disease had been discovered on the farm of Mr. Swinford, of Chislet, near Canterbury. It was not known how the outbreak originated, but the Board of Agriculture issued an order on March 29th prohibiting the movement of cattle, sheep, goats, or swine into or out of a scheduled district, which covered nearly one-half of the county of Kent. A further order was issued on April 8th modifying the boundaries of the scheduled district, and allowing the movement of animals—within the boundary—under certain conditions, and under carefully-considered regulations. All the restrictions were now removed, except those applying to the farm on which the disease occurred. From local information it appears this outbreak, which occurred only a mile and a-half from the seaboard, was a considerable one; three hundred and thirty-six ewes, with their lambs, had the disease, and about one hundred and two lambs died. Two heifers were affected. Although there are many ways by which the disease may be spread or imported, the committee wished to emphasise their previous condemnation of the course adopted by the Board of Agriculture, in throwing the carcases of diseased animals from the Argentine overboard, and the recurrence at intervals of foot-and-mouth disease, adjacent to or near the coast, that would be endangered by this action.

As regards sheep scab, a suggestion had been made that local chambers be asked to consider the best means to be adopted for the eradication of sheep scab. The committee had now to report that, although the suggestion was not carried out, resolutions from eleven chambers had been received, and they unanimously advocated the compulsory dipping of all sheep at least once a year, with the single exception of the North Cotswold Farmers' Association, who recommended that it should be compulsory to dip at least twice a year.

Professor Lloyd seconded the resolution.

Mr. T. Latham moved to add to the report a recommendation that a statement concerning the outbreaks of sheep scab be sent to the Chamber during the year.

The proposal having been approved, the report was adopted.

The Duty on Corn and Flour.

Mr. James Lowther, M.P., proposed:—"That this Council approves of the tax on corn and flour, but regrets that a higher duty was not put upon flour." Mr. Lowther said he had, with some reluctance, consented to propose the resolution, having taken such a strong course on the fiscal

question. He would have welcomed a protective duty, but the proposals of the Budget fell far short of anything of the kind, and must be considered from a revenue standpoint. There was no doubt that alarm had been felt that the new duties would tend to increase the cost of feeding cattle in this country. The temptation offered by our fiscal system to the producers of grain abroad to grind their corn where it was produced would deprive the English cattle feeder of a very large quantity of offal, which would form a great loss to the feeders of stock. He hoped before long the matter would be remedied, and that they would allow a decaying industry to have a chance. (Hear, hear.)

Mr. C. Middleton said, as one who had always dissociated himself from the opinions of Mr. Lowther on fiscal matters, he had much pleasure in seconding the resolution, as the new tax was in no sense a protective measure. He believed in many parts of the country, as in his own case, the duty would cost the farmers more than they would obtain. They all thought a higher duty should have been put upon flour. They should look upon these duties, not as a war tax, but as a duty to be continued in the future as broadening the basis on which taxation was raised.

Mr. F. A. Channing, M.P., deprecated any alteration, and drew attention to the fact that corn offal, now free to farmers in Denmark, Germany, and other countries, had been taxed to the extent of 5d. per cwt. in this country. He would strenuously oppose the imposition of the new duties.

Colonel Harben, in a vigorous and emphatic speech, said the cry of raising the price of bread was a political cry, got up to damage the Government.

Mr. Lipscomb, in supporting the resolution, said he knew from his own experience that more than half of the country mills in his district had been closed. The new duty would practically have no effect, and they had the right to ask that new taxation should not cripple their trade.

Mr. Claré Sewell Read agreed that the new duty would not raise the price of corn, or benefit in any way the home grower. The American farmer would pay the tax, and not the British consumer.

The resolution was then carried unanimously

Milk-Blended Butter.

On the motion of the chairman, it was resolved that the Dairy Products Committee should arrange for a deputation to wait upon the President of the Board of Agriculture on the subject of water in butter.

The chairman said he had seen Mr. Hanbury, who had expressed his readiness to receive such a deputation.

Agricultural Seeds.

Professor Long moved a resolution in favour of the establishment in this country of a seed testing station. He pointed to the fact that many of the agriculturists of this country were compelled to send to other countries to get their seeds officially examined.

The motion was agreed to, but, on the suggestion of the chairman, the resolution proposed by Mr. Horne to send a deputation to the Board of Agriculture on the question was abandoned.

The meeting then adjourned until June 3.

Shorthorn.

Meetings of the Committees and Council of the Shorthorn Socety were held at the Society's Rooms, 12, Hanover Square, W., on Tuesday, Colonel Sir Nigel Kingscote, K.C.B. (president) in the chair.

Editing Committee.

Lord Brougham and Vaux reported that the Committee had examined the list of pedigree exportation certificates issued by the secretary since the last meetng of the Council, viz.:—For Canada 43, South America, 104; Russia, 75; South Africa, 2; United States of America, 4; total, 228.

A large number of new and other pedigrees had been examined by the Committee, with the certificates in support of their correctness, some of which had been accepted for entr in the forthcoming volume of the Herd Book, and others referred back for further inquiry.

The Committee had also considered a number of applications for registered names, and they recommended that the following names be registered, and that the applicants be allowed the exclusive use of such registered name either as a prefix or affix in the naming of their cattle:—

Registered Name.	Owner.
Craigavad	A. M. Kirker.
Cranford	George Taylor.
Ruddington	Philo L. Mills.
Shethin	George Shepherd
Sibthorpe	A. Stretton.
Waresley	W. H. O. Duncombe
Whitehall	W. Parkin-Moore.

This report was adopted.

General Purposes Committee.

Sir Jacob Wison reported that the accounts for the past twelve months had been examined by Messrs. Welton, Jones and Co. and the Committee, and were found to be correct; that the receipts for the same period had been £264 2s. 10d., the balance of the Society's current account at the banker's being £278 7s. 6d., and the Committee recommended that cheques be drawn in payment of prizes and various accounts amounting to £109 5s. 10d.

The Committee recommended that the votes paced at the disposal of this Society by the Royal Agricultural Benevolent Institution on account of the Strafford Memorial fund be given to Mr. William Clayworth, of Langford, Newark, No. 18 on the list of candidates, who was unfortunately unsuccessful at the last election.

This report was adopted.

It was resolved to make application to the Royal Agricultural Society for permission to hold the annual general meeting of members of the Shorthorn Society in the show-yard at Carlisle, on Tuesday, July 8th, at 2.30 p.m.

In accordance with the 22nd Article of Association, the Council proceeded to prepare a form of voting paper, containing the names of fourteen life members or annual members of the Society who for seven years previously have been members, from whom the members of the Society shall select seven members of the Council to fill the vacancies caused by the retirement of the seven members who are not eligible or election until after the expiration of one year.

The following are the fourteen names for submission to the members:—

Ashworth, Alfred, Horsley Hall, Gresford.
Baring, Viscount, Stratton Park, Micheldever, Hampshire.
Buckley, Abel, Mountain Lodge, Mitchelstown, co. Cork.
Fitzwilliam, Hon. H. W., Wigganthorpe, York.
Fletcher, J. Douglas, Rosehaugh, Avoch, Ross-shire.
Foster, S. P., Killhow, Carlisle.
Gordon, A. M., Newton Insch, Aberdeenshire.
Greenwell, Walpole, Marden Park, Woldingham, Surrey.
Morgan-Richardson, C., Noyadd Wilym, Cardigan.
Murray, C. A. Scott, The Manor House, Hambleden, Henley-on-Thames.
Potter, Edmund, Lowfields, Kirkby, Lonsdale.
Potter, Tom, Daybrook House, Nottingham.
Stanyforth, E. W., Kirk Hammerton Hall, York.
Stuart, Lieut.-Colonel Villiers, Castletown, Carrick-on-Suir, Ireland.

Scrutineers were appointed to examine and report upon the voting papers for the election of the Council when sent in.

The next meeting of the Council was fixed for Tuesday, June 3rd, 1902.

THE SHORTHORN BULL "SILVER MIST," shown above, is a yearling belonging to Mr. John McElderry, Ballymoney. At the recent Show of the North-East of Ireland Agricultural Association's Show at Belfast, "Silver Mist" won the Queen Victoria Challenge Cup and the Association's Gold Medal for the best yearling Shorthorn Bull bred in Ireland, and exhibited by an Irish resident. "Silver Mist" was also awarded Second Prize in the class for Bulls calved in 1901.

British Dairy Farmers.

A meeting of the council of the British Dairy Farmers' Association was held at Hanover Square, London, W., on Wednesday, Mr. George Barham, J.P. (vice-president), in the chair.

On behalf of the Finance and General Purposes Committee, Mr. Page reported that the customary examination of the society's accounts had been made, the balance at bank being £350 17s. 8d., against which they recommended payments amounting to £40 5s. 2d. The committee presented a return, showing that the imports of milk and cream into the United Kingdom for the four weeks ended March 29th, and the five weeks ended May 3rd, were respectively 78,155 and 90,698 cwts, compared with 92,636 and 104,328 cwts. in the corresponding periods of last year. These imports included 2,283 cwts. of fresh milk and 645 cwts. of cream in the nine weeks, the remainder consisting of preserved and condensed milk.

Mr. George Barham, chairman of the Conference Committee, presented the following completed programme of the ensuing dairy conference, which, after discussion, was adopted:—

Members desiring to take part in the proceedings will assemble at Reading on the evening of Monday, June 2nd. Reception by the Mayor and Mayoress at the Town Hall, from 8.30 to 10.30 p.m. During the evening there will be addresses of welcome by the Mayor on behalf of the town, and Mr. W. Berkeley Monck, on behalf of the British Dairy Institute.

Next morning there will be an inspection of the British Dairy Institute, followed by a conference in the hall of Reading College, when papers will be read and discussed on (1) Practical Education in Dairying, and Work at the British Dairy Institute, by Mr. Miles Benson, Chief Instructor at the Institute; (2), Theoretical Instruction in Dairying, by Mr. Douglas A. Gilchrist, B.Sc., Director of the Agricultural Department Reading College. After luncheon, on the invitation of Mr. Martin J. Sutton, J.P., the members will take special train to Ascot, driving thence to Winkfield, to inspect the dairy and poultry farm belonging to Mr. Walter Palmer, M.P. Tea, on the invitation of Mr. Palmer. Subsequently the members return by special train to Reading. In the evening there will be a dinner at the Town Hall, on the invitation of Mr. W. Berkeley Monck, J.P., chairman of the Committee of the British Dairy Institute.

On Wednesday morning it is proposed to take a steamer from Caversham Lock to Pangbourne or Goring, thence drive to Buckhold, Pangbourne, to inspect Dr. Watney's farm and herd of Jerseys. Luncheon will be given on the invitation of Dr. Watney. In the afternoon the party will proceed to Oxford, partly by rail and partly by water.

On Thursday the proceedings start with a conference, at which a paper by the Countess of Warwick on the Marketing of Dairy Produce, will be read and discussed. In the afternoon a visit is to be paid to Blenheim farms and Park.

On Friday the members proceed by train to Claydon, drive to Hillesden, to see the farm and stock of Mr. N. Coates, jun. (60 cows) Thence to Buckingham for a conference in the Town Hall, when Professor Long is to read a paper on Some Facts in Relation to Modern Dairying. A special train will afterwards convey the party to Tring, in time for luncheon at the Home Farm, Tring Park, on the invitation of the Right Hon. Lord Rothschild. Afterwards the herd and farm will be inspected, this concluding the programme.

As chairman of the Show Committee, Professor Long reported that the revision of the schedule of prizes had been completed, and that it would be put into type for consideration by members of the council. He also reported upon a proposal to establish a class or classes for Colonial butter, and after a conversation the Council agreed to provide

two such classes, one for salt and one for fresh butter, in boxes containing not less than 56lbs., with two prizes in each class—viz., a first prize of £5 and a silvere medal, and a second prize of £3 and a bronze medal.

A brief report was also received from the Poultry and Pigeon Committee. Upon the report of examiners of candidates for certificates at the Gloucester County Dairy School, on April 26th, it was resolved to award elementary teachers' certificates to Mrs. Ada Jones and Miss Flora L. Turner. It was resolved to make an addition to the members' chemical privileges by providing for an estimation of water in butter at a fee of 2s. 6d.

The next meeting of the Council was fixed to be held on Wednesday, June 11th.

Highland.

A meeting of the directors of the Highland and Agricultural Society was held on Wednesday, in the society's hall, George IV. Bridge, Edinburgh, Mr. A. M. Gordon, of Newton, presiding. The chairman referred to the death of Mr. David Buttar, Corston. There was no man, he said, who took a deeper interest in the welfare of the society, or who worked harder for its benefit than did Mr. Buttar. He moved that the condolence of the society be sent to the relatives. This was seconded by the Rev. Dr. Gillespie, and agreed to.

Donations were intimated to the Aberdeen Show Local Fund of £5 5s., by Colonel M'Inroy, of The Burn, and £5 by General Sir Peter Lumsden, of Buchromb, and the thanks of the society were awarded to the donors.

A letter was intimated from the Town Clerk of Perth that the Town Council had resolved to grant the use of the South Inch for the show of the society in 1904 free of charge, and also to give a free supply of water for the show. It was further stated that the Town Council had no funds out of which to make a contribution in aid of the funds of the show. Dr. Gillespie remarked that though there was no Common Good it was to be hoped the Perth gentlemen would subscribe to the local show fund. Mr. Andrew Hutcheson, Perth, said the taxes in Perth were already prodigiously high. Dr. Gillespie said the last time the society went to Dumfries the Town Council raised £100 by subscriptions, and he was only seeking to preach to Perth what they had practised in Dumfries. (Laughter.)

An application for an additional grant was made by the committee of Aberdeen University, who are at present conducting investigations as to the communicability of tuberculous bacilli between man and animals and animals and man. Mr. Macdonald (the secretary) said that the results already obtained by Professor Hamilton and his colleagues had been very striking indeed, and certain fresh lines of inquiry had been suggested by these investigations. Professor Hamilton wanted a repetition of the experiments, which would involve an expenditure of £100, half of which was promised by the University Committee. It was agreed to give an additional grant of £50.

It was reported that 63 replies had been received from farmers with reference to the inquiry as to the damage caused to sheep from maggots, all containing valuable suggestions, and it was proposed that an investigation should be carried out in the coming season with the object of discovering means to combat the plague.

In connection with the minutes of the Publication Committee, Dr. Gillespie complimented Mr. Macdonald on the very excellent character of the last volume of the "Transactions." He questioned whether there ever was so much varied and original matter in the annual publication as was contained in the latest volume, and most of the credit was due to the excellent initiative and management of the secretary. (Applause.) It was resolved to hold the annual general meeting on June 4.

Chard May Fair.—This annual fair was held on Wednesday, under most favourable circumstances. There was an unusually large attendance of buyers, and the stock made good high prices. Over one hundred head of cattle, twenty calves, and between 1,500 and 1,600 sheep came under the hammer of Messrs. Jeffrey and Simmons. Prime beef made from 11s. 6d. to 12s. per stone, veal sold well at 8d. per lb., and mutton at 7d. Fat heifers made from £10 10s. to £22; cows and calves, from £13 5s. to £18 10s.; heifers and calves from £10 10s. to £15 5s.; barreners, £10 10s. to £15 2s. 6d.; yearling steers, £9 15s.; yearling heifers, £6 to £8 2s. 6d.; calves, from a guinea to £3 5s. In sheep the prices were also well up. Single couples fetched 50s. to 53s. 6d.; double couples, 50s. to 56s. 6d.; fat wethers, 52s. to 63s.; fat ewes, 45s. 6d. to 49s.; fat lambs, 25s. to 29s.; hogs, 41s. 6d. to 43s. 6d.; rams, 42s. to 45s.; store ewes, 42s. to 44s.; store wethers, 39s. 6d. to 41s.; chilver hogs, 37s.

LITERARY NOTICES.

Another issue has just been made of the Corn Trade Year Book, by G. J. S. Broomhall, F.R.S.S. (Liverpool: Northern Publishing Company, 17, Gorce Piazzas). The author, in his introduction, says that "after a lapse of five years, since the last publication of the Corn Trade Year Book, of 1896, the demand for a further volume, bringing the statistics of the trade up to date, has become so strong as to prove irresistible. In this volume the history of the grain trade is brought up, either to the end of the calendar year 1901, or when that has not been found practicable, to the end of the last cereal year, viz., July 31st, 1901. Speaking generally, the period covered is the ten years from 1892 to 1901, but in some special cases the inquiry is carried back for thirty or forty years, and, moreover, in a few instances the leading statistical data of the seed and provision trades have been added, as it is thought that they will serve to throw a valuable side light upon certain of the problems that concern members of the grain trade. As it was found that the tabular statements covered so much space, it was resoved to cut down the text to the smallest possible dimensions, more especially as in a book of this description it is not so much opinions as facts which are wanted, and these can be presented most conveniently and effectively in a tabular form. At the outset we set down a brief summary of the history of the past five seasons, since the last Year Book was issued." Numerous charts and diagrams are provided, and illustrate the statistical matter which forms such a large feature of the book. The period covered by the review is ten years, but in some special cases the inquiry is carried back for thirty or forty years. The book is divided, broadly, into two sections, the first recording the statistics of each country separately, and the second consisting principally of tabulated statements, showing the general movements of grain and flour.

A revised and enlarged second edition of "India and Imperial Federation" has been issued by Messrs. Sampson, Low, Marston, and Co. To the previous edition are added many press comments and public speeches dealing with the good work done by Mr. David MacLaren Morrison, who compiles the additions, in the cause of India and her place in the Imperial Federation.

We have received from Mr. Henry Frowde, of the Oxford University Press, a copy of the form and order of service commanded by the King for use at the Coronation ceremony in Westminster Abbey.

In "The South African War and the Bear Operator" (London: P. S. King and Son, 4s.), we find Mr. Charles W. Smith still on the trail of the gamblers in the exchanges and bourses of the world. After many years of consistent agitation, Mr. Smith finds the same old evils of artificial agitation for the purposes of speculation springing up, they being discovered this time in connection with the war in South Africa. We are afraid that any amount of agitation will fail to kill the hydra-headed monster of artificial speculation in futures and other gambling systems, until a more healthy state of public opinion has come about. However, Mr. Smith is to be admired for his efforts to bring about this healthier state of public opinion.

We have received from Messrs. J. Thornton and Co. a copy of their circular containing a record of shorthorn transactions for the period from January 1st to March 31st last.

Leyburn Cattle Fair.—This annual charter fair was held on Friday. Notwithstanding that Penhill and Coverdale were covered with snow, there was almost a record show of cattle. Good calving cows fetched £19 to £24, calving heifers £15 to £18, young beasts £14 to £17, young bulls £11 to £14, stirks £5 to £8, and calves 50s. to 60s. each. Sheep was also a good trade, half-bred hoggs being priced at 25s. to 30s. each.

Leicester May Fair.—This spring fair for the sale of cattle, sheep, and horses was held on Friday, and was well attended by buyers and dealers from all parts of the kingdom. Trade ruled active for choice lots, which changed hands freely at high rates. Superior milch cows made £20 to £24; secondary, £15 to £18 10s.; heifers, £10 10s. to £14; Shorthorn cattle, best, £16 to £18; secondary, £12 10s. to £15 each. The best Irish stock made £18 to £19; secondary, £14 to £16 10s. per head. Welsh cattle were a very heavy delivery; runts, £14 to £15; rough cattle, £10 to £12 10s. each. Poor trade in young stock at £8 to £10 10s. Calves in fair request and made 20s. to 40s. Good hog sheep, 36s. to 42s.; secondary, 28s. to 34s.; ewes with one lamb, 40s. to 52s.; ewes with two lambs, 57s. to 63s. Agricultural horses made high prices, but the supply was very limited.

Home Notes.

The Borough.

Contemporary reports of our trade make it appear that a good demand exists, and that a steady business is constantly proceeding. Judging from my own observation and inquiries, I am rather inclined to describe the trade as fitful and uncertain. The factors appear to have much unoccupied time on their hands, and are only occasionally disturbed from their enforced leisure by inquiries from merchants for choice samples, which they are unable to produce. There are still plenty of hops of a sort for sale, but as their quality and colour do not meet the present requirements of buyers, actual business is rather conspicuous by its absence. Doubtless, if the stocks now on hand could be replaced by others possessing the necessary good points, an active trade would promptly result, but under present circumstances the necessities of brewers must be more forcibly indicated before we can hope to see the market strengthened to any material extent. In the meantime, there is just sufficient movement to keep the trade from collapse, and to maintain values at about their recent level. Those who speculated in the early part of the season in coloury parcels are enabled, if they are so disposed, to make a decent profit on their purchases. But such cases are exceptional; therefore, while I am always desirous to use the brightest colours in my weekly picture, I am reluctantly compelled by the force of facts to limit myself to a monochrome sketch to-day.

I sometimes wonder why our Borough men are satisfied to drift along in the monotonous course that custom has marked out. It appears that only when buyers seek for hops are the sellers busy, and when the demand falls off they too contentedly sit still and wait for business to revive. Contrast with this routine

German enterprise and energy.

I have evidence before me which gives point to my thoughts. Being aware, some time ago, that the scarcity and high price of German hops would probably create an opening in Belgium for English growths, I urged some friends in the Borough to take advantage of the opportunity, and to attend the Brussels market with samples of our products. But my suggestions were unheeded; they limited their proceedings to correspondence, apparently expecting that Belgian buyers would come over here, and thus no direct business resulted. English hops are being sold in Belgium to-day it is true, but the sales are made through German hands. Every week on the Brussels Bourse several representatives of Nuremberg houses are to be found, selling German hops if they can; but, if these are not available, turning their attention to English. An English trader can leave London on Tuesday evening, attend the Brussels market on Wednesday, and return to his office in the Borough on Thursday morning without any more expenditure of time and money than is incurred by the Nuremberg traveller. Why cannot our people take up this business? I am pretty certain it would be remunerative, and would undoubtedly provide an additional outlet for our surplus, and thus assist our own market.

Our Imports and Exports

during last month are thus officially reported:—America has sent us 1,030 cwt., and from other countries we have received 2,455 cwt., giving a total of 3,485 cwt. But our exports have been comparatively large. We have shipped 1,167 cwt. of English hops and 231 cwt. of foreign. This total of 1,398 cwt. deducted from the imports, shows that our market has been supplied with no larger addition than 2,087 cwt., an unimportant quantity, not sufficient to exercise any appreciable effect upon values. But it must be further remembered that these supplies are sent, not on consignment, but in execution of orders previously given by brewers, who are paying for them much higher figures than the currency of our own hops. They can only be induced to do this, even to a limited extent, by the reason that they find in these goods some points of quality or flavour of which our hops are deficient. This fact further

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interest and benefit to the member of the society.*

emphasises my regret, that our growers continue to be so blind to their own interests as to permit their competitors to surpass them in any respect, and I still trust that the painfully forcible lessons taught by their present experience, will persuade them to make amends in future for their past neglect of these essentials.

In connection with these matters, the official returns furnish a striking illustration of the change in

the Value of English Hops.

During the four months ending April 30th last we exported 5,962 cwt. of our own growth, the value of which was declared to be £19.390. These figures provide an average of about 65s. per cwt. Comparing them with the returns of the same months in the previous year, I find that we then shipped 3,688 cwt., with a declared value of £21,675, giving an average of 117s. 6d. per cwt. So that, although the volume of our foreign trade has increased by upwards of 50 per cent. the remuneration to our growers has decreased in nearly the same proportion, the reduction being over 44 per cent. The folly of overproduction, which is the main cause of this serious depreciation in value, is thus again brought home to us. May I hope that some day English hop growing will be regulated by the strict rules of commerce and commonsense, and that our planters will shake themselves free from the fetters of prejudice and obsolete custom, which now too commonly hinder their progress and prosperity.

Foreign Notes.

Nuremberg.

The continued influences of cold weather, checking the consumption of beer, and the scarcity of attractive qualities of hops, are keeping the market quiet, the brewers' demand having fallen off considerably during the past month. Consequently, although quotations have not been nominally reduced, holders manifest some desire to promote business by making slight concessions. The tone of the trade is therefore the turn weaker, and as most of the lots now available are of inferior colour and quality, the present tendency indicates that values of such hops will be lowered still further before buyers can be induced to operate in them. The future of the business depends mainly upon the climatic conditions of the coming summer. Should the consumption of beer be encouraged by warm weather, brewers will doubtless be compelled to purchase hops that are now considered unworthy of attention. Under these circumstances values will improve. But if the low temperature now prevailing should continue, and the summer heat be below the normal, inferior hops will be left in the hands of dealers, and diminuation of prices must result.

Reports from the Plant tions.

of Germany and Bohemia are generally favourable. Although the growth of the young shoots is very slow, their soundness and health are evident, and the soil being in good form for cultivation, the preparatory work has made satisfactory progress, and planters are encouraged to expect a full yield, assuming that the present outlook is supported by suitable weather as the growing season develops. It is now evident that a substantial extension of the hop area will be made in many parts of Germany.

The Official Statistics,

recently issued by the German imperial authorities show that the imports from September 1st, 1901, to January 31st, 1902, have considerably increased over those of the corresponding months of the previous season. From Austria-Hungary the imports amounted to about 113,000 cwts., and from Russia about 7,000 cwts.; these yield a total of 120,000 cwts., whereas in 1900-1 the quantity from these sources hardly reached 40,000 cwts. On the contrary, German exports this season have only been rather more than half of those of the previous corresponding period, amounting to about 73,000 cwts. in 1901-2, and 133,000 cwts. in 1900-1. These figures demonstrate the deficiency of the German growth of 1901, and the details also prove the enterprise of German traders. For I find that German hops are not only sent into every European country, but also are shipped to Africa, Japan, the Argentine, Brazil, Chili, Mexico, the United States, and Australia. Belgium appears to be the most important buyer; next in order comes England, followed closely by France, and approached by the U.S.A. Holland, Sweden, Switzerland, and Denmark also take substantial quantities of the German exports.

Belgium.

The hop market continues quiet, and quotations have receded somewhat from recent advanced figures. Holders are, however, still demanding 50 to 52 francs for good Alosts, but find difficulty in obtaining these prices, except for small lots. Quotations for the 1902 growth vary from 57 to 60 francs, according to the conditions of sale and delivery. Hops were imported during the four months ending March 31st last to the extent of rather under 8,000 cwts., only about 600 cwts. arriving from England. The exports during same period were about 5,300 cwts., of which about 400 cwts. were shipped to England. France is Belgium's most important customer.

By Hordeum.

Malt Substitutes.

The following tables show in a more striking manner than verbal description possibly can do the rapid transitions occurring in brewing. For the first time, most valuable and important information is given concerning the actual quantities of beer produced, and the table we have been accustomed to for so many years is most obligingly and conveniently split into three, so that we can get much information concerning the numbers and action of those brewers who still elect to use malt solely.

Materials Committee. It was usually considered that the largest proportion of beer brewed is sophisticated, and it is hard to see what brewers gain when they secure this admission.

One of the saddest features shown in the table is the fact that one large brewery which made 427,000 barrels of beer last year only used 57,700 quarters of malt, with the enormous proportion of substitutes of 50,100 quarters. Taking the classes shown, it is noteworthy that the percentages of substitute use is steadily rising. This arises about equally from

decreased malt use

and the larger employment of rice. Happily, the use of sugar for a time became less profitable to brewers, so its use for scientific improvement of beer is not so important as was claimed for it two years ago. Still, it is deplorable that four large classes of brewers use upwards of 40 per cent. of sugar and other things, and very nearly two-thirds of the total beer brewed contained 30 per cent. and upwards of sugar. The average of substitutes used in the whole of the beer brewed is over 28 per cent.

How anyone could reasonably have expected brewers to accept the restriction to 15 per cent. is simply absurd, and the end of such a proposal was manifest from the first. It is interesting to note that just half the classes of brewers used two bushels or upwards of materials in their brew, and most of them paid 7s. 9d. or more per barrel duty, whilst some of the large users of substitutes paid as little as 7s. per barrel. The range between the highest and lowest is 2s. 5d. per barrel. This works out at

TABLE I.—Return showing number of Brewers, amount of Materials Used and Duty Paid, 1883.

Number of reputed barrels of beer brewed. Standard (not actual) barrels.	Number of Brewers.	Amount of Duty paid by all common brewers.	Duty paid per quarter of materials used.	Total malt and substitutes used by all common brewers.	Total malt used by each class of common brewer.	Total substitutes used by each class of common brewer.	Total materials used by each class of common brewer. Average.	Malt used by each class of common brewer. Average.	Substitutes used by each class of common brewer. Average.	Percentage of all substitutes to malt used by each class.

Unhappily, their numbers have fallen just below the half of the total, so that we can no longer say they exceed the number of men who use substitutes. The difference is only 58 in 5,968. Still it is always best to be exact when dealing with facts, especially when you meet opponents who are not very scrupulous.

The Largest Brewers

are in the minority still, and it is sincerely to be hoped they may long head the class. As the second largest brewers have very heavily decreased the total amount of sugar they use, it may be hoped they will shortly join the minority. It will be the best day's work they have done for many years when they do this in their own and many other interests.

As it is the first time we have been told the actual quantities of beer made, there are no means of comparing with anything, excepting the not very lucid statements of Mr. Bannister to the Beer

four shillings per quarter

duty paid, but it is obvious the method of charging the duty requires revision, especially in the detail of undue or excessive dilution by brewers.

The steady and persistent falling away in the number of brewers is a matter for regret. Few businesses are ultimately benefited by growing into monopolies in the hands of a limited number of men. Brewing is distinctly one business that is best kept from such a condition. Last year 322 brewers gave up business, of whom 11 only brewed 20,000 barrels or more of beer, and of the whole number was probably an undue proportion used malt only.

Disregarding the number of brewers, it is useful to compare the use of materials by the different classes in 1883 (the first year available) and last year. The percentage has altered more than the numbers of quarters, owing to other changes in the trade.

In the lowest class (i.e., the smallest brewers) the amount of materials has fallen to less than one half. In the next class the loss is nearly as large, but in the next highest men brewing over 10,000 barrels (but under 20,000) there is an actual increase, which continues in nearly all the other larger classes. In the time the largest brewers

have doubled their trade,

and it would be very interesting to know the present position in the list of the firm that stood third in 1883. In what class are they to-day?

Owing to the restricted use of malt last year the total amount brewed was in reality less than 19 years ago, but the quantity returned as used is nearly 560,000 quarters more. In any case, notwithstanding the enormous expansion of the brewing trade and the increase in beer drinking generally, the gain to barley growers is very trifling.

What the Revenue throws away and consumers lose are interesting problems, but what the nation loses by so large and utterly unnecessary an amount of adulteration of beer, is a very serious matter of grave import to the future of this country.

The Royal Commission on Arsenical Poisoning.

A meeting of the Royal Commission on Arsenical Poisoning was held on Friday at the Westminster Palace Hotel, Sir W. Hart-Dyke, M.P., presiding. There was only a small attendance.

Mr. Fletcher Moulton, K.C., M.P., examined by Sir W. Hart-Dyke, said he had taken an active part throughout the investigations into the Manchester arsenical scare. He was a member of the expert committee, with Mr. Sullivan and Mr. Groves, which went to Manchester to investigate the outbreak on the spot. It became perfectly clear that the mischief was very widely spread. The Manchester brewers were for the most part incredulous as to the possibility of there being any serious arsenical poisoning, the thing being so utterly without precedent. The committee came to the conclusion that the mischief was substantially due to the use of Bostock's sugar, but that there was another source of contamination, that existing in the preparation of the malt. The latter was obviously so serious a question that the committee determined upon a searching inquiry, and this had been carried out. The evidence that the presence of arsenic in some measure was due to that source was abundant. The committee also found in the cases of arsenical poisoning that the more poorly-fed people suffered much greater than those better fed, who were even more addicted to alcoholism; his impression being that constitutional peculiarities played an important part in the susceptibility to arsenical poisoning in small quantities. He should not be surprised if the fact that the attention of the brewing public had been called to the importance of preventing the contamination of malt, did not make a great difference to the occurrence of alcoholic neuritis.

The chairman inquired whether the recommendations of the report of the expert committee on this matter had been adopted by brewers?

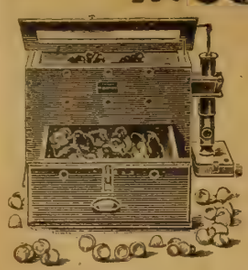
Mr. Moulton: Not beyond the fact that the general recommendations might have promoted greater care. The brewers were largely awaiting the result of the present commission. They were exceedingly anxious to have guidance in the matter. He was satisfied that now there was absolutely no danger existing on the side of the glucose sugars, and that the scare would prevent the possibility of further blunders. Malting would be rendered safe by better methods and tests, and the selection of fuel.

The chairman inquired whether the obtaining of a warranty by the brewer from the maltster and manufacturer would entitle the brewer to indemnification.

Mr. Moulton said the only good of the warranty was that it introduced the word "arsenic," and kept it constantly before those concerned in selling the goods. That would be a real guarantee to the people.

The Chairman: Do you think that guarantee would be strengthened if official tests were framed by the Board of Inland Revenue for the guidance of the brewers?

Mr. Moulton: Yes, because the brewers would then have a definite standard of tests, especially if those tests were made easy of application. He thought that would ensure almost certainty of purity. He also thought that beer should be brought under the Food and Drugs Act. He did not think, however, that it should be made a statutory duty to require a warranty. The greatest kindness the commission could show the public and the trade would be to state what they thought was the duty of the persons concerned, and what they, in their opinion, considered an adequate discharge of that duty. The tests should be reasonable and easy of application, not only by analysts, but by the unpractical mind. He considered such tests could be formulated.



Mr. Gordon Salamon, expert chemist, and one of the Manchester Expert Committee, was also examined as to the tests and experiments carried out by himself and others.

The commission again adjourned.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW, 1898, 1900, 1901.

SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901

TAMLIN'S . . NONPAREIL PATENT INCUBATOR

This is the only Incubator that ever hatched 95 per cent. in Competition for Hatching results open to the World.

Guaranteed Automatic.

Best planished Copper Tanks.

Packed ready for immediate use.

Rearing Turkeys.

Housing.

(*Continued from page* 573)

Having selected the stock birds of large frame, they should be housed in a good-sized shed, with plenty of ventilation. Many people keep their stock turkeys very successfully in wooden houses, with wire-netting fronts, just boarded up two feet along the bottom. These houses have moss peat on their floors, and a perch 18in. from same, about 2in. in width. Stock turkeys do well in these houses if there are ventilation holes bored at the back, so that there is a free current of air through the house over the birds' heads. Large nest boxes are required for stock turkeys. These should be 24in. square, in order that they may not rub their tails, as if they do this they are disfigured. The nest boxes can be inside the house, or out in the run under a tree, or under a small heap of brushwood. Turkeys kept on a farm frequently lay away, and having selected a suitable place for their nest, they lay their eggs there, and as soon as the batch is laid they leave the other birds, and go and hatch their eggs, bringing their young brood home a month later. It is really a waste of time to allow the hen turkeys to hatch the young birds, as when they do this they rarely lay a second batch of eggs that season, whereas if they have their eggs taken away every day, and these are set under ordinary hens, the turkeys usually lay a second batch, and with only a short interval from the first, so that a much larger number of birds can be reared by managing in this way. Turkey eggs take twenty-eight days to hatch; now and then, if set when very fresh, they will hatch out in twenty-seven days, but not infrequently go on until the 29th, and sometimes even the 30th day. We consider it a good plan to test them on the ninth day, sothat if there are any clear eggs they can be removed, and then if several hens have been set at the same time the eggs can be divided amongst a less number of hens, and the remainder set with fresh eggs. There are several good egg-testers on the market, but where one does not possess one of these the egg can be tested by holding the large end of the egg between the thumb and finger before a small, clear light in an otherwise dark room. If a shade is placed round the light so that it is all concentrated on the egg so much the better. When the eggs are fertile they will appear very cloudy, and a dark speck will be seen rather nearer the large end, but if unfertile they will be quite clear. Eggs under examination should always be very carefully handled, as it would be fatal to give them a sharp jerk.

We prefer to test on the ninth day, as it is so much safer to do it on this day than earlier, as turkey eggs are generally spotted and not so claer as white-shelled fowls' eggs. If any eggs remain unhatched on the twenty-ninth day an incision should be made in the end just at the top, and if the skin is found to be white it will be known that the turkey is alive, but if dark, it is a sign of death. If alive, the egg should be gently tapped to ascertain the position of the beak. Then the young bird can be liberated by moving a piece of shell broken away over the beak, where it will very soon break the shell round and be free.

THE YOUNG BIRDS.

The young birds, when hatched, are very small when compared with the size of the stock birds. This is undoubtedly due to the small size of the egg laid by turkey hens in comparison to the size of the birds, for it will be noticed that turkeys produce the smallest egg in proportion to their size of any class of poultry. They are not as sturdy as chickens when first hatched. They seem to be cold little things, without that life and heat noticeable in newly-hatched chickens, but with careful and regular feeding they soon begin to get strength. When about twelve hours old, they should have a feed of finely-chopped egg and grated breadcrumbs just moistened with milk. A sprinkling of mustard and ground ginger on this will warm the young birds. Three hours afterwards they should be fed on fine biscuit-meal scalded with boiling water and made quite crumbly. The birds should be fed on a piece of board in the run just outside the coop, and the food should only just be sprinkled on this board, a few pieces at the time, so that as the birds eat them, a few more are sprinkled on. If the food is put down in a mass, as we have seen some inexperienced people do, the birds will not eat nearly as well. The object of everyone who feeds young turkeys should be to get them to eat as much as possible, and to accomplish this pains require to be taken. After they are on their feet they should be fed every two hours during the day. There is not any better food for them than scalded biscuit-meal or specially prepared chicken and pheasant meal, which is a mixture of fine biscuit flour, ground oats, buckwheat, meal, and several other nourishing meals. Do not on any account give the young birds anything which is wet or sloppy. They are very clean in their ways, and like crumbly food, but not anything which adheres to their beaks. Soaked bread should be avoided unless the birds are constipated, when a feed of this may be safely given as it is relaxing. Those who have the care of young turkeys should always be careful to notice the excrements of the birds, for they are apt to have constipation, and where the back passage becomes clogged there is very little hope of recovery, as the birds are so frail they must have a constant supply of nourishing food, and there must be an outlet for the waste material. Quite a number of young turkeys die every year from a stoppage at the vent, which could easily be prevented.

(*To be continued.*)

SOCIETY NOTES.

A meeting of the Warwickshire Chamber of Agriculture was held at Birmingham on the 1st inst., and naturally the chief subject of discussion was the tax on corn and flour. Mr. J. Brierley, who presided, said that agriculture would be affected prejudicially by all the three new sources of income proposed. First of all, agriculturists would have to pay their proportion of the income tax, then their proportion of the new tax on cheques, and, lastly, the duty on all corn that was bought for feeding purposes. So far as home-grown corn was concerned, they would be affected advantageously. The tax was very small indeed, threepence per hundredweight, and half of it would be paid by the foreigner. There was a relative duty between home-grown and foreign corn, which arose from the latter being either better or worse than English corn. Supposing that on the day before the new duty was put on foreign corn was worth 32s. and English corn 30s., there would be a relative difference of 2s. per quarter. It might be supposed that the effect of the tax would be to make foreign corn 33s. and English 31s., but the miller divided the tax between the British consumer and the foreigner, so that English corn went up 6d., and foreign corn came down 6d.. Eventually the following resolution was carried:—"That this Chamber regards the Budget proposals as to corn and flour as an honest attempt to place the burden of taxation equally on all sections of the community."

The Chamber was unanimous in its approval of the new Board of Agriculture regulations fixing 16 per cent. of water as the maximum for butter, and a resolution was passed expressing the opinion that "butter blended with milk or water should be called by a name clearly indicating its character." The report of a committee appointed last June to inquire into the conditions under which agricultural seeds are sold was presented, and a resolution urging the desirability of a seed-testing station being established, which should also include departments for dealing with feeding stuffs and manure was carried unanimously.

The Budget was also the first thing considered at a meeting of the West Riding Chamber of Agriculture, held on the 2nd inst. One member condemned the proposed duties on corn and feeding stuffs, which, combined with the shipping trust, would, in his opinion, be calculated to affect the agricultural industry injuriously; whilst another member was of opinion that the corn duty would be beneficial to the ordinary farmer, although he was doubtful as to the case o grass farms. Eventually the Chamber agreed to a resolution supporting the Government in imposing a tax on imported wheat, barley, oats, and flour, but disapproving the tax on other feeding stuffs. The report of the Departmental Committee, appointed by the Board of Agriculture to inquire into the conditions under which agricultural seeds are at present sold, was submitted, and the establishment of a central seed testing station having been urged by the Chamber twelve months ago, the members now decided to support the present report. A resolution was adopted, to be submitted to the Central Chamber, recommending that feeding stuffs should be scheduled under the Sale of Food and Drugs Act.

The report of the Council presented at the annual meeting of the members of the Craven Agricultural Society and Farmers' Club, held on Monday, at the Skipton Town Hall, was unfortunately not a satisfactory one, but this was through no fault of the Society. Last year's show was one of the worst-attended of recent years, and was the cause of the Society losing, not only the good balance there was made in 1900, but incurring a debt of £75 13s. 10d. as well. The curse of this state of affairs was undoubtedly the wretched weather which prevailed on the day of the show and also that preceding it, for the display of stock was excellent in every department. The show has experienced such bad weather in recent years that it has been decided to alter the date, and this year it will be held on the first Saturday in August instead of the last Friday, as hitherto. It is to be hoped that both members and the public will give this alteration their best support, and help to put this old and useful show and Society in as prosperous a condition as it used to be.

The annual report of the Council of the Bedfordshire Chamber of Agriculture and Farmers Club presented at the annual meeting stated that the Chamber had had a satisfactory year. Seventeen new members have been elected, but ten losses have occurred through death and other causes. The balance-sheet for the year ending February 28th last showed a balance in hand of £52 14s. 2d., but there was a very large number of subscriptions in arrears, the total amount being £22 10s. The report also gave details of the work done by the Chamber during the past year, and particulars of the resolutions passed, whilst in the course of a few general remarks the Council stated they hoped "that the Board of Agriculture may become in time the Board *for* Agriculture. It recognises that in the the present President, Mr. Hanbury, M.P., we have a sympathetic Minister who wishes to hear our just grievances and who is open to be approached either individually or collectively if good is likely to result."

The statement of accounts presented at the annual meeting of the Maidstone Farmers' Club was very satisfactory. The receipts totalled £91 11s. 5d., including balance brought forward from last year of £64 1s. 5d., and the expenditure amounted to £28 10s. 5d., leaving a balance of £61 1s.; but on December 31st there were some outstanding liabilities which reduced the balance to £39 14s. It was decided that in future the chairman should be elected annually, and on retiring should not be eligible for re-election for the ensuing year. Mr. H. Leney, who had occupied the chair for nine years, was heartily thanked for his services, and Mr. F. Smith elected to succeed him.

At the eighth annual meeting of the Lincolnshire Red Shorthorn Association the Committee reported that there were now 247 members, as compared with 258 at the end of the previous year. The financial statement showed that the year commenced with a credit balance of £915 12s., and closed with one of £899 1s. 7d. It was decided to hold two sales this year, as last, the second in October, and it was resolved that all bulls sold at sales of the Association shall be entered for registry free of charge to the purchaser, by the seller, and that this shall be a condition of the sale. It was further resolved that breeders be allowed to register for their sole use a prefix or an affix to names of animals entered or bred by them at a charge of 5s.

At a recent meeting of the Dorset Horn Sheep Breereds' Association, the President, Mr. S. Kidner, reported the continued growth of the Association both in members and in influence, 38 members having joined during the year. The date of the annual general meeting was fixed for Friday, May 23rd, at Yeovil, commencing at twelve noon.

The eleventh annual meeting of the members of the Lincoln Longwool Sheep Breeders' Association was held recently at Lincoln. The statement of accounts for the year ending December 31st, read by the secretary, showed that the income, including a balance of £206 15s. 7d., brought forward, amounted to £699 18s. 9d., the chief items being £220, annual subscriptions; £63 15s. 6d., fees for the ear-marking of lambs; and £121 12s. 6d., half commissions on sales. The principal items of expenditure were printing and stationery, £22 8s.; postages and parcels, £20 11s. 9d.; advertising, £36 17s.; printing 10th Flock Book, £53 14s. 6d.; ear-marking of lambs, £101 14s. 2d.; expenses connected with the ram sales, £118 15s.; prizes awarded, £110 10s.; salary and percentage, £66 16s. 2d. The credit balance at the end of the year was £146 3s. 8d. The expenditure for the year exceeded the income by £60 11s. 11d., and this was largely accounted for by the loss of income from the issue of exportation certificates. Only 229 exportation certificates were issued, whereas in 1900 no fewer than 1,553 were issued. The membership of the Association numbers 277, as compared with 307 last year. The report was adopted, and a discussion took place afterwards on Mr. E. J. Bullen's suggestion that all rams sold at the Lincoln ram sales, under the auspices of the Association, should be sold by the breeders as registered sires after being entered, and not merely as eligible for entry. Subsequently Mr. Dean proposed that the breeder shall give a certificate if required, but that the resolution should not take effect at this year's sales, and this resolution was carried with but one dissentient.

At the last meeting of the Cheshire Chamber of Agriculture a long discussion took place on the Budget, as it affects agriculture. The secretary read a letter sent by Mr. W. E. Nuttall, secretary of the Bolton District Farmers' Association, to Mr. J. Sadler, secretary of the Cheshire Milk Producers' Association, on the subject of the Budget as it affects agriculture. A resolution passed by the Bolton association, and sent also to the Chamber, was as follows:—"That this meeting of dairy farmers, representing the whole of the Bolton district, whilst not objecting to pay their fair share of the increased price of flour consequent on the tax on wheat and flour, considers it most unjust and inequitable to be compelled to pay, in addition, an increased price for their purchase of feeding stuffs for their cattle owing to the tax on the whole of the grain coming into this country — a tax which will compel the dairy farmers to contribute an utterly disproportionate sum to the increased taxation required, and respectfully requests that the Chancellor of the Exchequer shall abolish, or at least modify, the tax on all imported grain, with the exception of wheat."

The following two resolutions were sent as having been passed by the Leicestershire Chamber of Agriculture:—(1) "That, in the opinion of this Chamber, the best method to restore prosperity to the agriculture of this country, to bring back the labour to the land, and relieve the congested state of the population in towns, is to impose an effective discriminating duty on imported agricultural produce, and encourage good cultivation by giving the utmost security to tenants." (2) "This Chamber welcomes that part of the Budget which re-imposes the small registration fee on imported flour, meal, corn, and grain, by which the revenue of the country will be considerably increased."

One of the members of the Cheshire Chamber moved the following resolution:—"That this Chamber protests most strongly against that part of the Budget which imposes a tax on corn imported into this country that is used principally for cattle-feeding, as it places on dairy farmers a proportion of the national burden of taxation greaty in excess of their fair share." This, however, did not meet with much approval, and an amendment "That the Chamber approves of the principle o the registration duty on corn, and regrets that the Chancellor of the Exchequer has not seen fit to put a tax upon such imported agricultural produce as beef, bacon, cheese, etc.," was carried by ten votes to seven. On the subject of water in butter the Chamber unanimously agreed that 16 per cent. should be the limit.

We have received from Messrs. Gartons particulars of a new breed of wheat they purpose introducing this autumn. The following is their description: "Early; grain medium large; colour, amber translucent; straw, long, strong, and of fine texture; ear, very long, compact, and bearded. The introduction of this new breed of wheat is a forerunner to a remarkably distinct series of other new breeds, to be introduced at a later period, and marks the turning point, when the British farmer will be able to produce a wheat superior in quality to the majority of foreign wheats now so largely used by our millers. The quantity and quality of gluten produced by the 'New Era,' when grown in suitable wheat-growing soils, is remarkable, and is quite equal to that of the best imported varieties. As a miller's wheat it has no equal, and will realise shillings per quarter more than any other wheat. Considering its many excellent qualifications, we predict for the 'New Era' a great future."

As usual, the enterprising management of the Great Northern Railway are well to the fore with an attractive and comprehensive programme of excursions. Doubtless thousands of holiday-makers will yield to the potent charms of bonny and beautiful Scotland, and these will be wise to avail themselves of the five or eight days' excursions to run from King's Cross by the East Coast route on Friday evening, May 16, to Edinburgh, Glasgow, Stirling, Dundee, Oban, Inverness, etc., at remarkably reasonable return fares. For instance, a holiday-maker may go to Edinburgh or Glasgow and back by this excursion for 26s., or as far north as Inverness for 39s. 6d. The same excursion is available for intending visitors to Durham, Newcastle, Berwick, and other places in the North-East. Tickets will also be issued by this excursion available for 16 days. On the same night, leaving King's Cross at midnight, cheap three, six, or eight days' excursions will run to Peterborough, Nottingham, Sheffield, Manchester, Liverpool, Doncaster, Leeds, Bradford, Halifax, etc., and on the Saturday cheap express three, six, or eight days' excursions will run to numerous stations in Norfolk, Lincolnshire, Nottinghamshire, Staffordshire, Lancashire, Yorkshire, and the North-Eastern district. Amongst the principal seaside resorts attainable by this excursion are Scarborough, Whitby, Bridlington, Redcar, Saltburn, and Cromer; whilst on the same day an express excursion, for one, three, or four days, will run to those charming and invigorating Lincolnshire resorts, Skegness, Sutton-on-Sea, and Mablethorpe. The Great Northern route to Cromer is worthy of attention, the time occupied in the journey being more than compensated for by the truly lovely scenery passed through between Peterborough and Cromer. On Whit-Monday the company will run a cheap one, two, or three days' excursion to Grantham and Nottingham, and day excursions to St. Albans, Hertford, Wheathampstead, Harpenden, Luton, Cambridge, Huntingdon, Peterborough, Skegness, Sutton-on-Sea, Mablethorpe, etc. Excursions are also announced for four days, on Tuesday, May 20, and two days, on Thursday, May 22, to Grantham, Nottingham, Retford, Worksop, Sheffield, and Manchester. For full particulars of above excursions, see the "Whitsuntide Holiday Programme," to be obtained from the town offices, or of the Superintendent of the Line, King's Cross.

CUPISS
CONSTITUTION BALLS.

Testimonial.
Burgh-by-Sands, Carlisle.

Having used Cupiss' Constitution Balls for over 20 years, I have always found them exceedingly useful for purifying the blood and keeping in excellent condition.

WHAT USERS THINK AND SAY:—

"I cannot speak too highly of your Oil Engines, and consider them fa the best Engines for Farmers' use."

"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cos of running, which latter bears no comparison to the cost of the steam engine which it replaced."

"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall,' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."

"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

SULPHATE OF AMMONIA.—Farmers and cultivators of the soil should give this valuable fertiliser a trial. It is the best artificial manure for grass, wheat, barley, roots, potatoes, &c. One ton of Sulphate of Ammonia contains as much nitrogen and will go as far as 25½ cwt. of nitrate of soda. It is not washed out of the ground by rain, and is not so readily exhausted from the soil as nitrate of soda. Pamphlets of instructions for its use will be forwarded, post free, on application. Present price (free on rail at Sheffield), 11s. 9d. per cwt.; larger quantities specially quoted for. Cheques and post office orders to be made payable to the Manager, THE SHEFFIELD UNITED GAS LIGHT CO., Sheffield.

BEST & CHEAPEST MANURE for all farm and garden crops, "NATIVE GUANO," a safe and reliable fertiliser, and an effectual remedy for fly, slug, wire-worm, &c.; price £3 10s. per ton in bags, 2 ton lots carriage paid, 1 cwt. paid to any station in England on receipt of P.O. for 5s. Extracts from 26th annual collection of reports: Native Guano for Grass, Grain, and Root Crops. G. Dickson, Selby: "Oats and barley did well. Heavy crop of cattle cabbage. Highly satisfied." E. Stanford, Warnham: "Clover good. Stopped fly on turnips. A good manure." H. O. Habberfield, Forestfach: "Oats 60 bushels per acre. Mangolds, best crop I ever had. Very pleased." W. Price, Hardwick: "A cheap and good manure for clover and swedes." J. Knight, Wisbech St. Mary: "Very good crops of mangolds and potatoes. Biggest and finest potatoes I ever had." W. Allsopp, Bloxwich: "Mangolds the finest crop ever seen on the farm. Swedes excellent." G. W. Gilbert, Boultham: "Cannot speak too highly of it for wheat: answers well for grub and wire-worm." J. Powell, Lulsley: "Hops, a very good crop." —Orders to the NATIVE GUANO CO., LIMITED, 29, New Bridge Street, London, E.C., where TESTIMONIALS FROM ALL PARTS AND FOR ALL CROPS MAY BE OBTAINED. AGENTS WANTED.

RATS CAN BE AT ONCE KILLED by laying down SANFORD'S POISON! They take it readily, and are found dead. "I found 42 rats dead with it in my wheat stack.—JOHN HALL, Morden." Cats and dogs won't touch it. Farmers who have used it say it is the best they ever tried. Also POISON FOR KILLING MICE in corn stacks, and POISON FOR KILLING MOLES on land. Post free 1s. 2d., 2s., and 3s., of SANFORD & SON, Saudy, Beds.—Sold by chemists.

WIRE NAILS, Mixed, 9s. per cwt.; 28 lbs., 2s. 6d.; Screws, Mixed, 3½s. per cwt.; 28 lbs., 9s.; wire, cut, wrought and malleable nails, tacks, shoe nails, rivets, &c., wholesale prices.—MIDLAND NAIL WORKS, 25, Rea Street, Birmingham. (John Pyne, Proprietor.)

COW MILKER! COW MILKER! The Celebrated self-acting Cow Milker supersedes hand labour. Milk each cow in four minutes effectually. Price 6s. each delivered.—Circular, with testimonials, on application, N. BUCHANAN, 9, Sandon Place, Sheffield.

BASIC SLAG, Kainit, Bones, Bone Meal, Superphosate, &c. State quantities required and station, when prices, analysis, &c., will be sent by return of post. CLEMENT-SWAFFIELD, Derby.

FARMS, ESTATES, MILLS, BUSINESSES, &c.

MESSRS. CRONK'S LIST of FARMS, containing particulars of numerous Farms in Kent, Surrey, Sussex, and elsewhere, to be obtained gratis at their offices or will be sent by post on receipt of a stamp. Properties inserted free.—12, Pall Mall, London, S.W., and Sevenoaks, Kent.

FARMS.—Rents from 10s. Acre; prices £7 Acre. Monthly List 2 stamps RUTTER, 10, Norfolk Street, Strand, London

TO BE LET, at Michaelmas next, in ESSEX, Good MIXED SOIL FARM, 300 Acres, one-third good old Meadow Land; capital Water Supply, excellent Farmhouse and Premises, with Covered Yards and Six Cottages; close to Village, and 3 miles from Market Town.—Particulars, apply A. BLOMFIELD, Orange Hall, Gosfield, near Halstead Essex

SURREY.—TO BE LET, from Michaelmas next, a Capital FARM of about 483 Acres, chiefly a good mixed soil, very suitable for sheep, with Farmhouse, Homestead, convenient Off Premises, and Eight Cottages, adjoining a station on the L.B. and S.C. Railway (with a siding therefrom), within short distances of several other stations, and in the centre of the great race-horse trainers' quarters; sixteen miles from London. Good hunting district. The Farm has been for many years in the occupation of a first class tenant, who is quitting on account of failing health.—Full particulars of Messrs. DEBENHAM, TEWSON, FARMER, & BRIDGEWATER, Land and Estate Agents, 80, Cheapside, London, E.C.

TO BE LET, FARLEY FARM, LUTON, 1 mile from Luton Market and Stations, Mid., G.N., and L. & N.W. Suitable for a Stud or large Dairy Farm, comprising about 191 acres of very productive arable and 75 acres of very good grass land. This farm is in a very high state of cultivation, having been farmed by the owners for very many years as a home farm. A large and profitable milk business has been carried on in the town of Luton which could be continued by the incoming tenant. Excellent well-arranged farm buildings, consisting of cow houses for 70 cows three covered and one open yard, cart stables, several good loose boxes, bull boxes, pig styes, calf pens, two granaries, two large cart sheds, cake house, slaughter house, very large loft with chaff-cutting and pulping machines, circular saw and grindstones driven by a stationary engine, good bailiff's house with orchard and garden. There are several paddocks, well fenced and watered, with loose boxes in them. An unfailing supply of good water, and four good cottages on the farm. An extra 120 acres of grass land adjoining could be had if desired.—Apply, T. H. WOODCOCK, Stockwood Estate Office, 19, Market Hill, Luton.

SITUATIONS, AGENCIES.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed. —Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings Fenchurch Street, London, E.C

THE FINANCIAL ASPECT OF THE EDUCATION BILL.

THE fact that the Education Bill has passed its second reading by the enormous majority of 237 indicates that the general principle of the Bill is generally accepted—at all events in the House of Commons. The questions to which practical ratepayers and taxpayers will now turn their attention are—Who will provide the sinews of war? To what extent will they be required?

As is well known to all who have devoted any attention to this important measure, the main scheme of the Bill is to form one Education Authority to control two allied, but distinct, subjects viz., Primary Education and Secondary Education. Dealing with the latter first, the Bill repeals the Technical Instruction Acts and substitutes discretionary powers for County Councils and boroughs to supply or aid education other than elementary, and for that purpose to spend such sums as they think fit out of the rates and out of the available balance of the Local Taxation Grants (popularly known as the "whisky money"), subject to a limitation of the rate for this purpose to a maximum of twopence in the pound. In addition to this, the Councils of boroughs (not being county boroughs) of more than 10,000 inhabitants, and of urban districts of more than 20,000 inhabitants, have a concurrent power of raising a further rate for this purpose of one penny in the pound. Presumably this concurrent power is conferred in the belief that there will be greater demand for secondary education in the larger towns than in country districts, and consequently greater expense will be incurred in making adequate provision to meet the very varied requirements of the rising generation. From the financial point of view, the result will be that the present power of Local Authorities to levy a rate for Technical Instruction will be increased to twopence, and in such of the populous districts as do not receive a specific grant on account of Local Taxation there may be a total rate of threepence in the pound.

This, of course, is merely for Technical Instruction, or Secondary Education. The new Education Authorities will also be required to take over the provision and control of elementary education. School Boards will be swept away, and with them will go the School Board Rate—or, rather, it will change its name, and will merge its identity in County, Borough, or General District Rates. By spreading the whole cost of education over the county it is likely that small parishes which have had a heavy School Board Rate will be somewhat relieved at the expense of neighbouring parishes which have hitherto escaped the imposition. But the relief will not be so great as it might appear at first sight. For the existing liabilities (including loans) must be borne exclusively by the district of the School Board by whom they were incurred, and each district will have the satisfaction of compensating their own officers whose offices are abolished under the Act, and for whom new posts are not provided. Moreover, capital expenditure to be incurred in the provision or enlargement of schools is to be borne by the parish or parishes to be benefited thereby.

The local Education Authority are required to maintain and keep efficient all necessary Public Elementary Schools within their area. But Voluntary Schools will still have to find funds for repairs of their buildings, and to make alterations and improvements as may reasonably be required by the Education Authority. Some people regard this as a hardship on the managers, as they will undoubtedly find it difficult to collect voluntary subscriptions after their supporters have been called upon to pay a compulsory rate. We think, however, that the advantages which Voluntary Schools will reap under the Act are so great as to far outweigh any objections which can be raised on this question of repairs. If the managers find the difficulty too great for them, they can hand over the school to the Education Authority, as has already been done in many country villages where Voluntary Schools have been taken over by School Boards. If they decline to make the necessary repairs they will lose their grant; and if they decline either to carry on the school or hand it over, fresh schools will have to be built by the Education Authority at the sole expense of the parish. There will, therefore, still be every inducement to large ratepayers to find a little money for the upkeep of the schools, as otherwise their last state will be worse than their first.

The Aid Grant under the Act of 1897, instead of being distributed by the Board of Education amongst the associations of Voluntary Schools, will in future be paid to the County Authorities in aid of the expenses incurred by them in connection with elementary education.

The expenses to be incurred under the Act "so far as not otherwise provided for" are to be paid out of the County or Borough Funds, or out of the General District Rate where an Urban District Council is the Education Authority. Hitherto the School Board Rate has been collected as part of the Poor Rate, for which agricultural land within an urban district is assessed on one-half its rateable value. But such land is only assessed at one-fourth for General District Rates, and the result will be that in future certain land contiguous to towns will be relieved of half its contribution to elementary education. It is gratifying to find that even a small proportion of agricultural ratepayers will benefit under the Bill.

It is obvious that if the Act is to be efficiently administered considerable additional expense must be incurred. Greater efficiency can only be attained at increased cost. It is said that the first step will be to increase the salaries of country teachers. They are undoubtedly underpaid in many places, but their salaries are not likely to be raised to the average earnings of teachers in towns, who have larger schools and greater responsibilities. Probably the expense of the staff of

new officers required, the compensation of discarded officers, and the cost of working the new Education Committees will be only partially covered by the saving of elections, salaries, and administration of the abolished Boards. But, of course, the main item will be the shifting of about a million pounds from the shoulders of voluntary subscribers to those of the ratepayers. Strictly speaking, this is not a new expense; it is only the method of meeting it that is new.

We do not begrudge the money which will be required to administer the Act; and if the sublime theory that the incidence of the rates should rest upon ability to pay were a realised ideal, the proposal to draw on the rates for the money would be unexceptionable. Unfortunately, agriculturists know too well that in practice rateability according to inability is rather the rule. We cannot regard the time as opportune to urge that the whole cost of education should come out of the national funds. These funds already bear about two-thirds of the cost, the remaining third being borne by the rates. In the present state of our national exchequer it is too much to ask that the rates should be relieved altogether.

But we are heartily in accord with those who contend that, inasmuch as education is a national object, the large additional charges which will probably be thrown upon County Authorities under the Act should be met by a corresponding increase in the Local Taxation Grants instead of falling upon the rates, which are levied on one class of property only. This appears to be the view of the Association of County Councils (who are most intimately affected by the Bill), of agricultural organisations generally, and of many supporters of the Bill, both in and out of Parliament. Indeed, the Government themselves do not controvert its merits; they only question its expediency. Mr. Balfour's reply to the demand for an increased grant from the Imperial funds is that the whole system of local taxation urgently requires revision, and that in that revision the charge for education will be included. With this distinct pledge before them, we counsel agriculturists to lose no opportunity of insisting that the first legislative business of next Session shall be a Bill to adjust the incidence of Local Taxation.

Bad Meat at the Central Market. — At Guildhall Police Court on Thursday, Herbert Downey, a cattle dealer, of Great Baddow, near Chelmsford, was summoned for sending five pigs to the Central London Market, intending them for sale as human food, the same being diseased and unwholesome. The defendant was fined £5 in respect of each carcase, with costs—in all, £27 2s. Henry Broad, a dealer, of Mitcham Road, Croydon, was summoned for sending seven pieces of diseased pork to the market, intending it for sale as human food, and was fined £5 and £1 1s. costs.

Agriculture for Women.—The annual meeting of the Women's Agricultural and Horticultural Association was held on Monday afternoon, at 61, Eaton Place, Mrs. Wilton Alhusen presiding. Miss T. W. Powell, the hon. secretary, read a report, which gave an account of the work done throughout the country by the union. Grants had been obtained during the year for eleven women gardeners, one floral decorator, three dairy workers, and one poultry woman. Advice had been given in twenty-five cases on various subjects. Sir J. Cockburn, late Agent-General for South Australia, remarked that in Australia vine growing was a great industry very suitable for women, and many women were engaged in it, and also in flower farming. There was an occult sympathy between women and flowers, and some women gardeners could make anything grow. Mr. A. E. Robertson described the American method of sending milk to large towns, purifying it by oxygen on the farms, and so rendering the use of drugs absolutely unnecessary. In the course of a discussion which followed, the difficulty of country people getting fresh milk was commented upon; this being a consequence of so much milk being sent to the large towns. In one district given over to dairy farms, it was stated, the children of the residents had to be fed on condensed milk.

By a Man of Mark Lane.

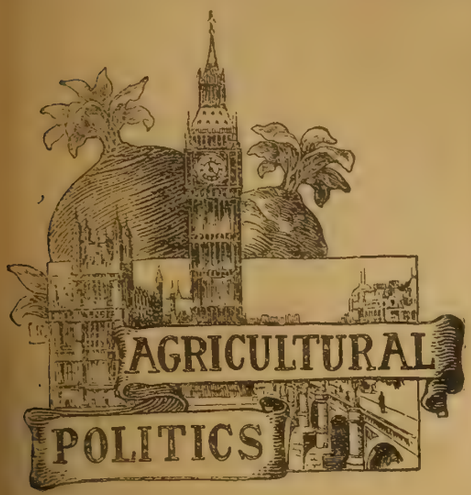
The following synopsis of the May crop report has been issued by the statistician of the United States Department of Agriculture:—The area of winter wheat under cultivation on May 1 is estimated at 27,103,000 acres. This is 4,868,000 acres, or 15.2 per cent., less than the area sown last fall. Kansas reports 1,835,000 acres, Texas and Tennessee each 270,000 acres, Indiana 205,000 acres, California 402,000, Oklahama 325,000, Pennsylvania, Virginia, Kentucky, Nebraska, and Washington each between 100,000 and 200,000 acres. For the area remaining the average condition is returned at 76.4, against 78.7 in April, and 94.1 last May, the mean of the May averages of the last ten years being 83.2. The average condition of the winter rye on May 1 is 83.4, against 85.4 last month, and 94.6 last year, while the 10-year average amounts to 89. The condition of the States of New York and Pennsylvania, with two-fifths of the total winter rye acreage of the country, is 91 and 83 respectively, against 94 last year. Kansas reports an average condition of 72, against 101 last year. The average condition of meadow and mowing lands on May 1 was 86.6, against 92.8 last year, and 90.6 mean of the last ten years. The average condition of spring pasture on the 1st of this month is given as 84.9, against 91.5 last year, and 91.3 two years ago. In the spring wheat States the preparation of the ground for seeding has been delayed by unfavourable weather, North Dakota in particular reporting so late a season as to make a reduction of its spring wheat acreage highly probable.

The receipts on account of Revenue from April 1, 1902, when there was a balance of £8,566,947, to May 10, 1902, were £17,715,067, against £15,090,925 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £25,905,959, against £25,251.265 to the same date in the previous year. The Treasury balances on May 10, 1902, amounted to £6,136,795, and at the same date in 1901 to £3,484,459.

In the Committee on the Finance Bill, Mr. Channing will propose to limit the duration of the Corn Duty to the 1st of August, 1903. Several members have given notice that they will move the exemption of different kinds of grain from the new Tax, amongst the proposed exemptions being rice, arrowroot, locu t beans, maize, and starch.

The pressure on the Government to transfer the extra cost of the Voluntary Schools from the rates to the Exchequer is increasing, and it is understood that the strong representations made by certain Unionist County members are being considered by Ministers. Roughly, the cost would be two million pounds per annum.

The correspondent who recently referred to the humorous statement in the satirical Press that the Corn Duty is "against the grain," and who described the "taxation of ground values," to contest in the charge on flour and meal, is much gratified with the promise of early consideration. The assertion that albeit bread may be rather dearer, it must continue at a loaf figure, will (if approved) be published shortly after the Bank Holiday. Quite a stimulus of agricultural epistoldam, by recent legislation, has been achieved, especially in the case of one farmer who states he shall never send a letter on feeding stuffs without appending an oaty beany.



On Thursday Lord Rosebery opened the New Town Hall at Colchester, and was presented with the freedom of the City. In the course of a speech, he said the English boroughs had in the past made the history of the country, but they had more to do. If the Education Bill passed, they would have the most important work of supervising the education of the children, and on the whole he rejoiced at that provision. Referring to the subject of rural depopulation, His Lordship said:—"You hear much, and perhaps you hear more in Essex than anywhere, of the devastation of our rural districts, of their desolation, of the great immigration of the peasantry into the towns. You have all sorts of reasons given to explain to you why that is so; you have all sorts of remedies suggested, but whatever the causes may be and whatever the remedies for that state of things may be, in the meantime the fact exists, and you are absorbing within your boundaries—within the borough boundaries of England—the great mass of its rural population.

"Well, that seems to me to impose upon the boroughs of England a new and a great responsibility. You have to take care of these young peasants — the blood of the country—who come up to recruit your inhabitants and to swell your labour rolls. Take care that they do not swell the roll of the neglected part of the population, of the derelict part of the population, of the wastrel part of the population. If you take them, take great care of them; take care that they are properly housed under sanitary conditions; that no means of equality of opportunity that may properly be offered to them be wanting in your midst, and then it seems to me you will, as far as is possible, have done your duty by them. Never forget that aspect of the rural depopulation question — that though it seems to involve some responsibility, at any rate on the landlords and farmers whose estates these peasants are leaving, it involves a greater and a more immediate responsibility on those urban authorities who take them in. The towns of England have absorbed the people; let them raise the people."

An idea of what amount the corn and flour tax would have yielded if it had been in operation last year is given in a Parliamentary return issued during the week. It will be remembered that the threepenny tax is applicable to wheat, barley, oats, rye, maize, buckwheat, peas, beans, locust beans, lentils, rice, and the offals of all these, whilst fivepence per cwt. will be paid on flour and the meal of all the above-mentioned agricultural products, as well as on starch, arrowroot, Cassara powder, tapioca, potato flour, pearled barley, sago, malt, and rice. The total return last year would have been £2,724.970, with the chief contributions as follows:—Wheat, £852,967; barley, £285,000; oats, £261,000; maize, £620,05; offals, £38.125; flour and meal, £470,380; starch, £27,515; and rice, £41,437.

Some information concerning the New Baltic, now in course of construction, was given at the annual meeting of the Baltic Mercantile and Shipping Exchange (Limited), held on Wednesday. Major Webb, who presided, stated that good progress was being made with the new building, which he expected would be opened in November next. It had been decided to equip the building with an electrical installation for lighting and power purposes. A well had been sunk on the property, giving good drinkable water. The new exchange would occupy an area of 16,000ft. Great attention had been paid to the decoration of the interior. The freehold had cost £30,000, but the directors asked for power to borrow another £100,00, if necessary, in addition to the £400,000 which the directors had been authorised to borrow. The report and accounts were adopted.

Mr. Arthur Wellesley Anstruther has been appointed to be an Assistant Secretary to the Board of Agriculture, in the place of Major J. T. Tennant, C.B., who retires from the public service as from the 1st proximo.

By a Lobbyist.

There can, of course, be no objection to Mr. Hanbury re-stating his resolve to make the Board of Agriculture an effective organisation. Indeed, good may come of it, inasmuch as the rival Ministers—I use the descriptive "rival Ministers" advisedly—may thus be advised of his unquenchable resolution. However, something more than the reiteration of the resolve is necessary. Has not the time arrived, in fact, when we should be enabled to give a welcome to the first instalment of the new policy? Perhaps Mr. Hanbury may deem his invitation to farmers to send him notice of all cases of excessive railway charges and his negotiations with the War Office, with the object of securing for British farmers the supply of horses for the British cavalry to be this first instalment. I would respectfully assure Mr. Hanbury that something more definite would be warmly greeted. Both the invitation and the negotiations are personal to himself, and are not in any way the result of the routine operation of his department. What we require is that the Board shall, of direct method and discipline, be a factor in the daily life of the agriculturist. Mr. Hanbury will, I know, forgive this statement, and pardon any remonstrant note it may appear to possess. No Minister was ever possessed by a more sympathetic anxiety. We desire that that anxiety may have wise expression.

I have always lamented that the allotment question should be made a partisan issue. What the concession of allotments and small holdings has to do with Home Rule it must pass the wit of man to discover; but it is the fact that the moment Home Rule became a question of practical politics, we began to snarl over the business, as though some vital issue of party principles were involved. Even to-day we still snarl. At the annual meeting of the Rural Labourers' League—and, assuredly, I am glad that it has been the means of obtaining 14,518 allotments—Unionists and Conservatives chortled as though the securing of an allotment is as Conservative a principle as the divine right of kings. It may be urged that out of this partisanism has come good. It may be so, but I cannot perceive it. The whole body politic is now loyal to the principle; and that being so, I cannot see the wisdom of making it unnecessarily a cause of squabbling. Much more may be obtained, even in the House of Commons, by harmonious alliance than by discordant jealousy. Let the two allotments' organisations work on parallel lines, and refuse to cultivate political spleen.

By the way, I find that the suggestion of the Rural Labourers' League that the trustees of rural charities should be empowered to advance the one-fifth of the purchase-money necessary to enable labourers to acquire small holdings, is regarded with a good deal of favour by M.P.'s for rural constituencies on both sides of the House. Of course, it would be easily possible to fashion a sufficient security for the advance, and to provide for the regular payment of a moderate interest. As a fact, the holding itself would, of course, be the security. Many a rural charity is lying fallow. By this means it would be productive of good to itself and of undeniable good to the community. We are now given over to so many heroic things in the legislative world that the mere unpretentiously-useful has little chance of commanding attention. However, I am persuaded that a short Bill of two or three clauses would meet with little or no opposition. By way of expediting matters, the Bill might be first passed through the House of Lords. The Duke of Bedford had shown that he has the political gift. Here is an opportunity of his making an excellent first appearance as the sponsor of a Bill.

I am glad Mr. Chaplin raised the significant questions he did in reference to the obstacles which local authorities persistently raise to the making of tramways. There is the fact that an excellent method of communication—one which might be of direct value to the rural community in every county in the country—has been neglected simply because of the conditions which these authorities impose. Of course, Mr. Chaplin never intended to convey, as certain of his subsequent critics insinuated, that the local authorities should be entirely disregarded. All he contended for was that they should be prevented carrying their antagonism into the region of unreason. I know of more than one case where the desire to construct a tramway has been frustrated simply because of the fact—no other reason, at all events, was apparent—that the proposed line did not altogether satisfy the personal convenience of a few individual members of the local authority. The only reply made to Mr. Chaplin, so far as I could appreciate—of course, the statement that the Right Honourable gentleman had raised the issue at an inconvenient moment was no reply—was that his proposal would cause needless competition. This is the reply that has baulked many a wisely-devised scheme, and, strangely enough, it has not unseldom come from the mouth of a Radical. The author on this occasion was that sturdy iconoclast, John Burns.

I have already referred to the fact that Mr. Chaplin has more than regained his old place in the esteem of the House. This, by the way, is a somewhat unhappy phrase. I do not know that the right honourable gentleman had ever lost that esteem. What, however, happened was that the responsibilities of office crib'd and cabin'd his great abilities. During the present session he has shown a real capacity of leadership, and an excellent knowledge of Parlamentary procedure. His commendation of his latest purpose was admirably conceived. There were sentences in it as terse and compact as even Mr. Chamberlain could have uttered. He has not by any means abandoned his old rotundity of phrase. This much his speech on the corn and flour duties sufficiently revealed. He has, however, associated with it a dialectical force which will stand him in excellent stead in rapier cut and thrust debate. Mr. Chaplin has again become the dominant personality among the rural M.P.'s, and he has assuredly within the last three months revealed capacity of statecraft. I pray that he will never more accept the uniform of office. He is much more useful to agriculture in the role of an unattached Privy Councillor.

There is naught more to be said in connection with the corn and flour duties. The debate has gone just on the lines I expected. This week has witnessed the apotheosis of sham emotion. The old cries against landlordism have been unctuously revived. The old pictures of a despoiled people have been relimned. The whole business, however, has lacked sincerity. While declamation has been perfervidly declaimed, one retaliatory, disconcerting fact has been evolved. The price of bread has been slowly readjusting itself. This is the one great reply to the assertion that this Budget is part of a conspiracy against the cheap food of the people. I am more and more convinced of my original opinion of the Budget. It is valuable, not because of any direct interest it will confer on agriculture, but because it gives an emphasis to the more generous policy towards the interest which has been initiated in the last few years. I am glad to know that so sane-eyed a friend of the interest as Major Rasch sympathises with this view.

Experiment on Manuring Mangels

An experiment on the manuring of mangels was carried out by the College of North Wales in Cae Ty Newydd Ucha in 1901. The plan of the experiment, which was the same as in 1899 and 1900, and other particulars are given in Table I. The farmyard manure, superphosphate and kainit were as usual applied in the drills, the nitrate of soda, except a part of the dressing to plot IX., was applied after the plants were thinned. The plots were one-twentieth of an acre in size, and the variety of mangel sown was the Yellow Globe.

TABLE I.

Plot.	Manure per Acre.	Cost of Artificial Manure per Acre.	Weight of Roots per Acre, 1901.	Increase over Unmanured Plot, 1901.
		£ s. d.	T. C. LB.	T. C. LB.
I.	No manure	—	32 6 8	—
II.	12 tons farmyard manure	—	44 15 80	12 9 72
III.	20 tons farmyard manure	—	51 17 16	19 11 8
IV.	20 tons farmyard manure 1 cwt. nitrate of soda ...	0 15 6	43 7 96	11 1 88
V.	20 tons farmyard manure 3 cwt. superphosphate...	0 8 3	43 14 32	11 8 24
VI.	20 tons farmyard manure 3 cwt. superphosphate... 1 cwt. nitrate of soda ...	0 18 9	44 0 80	11 14 72
VII.	20 tons farmyard manure 3 cwt. superphosphate... 3 cwt. kainit ... ... 1 cwt. nitrate of soda ...	1 8 1	50 2 96	17 16 88
VIII.	20 tons farmyard manure 3 cwt. kainit ... ... 1 cwt. nitrate of soda ...	0 19 10	46 18 64	14 12 56
IX.	20 tons farmyard manure 3 cwt. superphosphate... 3 cwt. kainit ... ... 1 cwt. nitrate of soda (applied in the drills) 1 cwt. nitrate of soda (applied after the plants were thinned)	1 18 7	45 15 0	13 8 104
X.	30 tons farmyard manure	—	45 2 16	12 16 8
XI.	30 tons farmyard manure 3 cwt. superphosphate... 3 cwt. kainit ... ... 1 cwt. nitrate of soda ...	1 8 1	46 1 48	13 15 40

In 1900 it was in oats, manured with farmyard manure; for the three previous years it was in hay, for which it was dressed in 1898 with farmyard manure, and in 1899 with mixed artificials. The field in which the experiment was carried out in 1901 was in a good state of cultivation, as may be gathered from the heavy weight of the produce on the manured plot.

The most marked feature of the experiment was the result due to the application of farmyard manure. The twelve tons applied to plot II. increased the yield by over twelve tons per acre, and a further addition of eight tons on plot III. produced an additional increase of nearly eight tons per acre. The heavy dressing of thirty tons per acre applied to plot X. failed in 1901 to produce as good a result as the twenty tons on plot III. The success attending such a large application of farmyard manure doubtless depends greatly on the season. The weather in 1901 was very dry for a long time after the seed was sown, and the plants on plots I. to IX. had made considerable progress before those on plots X. and XI. appeared.

These rows suffered more from the drying winds than the remainder, owing to the fact that the soil was kept loose and open by the large quantity of bulky manure placed between the drills, which were only 25in. in width. Under such circumstances, particularly on land near the rock, as in Cae Ty Newydd Ucha, it is somewhat difficult to get sufficient soil to cover the farmyard manure. Where such a large quantity is applied it is usually advisable either to make the rows wider, or to apply part of the manure in the autumn.

Table III. contains the average figures for the past three years. The experiment has been carried out in different fields, but on land similar in quality, though varying in condition. The farmyard manure employed has invariably been of high quality. The composition of the other manures has been as follows: Nitrate of soda, 95 per cent. pure; superphosphate of lime, 25 per cent. soluble; kainit, containing 12 per cent. of potash.

TABLE II.

Plot.	Manure per acre.	Average weights for the three years 1899, 1900 and 1901.	Average increase over unmanured plot for the three years.
		T. C. LB.	T. C. LB.
I.	No manure	18 3 51	——
II.	12 tons farmyard manure	31 15 13	13 11 74
III.	20 tons farmyard manure	38 19 19	29 15 80
IV.	20 tons farmyard manure 1 cwt. nitrate of soda	33 18 84	15 15 33
V.	20 tons farmyard manure 3 cwt. superphosphate	32 2 3	13 18 64
VI.	20 tons farmyard manure 3 cwt. superphosphate 1 cwt. nitrate of soda	37 8 77	19 5 26
VII.	20 tons farmyard manure 3 cwt. superphosphate 3 cwt. kainit ... ... 1 cwt. nitrate of soda	41 9 85	23 6 34
VIII.	20 tons farmyard manure 3 cwt. kainit ... ... 1 cwt. nitrate of soda	37 7 109	19 4 59
IX.	20 tons farmyard manure 3 cwt. superphosphate 3 cwt. kainit ... ... 1 cwt. nitrate of soda (applied in the drills) 1 cwt. nitrate of soda (applied after the plants were thinned)	40 8 77	22 5 26
X.	30 tons farmyard manure	39 17 96	21 14 45
XI.	30 tons farmyard manure 3 cwt. superphosphate 3 cwt. kainit ... ... 1 cwt. nitrate of soda	42 7 56	24 4 5

The table clearly indicates the importance of farmyard manure for the mangel crop, and shows that where a good dressing of this was given the only mixtures of artificials which produced any result were the complete dressings applied to plots VII., IX., and XI.

TABLE III.

Plot.	Manure per acre.	Average weights for the three years 1899, 1900 and 1901.	Average increase over unmanured plot for the three years.
		T. C. LB.	T. C. LB.
I.	No manure	18 3 51	——
II.	12 tons farmyard manure	31 15 13	13 11 74
III.	20 tons farmyard manure	38 19 19	20 15 80
X.	30 tons farmyard manure	39 17 96	21 14 45

EFFECT OF FARMYARD MANURE.

Table III. shows that as much as 20 tons of farmyard manure per acre has been profitably employed, but that it did not pay to apply more than this quantity as the average yield produced by the additional 10 tons applied to plot X. was rather less than a ton.

TABLE IV.

Plot.	Manure per acre.	Cost of artificial manure per acre.	Average weights for the 3 years, 1899, 1900 and 1901.	Average increase due to mixed artificials.
		£ s. d	T. C. LB.	T. C. LB.
III.	20 tons farmyard manure	——	38 19 19	——
VII.	20 tons farmyard manure 3 cwt. superphosphate 3 cwt. kainit ... ... 1 cwt. nitrate of soda	1 8 1	41 9 85	2 10 66
IX.	20 tons farmyard manure 3 cwt. superphosphate 3 cwt. kainit ... ... 1 cwt. nitrate of soda (applied in the drills) 1 cwt. nitrate of soda (applied after the plants were thinned)	1 18 7	40 8 77	1 9 53

EFFECT OF A COMPLETE DRESSING OF ARTIFICIALS IN ADDITION TO FARMYARD MANURE.

It will be noted that although the mixed artificials produced a considerable addition to the yield that the increase cost, even in the case of plot VII., over 11s. per ton, a price which is probably rarely realised when mangels are fed to stock. A comparison of the results on plots VII. and IX. shows that no advantage was gained by applying nitrate of soda to the drills.

IN PARLIAMENT.

HOUSE OF COMMONS.

Corn and Flour Tax.

On Monday Sir Michael Hicks-Beach moved the second reading of the Finance Bill, and in doing so announced that he had abandoned the additional duty on cheques.

Sir William Harcourt then moved:—"That this House declines to impose Customs' duties upon grain, flour, and other articles of the first necessity for the food of the people." He said: I am sure the House will have been glad to hear the announcement which has just been made by Sir M. Hicks-Beach, and I only wish he had gone further and relieved us of another tax—the Corn tax—also. (Opposition cheers.) He took issue upon this particular proposal as the blackest spot in the Budget—it was its most glaring vice. It was a tax bad in principle and still worse in its application. Upon it centred every possible objection which could be urged to any other tax. Mr. Gladstone had told them that such a tax could not be defended on principle. If the price of bread was raised it must be paid by somebody. Even a statistician or professor of political economy could not confuse the proposition. It was said quite truly that the main element as to the price was the question of supply and demand, which determined the market price. There must be a substantial rise in the price of corn and flour, and consequently in the bread supplied by the baker. But what was the use of arguing whether the charge did or did not result in the rise of the price of bread? It had risen, and generally risen. (Opposition cheers.) It had mostly risen on the low-priced loaf, which was bought by the very poorest. He affirmed that in London and many other parts of the country the charge had caused a rise in the price of bread. This was a bad tax from every point of view. The worst kind of tax was one which imposed the burdens of which the fruits did not go to the Exchequer. (Opposition cheers.) That was the vice of all protective taxes. It was said that the Government did not impose it for the purposes of protection, but he cared very little what their intentions were. They had got to see what were the consequences of the Government action in this respect. The view of the public at large was that this tax reached the form of protection; and he felt that at the bottom of this tax lay the question of free trade or protection. (Hear, hear.) It was just like the dams in Holland to keep out inundations, and they took very good care that the rats should not undermine them. (Opposition cheers and laughter.) Everybody believed, until the Government brought in this tax, that the question of a tax upon corn had been settled, and that we should never hear of it again. He had not been a hostile critic of the financial policy of the Chancellor of the Exchequer, but he could not understand why a man of his bright intelligence, his firm mind, and his sound sense, should ever have meddled with corn at all. This tax was to be condemned, not only on its financial aspects, but a great deal more on its social and political aspects. He challenged the policy of this tax as against sound finance, and the fundamental principle of sound finance was that it should not cast a burden on those who were least able to bear it. Sound finance was not a matter of dry figures. It demanded the statesmanship of the heart. It demanded sympathy for the class upon whom taxation was burdensome and intolerable, and who had no means to endure it. (Hear, hear.) They ought to so distribute taxation that it should not be beyond the capacities of the poorest people to bear it. In concluding, Sir William said: Is this a sample of your social programme? You promised old-age pensions. This is the sort of pension you offer to the old age of people who can no longer work. They ask you for bread, and you give them a corn tax. (Opposition cheers.) Is this the war gift you are going to bestow on the widows and children who have little enough means to live upon? Whatever happens on this division, the country will, at all events, know who are for and who are against the tax upon the bread of the people. (Opposition cheers.) The tax was hailed on its introduction with a vociferous shout of "Well done!" There has come back a strange and unexpected echo from Tory Lancashire, and I believe that cry will swell when this matter is more thoroughly understood throughout the country. (Opposition cheers.)

Sir Michael Hicks-Beach replied at some length to Sir William Harcourt, whom he accused of wanting to "run the Empire on the cheap." After comparing the taxation of the present and that of the Crimean War, and having shown that it was practically impossible to have further taxed beer or tobacco, Sir Michael came to the point which chiefly concerns our readers—viz., the corn and flour tax. He said: The right hon. gentleman (Sir W. Harcourt) says who will pay the tax, and has referred to rises within the last few weeks in the prices of corn and bread. Of course, there have been rises, but there always are rises when stocks are low in the spring of the year, and I suppose that if it had been possible for me to impose that duty after the harvest or during the harvest when stocks were large and anticipations favourable, there probably would have been no rise at all. (Hear, hear.) But corn has been rising irrespective of duty for weeks past. It has risen in America, where the duty could have no effect whatever. It has risen because stocks are low. People have complained to me of the high price of maize in particular, but the market records show that the American crop of maize last year was hardly half of what it was in the previous year. At present wheat is exactly the same price as it was in March, 1901, and the price of flour on the 5th inst was the same as it was a year ago. The right hon. gentleman says it is a bread tax, and refers to the rise in the price of bread by bakers. He refers to it as a universal rise, but there is nothing of the kind. I have obtained information on this point from the 30 largest cities in this country, including the metropolis. There has been no general rise in the price of bread in London. There has been a rise by many bakers in London, but not a general rise. Out of the other 29 cities I find that in 19 there has been no rise at all—(hear, hear)—in nine there has been a rise of a halfpenny on the quartern loaf, and in one there has been a decrease in price since March 1st. (Cheers and laughter.) The price of bread varies in a most extraordinary way in different towns and villages, and even in different streets of the same town, and therefore I have obtained what I think is more reliable than the statistics of bakers, and that is statistics from co-operative societies all over Great Britain. Even a co-operative society, I am told, is sometimes influenced in fixing the price of bread by—well, political considerations. (Laughter.) But I think generally it may be assumed that co-operative societies will not raise the price before it was necessary. Of 284 societies in Great Britain, 32 have raised the price of bread by a halfpenny on the quartern loaf. I find that in the North, East, North Midlands, West Midlands, and South-eastern districts of England there has been no rise at all, nor has there been in Scotland. In London, Lancashire, Cheshire, the South Midlands, and the South-western districts of England there has been an average rise in co-operative prices of a farthing per quartern loaf. Out of all these societies the mean co-operative price of bread is no more than 5d. per quartern loaf. I do not think that is exactly a starvation price. It is certain that the supply of corn will exceed the demand in future, and, if so, what becomes of the suggestion that this duty can by any means be a protective duty to the farmers or raise the price of corn in this country? All that the right hon. gentleman has said on this subject really amounts to a kind of superstition which has grown up about the principles of Free Trade. This has been called a cowardly duty. (Opposition cheers.) Is it a cowardly thing for a Government to face the outcry of the big loaf and the little loaf and the tax on the food of the people which, with so little cause, has been so promptly raised by hon. gentlemen opposite. (Ministerial cheers.) I think it might be cowardly if we had imposed fresh taxation on a few of the wealthy who could not resist it at the polls. We have faced this danger, and, according to Sir W. Harcourt, we have suffered already. (Opposition cheers.) Manchester may be placarded with invitations to the people to rise in their thousands against the bread tax; appeals may be made—and a few hundred electors of Bury may be deluded by them—(ironical Opposition laughter)—to the memory of the great Sir Robert Peel against the imposition of the very duty which he himself devised and imposed. But the common sense of the mass of the people of this country will recognise the absurdity of arguments of that character. In a short time, when this duty, if it has any effect at all, will have found its proper level, I am convinced that it will be felt generally throughout the country, and the exaggerated and absurd anticipations of its result will never be realised, and that a duty which, when it existed, nobody felt, for the removal of which nobody was grateful, because nobody desired it, will no more in the future than in the past have—to use the words of Mr. S. Buxton—"any practical effect upon the food of the people." (Ministerial cheers.)

Mr Robson said the introduction of this tax was a step in the retrograde policy which the Chancellor of the Exchequer had had in view ever since he held his present office. The Government had now hit the three great mainstays of popular nutrition, namely, meat, sugar, and bread, and they had taken care that the consumer should suffer much more than the Exchequer should gain. (Opposition cheers.)

Earl Percy believed this tax would have no serious effect on the price of bread. Free trade in corn products was absolutely necessary in this country, and there was no probability of returning to protection.

Mr. M'Crae said the tax was economically wrong, because it imposed artificial restrictions upon the trade. In several large towns the price of second quality bread, upon which the poor chiefly subsisted, had risen 1d. per loaf. It was more

than a bread tax, it was a blood tax, because it robbed the people of bread and thus robbed them of vitality.

Mr. Bartley believed that the working man was prepared to pay his share towards the cost of the war. So far from this proposal being a cowardly one, he thought it was one of the few bold things which the present Government had done. (Ironical Opposition cheers and laughter.) He congratulated the Chancellor of the Exchequer on being bold enough to broaden the basis of taxation. He believed that long before the general election arrived the public would realise that the Chancellor of the Exchequer had adopted a sound fiscal system.

Sir H. Fowler said public opinion had already killed the cheque tax, and he believed that when submitted to the constituencies a similar fate awaited this corn duty, which was a most unfair application of the principle of indirect taxation, combining, as it did, taxation in its worst form with Protection, not only to the farmer in the case of wheat, but still more to the miller in the case of flour. As political economists and impartial legislators we should adopt the principle that the burden of taxation should be fixed on the shoulders best able to bear it. This Bill was a change of policy, it might be a little change, but it was an admission of the principle of taxation of necessaries and of Protection. Once that principle was adopted we could not stop at corn. What should we do with the Colonies, which, like Canada, had given us preferential rates, and to which we had always said that we could not alter our Free Trade policy? He believed that the House was in the rapids on this question, rapids on which the Government had not meant to enter, and on which the country would not enter. (Opposition cheers.)

Major Rasch said hon. members opposite contended that the farmer would not benefit, yet declared that the agricultural labourer would be crushed by his burden. Hon. members could not have it both ways. Of course, the agricultural districts were not satisfied; they rarely were. They would have preferred the tax on flour rather than corn so as to keep the offal. They considered this a pious opinion on the part of the Government —(Opposition laughter)—widening the basis of taxation.

Mr. Ashton argued that the price of a commodity could not be raised from 4 to 8 per cent. without somebody feeling the increase, and he believed that the consumer would have to pay. The tax was, in his opinion, wasteful.

Lord Willoughby de Eresby thought there was not the slightest ground for people grumbling at this tax on the score of Protection. So far from it being a Protective duty, it was an excise duty, and a matter of justice to the farmer.

Mr. Broadhurst said he prophesied that the Chancellor of the Exchequer would be compelled to withdraw the cheque duty, and if the right hon. gentleman would take his advice he would withdraw this bread tax also. He could not imagine why the right hon. gentleman should have returned to the quixotic path of Protection.

Mr. Kearley, Sir E. Vincent, and Mr. Fletcher Moulton spoke against the tax.

Mr. Churchill admitted that the whole of the tax would fall upon the consumer, but he denied that it was a protective tax except in economic theory. Was it a good tax? Did it give the results demanded from it? He ventured to answer both questions in the affirmative. This was not a new tax, but was the revival of an old one. Every argument which could be used against the corn tax could be equally applied to a tea tax. Sentimental emotions and prejudices ought not to be allowed to prevent any Government from taking a wise financial course. The tendency during the last sixty years had been to increase direct and to decrease indirect taxation, and he would never vote for any Government which proposed to reverse that process. It had been asserted by hon. members opposite that this Government shifted the burden of taxation from the shoulders of the rich to those of the poor. That was a very dishonest charge. (Ministerial cheers.) What would have been thought of the Government if they had not proposed a tax which they honestly thought to be necessary to meet a deficiency? They did not endeavour for the sake of a vulgar party advantage to neglect their duty. (Cheers.) He should support this tax, because it was the best financial expedient that could be found, being efficient, economical, and highly productive. (Ministerial cheers.)

Mr. G. M. Brown opposed, and Mr. Renwick supported the tax, and the debate was then adjourned.

The debate was resumed on Thursday by Mr. Buxton, who declared that as the tax had caused a universal rise on flour of 1s. per sack, bakers' profits were so much reduced that in many cases it was necessary for them to raise the price of bread. It could not be denied that this was a Protective tax any more than that "a sort of war" was real war. (Opposition cheers.) According to a recent report of Sir M. Hicks-Beach's views, he was using the arguments of the old Protectionists and desiring the import of grain instead of flour.

Sir M. Hicks-Beach: My reason for desiring the import of grain instead of flour was because we get the whole grain—the offal as well as the flour. If we merely have the flour only imported the offal remains in the United States. Their stock are fed with it, and we do not get the benefit of it in this country. (Hear, hear.)

Mr. Buxton, continuing, opposed the tax, because it violated the principle of Free Trade, was a pure gratuitous raising of the question of protection, and would fall with the greatest severity on the working classes.

Mr. A. Chamberlain thought it must have required some courage on the part of Mr. Buxton to oppose the tax after the views he had expressed in a pamphlet on the abolition of the duty by Mr. Lowe. Mr. Buxton had said that the tax was one profitable in itself, was collected with little trouble and expense, was of little interference to trade, and had no effect on the price of bread.

Mr. Buxton: At that time.

Mr. A. Chamberlain: And the laws of political economy are apparently quite different in 1902 to what they were in 1869! The hon. gentleman shed a tear over the abandonment of this tax.

Mr. Buxton objected to certain extracts being taken from his pamphlet without the context being given. On every principle he condemned the tax.

Mr. A. Chamberlain did not wish to press the point too hard, because he did not pretend that the Government could justify the tax merely on what the hon. gentleman had written, or because his opinion at one time was not exactly what it was at another. The sources of national expenditure were matters in which all had an interest, even the poor, and it was just that they should contribute their share. Was it so certain, as they said, that this tax would be borne by the consumer? The duty imposed in France was only greater by about half the amount of that duty. (Ministerial cheers.) If the supply was greater than the demand the duty would tend to be borne by the producer, and if the demand was greater than the supply it would tend to fall on the consumer. Already the American exporters were considering how they could maintain their trade in view of this duty, and at least one great railway company had reduced their rate on flour in order to be able to put that article into this country at the same price as formerly. (Ministerial cheers.) In any case, he did not believe that those who had approved of the policy of the Government, and had seconded them in all their efforts to pursue it to a successful conclusion, would grudge their contribution to the expenditure involved, or expect to have all the advantages of Empire without bearing any portion of its cost. (Ministerial cheers.)

Mr. J. Redmond said that after careful consideration the Irish members had decided to support the amendment, because they believed such taxation would be injurious to Ireland, and because, further, it was imposed for the purposes of a war of which they disapproved. This tax was a mean and contemptible expedient in a Budget of 200 millions. (Hear, hear.)

Mr. Russell declared that to vote for this tax was to vote for a tax upon Irish agriculture, which it could not bear. He assured the House that he would be no party to taxing the food of the people, and would oppose the imposition through and through. (Opposition cheers.)

Mr. Logan believed that a more extravagant tax was never devised.

Sir J. Reid objected to the proposed duty on corn, not only because he believed that its effect would be most serious in itself, but because he was afraid that it was intended to be at the beginning of a series of taxes which would be extended from one of the first necessities of life to other articles of food and manufacture.

Mr. T. G. Bowles said that the registration tax was abolished in the name of "abstract science and speculation," as Mr. Lowe said, and not in the name of the free food of the people. He would admit that the tax was appreciable, and to some extent protective in character, but political economists said you might impose any tax so long as the motive was pure—(laughter)—and here the motive was pure—it was revenue. Was there, however, necessity now for this tax, was there emergency? They were hoping for the dawn of peace, and if that hope was realised where was the emergency? Moreover, why the demand for over seventeen millions "for contingencies"? That was a constitutional innovation of a serious character, and if those "contingencies" were left out of account there was no need for this tax or for the increase of the income tax.

Mr. Fenwick protested against the allegations of Mr. Balfour that the crisis which had compelled the Chancellor of the Exchequer to seek new sources of revenue was one created by the working classes, and for which they ought to pay.

Mr. Balfour: I never suggested that the working classes were more responsible than any other class of the community. All I meant was that the nation at large, including the working classes, were responsible for and supported the war policy. (Hear, hear.)

Mr. Fenwick contended that the crisis was the Government's own creation.

Mr. J. W. Wilson was reluctantly compelled to believe that the tax would be felt by the consumer, and he could not give his vote for it. The principle involved was above party loyalty. (Opposition cheers.)

Mr. G. Whiteley said the imposition of the bread tax was a colossal step for the Government to take. Speaking for the Opposition, he said they had been called a pro-Boer party throughout the country, but he thought they should now have to be designated a pro-bread party. The Liberal party were upon safe grounds at the present juncture, and they could very well adopt the motto, "The loaf, the whole loaf, and nothing but the loaf, so help the people of the country." (Laughter.)

Mr. Holland denounced the proposal of the Government as contrary to the policy of the country for the last half century, and believed if they went to the country on the subject they would suffer a crushing defeat.

Mr. Lees Knowles, as a friend in need of the Government, said he was bound to support the proposed tax. It would be paid by the foreigner, and would be so infinitessimal that nobody would feel it.

Mr. Channing agreed that the working men should bear their share of taxation for the war if they had received any benefit from it. But the wages of the men had not been increased. The expenditure for the war had benefited the classes, but not the masses of the country. (Opposition cheers.) The tax was a dole of £1,350,000 to the agricultural landlords.

Mr. Chaplin denied that the imposition of the tax justified the rise in the price of bread. Where bread had risen it was entirely due to the action of the bakers. The price of wheat was constantly fluctuating, and it was generally accepted that only a variation of 5s. a quarter would affect the price of bread. In the majority of cases wheat could only be grown in this country at a loss to the farmer. This tax might possibly reduce that loss. (Ironical Opposition cheers.) When wheat commanded a fair price in this country the lot of the agricultural labourer was comfortable, but with the fall in the price the labourers were out of work, and receiving no wages at all. The cry raised by the Opposition was an unreal cry, and their agitation was an unreal agitation.

Mr. C. Allen contended that the sufferers by this would be the wives and children of the flotsam and jetsam of the working classes.

Mr. Bell also opposed the imposition of the tax.

Mr. Runciman warmly supported the amendment.

Sir H. Campbell-Bannerman said it was very remarkable that one phase of opinion which had really more to do with the subject matter of the discussion than any other had been almost unrepresented. They had not had the Protectionist view of the question. (Opposition cheers.) It was evident that the word had gone out on the other side of the House that the dangerous love of Protection and the ardent expectation of Protectionist results from the action of the Government must be suppressed. (Opposition cheers.) If the Government wished to muzzle the Protectionists they should have begun early and stopped the exultant shrieks of the hon. member for Sheffield, and they should have prevented Mr. Hanbury saying what he did at Norwich last Saturday. He believed that this tax was harsh, cruel, ill-placed, and injurious to the community, and contrary to the sound policy of Free Trade.

Mr. Balfour said the main stress of the right hon. gentleman's arguments in proposing this tax the Government had inserted the thin end of the wedge of Protection. The right hon. gentleman had a theologian's acumen in discovering a suspicion of heresy. Unless they could show that as a result of this tax fewer quarters of corn would come from abroad into this country than came in now, and that more quarters of corn were grown in this country than hitherto, then this was not a protective tax. It might oppress the widow, it might starve the orphan, but it was not a protective tax, and the insinuation that the Government were introducing a fundamental change into our Free Trade system was exquisitely ludicrous. The tax was the invention of a free trader, and supported by a Free Trade Parliament. The tax was put on for fiscal reasons. It was put on because it was necessary that a greatly increased revenue should be raised in the course of the present year, and because, in the opinion of the Government, this was a fair tax. (Ministerial cheers.) Mr. Gladstone was not indifferent to the widows and orphans, neither was the House of Commons in the present day. Every tax considered by itself and in isolation must appear an unjust tax, but this tax had to be judged as part of a very complex and elaborate system. It was more favourable to the working classes and the poor, to the widows and the orphans now, than it was at the time when it was first imposed. Some hon. members thought this tax was a kind of punishment to those who had applauded the war and had supported the general policy of the Government. That was not the view entertained on that side of the House.

All they desired was a general system of taxation, and that the burden should be distributed over the whole community. They had been told that it was a mean and cowardly tax. (Opposition cheers.) In his opinion no course would have been so cowardly, so mean, so utterly unworthy in carrying out a policy of which the people had approved as that they should endeavour to do it at the cost of a small and relatively hopeless minority in the country, whose interests ought to be as dear to that House as those of any class. (Ministerial cheers.) This tax had the greatest merit of not interfering with trade, of not being difficult to collect, of not losing or wasting any important portion of that taken from the people on its way to the Exchequer, and while it raised the large sum of two and a half millions, it would not bear with undue severity on any portion of the population of the kingdom. (Loud Ministerial cheers.)

The House then divided on Sir William Harcourt's amendment, with the following result:—

For the amendment	188
Against	296
Majority against	108

The House then adjourned. After some further discussion on Wednesday, the Finance Bill passed the second reading by a majority of 90, 224 voting for the second reading and 134 against.

Gambling in Grain Futures.

On Wednesday Mr. Field asked the President of the Board of Trade whether his Department was aware of the legislative measures now enforced in Germany to discourage gambling in futures in grain and options in other products; and whether the Government would consider the question of introducing similar legislation to safeguard the producers and consumers of the three kingdoms.

Mr. G. Balfour: I am aware of the German legislation regulating produce exchanges. There is no intention of introducing similar legislation in this country.

Irish Butter and the Butter Standard.

On Monday, in reply to a question by Mr. O'Shaughnessy, Mr. Hanbury said: I am not aware that salt butter will in any way be injuriously affected by the new standard, nor was any evidence, I believe, given to that effect before the Departmental Committee. The brine butter, to which hot brine is added instead of salt, with the result of largely increasing the percentage of water, will no doubt be affected, but the practice has for some time been dying out, and at a meeting of the South of Ireland Butter Merchants' Association, held in Limerick a day or two ago, it was, I understand, resolved to recommend the use of dry salt instead. I believe such a course will do much to add to the price of the butter, and in any case the Irish Department agree with me in fixing the standard of water in butter, which is the same in both countries.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended May 10, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living:	1901.	1902.		1901.	1902.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan.

The Preparation of the Raw Material for Grinding.

There is very little new to record in the tra e since these notes last appeared. A deputation of millers has waited upon the Chancellor of the Exchequer with reference to the new duties on wheat and flour, but the interview was strictly private. It is generally understood, however, that the reception was satisfactory, and that a drawback will be allowed on exported flour which is manufactured from wheat on which duty has been paid. There may be some difficulty in cases where the flour is made from a mixture of foreign and home-grown wheat, but this should be easily surmounted. No doubt some effective arrangements will be made by the Customs authorities, perhaps on the lines of the French *acquits*, that is to say, millers will be allowed to export a certain percentage of the wheat, upon which duty has been paid in the shape of flour. As a good deal of the latter is only low grade, they will be able to take a large percentage from the wheat.

Millers certainly have the advantage in the discrimination (3d. and 5d. per cwt. respectively), between wheat and flour, and when matters have arranged themselves, and everyone has become used to the tax, they will find the new departure as

Beneficial to them as to British Farmers.

Therefore, on the whole, Sir Michael is to be congratulated upon giving some little assistance to two of the most important industries in the country. American millers are up in arms with regard to the tax, and it certainly will not do their export trade any good, unless they receive some assistance from the great carrying companies of America, who very naturally discriminate in the freights between wheat and flour, as the former is handled at so much less expense than the latter. But in this country, after all, the duty will be little more than a "nine days' wonder," and no one will be any the worse for it.

English wheat has been very short on our markets of late, but what has been on offer has been soon bought up at good prices. Whether the stock in farmers' hands is nearly exhausted or whether they are holding out for more money it is impossible to say; many people think the latter is the case. Trade in flour has been very dull, but offals still continue to go off well at good prices, considering we are so far advanced in May. The cold north and east winds, which have been so prevalent, have kept all vegetation back, and this, without doubt, has kept up the price of offals.

Cleaning and Conditioning the Wheat Mixture.

Turning from trade news to the theory and practice of milling, a debateable point often crops up as to which is the most important step in order to secure the best results. The writer would say that every step is equally important, but at the same time there is always a tendency to believe that at one point in the mill the greatest care should be taken. At one time it was purification, in its higher forms; at another, it was flour-dressing and re-dressing; at another, the break system, that is to say, the breaking down of the wheat and the grading and dusting of the middlings, was thought to be mainly responsible for the production of high class flours. Even to-day there are millers who pay particular attention to one portion of the system, perhaps to the neglect of others; but, if there be a point where the greatest care should be practised, it is in the preparation of the raw material for grinding. The cleanliness and condition of the wheat is of the very first importance, because, without these qualities in the wheat, it is useless to try and make pure flours. This is now recognised by most members of the trade, and there never was a time when it was so necessary to clean the wheat.

Reducing the Wheat on Three Breaks.

It may not be known to country millers, who are readers of this column, that some of the largest and most important mills in this country are only using three breaks at the present time, which practically amounts to two breaks and a bran roll. Now, this would be quite impossible unless the wheat were in the pink of condition, both as regards the endosperm and its coverings. The latter must be made so tough that there can be no possibility of making bran powder, that product which is so difficult to remove in purification. Let any one try to grind wheat which has not been conditioned on three breaks, and see what the result would be. It would simply be lamentable, and no pure flour would be possible. Of course, irrespective of condition, the wheat mixture must be quite clean, but it is condition which mainly controls the purity of the manufactured products out of the clean wheat.

If there are any country millers who are only using three breaks—or even if they are using four breaaks—they need not be afraid of grinding their wheat a little on the wet side. Of course

Extract of Flour from the Wheat depends upon the trade done,

but some of the most successful millers in the country take a low extract from the wheat and class the bulk of the flour as patent. The preparation, the miller must not imagine that less care ance, but, having put his mixture into the first break hopper as near perfection as regards condition, the miller must not imagine that less care may be taken in succeeding operations. Dull rolls, as well as rolls which are not properly adjusted, will make middlings which are difficult of purification; bad grading and dusting also prevent successful work on purifiers, and faulty reduction of the middlings, even if they are well made on the breaks, results in indifferent dressing. There is no point in the mill which it is safe to neglect. The preparation of the wheat is only the *beginning well*; there must also be the *ending well*.

MILLER FARMER.

THE DAIRY.

Lancaster Cheese Fair.

Lancaster May cheese fair was held in the covered market, Lancaster, on Tuesday, and was well attended by buyers from Preston, Ulverston, Kendal, and the district. The pitch was the largest at a May fair for the past three years, comprising 31 dairies and 452 cheese, against 17 dairies and 247 cheese at the corresponding fair last year. The lots offered were entirely new grass cheese, and there was a brisk demand, the market being cleared in 20 minutes. The best dairies realised up to 65s.; medium cheese made 57s. to 60s., and common 55s.

Nantwich Cheese Fair.

The first Nantwich bi-monthly cheese fair was held on Thursday, the pitch being about 12 tons. Buyers were present from Manchester, Rochdale, Warrington, Bradford, Huddersfield, Crewe, and other centres. Best lots found a ready sale at prices ranging from 55s. per cwt. to 60s. Medium qualities made from 48s. to 54s. Most of the lots were cleared by eleven o'clock.

BARLEY & MALT

By Hordeum.

Malt Use in Beer.

Some of the facts disclosed in the lately-issued Returns relating to Brewers' Licences show the necessity of there being a clearer understanding about the use of malt by brewers. For the first time it is now provable that a very large firm of brewers have carried the science of substitute use to the point of displacement of nearly one half of the total amount of materials they brew. Half the malt is displaced with sugar.

If this were an isolated case, it would be sufficiently alarming, but there are many others nearly as bad. Taking the whole of the beer made the displacement of malt amounts to nearly 30 per cent., which implies, after the deduction of the amount of beer brewed from malt solely, that in the whole of the substitute beer the ratio of sugar to malt has grown to nearly

40 per 100.

Where 100 quarters of malt are used there is now, as a rule, the equivalent of 40 quarters of other material that is not malt, and which does not adequately take its place in any sense whatever, excepting that it does earn a greater profit than the exclusive use of malt permits. There ought to be no misunderstanding about this point. It is claimed that the exigencies of scientific brewing make the use of sugar or of some similar substitute an absolute necessity. But this is utterly untrue. Brewers would not use such substances if their use were not the direct or indirect source of greater profits. Now the use of malt is a necessity, and this is very clearly proved by every-day practice. There are many brewers who would give much if they could only turn out a satisfactory article without the aid of any malt; but they cannot do it. They would do anything if their ultra-scientific friends could only show them how to brew successfully from sugar or rice or maize, or any combination of these things.

But they cannot do it. The mashing and fermenting processes

must have malt

to work upon, but it is not yet known in what proportion. The diastatic activity of nearly all well-made malt suffices to exercise its subtle and little-understood influences upon a considerable proportion of so-called malts that are altogether devoid of any similar energy, and the operation of malt upon yeast can stand considerable dilution. Hence we find the use of substitutes persistently increasing.

The check given to sugar use last year is purely fiscal in its origin and working. A duty of three to four pounds per ton to a material costing only three times the amount is quite sufficient to set back its use to a much greater extent than we have yet noticed with sugar. This seems to point to the fact that sugar is still as cheap as malt, and if this is true then it has paid brewers well for some years past to employ sugar instead of malt.

The question of sugar use is very largely affected by locality. In some districts it is almost unknown, and in others its use is excessive.

Irish Purity,

or freedom from substitute use, is proverbial. Galway is the only collection where beer is made in the United Kingdom in which not an ounce of sugar is brewed. Dublin stands next, where to the equivalent of each bushel of sugar over 1,050 bushels of malt are mashed; and for the whole of Ireland the proportion stands of nearly 100 to 1—i.e., to every 100 bushels of malt brewed only 1 bushel of sugar is added. The bushel of sugar being, of course, what is regarded by the Excise as the equivalent of a bushel of malt. It may be a widely-varying number of pounds of glucose or syrup or dry sugar, of maize, rice, and the host of things that are classed as sugar, but for the purposes of true comparison they are all reduced to

one uniform standard.

Few people can follow clearly statements of cwts. of rice or sugar, but when they are turned into their corresponding number of bushels of malt all difficulties vanish.

The use of substitutes in Scotland is twenty times greater than in Ireland, as to every five bushels of malt a bushel of sugar is added. Yet there are only two collections in England and Wales where so little is used, and the average is under three bushels.

Of the 74 collections in Great Britain and Ireland, no less than 42 use 30 per cent. and upwards of substitutes for malt. The two worst offenders are London and Warrington, closely followed by Cardiff and Birmingham; and in all these places which collectively represent a very great quantity of beer, under two bushels of malt have a bushel of sugar added in every instance.

Yet the fact remains that malt is a necessity in all beer, and its use cannot be dispensed with.

Animal Parasites.

The chain of animal existence possesses many curious and interesting links. One of these is constituted by creatures which are incapable of perpetuating their existence without the active intervention and direct support of other beings in the links that build up the great chain. Each creature plays its own special part, and it has been ordained in an inscrutable way that these forms low down in the scale of existence shall become conspicuous actors in the great drama of life. Human intellect is stunned at the marvellous ways instinct guides these creatures through their wanderings in their various stages of development to achieve their salvation. As soon as born each knows the part it has to play, and the marvel is how it guides itself successfully through the intricate metamorphoses of its life. Nature, "a mother kind alike to all," has prepared beforehand the food that each living thing is to consume, and instinct again prompts each individual to seek out and devour what suits his requirements best. In the domain of nature it has been preordained that "the stronger shall the weak devour," and the greater proportion of all creatures live on the booty of their own depredations. By the side of those that earn their own food by their independent efforts, there are other creatures that do not prey on their own account, but feed unop the booty gathered in by others. These dependent creatures that do not prey on their own account establish themselves as parasites in the organs of those that do earn their own living. These creatures then that are dependent for their entity on the nourishment supplied by the tissues of others are called parasites. Some require merely a resting place in their host, some require part of the booty of the chase, some consume only the detritus, some feed at the expense of their host, either establishing themselves in his organs or by making periodical marauding excursions to his body. A great number of creatures that are really dependent for their subsistence on the exertions of others are not true parasites. Nature has ordained that many animals shall live in harmony and render each other mutual assistance (mutualists), while others again feed only on the excess food ingested by the host (messmates). The boundary line between commensalism and parasitism is very hard to be drawn, and so far as it concerns our object it is perhaps not necessary for us to split straws over the question. The true parasite, however, is that creature which lives at the expense of another, devouring that which belongs to him and which should go to build up his tissues and repair his tissue waste. Some parasites (cestodes and trematodes) are free at the commencement of existence, and end it in some organ or cavity of the body. Some are imprisoned at the commencement and have a free existence at the close of life (gadflies).

Parasites may be either of animal or vegetable nature. The vegetable parasites may consist of microscopic plants—bacteria, moulds, smuts, rusts, etc.—or of microscopic plants like the dodder, broom-rape, mistletoe, etc. The distinction between an animal and a vegetable form is narrowed to this, that animal forms must have ready formed protoplasm for their food, but vegetable forms can build up their tissues out of elementary chemical substances. Parasites play some great part in the economy of nature, and, at one time, they were thought to arise spontaneously. The mystery surrounding their origin has been dispelled, and it is interesting to study their life-history, as it is only from an accurate knowledge of the life-histories of these pests that any control is capable of being exercised to arrest their development, thereby protecting ourselves and our flocks and herds from invasion. Animal parasites are found widely distributed in nature. Mammals, birds, reptiles, and fishes and many organisms lower in the scales of existence are greatly infested. They may be found dwelling on the skin or inhabiting the tissues and cavities of the organs of their hosts. All animals harbor parasitical worms, and all these worms invade the organs and tissues from without. Speaking generally, they are introduced mainly by food and drink. It is part of the plan of nature that their means of reaching maturity shall be extremely difficult of accomplishment, for if it were ordained otherwise they would completely crush out of existence all other living things. Again, since the means afforded of attaining maturity are so difficult, it has been ordained that there shall be prolific births, for, in the struggle for their precarious existence, few forms indeed succeed in reaching adult age. There are definite laws governing the development of parasites. They are quite incapable of prolonging their existence unless they reach the organs and tissues of the animals upon which nature has destined them to exist. Some, indeed, will not thrive, but absolutely perish, unless they reach particular creatures. Again, not only must they reach particular creatures, but they must also reach particular organs and tissues before existence can be supported. The complexity of their development is a continual round of danger to the maintenance of their existence. Unless this were so, they would become so numerous as to threaten the balance of the scales of existence of all highly-organised animals. A single female may give birth to ova that are capable of developing into millions of adult forms, but circumstances are always so adverse to their development that but few ever succeed in reaching maturity. Nature, taking into account the complexity of the development, has ordained prolific births, full well knowing that only a comparatively few individuals will, in the course of their adventurous careers, overcome the obstacles presented, and reach maturity to prolong their kind. If, indeed, these creatures threaten the flocks and herds of the pastoralist, we have at our command a knowledge of their development, and by the exercise of reasoning intelligence and the application of suitable remedies, we can repel with considerable force destructive invasion. All other forms of animal existence, as before remarked, live upon the results of their own labours. They build up their tissues from booty of their own depredations. Parasites live upon the juices of the bodies of the animals they infest. They, in the main, disturb the health of their host, and tend to bring its existence to an end. For this reason, wherever present, they should be compelled to relinquish the dwelling into which they entered uninvited, and it is by an intelligent application of therapeutical agents and prophylactic measures that we are able to come to the assistance of animals, and rid them of enemies that depreciate their market value, or end their existence. The division of animal parasites infesting our flocks and herds, of which we shall first treat in subsequent numbers, is the cestodes, or ribbon or tapeworms. This season they have been particularly prolific, and our lamb trade has been markedly injured by their appearance in excess. How they maintain their adult existence, how they perpetuate their species, how they pass one generation in an immature form in a creature altogether distinct from the one in which their adult existence is supported, and how they reach these creatures to consummate their marvellous life-history, and what means we should adopt to frustrate their career, are studies of the utmost economic importance to all engaged in the industry of raising flocks and herds. By well-directed efforts producers can lessen mortality, and can secure increased profits from additional attention to the wants and requirements of their stock.—A. A. Brown, M.B.B.S., in the "Victoria Journal of Agriculture."

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

9,916.—Henry Senior Wortley, of Huddersfield, for "Improvement in or relating to machines for crushing oats and like grain."

10,103.—Charles William Jones and Frank Arthur Goldsmith, of Flintz, for "Improvements in harvesting or hand drag rakes."

10,162.—Everard Kitton, of Chancery Lane London, for "Improvements in or connected with horse-drawn field or land rollers."

10,164.—Francis Adrian Miles, of Finsbury, for "Improvements in horse hoes, cultivators, and like implements."

10,202.—Walter James, McBain, of Glasgow, for "Manure distributing machine."

Louth Statute Fair was held on Wednesday. There was a large attendance, but very little hiring was done. First waggoners obtained £23; second waggoners, £18; lads able to plough, £14; grooms, £20; cooks, from £17 to £21; housemaids, £13 to £16; kitchenmaids, £12 to 18; nursemaids, £9 to £11; and useful girls first time out from £7 to £8 per annum.

GARDEN.

Cold, north-easterly winds, dull skies, though with occasional gleams of a wintry sun, and varied by frequent showers of equally cold rain, are still the prevailing conditions. Out of doors nothing grows, and even under glass the nights are so cold that unless artificial heat is used freely the progress made is very slow. The season can scarcely fail now, of being an exceptionally late one, even if not a bad one also. In years like this the grower of fruit, vegetables, or flowers for sale, becomes disheartened, and no wonder, when he sees all his efforts, forethought, and expense nullified by unfavourable and unnatural conditions; sees the more fortunate foreigner pouring his produce into the country by thousands of tons weekly, unhindered and even encouraged in doing so; sees the money that ought to go into his own pocket sent abroad, etc.; and knows that when at length—if ever his tardy crops do mature, the best of the season will be gone and only "bottom" prices will be obtainable.

But what can be done? There is nothing for it but to "grin and bear it," and live on the loss, somehow. The capitalist can cover his land with glass, and so ensure a more favourable atmosphere or climate, but this is too often beyond the means of the small or poor grower, and while glass and fuel are dear (comparatively), freight and transport are cheap—especially those from abroad—and consequently it pays the foreign growers better to send his produce five hundred or a thousand miles than it does the market gardener to grow it at home, and dispose of it almost at his own door.

Very little progress is being made at present, but when the warmer weather does come, as it probably will, in time, something may be done to hasten and improve early-planted potatoes that, having already pushed up through the soil, have been badly nipped or cut down by the recent frost, etc. When this occurs, the plants usually send up several shoots—often ten or a dozen—instead of the two or three produced at first, and if these can be thinned out to some extent, leaving only about three of the strongest, when the growth re-commences, the tubers will be improved in both size and quality. Of course, such work takes time, and on anything like a large scale would be impossible, but if it can be managed it will prove very beneficial. The surplus shoots may either be cut away, just below the surface, or preferably pulled up, giving a smart jerk, but taking care not to disturb the main root. Then a light sprinkling of nitrate of soda, ammonium sulphate, or good guano (such as Allendorff's Fertility), given between the rows just before the principal moulding, will promote a rapid and vigorous growth in the haulm, thus helping to make up some of the time lost, and augmenting the crop.

Until the weather improves, seed of either the dwarf bean or scarlet runners will be almost, if not quite, as well out of the cold soil as in it, although it is now high time for the main crops to be in now. If an early supply is needed, the best plan, where practicable, will be to sow under glass, in boxes, or (preferably) singly in small pots, raising the plants in a gentle warmth, and planting them out when a few inches high.

Directly the weather improves, begin planting out strong, well-hardened tomatoes against sunny walls and fences, or in any sheltered spot. If in a single row, place them 18in. apart, but in the open 2ft. is better, with a space of 2½ft. or 3ft. between the rows. Plant very firmly, and do not make the soil too rich. Continue thinning out root crops, plant out early leeks and celery, and prepare the ground for celeriac. Plant out plenty of cauliflowers and cabbages, and sow more lettuce and endive.

Fruit Garden.

The apple blossom weevil (Anthonomus pomorum) appears to be unusually prevalent and destructive this season, and fresh reports of bad attacks reach me almost daily. The best and almost only means of dealing with this pest are to place sheets of some kind beneath the trees, and then shake them well, throwing the dead and fallen blossoms, etc., into a hot fire at once.

Flower Garden

It is now getting high time to begin planting out the summer bedders, but as long as the cold spell holds the majority will be better under glass. If any beds have to be planted, as sometimes happens, a rough screen had better be rigged up on the windward side, using some stakes and any old mats or sacks, etc.

As the hyacinths, tulips, narcissus, and other bulbs are lifted from the beds do not dry them off at once, but re-plant them closely and rather deeply in any spare bed of light, rich soil, watering in well, and take them up again when the foliage has quite matured. Gladioli that were started in pots should be planted out, giving them deep and mellow soil, and an open, sunny position.

B. C. R.

The Education Bill.

Mr. Henry Chaplin, M.P., has sent the following communication to "The Times":—"I shall be grateful if you will allow me space for a few words upon one aspect of the education question which has hardly received from the Government the attention it deserves.

"I ask this of your courtesy for two reasons. First, because, like some other members who were desirous, I know, of speaking on this branch of the subject, I was unable to obtain the opportunity of doing so in the House last night; and, secondly, because I think that the debate and the division may convey a false impression as to the attitude of many members of the party on the subject.

"I refer to the financial and the rating clauses of the Bill, to which some of us are much opposed, and on which I find myself in the rare position of cordial agreement with Sir W. Harcourt.

"Speaking of the rates, he said: 'It is the one subject in country districts on which people fell more acutely than anything else,' . . . and 'that in those districts a very small addition to the rates is more sensibly felt than in the big towns.'

"My experience concurs with his, and I strongly suspect that he is also right in thinking that 'the fear of rates' in the cases which he speaks of 'is greater than the love of education.'

"Nor can we wonder if it is so. The condition of some of these districts is deplorable. In the corn-growing counties they have passed, and some of them are passing still, through times of the greatest trial and distress, and in truth they are not in a position to bear any further addition to their burdens.

"This has been fully recognised by the Government already. Since 1895 their policy has been, or it was until quite recently, to give to agricultural districts such relief as was found to be possible in respect of rates, and it is just at this moment when they urgently need whatever encouragement and aid is possible that the Government elect to impose upon them this added burden in the form of a new education rate.

"What the people in those districts say themselves, I understand, is this: We raise no objection to the improved education which you propose; on the contrary, we agree with you that it is a matter of great national importance. But if that is so, then it should be met, not by local but by national funds. It is true that we shall not derive the same advantages from your scheme as others will, and for this reason. Our great want at the present time is to keep the people on the land; our object, to induce them, if possible, to stay there. But it is also our misfortune that the better and more highly you educate these people the more certain it is that they want to leave the land at once. And while we are ready and prepared to bear our share of a national burden for a great national purpose, we are neither willing nor prepared, nor will we submit, if we can help it, to bear a heavy addition to our local burdens for a purpose which in that respect will be an injury rather than a benefit to us.

"It is impossible to deny the force of their contention, and this proposal is the more to be regretted because it is not only a complete reversal of the general policy which found expression in the Rating Act of 1896, but it is directly opposed to the recommendations of the Royal Commission which was appointed at that time, and which reported barely a year ago.

"A more able or powerful Commission has seldom conducted an inquiry, and they recommend that education, including technical and secondary as well as elementary education, shall be regarded as a national service and treated accordingly.

"And now, without a word of explanation, in reply to the remonstrances which were raised in the debate, the Government, reversing all their later policy and over-riding their own Commission, prepare to throw the added cost of their education scheme entirely on the rates, and to inflict upon the most impoverished country districts this new and heavy burden.

"What it will amount to no one probably can say; but I heard and I have not forgotten Mr. Forster's Statement on his own Education Bill in 1870. Here is what he said: 'After all it is a very small matter as regards the rate. . . . But should it exceed 3d. in the pound, and I do not believe it will amount to anything like that sum in the vast majority of cases,' etc.

"Would five or even ten times 3d. equal the education rate in some localities at present, and what assurance have we that history may not repeat itself again in this case? If it does so, even partlally, I can imagine nothing more grievous and unfortunate or more ill-timed in the case of some of our country districts.

"This proposal, in my judgment, is the great blot on a Bill with regard to which, in other respects, I should join with you in wishing it success.

"With that exception I should cordially support it, but it is a grave exception, and if it is persisted in it will be, of course, opposed with whatever forces we can muster for the purpose.

"But I venture most respectfully to express the earnest hope that it is not yet too late to reconsider the proposal to throw the additional burdens of this scheme, whatever they amount to, entirely upon the rates."

"Stafford House, St. James's, May 9."

Burning Bricks.

Sir,—At what distance from a publicly repaired and used road may a clamp to burn bricks be set up? For instance, could it be set up, say, within 20 to 25 feet of the centre of such road? Also the same query with regard to house property and the cartilage of same? Your answer, in due course, in your paper, will greatly oblige.

CIVIS.

[*** My opinion is that such proceedings could not be adopted in either of the queries submitted; but it is impossible to answer your questions fully without knowing the bye-laws in force in your district. As to offensive trades, Section 112 of the Public Health Act, 1875, is the one to look at but this section is too long to set out here. I am sorry that I cannot give you a definite reply, but you must see the Clerk to the Council for your district, and he will be able to show you the bye-laws and give you every information. As a ratepayer you are entitled to adopt this course and ask for any information you require.—ED.]

Poultry for Profit

Sir,—Mr. Welch, in his letter to you of 5th inst., desires that I should give some account of the income from my poultry.

I have pleasure in so doing, in the hope that it may induce some others to give this subject the attention it deserves. I may as well explain that during last year we put aside two bins or boxes with two compartments in each, and as either a sack of corn or meal was tipped in it was booked against the poultry, and they were fed entirely from these bins; and in like manner, when eggs were collected or chickens killed they were booked to credit; and by reference to this book I could supply quantities and sorts of food as well as the prices, also quantities of eggs and chicken. But probably the chief interest will be taken in the totals, and they work out as follows:—

	£	s.	d.
Eggs and chickens sold, and increase of stock, for the year 1901	98	0	0
Less cost of food and eggs for setting	45	15	0
Profit	£52	5	0

In this account, be it observed, there is nothing charged for labour or rent, that being more difficult to obtain, because the 100 hens and three ducks, to begin with, are attended to along with the other stock on a 50-acre dairy farm, and no attempt has been made to separate the time devoted to the poultry. The rent, also, cannot be easily got at, as they are partly mixed with the pigs and young stock, and do not exclusively occupy any portion of the land; but when I state that there was upwards of 450 chickens and 30 ducks reared in the year it may be possible for those acquainted with such work to apportion the time needful to be charged; and to those who have had no experience I may say the result to us is highly satisfactory. ROBERT BROWN.

Court Farm, Failand, near Bristol.

May 15th, 1902.

Bedfordshire.

When I finished writing to your readers last time I threw away my pen in disgust and despair, never dreaming that my oft-repeated ambitions would so soon be realised. The fact that the English people are "waking up" at last, and are determined that agriculture shall not die, has put fresh life into my soul, and I am at the old game, with a brand new pen. I don't care a tinker's cuss what are the party politics of the present Government. I know that we have a Government full of sympathy for depressed agriculture, and that is good enough for me. I am intensely sorry that the Opposition are making this corn tax a party question, for, by so doing, they are compelling thousands of Liberal agriculturists either to vote against their political principles, or to show themselves traitors to their own, which is England's greatest industry. I need not say much about the weather, for it is in everybody's mouth. Shivering and grumbling are the order of the day; in fact, I am inclined to grumble a bit myself. It is blasting weather. We had an awful frost last night, and my horsekeeper told me this morning that when he fetched the horses in the grass nearly carried him on the top of it. The corn, naturally, looks bad, but warmer weather would alter all that. Beef is selling well, but the demands for store cattle is not keen, because of the shortness of keep.

Corn Tax and the Price of Bread.

Will you allow me, Sir, to give your many readers a personal illustration of the absurdity of the cuckoo cry (used at the Bury election and elsewhere), that this small corn tax — equal to a quarter of a farthing on a 2lb. loaf—must inevitably raise the price of bread, the profits of the millers and bakers being so small? I farm four miles from Bedford. About a year ago I took a little house in Bedford for my family during the school terms. When I examined my Bedford baker's book I found he was charging me 5½d. per quartern loaf. I at once went to him and protested, saying I was not prepared to pay 5½d. for four pounds of bread, when I had to sell 36 stones of the wheat, which made the bread, for 28s. I further told him that I was only paying 4½d. per quartern loaf at my village home. The baker at once answered, "Yes, but our expenses are so much heavier in the towns than they are in the country." Then I said, "Would you believe it, but one of your Bedford bakers brings the bread from Bedford, and sells it in my own village for 4½d. per quartern loaf." He then told me that as I was a farmer and grew the raw material he would only charge me 5d. for my bread at Bedford. The profits of the miller and baker are so small that they can only just manage to go to the extra expense of taking the bread nearly five miles and then sell it for one penny less than they sell it in their town shop, where the bread is made. This one penny alone means ten shillings per quarter on the wheat, and yet the Bury electors have been so gulled as to believe that the small registration duty of one shilling per quarter on wheat justifies their bakers, who raise their bread one halfpenny per quartern. Never did absurdity go to greater lengths than in this hollow agitation, led by Sir William Harcourt.—Thomas Street (May 14th.)

Carmarthen.

For the last three weeks we have had nothing but cold, piercing blasts from the north-east, with frequent night frosts, with rain and sleet, and on Thursday last the hills in the parishes of Breckfa, and Llanarthney were covered with snow. The wind blew quite a storm, and doing irreparable injury to the blossom of the apple, pear, plum, and cherry trees, where there were great prospects of an abundant crop; the trees were white with blossom. We have had heavy showers of hail and sleet, accompanied by some thunder and lightning. Few kinds of apple blossom were not sufficiently expanded to be readily injured, and it is hoped they have been saved. Vegetation is exceedingly backward now in the middle of May. The oak and ash have shown very little of their foliage, and everything else is very backward. Most farmers in this county have sent their cattle to grass, but they have only half a bait, and are consequently mostly in poor condition. Fat beasts are scarce, and are in request at from 6d. to 7d. per lb. Store cattle are in demand and prices improving, and, when we have grass, will be in greater request. Fat sheep sell at about 8d. per lb., and fat lambs at 10d. per lb.—D. P. (May 14th.)

Lancashire (North).

We can only say that after the mild and damp winter, we are perhaps later now in growth than for very many years, and the prospects of an average hay crop are very doubtful. With night frosts, pastures show no signs of growth, and corn has gone off considerably in colour. The few cold showers we have had have prevented that absolute ruin caused to oats by last year's drought; at the same time the outlook is not too promising.

Lambs are reported a very good crop, and losses among ewes not in any way unusual. Prices of fat cattle and sheep keep up well. Store stock are also correspondingly dear, and unless beef and mutton maintain the present level (which is hardly likely when grass is plentiful) there will be little or no margin for grazing.

Judged by the bloom, orchards should be overloaded, but it remains to be seen what harm the cold winds and night frosts have done, and we think it will be great.—(May 15.)

Somerset (West).

The weather for some weeks has been cold and dry, and the season is backward. The barley and other corn crops, however, look better than could be expected under the conditions. Rain has now fallen, and looks like more. This is bad for our County Show, but I hope it will bring warmer weather and an improvement generally. Grass is by no means plentiful, although sheep have now been on trefoil for some time, and hay crops can hardly be other than light. Mangels are now under favourable conditions, but they have made little progress as yet, and the work on the farm is generally forward. Beef is higher than for some years, whilst mutton has greatly improved. The supply of the former, however, is in few hands.—S. K. (May 15).

Wilts (North).

The prospects for the summer season have of late been by no means encouraging, but it is hoped that the change in the weather which has now apparently taken place may be permanent and beneficial. On the whole, the past winter cannot be said to have been a very unfavourable one, as there was but little snow. This district was rather better provided with provender for the stock than many, and has, consequently, been quite "a happy hunting ground" for the purchasers of hay, who have now pretty nearly denuded it of that article, which, if the next crop should be light, of which there are more unlikely prospects, must command a very high figure. Buyers from very long distances have come into this neighbourhood. Beef is scarce, and, as everywhere besides, is selling well. Veal and fat pigs are also at good prices. It is hoped that the potatoes and mangolds out of the ground may not suffer from the frost of yesterday morning.—W. F. P. (May 15).

Worcestershire.

Agriculturists generally are looking with some anxiety for a change in the weather, this "winter ling'ring in the lap of May," offering anything but a pleasant prospect. Cold easterly winds have been unusually prevalent throughout the month, retarding growth and causing farmers to fear a visit of King Frost, which just now would prove truly disastrous. The favourable conditions under which tillage and seeding operations were carried out are clearly "en evidence" in the forward state of the growths, despite the drawbacks which have since been experienced. Corn crops, on the whole, are looking promising. Here and there, it is true, autumn-sown wheat is thin on the ground, and the cold winds have caused it to take on an unhealthy yellowish tinge instead of the "port wine colour" which is so welcome to the grower at this season of the year. A few days of warm sunshine would quickly rectify matters in this direction. Satisfactory progress is being made by such crops as vetches, winter barley, rye grass, and clover, but complaints are rife of the ravages of the wireworm in oats.

Graziers and dairy farmers are looking anxiously for more rain and plenty of warm sunshine for the early growth of herbage, the cold windshaving checked the young growth and yellowed the older growth. The large number of young cattle coming into the markets is doubtless due to this shortness of keep rather than to any overstocking, for the rickyards are mostly empty of hay and straw as the result of last year's shortage, one of the worst on record. A whole rick of hay or corn is daily becoming a greater curiosity. Most farmers, too, are becoming reconciled to the fact that the registration duty on corn included in the Budget will mean a considerable burden rather than a relief. Assuming they benefit by the price of corn, the extra cost of purchased goods will be very heavily in excess.

The fruit prospects are distinctly good, though it is yet full early to say with any certainty how far the cold winds have affected them. There is everywhere a profusion of plum, pear, cherry, and apple blossom, making the country for the most part a veritable flower garden. Fortunately, the nights have been free from frost, and generally early precautions have been taken to fight the insect pests. There was an unusually large quantity of winter moths, but the grease banding, which is now very generally adopted, should do much to combat the resulting profusion of caterpillars, which are now hatching out. The sawfly has commenced its destructive attacks upon the gooseberry and currant bushes, and aphides are too much in evidence to be pleasant. Should there be no serious damage by frost, the yield of fruit should be large, and farmers will do well to study carefully the methods of their Continental neighbours in marketing their produce. — "Birmingham Daily Post" (May 12th.)

Monday (May 12th).—Rainy and unsettled weather prevailed over the greater portion of our islands, and the temperature continued very low for the time of year. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, over nearly the entire kingdom, but the amounts were mostly small. The wind had again become northerly over the entire country, and in Ireland it had increased considerably in strength. The mid-day temperatures were slightly above fifty degrees in the South and West, but at places in the North they were not much above forty degrees.

Tuesday (May 13th).—The weather was very unsettled over the Northern portion of our islands, and snow and hail were reported in places. Rain was measured in the morning, as the result of the fall since the previous day, in the Northern and Eastern districts, but the amounts were everywhere small. A northerly wind was still blowing over the entire country. In the morning, at Aberdeen, the temperature was lower than in any other part of Western Europe, being seven degrees cold than at Bodö, within the Arctic Circle. In London the highest temperature was forty-eight degrees, which is fourteen degrees below the average.

Wednesday (May 14th).—The weather still continued very cold over the whole of Western Europe. Frost occurred during Tuesday night in the Northern, central, and Eastern portions of our islands, and, open to the sky, the exposed thermometer fell several degrees below the freezing-point. The mid-day temperatures were generally ten degrees and more below the average, the thermometer, where highest, only slightly exceeding fifty degrees. A northerly wind was still blowing in most parts of our islands. Small amounts of rain were measured in the morning in most places, as the result of the fall since the previous day, and slight showers were again experienced, whilst at Yarmouth sleet was reported. Frost occurred in London during Tuesday night, and the exposed thermometer fell eight degrees below freezing-point. The highest temperature in the Metropolis during the day was fifty-four degrees.

Thursday (May 15).—Rainy and unsettled weather prevailed in most parts of our islands, and the wind generally had become south westerly. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, over nearly the entire kingdom, and at the Western stations the amounts were fairly large. Temperature had risen generally, but the thermometer was still many degrees below the average. There was more cloud than of late during Wednesday night, and consequently the temperature did not fall so low as on several previous nights, and there was nearly an absence of frost.

AGRICULTURAL SHOWS

FOR

1902.

MAY 19.—King's Heath Horse Show, at King's Heath. Secretaries, Messrs. Bailey and Poste, 93, High Street, King's Heath.

MAY 19.—London Cart Horse Parade Society, at Inner Circle, Regent's Park, London. Entries close, April 28; late entries, May 5. Secretary, F. F. Euren, 12 Hanover Square, London, W.

MAY 19.—Lydney and District Farmers' Club, at Lydney, Hon. Secretary, F. Montagu Lloyd, The Grange, Newnham-on-Severn.

MAY 19.—Ixworth Farmers' Club, at Bury St. Edmunds. Secretary, Chevell Lawrence, jun., Bury St. Edmunds.

MAY 19.—Clitheroe Agricultural Association, at Clitheroe. Secretary, T. Robinson, 3, Wesleyan Road, Clitheroe.

MAY 20 and 21.—Notts Agricultural Society, at Nottingham. Entries close, May 3. Secretary, W. H. Bradwell, Thurland Street, Nottingham.

MAY 21.—Ormskirk and Southport Agricultural Society, at Southport. Entries close, May 10. Secretary, E. C. Stretch, 15, Moor Street, Ormskirk.

MAY 21.—Reigate and Redhill Horse and Hound Show, at Reigate. Secretary, Eustace Frith, Reigate.

MAY 24.—Accrington Agricultural Society. Entries close, May 14. Secretary, F. C. Riley, 3, Church Street, Accrington.

MAY 26.—Newchurch and District Society, at Newchurch, near Manchester. Entries close, May 20. Secretaries, Messrs. Mitchell and Burrows, Newchurch, near Manchester.

MAY 27, 28, 29, 30, and 31.—Bath and West and Southern Counties Society, at Plymouth. Entries close: Implements, March 18; Stock and Produce, April 7 (post entries and double fees, April 14); Poultry, May 2; Harness Horses and Jumping, May 10. Secretary, T. F. Plowman, 4, Terrace Walk, Bath.

MAY 28 (about).—Eastern District of Stirlingshire Agricultural Association, at Falkirk. Entries close, May 21. Secretary, W. Wright, Newmarket Street, Falkirk.

MAY 23.—Eastern District of Stirlingshire Agricultural Association, at Falkirk. Entries close, May 22. Secretary, W. Wright, Newmarket Street, Falkirk.

MAY 31.—Batley and District Agricultural Society, at Batley. Entries close, May 24. Secretary, T. Machell, 28, Beaumont Street, Batley, Yorks.

JUNE 3 and 4.—Wiltshire Agricultural Association, at Swindon. Entries close, May 6. Secretary, J. Welch, Market Lavington, Devizes.

JUNE 4.—Yealmpton Agricultural Society, at Yealmpton (seven miles from Plymouth). Secretary, John Pearse, 15, Princess Square, Plymouth.

JUNE 5.—Renfrewshire Agricultural Society, at Paisley. Entries close, May 29. Secretary, B. Lang, Solicitor, Paisley.

JUNE 5 and 6.—Shropshire and West Midland Agricultural Society, at Shrewsbury. Entries close:—Implements, April 21; stock, April 28. Secretary, T. Whitfield, junr., 11, Talbot Chambers, Shrewsbury.

JUNE 5 and 6.—Suffolk Agricultural Association, at Ipswich. Entries close, May 7. Secretary, Robert Bond, Old Bank House, 6, Butter Market, Ipswich.

JUNE 6.—Kintyre Agricultural Society, at Campbeltown. Entries close, May 23. Secretary, G. Erskine Inglis, Estate Offices, Campbeltown, Argyllshire.

JUNE 7.—Ashton-under-Lyne and District Agricultural Society, at Hurst. Entries close, May 31. Secretary, T. E. Hewitt, 97, Katherine Street, Ashton-under-Lyne.

JUNE 10.—Huntingdonshire Agricultural Society, at St. Neots. Entries close, May 20. Secretary, A. G. Dilley, Market Hill, Huntingdon.

JUNE 10, 11, 12, and 13.—Royal Counties Agricultural Society at Reading. Entries close:—Implements, April 5; post entries, April 12; stock, April 19; late entries, April 26; poultry, May 10. Secretary, F. Simons, Basingstoke.

JUNE 11.—Edinburgh Agricultural Association, at Edinburgh. Entries close, May 19; post entries, May 24. Secretary, J. Wylie, J.P., Royal Bank, Leven Street, Edinburgh.

JUNE 11 and 12.—Northamptonshire Agricultural Society, at Daventry. Entries close, May 14. Secretary, A. E. Lovell, Harnole, Northampton.

JUNE 11 and 12.—Royal Cornwall Agricultural Association, at Camborne. Secretary, H. Tresawna, Lamellyn, Probus.

JUNE 12.—Waltham Cross and Three Counties (Essex, Herts, Middlesex) Horse and Foal Show Society, at Waltham Cross. Entries close, May 21. Secretary, J. Crawter, junr., Cheshunt.

JUNE 13.—Stirling Agricultural Society, at Stirling. Entries close, June 5; post entries, June 7. Secretary, Andrew C. Buchanan, 26, Port Street, Stirling.

JUNE 13 and 14.—Richmond (Surrey) Horse Show Society, at Richmond. Entries close, May 24; double fees, May 26. Secretary, C. Capel Smith, 1, The Little Green, Richmond, Surrey.

JUNE 14.—Ossett Agricultural Society. Entries close, June 7. Secretary, A. Shaw, Ossett.

JUNE 14.—Ramsbottom and District Agricultural Society, at Two Gates, Ramsbottom. Entries close, June 7. Secretary, M. Bortwistle, 8, Garden Street, Ramsbottom.

JUNE 17.—Murrow Foal Show, at Murrow. Secretary, A. Huddlestone, Murrow, Wisbech.

JUNE 17, 18, and 19.—Herefordshire and Worcestershire Agricultural Society, at Hereford. Secretaries, A. Edwards and T. H. Edwards, Corn Exchange Offices, Leominster.

JUNE 18.—Thorne Agricultural Society, at Thorne. Entries close, June 1. Secretaries, C. Haycroft and J. Servant, Thorne, Doncaster.

JUNE 18 and 19.—Norfolk Agricultural Association's Summer Show, at Norwich. Entries close, May 19. Secretary, Caleb Barker, East Harling, Thetford, Norfolk.

JUNE 18 and 19.—Glasgow Agricultural Society's Summer Show, at Scotstoun, Glasgow. Entries close: Implements, May 21; stock, May 28. Secretary, A. Russell, 54, West Nile Street, Glasgow.

JUNE 19 and 20.—Essex Agricultural Society, at Romford. Entries close: Stock, May 19: Implements and Dairy, May 26; Poultry, June 2. Secretary, F. Taylor, 17, Duke Street, Chelmsford.

JUNE 24 and 25.—North West of Ireland Agricultural Society, at Londonderry. Entries close, June 11. Secretary, Ashmur Bond, Castle Street, Londonderry.

JUNE 28.—Dalkeith Agricultural Society, at Woodburn Park, Dalkeith. Secretary, T. Watson Dods, Dalkeith, N.B.

JUNE 28.—Keighley Agricultural Society, at Keighley. Entries close, June 21. Secretary, F. S. Pearson, Old Bank Chambers, Keighley, Yorks.

JULY 1.—Bishop Auckland Agricultural Society, at Bishop Auckland. Entries close June 24. Secretary, W. Burkitt, Grange Hill, Bishop Auckland.

JULY 2.—Barnstaple Agricultural Society, at Pilton Park. Hon. Secretary, T. Yeo, Barnstaple.

JULY 2.—Mid-Kent Agricultural Association, at Maidstone. Entries close, June 11. Secretary, P. Champion, 3, Market Buildings, Maidstone.

JULY 2.—Scunthorpe Agricultural Society, at Scunthorpe. Entries close, June 25. Secretary, G. W. Johnson, 40, High Street, Scunthorpe.

JULY 2.—Mansfield and District Agricultural Society. Secretary, G. Cox, West Gate House, Mansfield.

JULY 2 and 3.—Leicestershire Agricultural Society, at Leicester. Secretary, H. C. Ardron, Syston, Leicester.

JULY 2 and 3.—Doncaster Agricultural Society, at Doncaster Race Common. Entries close, June 7. Secretary, F. H. Chafer, 9, Market Place, Doncaster.

JULY 2 and 3.—County Cork Agricultural Society's Summer Horse and Sheep Show, at Show Yard, Cork Park, Cork. Entries close, June 9. Secretary, E. Corrigan, 21, Cook Street, Cork.

JULY 3.—Brentwood and Mid-Essex Horse Show Society, at Middleton Hall, Brentwood. Entries close, June 21. Secretary, F. A. Thorne, Brentwood, Essex.

JULY 4.—Ripon and District Agricultural Society, at Ripon. Entries close, June 26. Secretary, B. North, 31, Market Place, Ripon.

JULY 4.—Malton Agricultural Society, at Malton. Entries close, June 14. Secretary, T. Mitchell, the Mount, Malton.

JULY 5.—West of Fife Agricultural Society, at Dunfermline. Entries close, June 21. Secretary, R. Husband, Solicitor, Dunfermline.

JULY 5.—United East Lothian Agricultural Society, at Amisfield Park, Haddington. Entries close, June 20. Secretary, J. Stirling, Haddington.

JULY 5, 7, 8, 9, 10, and 11.—Royal Agricultural Society of England, at Carlisle. Entries close: Implements, &c., March 15; post entries, at double fees, April 1. Live Stock (horses, cattle, sheep, pigs), April 15; at post entry fees, April 30; late fees (last day), May 15. Poultry and Farm Produce, April 30, at ordinary fees; at post entry fees (last day), May 15. Secretary, Sir Ernest Clarke, 13, Hanover Square, London, W.

JULY 8, 9, and 10.—Peterborough Agricultural Society, at Peterborough. Entries close, June 14. Secretary, J. E. Little, Cowgate, Peterborough.

JULY 9.—Southmolton Agricultural Association, at Southmolton. Entries close, June 27. Secretary, J. Blackford, F.A.I., Castle House, Southmolton, N. Devon.

JULY 9.—East Surrey Agricultural Association, at Addiscombe Farm, Croydon. Secretary, Harry Fuller, 83, High Street, Croydon.

JULY 9 and 10.—Mallow Agricultural and Show Society, at Mallow. Secretary, N. F. Davin, Mallow, Co. Cork.

JULY 15, 16, 17, and 18.—Highland and Agricultural Society of Scotland, at Aberdeen. Entries close: Implements, May 12; Stock, June 9. Secretary, J. Macdonald, 3, George IV. Bridge, Edinburgh.

JULY 16 and 17.—East Kent Agricultural Society, at Ashford. Entries close, June 2; post entries, double fees, June 9. Secretary, P. M. Collard, Little Barton, Canterbury.

JULY 16, 17, and 18.—Lincolnshire Agricultural Society, at Boston. Entries close, June 10. Secretary, S. Upton, St. Benedict's Square, Lincoln.

JULY 17.—Halesworth Horse Show Society, at Halesworth. Hon. Sec., H. Brown, Halesworth.

JULY 17.—Great Chesterford Colt and Foal Society. Entries close, July 5. Secretaries, Messrs. C. Edward E. Cooke, Hinxton Grange, Saffron Walden, and W. C. Emson, Strethall Hall, Littlebury, Saffron Walden.

JULY 17.—Herts Agricultural Society, at Hatfield. Entries close, June 26. Secretary, W. A. Sherriff, Hatfield, Herts.

JULY 17.—Royal Isle of Wight Agricultural Society, at Newport, I.W. Entries close, June 17. Hon. Sec., H. J. Way, Newport, Isle of Wight.

JULY 17.—Stratton and Holesworthy Agricultural Society, at Bude. Secretary, H. J. Mackenzie, Granville Estate Office, Bude, North Cornwall.

JULY 17.—Thorney Shire Foal Society, at Thorney Park. Entries close, July 10. Secretary, H. Horrell, Thorney, Peterborough.

JULY 18.—Driffield and East Riding Agricultural Society, at Great Driffield. Entries close: Stock, July 3; dogs, July 8; poultry, etc., July 10. Secretary, T. Holtby, Exchange Street, Driffield, Yorks.

JULY 22, 23, and 24.—Gloucestershire Agricultural Society, at Tewkesbury. Entries close, June 16; post entries (double fees), June 23. Driving and Jumping, entries close, July 7. Secretary, F. J. Townsend, Cirencester.

JULY 23.—Bridlington Agricultural Society, at Bridlington. Entries close, July 12; post, July 14. Secretary, B. M. Townsend, Quay Road, Bridlington.

JULY 23.—Cambridgeshire and Isle of Ely Agricultural Society, at Chatteris. Entries close, Stock, June 30; post entries (double fees), July 5; Implements, July 5. Secretary, R. Peters, 7, Downing Street, Cambridge.

JULY 23.—Chesterfield and East Derbyshire Agricultural Society, at Chesterfield. Entries close, July 8. Secretary, T. Wardle, Auctioneer and Valuer, Chesterfield.

JULY 23.—Cleveland Agricultural Society, at Middlesbro'. Entries close, July 12. Secretary, T. S. Petch, Liverton Lodge, Loftus, R.S.O., Yorks.

JULY 23.—Wadebridge District Agricultural Association, at Wadebridge Hon. Secretary, T. Rickard, Cleveland House, Wadebridge.

JULY 23.—Chiltern Hills and Southern Bucks Agricultural Association, at Slough. Secretary, J. Bliss, 26, High Street, High Wycombe.

JULY 23.—Perry Barr and District Agricultural and Horticultural Society, at Perry Hall Park. Secretary, J. B. Ross, Perry Barr, Birmingham.

JULY 23.—Upholland Horse Show. Secretary, J. H. Wright, Sunny Bank, Orrell Port, near Wigan.

JULY 23, 24, and 25.—Northumberland Agricultural Society, at Newcastle-on-Tyne. Entries close, June 28. Secretary, W. J. Bolam, Berwick-upon-Tweed.

JULY 23, 24, and 25.—North-east of Ireland Agricultural Association's Horse and Sheep Show, at Belfast. Entries close, June 28. Secretary, K. MacRae, 37, Donegall Place, Belfast.

JULY 24.—Bedfordshire Agricultural Society, at Bedford. Entries close, June 21; post entries, double fees, June 28. Secretary, H. R. J. Swaffield, Ampthill.

JULY 24.—Maltby Horse and Foal Association, at Maltby. Secretary, J. R. Spear, 12, Carlton Avenue, Rotherham.

JULY 24 and 25.—Tunbridge Wells and South-Eastern Counties Agricultural Society, at Eridge Road, Tunbridge Wells. Entries close:—Live stock, June 18; post entries, June 23; implements, June 18; late entries, June 23. Secretary, W. Roper, 6, Kentish Buildings, Tunbridge Wells.

JULY 25.—Hutton Cranswick Horse, Foal, and Horticultural Society, at Hutton Cranswick. Entries close, July 21. Secretary, G. Rayner, Hutton Cranswick, Hull.

JULY 26.—Lauderdale Agricultural Society, at Lauder Entries close, July 11. Secretary, G. L. Broomfield, Lauder.

JULY 28.—Shirley Horse Show, at Shirley. Entries close, July 22. Secretary, J. Clews, Shirley, near Birmingham.

JULY 29 and 30.—Devon and Exeter Horse Show, at County Ground, Exeter. Hon. Secretaries, C. J. Ross and P. Whitton, 24, Gandy Street, Exeter.

JULY 30.—Morayshire Farmers' Club, at Public Park, Elgin. Entries close, July 16. Secretary, W. Rose Black, Town and County Bank, Limited, Elgin.

SEPTEMBER 18.—Market Harboro' Horse Show, at Market Harboro'. Entries close, August 30; double fees, September 6. Secretary, F. Berry, Auctioneer, Market Harboro'.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: There has been a little better inquiry during the past week. Barley was about 3d to 6d per qr dearer. Wheat advanced 6d to 1s per qr on the week. Oats improved 6d to 9d per qr. Maize steady. Flour made 6d per sack more money.—NIXON, GOWER, AND CO.

Mark Lane. Wednesday.—This was quite the usual mid-weekly market on the Corn Exchange, but although little desire was evinced for fresh engagements of any magnitude, buyers were again willing to entertain the recent high limits imposed respecting bread and feeding stuffs. Home grown wheat continues all but exhausted here, and, locally, millers still take what little remains without hesitation. Whites range at 33s to 35s, and reds at 32s 6d to 34s 6d per qr, delivered up. Free on rail country, the general range of red is 32s 6d to 33s 6d. Foreign generally unchanged. American descriptions have recovered last Monday's depression. No. 1 Northern Duluth, inspection, 32s 6d ex granary. 32s ex ship. Hard Kansas in latter position. 32s 6d. Northern Manitoba, on passage, 32s 6d and 31s 6d for No. 1 and No. 2 respectively. Of white wheats, Californian held for 32s 6d; Victorian, 32s 9d, ex ship; with New Zealand remaining exhausted. Scarcity of American patents and bakers' grades is still severely felt in the flour market on spot at present, while buyers seem inclined to go out of stock before entering into fresh engagements at a higher range. Mayblossom fancy patents, 25s 6d, ex granary; Minnesota firsts (Ceresota, Golden Lily, Pillsbury Best), 25s to 25s 6d. Second patents quoted at 23s to 24s. Of bakers' grades there are practically none on spot. Iron Duke, 21s to 21s 6d, ex store, and ordinary qualities held for 20s 9d. Princess Royal being nominal at 21s 3d per sack. Australian patents, 23s to 24s, ex store, 280lb. Top price Town made 30s net; No. 1 households quoted at 23s cash at the mill door; extras, 1s more. Town households, 24s 6d whites, 27s 6d per sack, delivered to the baker. Cascadias, 23s 3d, ex store. Hungarian flour remains extremely scarce. Whole meal, 18s per ton. Grinding barley rather firmer, and in small compass. Odessa held for 20s 6d, ex ship now due, and 21s 3d ex quay. Danubian in the former position, 20s. Foreign malting fairly maintained. Chillian Chevalier ruling at 33s to 34s. Oats again the turn better to-day for Baltic sorts, which continue in short supply, with other classes commanding full rates. Common Libau, 20s 3d ex quay, 35lb; 40lb Libau, etc., bold, 23s 6d; and good 46lb Danubian held for 23s. Fine Konigsberg, 25s, ex quay, 40lb. New Zealand ordinary bluff, 27s to 28s, 384lb, ex store. English and Scotch remain at enhanced rates locally. Maize unchanged. Odessa, 22s 3d, ex ship; 22s 9d to 23s, ex quay. Mixed American, as of late, is out of supply ex granary, and not named ex ship. Imported beans and peas unaltered. Egyptian splits, 22s 6d; and Mazagans, 23s 9d, ex mill, 320lb; New Zealands, 36s to 38s, ex store, 504lb.

COUNTRY.

Barnsley, Wednesday.—The market was still slow, but prices remained firm. Wheat made up to 12s per load, white oats 26s; black oats, 24s per qr.

Banbury, Thursday.—Wheat (red), 32s to 33s per qr; beans (new), 37s to 38s per qr; oats (black), 23s to 24s per qr. No wheat on offer, and prices very firm.

Braintree. Wednesday.—There was a slight fall in prices. Red wheat in the mill made from 30s to 33s 6d per quarter, white 30s to 34s.

Birmingham, Thursday.—The market was very quiet before the holidays, and attendance was limited. English wheat was scarce, and prices were unchanged at 32s 6d to 33 per qr. In the foreign department No. 2 Northern Manitobas were 6s 5½d, and No. 2 6s 4d; No. 1 Northern Duluth, April-May, 6s 5½d per cental, Liverpool. An increase of 3d to 6d was asked for maize, round offering at 23s to 23s 6d (Sharpness), 23s to 24s (Liverpool), and Plate at 23s (Sharpness), and 22s 6d (Liverpool), and Galatz-Foxanian 22s 6d to 23s (Bristol). Grinding barley made 19s 3d to 20s 3d at Sharpness, and 20s 6d at Liverpool. English white oats were 6d dearer, and passed at 23s 6d to 25s 6d per qr Birmingham. Beans were unchanged at 14s 6d to 14s 9d per bag for new, and 16s for old, at Birmingham.

Bury St. Edmunds.—We had a dull market on Wednesday, and business was very slack. Wheat, however, being in short supply, made last week's prices, but no more. Reds, 32s 6d to 33s per 504lb, and up to 34s per 8 imperial bushels for heavy samples. Oats scarce and dear, with a strong demand at 24s to 26s per qr. Beans and peas also scarce and very firm, at fully last week's prices. Maize rather easier, at 23s to 23s 6d per qr. Maize germ steady, £6 5s per ton. Other feeding stuffs and corns in quiet demand, but steady.

Birmingham, Thursday.—Very little business transacted at market. English wheat scarce and selling at 33s per qr. Foreign wheats unchanged. Grinding barley, 19s 3d to 20s 3d per qr sharpness. Maize 3d to 6d per qr dearer, roll round realising 23s to 23s 6d; and Plate 23s per qr Sharpness. English white oats 6d per qr higher, commanding 23s 6d to 25s 6d.

Bristol. Thursday.—Scarcely enough English wheat offering to-day to test values. Foreign very firm. White descriptions rather dearer. Barley firm. Maize unaltered. Oats, turn in sellers' favour. English wheat, 31s to 31s 6d; American, 32s 6d to 34s. Grinding barley, 19s 9d to 20s 3d. Oats, Irish black, 21s 3d to 21s 6d. Maize, round, 22s 6d to 22s 9d.

Bristol, Thursday.—Trade has been moderate since our last. A very scanty supply of English wheat on market to-day, with value unchanged. Foreign wheat very firm. Grinding barley 3d. lower, owing to numerous arrivals. Maize unaltered. Oats also without change. Flour trade inactive, with values same as last week. GRACE BROS.

Chichester, Wednesday.—There was a good attendance, and a fair amount of business was transacted. Wheat and flour showed no quotable change. Feeding stuffs firm at late rates.

Driffield, Thursday.—Very little doing in grain. Wheat maintains the full price of last week of 31s per qr; oats, 23s to 24s per qr.

Glasgow. Wednesday.—There was the usual attendance at our market to-day. Wheat 1½d to 3d per boll dearer. Flour held for full prices, with fair trade passing. Indian corn sold out on spot. Round maize firm, with steady trade. Home and foreign oats strong, with fair business doing. Grinding beans and Canadian pease steady. Barley quiet. Bran and thirds steady. Oatmeal firm.—GIBSON AND CLARK.

Goole, Wednesday.—Moderate attendance, and an average supply of grain. Wheat firm at last week's prices, but not quotably dearer. Oats are very firm, and sellers ask very high prices, which checks business. Beans steady and quiet.

Hereford, Wednesday.—Very small attendance. Foreign wheats were slightly easier since last week; English wheats maintained their prices. There was nothing doing in barleys. Maize was firm, and oats steady at recent advances. Quotations:—Wheat, white 3s 10d to 4s per bushel; red, 3s 9d to 3s 10d; barley, 3s to 4s; oats, 2s 9d to 3s 6d; beans, 4s 3d to 4s 6d; maize, 3s to 3s 3d; vetches, 6s 6d to 7s 6d.

Leeds, Tuesday.—There is still no improvement in the weather, temperature keeping exceedingly low. The unfavourable Bureau Report, smaller shipments, and continued steady Continental demand all combined impart a very strong tone to the trade. English wheat is scarce, and held for high prices, and holders of foreign insist upon 3d to 6d per qr advance on last week's rates. Maize 3d dearer. Beans and oats steady.—DUNNS AND CO.

Manchester, Thursday.—Market strong. English wheat: Hardly anything offered, and prices nominal; foreign very firm; a good demand at 1d to 1½d per cental dearer. Maize met a quiet trade at unchanged rates. Barley in good demand, and 1d per bushel dearer. Oats very scarce, and 1d dearer. Beans quiet and unchanged. Peas quiet and unchanged. Flour met a better trade at extreme prices, though not quotably dearer.

Manchester, Thursday.—Quotations of wheat have shown little irregularity during the week, but to-day the market, both in English and foreign descriptions is found to be pretty much as seven days ago. Flour has continued quiet, but steady rates are maintained by millers. Indian corn is firm, at late rates, with a steady demand. Oats and barley are well held. Peas and beans tend on easy side.

Maidstone, Thursday.—The firm tone in the wheat trade continues, with a slight tendency to further advance, though we do not note a rise of more than 6d on recent high cost in comparison with a month or two ago. Barley sells fairly well, and rather more this week paid for it. Oats are remarkably strong now; no sign of relapse. Maize is unmoved. Beans and peas are dear, being very scarce, especially English. Not any alteration in rye, hemp, brank, lerfe, or millet.

Newport, Wednesday.—There was an average attendance, and business showed improvement, wheat being much firmer and 3d to 6d dearer on the week. Maize, barley, and oats were very firm and in demand. Flour, fines, 23s 6d per sack.

Plymouth. Thursday.—Very fair attendance. Maize and oats firm, but unchanged. Wheat firm and in scarce supplies. Barley 3d dearer. Great deal of rain in district lately.—ORLANDO DAVIS AND CO.

Ripon, Thursday.—A small attendance, with a light show of samples. English wheat and maize 6d dearer. Wheat, English, new, 31s 6d to 32s 6d; ditto foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s 6d to 26s 6d per qr; beans, 1s per stone.

Romford. Wednesday.—English wheat was unchanged at last week's full prices. Small supply. Red wheat 33s 6d, white wheat 34s to 34s 6d. per qr.

Sheffield. Tuesday.—English wheat was in very small supply, and was held firmly for last week's rates. Late rates also prevailed for foreign wheat, which was in fair demand. Beans and maize commanded slightly higher prices. English oats were a blank. Quotations:—Wheat, white, 32s to 34s; ditto red, 32s 6d to 34s per 504lb; oats, new white, 26s to 27s; ditto, new black, 23s to 24s per 336lb; barley, grinding, 23s 6d to 24s; ditto, malting, 30s to 32s per 448lb; peas grinding, 35s to 37s; ditto, blue, 53s to 80s; beans, Egyptian, 34s to 36s per 504lb; barley, English, new, 37s 6d to 38s per 532lb; Indian corn, ditto, English, new, 37s 6d to 38s per 532lb; Indian corn, small, 23s 6d to 24s 6d; ditto, American mixed, 26s 6d to 29s per 480lb.

Spalding, Tuesday.—Not much wheat offering. The price remained 32s 6d per qr. Oats, 24s 6d per qr. Beans, peas, and barley unchanged.

Stockton, Wednesday.—There was no farmers' wheat showing. Owing to the firmness of the American markets, holders of foreign wheat made 6d advance on the week, there being a better demand. Oats and maize strong.

Wolverhampton, Wednesday.—There was a quiet market, with scarcely any alterations in quotations:—Wheat, new, 12s 6d to 13s per 216lb; oats, 16s to 17s; beans, old, 16s to 17s 6d; new, 15s to 16s per 196lb; barley, 35s to 48s per 484lb; new maize, 27s to 28s; old, 29s 6d to 30s 6d per 480lb.

Worksop, Wednesday.—Small attendance, and very little grain on offer. Last week's increased rates fully maintained. White wheat, 31s 6d to 32s 6d; red wheat, 31s to 32s; grinding barley, 27s to 29s; white oats, 24s to 26s; black oats, 23s to 25s; round maize, 24s 6d to 26s per qr.

FOREIGN.

Paris, Wednesday.—The weather seems likely to become more settled; the temperature, although still fresh last night, rose perceptibly this afternoon, and it is hoped that farmers' wishes for a warm and dry period are at last to be realised. The native wheat market again did not present much animation; to-day the attendance, moreover, was rather scanty, farmers not being any better represented than of late. They find it easier to dispose of some lots of wheat in their own markets to the small millers, who, still finding a poor sale for their flour, are in no hurry to engage in operations of any importance. Trade still continues just as quiet. The weaker position of the foreign markets and the favourable outlook for the growing wheat contribute to render buyers very reserved; nevertheless, sellers are still somewhat tenacious, and consequently prices are maintained at about the previous level, despite the rather dull feeling in the "Marche de Paris." In short, values may be quoted the same as last week. Choice Red Wheat 37s 10d to 38s 3d, and White 37s 10d to 38s 9d per 480lbs. Flour.—Fleur-de-Paris.—The market opened sustained but closed quiet at the following prices:—May, 26s 10½d to 27s 1½d; May, 27s 1½d to 27s 5d; July-August, 27s 5d to 27s 8d; and Sept.-Dec., 26s 7½d to 26s 10½d per 280lbs. Consumption Marks Flour. — Although dealers and bakers continue only to purchase for their immediate requirements rates are fully sustained. Quotations are as follows:—Choice Marks 31f. to 32f. (31s 5d to 32s 5d). First Marks 30f.50 to 31f. (30s 11d. to 31s 5d), Good Marks 29f.75 to 30f.50 (30s 2d to 30s 11d), Ordinary Marks 28f.50 to 29f.75 per 100 kilos (28s 11d to 30s 2d per 280lb.). Rye.—Owing to the fears entertained of the crop, the demand has improved, and prices are firmly held in all directions, good conditioned corn being held at 26s 1d, with buyers at 25s 8d per 480lbs. Oats.—The continuance of cold weather is prejudicial to the young crop, and if the frosts continue the plants will lose strength and become deteriorated. Here the situation remains unchanged, with prices fully supported and less ample offers. Grey Beauce, 23s 2d to 23s 6d; White, 22s to 22s 4d; Red, 22s 11d to 23s 2d; Black from the Central Provinces, 24s 1d. White Libau is quoted at 22s 7d to 22s 11d; Black 22s 11d to 23s 2d; and Swedish, 24s 4d per 320lb. Barley.—The same as for oats, the present weather is considered most unfavourable to the young barley plants, which are begining to lose colour. Prices are therefore well supported, the best runs only giving place to a little business for export to England and Belgium. Quotations are merely nominal:—Malting 17f.50 to 17f.75 (25s 4d to 25s 9d), Grinding 17f. to 17f.25 (24s 8d to 25s), and Feeding 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb.). Buckwheat.—This article is still sparingly offered, and very firmly held at previous rates, viz., 28s 9d per 480lbs.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended May 10, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

Wheat	42,534½ qrs.	30s. 9d.
Barley	3,345½ qrs.	26s. 10d.
Oats	8,653½ qrs.	22s. 6d.

London Arrivals (special).—The following supplies received up to noon to-day (Friday) are not given in the usual weekly returns: — Wheat, 44,040 qrs.; barley, 9,550 qrs.; oats, 55,550 qrs.; maize, 17,900 qrs.; flour, 40,000 sacks. Of minor articles arrivals yesterday and to-day include 280 qrs. of lentils, 1,401 tons of cottonseed, 1,887 tons of linseed cake (from Russia), 250 tons of potato flour (American), and 13 tons of cloverseed (French).

St. Petersburg, Friday.—The official report on crop prospects is highly favourable to the growing winter wheat, but extremely discouraging with respect to the growth of pastures and spring sowings. (By telegraph.)

Strasburg, Friday.—A violent snow storm and blizzard swept over Alsace-Lorraine on Wednesday night, and continued all Thursday. Immense damage has been done. (By telegraph.)

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The persistency of the north-easterly current this May has been extremely remarkable, and it has reduced the average temperature by six degrees for 16 days. How far temperature deficits really accumulate is a matter on which botanists and men of science have not yet completed any assured theory, but that the effect of 16 very cold days in the growing period of the year must be serious is a fact which is obvious without going to men of science. The one advantage is that a cold and showery May is exceedingly fatal to insect life, and we may therefore look for a summer comparatively immune from grub and fly.

The American Bureau report appeared this month two days late, so that it was just in time to influence the London market on the Monday and Liverpool on the Tuesday. But on Wednesday and Thursday its effect was marked, and despite large wheat arrivals the trade just before Whitsuntide closed with an exceedingly stiff feeling.

The area of winter wheat which has been uninjured by the last four months' weather is not given, but as no less than 4,868,000 acres have had to be ploughed up the season must have been exceptionally trying. Perhaps half of this loss will be replaced by spring wheat and a quantity of maize, but the total crop of winter wheat will be that raised on 27,103,000 acres, or considerably under the mean of 30,000,000 acres. On this acreage the present promise is 11½ bushels to the acre, or 1½ bushels below the average.

Spring wheat sowings made rapid progress during the hot weather wave in April, and with Minnesota, Iowa, Wisconsin, and Michigan all forward, the promise of the spring wheat is little over the average. There is, however, a very grave drawback in the fact that the fine April weather did not reach the Dakotas and Nebraska, which remained under winter influences. These influences have now returned to America in general, the weather there being as untoward as it is here.

The yield of wheat in America this year is therefore seen to be a most uncertain quantity, and as fas as it is possible to guess at present a total crop of the two sorts might come out at 60,000,000 quarters, but hardly at a greater total. The yield of last year was 81,000,000 quarters, and that of 1900 was 63,000,000 quarters. An average crop in America is nowadays perhaps 70,000,000 quarters, but as the Eastern areas of wheat land are steadily shrinking and the Western areas growing the striking of an average is very difficult.

Second only in importance to the very backward state of the winter wheat in the United Kingdom, the United States, and France is the very unpromising outlook for oats, barley, and pulse. In America rye is 5.6 per cent. below an average, while the promise of the hay is 4 to 7 per cent. below the mean according to the State. Apparently no State attains an average promise. In Russia "the starving peasantry" of the political papers are happily a fiction. Russia had excellent wheat crops last autumn, and has been a steady exporter ever since. But the live stock of the Russian peasantry and small farmers is really in a starving state in more than one province. The grass has not begun to grow, and feed is about exhausted. Straw is said to hold out, but, of course, is not much in the way of diet. The oat crop in Russia was small, and there are over 22,000,000 horses to feed. The deplorable state of the Russian pastures also affects 29,000,000 cattle and 48,000,000 sheep, so that we must not be surprised at an ukase forbidding exports of feeding stuffs. Last week, in addition to 140,000 quarters of wheat, 124,000 quarters of feeding barley, 58,000 quarters of oats, and 88,000 quarters of Indian corn were shipped from a country which has a grave home problem to keep its own live stock fed.

The market for feeding stuffs at Mark Lane on Wednesday and Friday was extremely strong, and even if the weather changes to mild and summer-like conditions after Whitsuntide the meadows will take time to recover from the sold spell. The American shipments of oats last week were only 9,000 quarters, and nothing was shipped by Sweden or Roumania, maizes being shipped by Roumania at the liberal rate of 205,000 quarters weekly; but if a good sale to S.-W. Russia were to set in, the saving of the 2s. per quarter on freights would deflect the whole of this supply from our ports.

The great barrier to advance in wheat is still the supply on passage, which is 1,494,000 quarters above the average. To-day's figures are:—

	Qrs
Californian	2,200,000
American	370,000
Argentine	476,000
Russian	30,000
Indian	113,000
Australasian	795,000
Various	20,000
Total	3,994,000

The expectations of other staples thus compare with a year ago:—

	1902.	1901.
Flour (sacks)	292,000	423,000
Maize (qrs.)	660,000	520,000
Barley ,,	330,000	270,000

The imports of the week were good of wheat, and with fair sales of foreign flour and of English wheat, the total business done was decidedly above the average:—

	Qrs.
Foreign Wheat	510,000
,, Flour	115,000
English Wheat	106,000
Breadstuffs	731,000

The imports of feeding stuffs last week were much below the requirements:—

	Qrs.
Maize	112,000
Barley	47,000
Oats	114,000

Here we have a deficiency of 88,000 quarters on maize, 73,000 quarters on barley, and about 36,000 quarters on oats, as compared with average receipts.

Imports this cereal year (September 1st to May 15th) thus compare with the same period last season:—

	Qrs.	
	1901-2.	1900-1.
Wheat	10,706,000	11,488,000
Flour	4,470,000	5,428,000
Breadstuffs	15,206,000	16,916,000
Barley	5,291,000	4,242,000
Oats	4,450,000	5,183,000
Maize	7,254,000	90,310,000

Total imports of feeding stuffs since September 1st have been about 10 per cent. smaller than last cereal year.

American visible supplies are cabled on 16th inst. as follows:—

	Bushels.	
	1902.	1901.
Wheat	50,475,000	58,481,000
Maize	8,492,000	22,781,000
Oats	4,911,000	15,589,000

All these figures point to a brisk resumption after Whitsuntide, and to markets running steadily in holders' favour. Wheat and flour will scarcely become a really good trade before the middle of July, by which date the bulk of present large supplies on passage will have been landed. But from mid-July to mid-September holders should have a decided opportunity, and the backwardness of the season is such that they may well have the best of it right up to the very end of September.

New York prices cabled at the close of Thursday were 30s. for spot wheat, 27s. 6d. for June, 27s. 6d. for July, 27s. 6d. for August, 26s. 9d. for September, 26s. 9d. for October, and 27s. 3d. for November and December. The prices for August and September delivery are tempting, and those who can store grain while waiting for the first rush of new crop deliveries to pass should have their reward.

Among minor, but not unimportant, articles which have made a forward movement are linseed, rapeseed, cottonseed, rye, beans, peas, and dari. The few articles which are rather weak include maize, germ meal, and rye meal, but this is only in contrast with the somewhat too rapid advance in April.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 23 qrs from Harlingen, 18,913 qrs Rosario, 5 qrs Rotterdam, 3,535 qrs Villa Constitution total 22,477 qrs. Linseed has been a strong market since our last, and closes firmly steady. Calcutta, April-June, was done at 53s 6d at the beginning of last week, but 54s was paid yesterday for this position. 54s 6d now asking, 55s paid to London. River Plate has had an advance of 6d to 1s per qr. Spot which was done early last week at 50s 6d made 51s yesterday, and it is reported that 51s 3d has been paid this morning for this position. May-June at the beginning of last week 51s 6d was paid, and at the close there were sellers at 52s 6d. Cottonseed: There has again been more firmness in this article, and business done spot and passage at up to £7 15s, whereat still buyers. May sold at £7 11s 3d to £7 15s, which latter also value June. A fair quantity New crop, Nov.-Jan. done at £6 11s 3d to £6 12s 6d, but sellers to-day talk of £6 15s, with an occasional buyer at £6 13s 9d. Oils: Exports for the week ending May 6th, 1902:—Linseed oil, 1 Denmark, 2 Germany, 30 India, 1 Italy, 44 Norway, 1 Russia, 3 Turkey, total 82 tons. Cotton oil, 125 Belgium, 10 Denmark, 161 Germany, 186 Holland, 4 Norway, 17 Sweden, total 504 tons. The market is steady. Linseed oil, 31s spot; 31st May-Aug. Cotton oil, 25s 6d spot; 25s 7½d May-Aug. Crude, 24s 4½d spot; 24s 4½d May-Aug. Rape oil, Jamba naked, 24s 3d spot; first quality, 24s 9d spot.—KEIGHLEY MAXTED AND CO.

LATEST MARKETS.

MARK LANE, FRIDAY, 3 p.m.

Wheat was duller from Monday, but at the same time dearer, that is to say, holders stood out for 6d. more money, while buyers decided to wait in most cases until after Whitsuntide. The holders were, however, so far the stronger that when business actually passed it was at the improvement demanded. There was an admitted advance of 3d. from Monday in both barley and maize. Oats were very firm at previous high prices. Very little Indian Argentine and Russian wheat was actually obtainable on spot, but some good strong wheat from the Baltic ports made 32s. 6d. No Persian or Chilian wheat seems offering this season. In beans, peas, and Dari, there were no quotable changes, but linseed, rapeseed, cottonseed, rye, and buckwheat were all held above Monday's terms. Small grilse, such as Dholl, Muttor, millet, and so forth, continue to be obtainable at a reasonable price, and has excellent nutritive value.

THE FLOUR TRADE.

MARK LANE, FRIDAY.

There was more doing than usual for a market just on the verge of a public holiday. London makes of flour were not dearer, but there was greater readiness to purchase at the best prices of Monday. Country flour was in unusually good supply for the time of year, the recent rise having attracted good supplies from Essex and East Anglia. American flour was a most irregular supply, but, on the whole, below demand. Values accordingly were put up 6d. per sack from Monday. Offals tended in sellers' favour, and £5 per ton was asked for pollard.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
May 12 noon	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5
May 13 11 a.m.	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5
May 14 11 a.m.	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5
May 15 11 a.m.	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5
May 16 11 a.m.	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5

Maize makes 4s. 5d. per cental for June and July, 4s. 8d. for September and October delivery.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the 18th inst. the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement the Acts of 1876 and 1901 throw the burden on the buyer.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Mark Lane, May 16.—Sunflowerseed, 13s. 6d. per cwt. for best, 11s. 6d. for ordinary. Cocksfoot, 44s. per cwt., for good New Zealand. Canary seed, 37s. per qr. for bold Turkish. Millet, 32s for Smyrna. (Special.)

Mark Lane, May 16.—A shilling more money is asked for buckwheat, and sixpence is obtained. The supply in June is likely to be small, while the inquiry seems to be improving. (Special.)

BUTTER.

Tuesday.—Bedale: 1s 2d to 1s 4d per 24oz. roll Gainsborough: 1s per lb. Leeds: 1s to 1s 1d per lb. Settle: 1s to 1s 1d per lb. Spalding: 8d per lb. Stone: 11d to 1s 1d per lb.

Wednesday.—Barnsley: 1s to 1s 1d per lb. Colne: 1s 2d per lb. Goole: Wholesale, 11d per lb. Keighley: Wholesale, 1s per lb. Kirbymoorside: 8d to 9d per lb. Knaresborough: Wholesale, 1s 3d; retail, 1s 4d to 1s 6d per 24oz. roll. Louth: 8d to 9d per lb. Market Weighton: 9d per lb. Northallerton: 1s 3d to 1s 5d per 24oz roll. Stockton: 10d to 1s 1d per lb. Worksop: 1s 1d to 1s 3d per lb. Hereford: 1s 1d to 1s 2d per lb. Market Drayton: Best, 11d to 1s per lb; seconds, 10d to 11d per lb. Uttoxeter: 1s to 1s 2d per lb.

Thursday.—Brigg: 9d to 10d per lb. Driffield: 8d per lb. Penistone: 1s 3d per lb. Ripon: 1s 4d to 1s 6d per 24oz. roll. Scarborough: 1s 2d per lb. Wetherby: 11d to 1s 2d per lb. Birmingham: 1s 2d to 1s 3d per lb. Kidderminster: 1s 2d to 1s 3d per lb. Wellington: 11d to 1s 1d per lb.

EGGS.

Tuesday.—Bedale: 16 for 1s. Gainsborough: 16 for 1s. Leeds: 7s 9d to 8s 3d per 120. Settle: 17 or 18 for 1s. Spalding: 16 or 17 for 1s. Stone: 16 or 17 for 1s.

Wednesday.—Barnsley: 14 or 15 for 1s. Colne: 1s 4d per score. Goole: 16 for 1s. Keighley: Wholesale, 15 for 1s; retail, 14. Kirbymoorside: 17 or 18 for 1s. Knaresborough: 14 or 15 for 1s. Louth: 18 for 1s. Market Weighton: 18 for 1s. Northallerton: 15 or 16 for 1s. Stockton: 14 and 15 for 1s. Worksop: 1s 4d to 1s 6d per score. Hereford: 17 per 1s. Market Drayton: 15 to 16 for 1s. Uttoxeter: 1s 2d to 1s 3d per score.

Thursday.—Brigg: 17 to 18 for 1s. Driffield: 18 or 19 for 1s. Penistone: 14 for 1s. Ripon: 14 to 16 for 1s. Scarborough: 16 for 1s. Wetherby: 14 for 1s. Birmingham: 13 to 15 for 1s. Kidderminster: 17 per 1s. Wellington: 15 to 17 for 1s.

Add BUTTER

CHEESE.

Newport, Wednesday.—There was a small market, and an improved demand for better qualities. Quotations:—Caerphillies, 38s to 45s; fancy dairies, 46s to 48s; Cheddars, 60s to 65s; Derbies, 61s to 63s.

Glasgow, Wednesday.—New Dunlop cheese were in the Glasgow market, but the trade in them was limited. Merchants preferred to buy Canadians and New Zealands, which brought late values. The new Dunlops were quoted from 52s to 54s per cwt. The new Cheddars offered showed good quality, but the high prices checked sales.

Market Drayton, Wednesday.—Finest Cheshire, 7½d to 9 per lb. Other qualities from 5½d per lb.

POULTRY AND GAME.

Smithfield, Thursday.—A steady demand, at firm prices. Quotations:—Fowls: Yorkshire, 2s 6d to 3s 6d; Essex, 2s 9d to 3s 3d; Boston, 2s 6d to 3s; Surrey, 4s to 5s 6d; Sussex, 3s 9d to 4s 6d; Welsh, 2s 3d to 2s 9d; Irish, 2s 6d to 3s 3d; turkeys (cocks), 6s to 7s; (hen), 4s to 4s 6d; goslings, 4s4d to 5s 6d; Aylesbury ducklings, 4s to 4s 6d; country, 3s 6d to 4s 3d; pigeons, 7d to 1s; wild rabbits, 6d to 8d; tame, 10d to 1s 3d each; Australian, 8s 3d to 10s 6d per dozen. Dutch plover eggs, 3s 6d per dozen. Russian game: Partridges, 1s 1d to 1s 4d; ptarmigan, 1s to 1s 2d; blackgame, 1s 2d to 1s 4d; brown hares, 1s 4d to 1s 8d; white, 1s to 1s 3d each.

FRUIT AND VEGETABLES.

Covent-Garden, Thursday.—Arrivals of both vegetables and fruit were on a fair scale this morning, and a fair business was done. Greenstuffs—Cabbages, 4s to 6s; cauliflowers, 10s to 12s per tally; carrots, 4s to 5s; turnips, 4s to 6s; mint, 3s to 5s; parsley, 3s to 5s; radishes, 6d to 1s per dozen bunches; horseradish, 1s 6d to 1s 9d per bundle; scakale, 8s to 14s per dozen punnets; rhubarb, 1s 6d to 2s 6d per dozen bundles; spring onions, 1s 6d to 2s 6d perdozen bunches. Old potatoes, 50s to 90s per ton; new, 10s to 15s per cwt. Fruit—English grapes, 3s to 5s; Belgian, 1s to 2s; French, 2s 6d to 4s per lb; Tasmanian and Australian apples, 10s to 14s per case; Denia oranges, 12s to 24s; Valencia 9s to 18s; Murcia 7s 6d to 9s per case; pineapples, 1s 6d to 5s each; Canary tomatoes, 3s to 4s per case; bananas, 7s 6d to 12s 6d per bunch; lemons, 8s to 18s per case.

POTATOES.

Borough, Thursday.—Arrivals are on a liberal scale, but with a fair demand, trade is steady. Quotations:—Scotch maincrops, 80s to 90s; Blacklands, Up-to-dates, 50s; Lincoln ditto, 60s per ton; new Jersey, 16s to 18s; Teneriffe, 10s to 12s; St. Malo, 15s to 16s per cwt; Lisbons, 4s per box.

Spitalfields, Thursday.—Arrivals rather light, but a very quiet demand was apparent for all descriptions. Best Lincoln Up-to-dates, 60s to 65s; Blackland ditto, 45s; Wisbech ditto, 55s to 60s; Scotch ditto, 65s; Scotch maincrops (grey soil), 65s to 75s; Lincoln maincrops, 70s to 80s; Reading giants, 40s; Blackland Gartons, 35s per ton; New Jersey, 18s per cwt; Teneriffe and Canary No. 2, 12s 6d; No. 3, 10s 6d; Maltese rounds, 8s 6d to 9s per cwt; Lisbon, 4s 3d to 4s 6d per box.

THE BALTIC.

The London Corn Trade Association notify us that the following standards of January shipments made up for May and June use, may now be seen at 2, Lime Street Square:—Soft Red Kurrachee wheat, Soft White Kurrachee wheat, Choice White Kurrachee wheat, Kurrachee Iowaree, Calcutta Urhurseed, Calcutta White peas, Calcutta grain, Calcutta lentils.

Trade at the Baltic has been rather brisk. Wheat makes 30s. 6d. for arrived Walla Walla, 29s. 6d. for prompt shipment. Californian makes 30s. 3d. for prompt shipment, with 30s. 6d. now asked. No. 1 Northern Manitoba fetches 29s. 3d. per quarter.

Maize is rising in value. A cargo from Poti (Caucasus) fetched 22s. 3d. on Wednesday, and 21s. 9d. was paid for Galatz on Thursday. There are offers of La Plata at a guinea, but no American is quoted.

Barley makes 17s. 6d. for a f.o.b. prompt shipment, and should probably be secured at this price.

Oats, at 15s. 3d. for October shipment from Roumania, are in speculative request.

Linseed oil strong, closing fully 20s. dearer. London spot pipes £32, brown rape oil slow; ordinary spot barrels £25 10s., May-Aug. £25 10s.; crude cotton oil very firm and scarce; London spot £25 5s., May-Aug. Linseed active, Calcutta seed advancing, 1s. to 1s. 3d., La Plata and Bombay 1s. to 1s. 6d. Sales include—London: Calcutta spot 54s., afloat 53s. 6d. to 53s. 9d., April-June 53s. 6d. to 53s 9d., May-June 53s. 3d. to 54s. 3d. La Plata (s.) cargo May-June 2,500 tons 52s. 1½d. U.K. Hull: Calcutta April-June 53s. to 53s. 6d., May-June, 53s. 6d. to 54s. 3d. La Plata May-June 51s. 9d. to 51s. 10½d. Rapeseed: Brown Calcutta May-June 36s. 6d. n/t Hamburg; Brown Cawnpore May-June 36s. 9d. o/t Antwerp; Yellow Cawnpore April-June 39s. Continent; Ferozepore May-June is 37s. 6d. o/t, 38s. 9d. n/t. Cottonseed: 2s. 6d. to 3s. 9d. dearer. London: Spot £7 15s. Hull: Spot £7 15s. Bombay May-June £5 2s. Liverpool quay terms, June-July £5 Hull.

MANURES.

Liverpool, Thursday.—Brilliant sunshine has been experienced during the past week, with occasional showers, but the temperature is low, and warmth is much needed. Nitrate of soda meets a fair demand, and values are again easier at £9 10s per ton. The demand for other fertilisers is not so active, yet values are without change. The trade in feeding stuffs keeps dull, and in some instances, linseed cakes, values tend in buyers' favour. Nitrate of soda, best quality, i.e., guaranteed 95 per cent., pure, in bags, £9 10s per ton; East India bone meal, fair to prime, in bags, £4 10s to £4 15s per ton; kainit, prime 23 per cent, in bags, £2 7s 6d to £2 10s perton; palmnut cake, prime, in bags, £5 15s per ton; linseed cake, American thin oblong, in bags, £7 to £7 5s per ton; linseed cake, English, in bulk, £8 to £8 5s per ton; linseed cake, foreign, round, rich in oil, in bags, £8 to £8 2s 6d per ton; cottonseed cake, N.A., decorticated, in bags, £7 2s 6d to £7 5s per ton; cottonseed cake, English do, in bags, £7 to £7 10s per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 7s 6d to £4 12s 6d per ton; cottonseed cake, Egyptian, do, prime, in bags, nil; cottonseed cake (crushed) 20 to 25 per cent oil, prime, in bags, £7 2s 6d to £7 5s per ton; maize germ meal, prime, in bags, £5 15s to £5 17s 6d per ton; corn oil cake, 10 to 13 per cent oil, prime, in bags, £6 5s to £6 7s 6d per ton; rice meal, Rangoon, as imported, in bags, £5 2s 6d to £5 5s per ton; Indian meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb; linseed, fine bold feeding, in bags, £3 2s 6d to £3 3s 6d per quarter, 416lb; N. A. cloverseed, new red, fair to good, in bags, nil; D.N.S. Brand, Superphosphate of lime, guaranteed, 25 to 27 sol, in bags, £2 5s to £2 7s, at depot; do, do, 30 to 31 sol, in bags, £2 10s to £2 12s at depot; do, do, 35 to 36 sol, in bags, £3 to £3 2s at depot; basic slag, prime quality, guaranteed 30 to 35 per cent phos, in bags, nominal; do, do, 35 to 40 per cent phos, in bags, nominal; finest do, 38 to 45 per cent phos, in bags, nominal.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in the West.

Although the weather has undergone a change for the best since our last report, there is still room for further improvement, and till this takes place we can hardly expect to see trade as it should be at this season of the year, especially as regards store sheep, the great spring sales of which have already begun, the initial sale being held at Beaminster (a famous horn country) on Tuesday, followed by that at Bridport next day, and then by the largest and most important of all—that of Dorchester on Thursday. True, there have been a few nice showers in some districts, though nothing like to the extent that has been the case around London, but at the time of writing more rain is still badly wanted, and not only rain, but much warmer weather than we have been having, the nights, which seldom pass without a frost, being so intensely cold that all vegetation is checked, and frequently throughout the daytime it is very little better. Of course, these unfavourable conditions naturally tell very adversely on business, especially where store stock is concerned, as it makes people very cautious in speculating when the keep prospect is as cheer less as is the case at present. And it will take a lot of the most favourable weather we can possibly have to make up for lost time and to put things at all right, as the crops are backward, and there is but little grass anywhere except in the most favoured localities. One of the most serious effects of this is that sheep have gone back very materially in value, competent judges pronouncing most classes of sheep from 3s. to 5s. below the price they made at the corresponding period last year. This is a serious matter for flockmasters, and more especially those in Dorset and Wilts, where they depend so largely for a little ready-money on the price for which they can sell their surplus stocks. The decline in values is not altogether due to the very cold, dry season through which we have passed, but there is no doubt it has had a very material influence on prices. And we are not over sanguine that there will be any great improvement as the season advances, unless we have a specially favourable summer, of which any indications are lamentably wanting up to the present time. A few classes of sheep make fairly good prices, but this is by no means a general occurrence, prices all round being undoubtedly disappointing, the more so as flockmasters, with the knowledge of the scarcity of sheep there is in the country, had been anticipating a revival in prices—not a decline. So far store cattle, though affected, no doubt, to some extent, has not felt the effect so seriously as sheep. The best mulchers show no falling off either in demand or in price, the best still commanding their £18 to £21 apiece, and even more, whilst barreners—those nearing beef—also find a ready market at good prices—not, perhaps, as good as they were before the drought became so acute. Still, anything like forward-condition bullocks make £24 to £36 per pair, and the plainer kinds £18 to £22 or £23—not a bad price on the whole, seeing what a small margin there is between the grazing and the fat bullock. Young stock also meet fair sale, and there is but little falling-off in the demand. Fat things continue, if we except sheep and lambs, to market fairly well, good ripe bullocks bringing their 4s. and 12s. per score where they have been at all well put out of hand, and even the plainer class of cows make 10s. to 10s. 6d. Calves sell exceedingly well, the holiday season, of course, stimulating the demand a trifle, and the past week's sales may be given as from 8½d. to 9d. per lb. for the best vealers, and 7½d. to 8d. for seconds. Fat sheep, as a rule, make a bad price, except here and there in the case of a few wethers, which may make 8d.—not over; and, although Whitsuntide led to a little more demand for lamb, still the price was by no means a very satisfactory one, 10d. being an extreme figure even for best Downs. Pigs relatively met a much better sale, and the price also compared favourably with that of lamb, best qualities making up to 11s. per score and over.

LONDON.

London (Central), Wednesday.—Fair supplies, but trade remained slow, prices, however, ruled firm. Beef arrivals included 80 tons Scotch, 550 Liverpool sides, 1,500 hindquarters, and 600 forequarters American killed. Prices:—Beef, Scotch short sides, 4s 8d to 4s 10d; long, 4s 6d; English, 4s 4d to 4s 6d; American, Deptford killed, 4s 3d to 4s 5d; Liverpool, 4s 2d to 4s 4d; American, refrigerated, hindquarters, 4s 5d to 4s 8d; forequarters, 3s 4d to 3s 6d; Argentine, hindquarters, 3s 8d to 4s; forequarters, 3s to 3s 3d. Mutton: Scotch, 4s 10d to 5s; English wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 8d. English lamb, 5s to 5s 8d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s 4d to 4s 8d; and Dutch, 4s 2d to 4s 6d per 8lb.

COUNTRY.

Basingstoke, Wednesday.—At Raynbird and Son's Sale Yard there was a good attendance of buyers to meet a supply of 36 fat beasts, 111 calves, 776 fat sheep and lambs, 195 pigs, and 94 head of dairy and store cattle, for which the following prices were realised:—Prime shorthorn steers sold up to £26 10s, and heifers made up to £21. Devon steers reached £22, heifers £21, and Devon cows up to £25; fat calves, 80s to £6; small, 20s to 50s; fat wethers and young ewes made from 42s 6d to 54s 6d; old ewes, 32s to 40s; rams, 45s to 57s; choice fat sucking lambs, 32s to 38s; ditto Exmoor ditto, 31s to 34s; fat porkers, 34s to 51s; store pigs, 19s to 33s 6d; dairy cows, £8 to £20. For fat beasts there was a brisk trade, and a clearance nearly made. A good show of fat sheep and lambs. Fat sheep on demand, and a clearance made at full prices. Fat lambs were wanted at a lower price, and a reduction from last week's figures. A few of the lots were held beyond the views of the buyers. An easy clearance was made of the short supply of dairy cows, which met a brisk trade. Store cattle showed a slightly improved trade, but still continues slow. Fat calves were shown in large numbers, prices ruling high, with a good demand. Fat porkers with a fair trade easily sold at satisfactory prices. Store pigs were exceptionally dear. Ruling values:—Prime fat Devon beasts, 7¾d to 8¼d; shorthorns, 7d to 7½d bulls, cows, and inferior beasts, 6d to 6¼d; best quality fat sheep, 8d to 8½d; second ditto, 7d to 7½d; old ewes, rams, and inferior sheep, 6d to 6½d; choice fat sucking lambs, 9d to 10d per lb. Fat calves, 6d to 9½d per lb. Fat porkers up to 11s per score.

Braintree, Wednesday — At Messrs. Balls' auction mart, fat hogs were in smart supply. Sheep sold well, and cattle advanced, heavy beasts making up to £24 15s. Stock penned: 43 beasts, 138 fat sheep, 12 store cattle, 22 calves.

Bristol, Thursday.—Beef, fair supply to-day. Trade firm. Best qualities, 68s to 70s per cwt.; secondary, 60s to 62s. Moderate number sheep penned, best light wethers fetching 7½d to 7¾d. per lb.; heavy wethers, 7d; ewes, 6d; lambs, 9d to 10d. Good supply of pigs; baconers 10s per score; porkers 10s 9d. Four hundred store cattle in market. Trade slow.

Cambridge, Monday.—Beasts, 529; sheep, 752; pigs, 561; horses, 22. Beef, 8s to 9s; mutton, 4s 4d to 5s 6d, clipped; pork, 6s to 7s 3d. A few lots store beasts, and trade not quite so good. Fat beasts short supply; trade brisk at more money. Fat sheep trade not so good as last week. Stores, a few good lots to hand, and all cleared. Fat pigs, a brisk trade all round; stores a little better show, and trade brisk. Hay, straw, and roots, fair trade.

Chester, Thursday.—A good supply of cattle and an improved demand, sellers having little difficulty in clearing their best stock at remunerative rates. Milch cows, £14 to £22; calvers, £13 to £20; barrens, £9 to £13; heifers, to £15; stirks, £6 to £11.

Dublin, Thursday. — Numbers in market: Beasts, 1,059, decrease, 145; sheep, 7,061, increase, 591; calves, 49, increase 5. Finished bullocks and heifers making fully last week's quotations. Rougher sorts and fat dairy cows easier sold. Sheep suitable for local trade easier to dispose of; shippers buying more cautiously, owing to Whitsuntide holidays. Lambs quieter. Cattle, live weight (best), 38s to 42s per cwt. Other sorts, 32s to 37s per cwt. Mutton, dead weight, 7d to 8¾d per lb.—GANLY, SONS AND CO.

Dumfries, Wednesday.—Seasonable supplies. Horned bullocks to £20; Galloway bullocks to £18; Ayrshire cows to £13; Galloway heifers, £13; polled bullocks to £15 calving cows to £14; buaals to £20.

Edinburgh, Wednesday.—Very large supplies, and trade dull. Half-bred hoggs, 34s to 37s; ewe hoggs, 32s to 37s; grey-faced, 30s to 38s; Cheviots, 22s to 27s, horned bullocks to £15 10s; stirks, to £8 10s; shorthorns, to £26 10s; Irish, £17 to £24; Ayrshire, £16 to £18 10s.

Glasgow, Wednesday.—No foreign cattle and sheep having arrived this week, the Glasgow cattle market remained firm. Top Scotch cattle, 68s per cwt secondary, 64s to 65s; top Irish, 66s. Top mutton, 9¼d per lb; secondary, 8½d. Lambs scarce; price 38s to 42s each. Dead meat in quiet demand, but values firm owing to scarcity: best Scotch, 6¾d; secondary, 6½d to 6¾d per lb.

Herefcrd, Wednesday.—Short supply of beef, with firm trade, last week's improvement being maintained. Best quality reached nearly 8d per lb; secondary, 6d to 6½d. Very little trade for store cattle. Fair supply of fat sheep, and a good clearance at last week's figures; wethers, 40s to 56s each, or 7½d to 8d per lb; ewes, 5½d to 6½d. Fat lambs, with an over supply, 9d to 10d. Fat calves moderate supply, 7½d to 8½d. Small supply of pigs.

Ipswich, Tuesday.—Messrs. R. Bond and Sons report a large increase in the number of fat cattle, which did not in any way adversely affect the trade, which was extremely sharp and well maintained throughout; prices ranged from 8s 6d to 9s 3d per stone. A short entry of fat sheep, and a good trade. A heavy consignment of fat lambs, the best of which were wanted, and made rather more money. Grazing and breeding sheep met a dull trade, and lower prices had to be accepted. A large number of calves were penned, those for killing sold briskly. Fat swine were not so numerous, and fully maintained late rates; well-bred stores in request. A fair entry of grazing cattle, and a good attendance of buyers; prices were much the same as last week. A good entry of cows; the best sold well. Numbers at sales and market:—Cattle, 805; calves, 102; sheep, 2,607; swine, 1,475; horses, 30.

Leicester, Wednesday.—Buyers and dealers were well represented. Heavy consignments of Lincolnshire and Norfolk fed bullocks. Trade slower, and secondary qualities 10s to 15s per head lower. Heifers, 7d to 7½d; cows, 5¾d to 6¼; choice bullocks, 7¼d to 7½d; secondary, 6¾d to 7d per lb. Large delivery of sheep, and the supply being in excess of the demand, quotations were 5s to 7s 6d per head lower. Choice light weights 7½d to 7¾d; large sheep, 6¾d to 7d; ewes, 5¾d to 6¼d; lambs, 10d; calves, 8d to 9d per lb.

Newport, Wednesday.—There was a good attendance of buyers, and brisk business was done all round. Although the supply of beef was small, sheep were plentiful. Prices:—Best beef, 7½d; seconds, 7d to 7¼d; cows, 6¼d to 6¾d; wether mutton, 8¼d to 9d; ewes, 7d to 7½d; shorn wethers, 8d to 8¼d; lambs, 10d; veal, 7d to 8d; porker pigs, 10s 9d to 11s per score.

Nottingham, Wednesday. — There was a good supply and plenty of buyers, the demand being brisk and the prices showing an advance all round. Best beef made 9s per stone; mutton, 8d per lb; veal, 9d; and lamb, 1s.

Preston, Wednesday.—Good attendance, and very large supply of cattle, for which higher rates quoted recently were fully maintained. Sheep plentiful, but met with slow trade at high prices. Calves sold at reduced rates. Beef heifers and bullocks, 7¼d to 7½d; cows and bulls, 6d to 7d; mutton, hoggs (woolled), 9¾d, ditto (clipped), 8½d to 9d; tups and ewes, 7d to 8½d; calves, 6d to 8½d. At market:—40 2cattle, 2,854 sheep, and 22 calves.

Romford, Wednesday.—Short supply of fat beasts, trade dear. Best animals, 5s. 2d to 5s 4d per stone; middlings, 4s 8d to 5s. Calves were in very short supply, at 5s 4d to 5s 6d per stone. Lambs were in average supply, trade slow, at 6s 4d to 6s 8d per stone. Sheep is about average supply, trade about the same. Best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Very few store beasts were on offer, and there was a fair demand. The pig market was again open; fair supply and moderate business at about usual rates.

Saffron Walden, Wednesday. — Fat ewes made 52s 6d. Down hoggets 61s 6d, half-breds 51s 6d, and lambs 33s 6d. Shorthorns realised £22 15s, small bullocks £19 15s, fat calves £5 5s, and weanels 43s. Hogs made 74s, porkers 45s, stores 23s 6d, fat sows 72s, and sows with pigs 145s.

Salford, Tuesday.—The supply of cattle was again smaller. There was a fair demand, and prices ruled about the same as last Tuesday. The supply of sheep and lambs was greatly in excess of last week's supply. Trade for choice sheep was slow but firm, at about late rates, but heavy grades made 2s to 3s less money. The lamb trade, owing to the cold weather, was dull. A larger show of calves, but a fair trade for choice quality at late rates. Cattle, 5d to 7¼d; sheep, 7d to 9¼d; lambs, 9d to 10½d; calves, 5d to 8¾d per lb. At market:—Cattle, 1,687, sheep and lambs, 14,324; calves, 185.

Sheffield, Tuesday.—Milch beasts in fair supply; demand without animation. Best £18 to £20, secondary £13 to £17.

Shrewsbury, Tuesday.—Steady trade all round, with store pigs slightly higher in price. Fair supplies. Fat cattle firm. Quotations:—Lamb, 10¾d to 11½d; beef, 6¾d to 8d; mutton, 7¾ to 8½d; and veal, 7d to 8¾d per lb; porket pigs, 10s to 10s 6d; and bacons, 9s to 10s per score; cows, with calves, up to £18 15s; hay up to £6s 10s; and straw up to £4 7s 6d per ton. number offered:—610 lambs, 82 cattle, 75 cows with calves, 896 sheep, 188 calves, 37 fat, 100 porket, and 466 store pigs.—B. R. CROXTON, Markets Inspector.

Spalding, Tuesday.—Beef to 9s per stone; cow beef made 8s. A large show of stores. Slow trade at £10 to £15 a head. Cows in demand at high prices. A larger show of sheep. Trade slow. Best mutton, 8d per lb. Lambs sold well.

Stockton, Wednesday.—There were on offer 182 cattle, 23 calves, 260 sheep, and 118 lambs. Of best cattle there was a good show, and prices ranged from 8s 6d to 9s per stone; rougher sorts, 6s 6d to 7s 6d. Calves met with a fair demand at 6d to 9d per lb. There were more sheep, and prices were easier. Young sheep, 8½d; ewes, 7d tups, 5d to 6d; lambs, 21s to 35s.

Thame, Tuesday.—There was a good supply of all kinds of stock, beef making up to 5s 3d per stone, whilst mutton, lamb, and veal were in great demand. Messrs. Bond and Buddow's sale comprised 53 fat beasts, 323 fat and store sheep, 41 fat and weaning calves, and 193 bacon hogs and store pigs. Fat bullocks made from £19 15s to £26 15s; fat heifers, £20 to £25 5s; fat ewes, 40s to 60s; fat tegs and wethers, 50s to 69s; fat lambs, 30s to 40s 6d; fat calves, £3 10s to £5 11s; weaning cow calves, 30s to 60s bull calves, 18 to 58s; bacon hogs, 10s per score. Stores dear.

Wakefield, Wednesday. — With the exception of calves, there were slightly diminished supplies in all departments. In spite of this the stock was quite equal to the demand. Fair attendance of butchers and buyers, but trade was not as brisk as it has been lately, and dealers in many cases had to accept less money. The fat beasts were of a fairly good quality. The market opened rather slow, and butchers, in view of the holidays, only bought sparingly. Best beef made 7¼d per lb; good beef, 6¾d to 7d; inferior, 5¾d to 6¼d. Trade in dairy cattle was slow, best cows making £1 per head more than last week. Superior cattle, £16 to £23; others, £14 upwards. Business was very quiet in store cattle, the prices quoted being from £9 to £15. There was a capital show of fat calves, which included some first-class animals. The choicest made 9d per lb., and inferior ones from 5d upwards. Slow trade in sheep, the cold weather making them somewhat difficult to dispose of. Small clipped sheep, 7¾d to 8d per lb; heavy sheep, 6¾d to 7¼d; and tups, 6¼d to 6¾d per lb. A fairly good trade was done in lambs, which sold at 9¼d to 11d per lb. A moderate trade in pigs. Porkers, 6s 6d to 7s 3d per stone; stores, 25s to 55s; suckers, 15s to 22s each. Numbers at market:—Beasts, 1,337; sheep and lambs, 4,975; calves, 84; and pigs, 415.

Wolverhampton, Wednesday.—A moderate supply of beasts; fair trade. Sheep and lambs were in fair supply; trade slow. Calves: Fair supply and trade. Beef, 6½d to 8d per lb; mutton, 7d to 8¾d per lb; lamb, 6d to 11d per lb; veal, 7d to 8½d per lb; only a few pigs on offer.

Worksop, Wednesday.—Good show of stock, with a better supply of beef. Best beef, 7s 4d to 8s 4d; secondary, 6s to 7s per stone; best Southdown wethers and long wools, 7d to 8d; ewes, 5½d to 7d; fat lambs, 9¾d to 10d; calves, 9d to 10d per lb.

York, Thursday.—A somewhat larger offer of sheep, which met with a slow demand, due to the backwardness of the grass and the cold weather. North country hogs, 37s to 44s; twice crossed hogs, 36s to 42s; Mashams, 25s to 30s; country hogs, 38s to 44s; clipped sheep, up to 40s per head. The same causes which affected the sheep trade influenced cattle. There was a smaller show of Irish stores, and much smaller of English. Considerably fewer buyers were present than is usual. A fair number of sales were effected. Fair demand for bullocks and heifers, full of flesh, and up to three years old, and in a few cases as much as 15gns. were made; the general run of prices was from £12 10s to £14; two-year-old, £10 to £12. Little demand for stirks. Smaller offer of calving and milch cows, and although trade was good, it was not so brisk as last market, and late rates were barely maintained. Ordinary prices ranged from £15 to £18; a few exceptionally good animals fetched to £22 10s.

FOREIGN.

Deptford, Wednesday.—Beast entries to-day consisted of shipments from the United States, and amounted to 299 head, this being 1,588 less than shown on Wednesday last. Trade ruled firm at 4s 10d to 5s. 790 United States sheep sold 4s 8d per 81b, sinking the offal, the demand being slow.

Yorkhill, Tuesday.—A sale of United States sheep was held this morning, 232 animals, landed by the Buenos Ayrean (s), from Philadelphia (held over from last week's sale), being offered. The shipment consisted entirely of wethers, and were very suitable for the requirements of the trade. There was a fair attendance of buyers forward, and trade was good throughout the day, the values being fully equal to those ruling at the previous sale. The animals sold at 44s a head, or an equivalent of from 8¼d to 8½d per lb.

FEEDING STUFFS.

London, Thursday.—Linseed has again improved, owing to an active oil market. Calcutta to London spot, passage, and April-June are now 55s; June-July, 55s 6d. La Plata, on passage, 52s 6d. Hull is also dearer. Calcutta, April-June, 54s 6d. La Plata, spot, 51s 9d; May-June, 52s 3d. To the Continet, Bombay May-June, 56s 9d; June-July, 56s 7½d, paid. Calcutta, April-June, 55s. La Plata, May-June, 53s. Linseed oil remains steady, and in good demand. We quote spot in pipes, £32; barrels, £32 June-August, £31s 15s; September-December, £30 12s 6d. Hull naked spot, £31; June-August, £31; September-December, £29 12s 6d. Linseed cakes are firm. We to-day quote London made £7 17s 6d, at £8 ex mill; American, Western, £7 7s 6d, at £7 10s; Russian, £7 12s 6d, at £7 17s 6d. Cotton cakes steady: London made £4 12s 6d, at £4 17s 6d. Rape seed firm. Brown Cawnpore, May-June, 37s 9d; brown Calcutta, spot, sold at 34s 9d; May-June, 36s 6d, wanted. To the Continent we quote yellow Guzerat, 42s; yellow Cawnpore, May-June, 40s 6d; brown Cawnpore, May-June, 37s 9d; brown Calcutta, April-June, 37s; Ferozepore, May-June, 37s 9d; Jamba, May-June, to Hull, 31s 9d. Cotton Seed continues firm, but the advanced prices asked somewhat check business. Spot London, £7 17s 6d; April-May, £7 17s 6d, sellers; November-January, £6 15s. Hull, spot, £7 16s 3d; May-June, £7 16s 3d; November-January, £6 13s 9d. Cargoes, May is held for £7 18s 9d; November-December and January, £6 16s 3d. Bombay to Hull, May-June is selling at £5 3s; May-July, £5 3s 6d.—THE PRODUCE BROKERS COMPANY, LIMITED.

Mark Lane, Friday.—Linseed cakes: The actual consumptive demand continues small, but there is a good inquiry for forward positions, and buyers have freely paid the recent advance of 2s 6d per ton asked by shippers. Russians in warehouse sell slowly at last Monday's prices. American are in good request, being by far the best value on the market, at 2s 6d per ton less money. Calcutta made in bags offer at unchanged quotations. London made are also obtainable at last week's prices, but attract very little attention. Cotton cakes: The market is well supplied with foreign, and while values are firmly held up in sympathy with seed, the amount of business passing is limited, Egyptian being quoted at slightly firmer prices, and English unchanged. Decorticated move off quietly at £6 5s to £6 12s 6d, as to quality; and meal at £6 10s. Rape cakes: Dull, East India unchanged. Maize germ meal: Arrived parcels of American may still be had at 2s 6d per ton more money, although shippers ask as much as £6 for future shipments. English is only sparingly offered at £5 15s to £6 per ton, ex mills. Rice meal: Very little offers in any position, and values are nominal at £4 10s to £4 15s, ex ship, and £5 landed.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6¾d to 7½d; clover, 7d to 7¾d; straw (oat), 5½d to 6½d per stone.

Whitechapel, Thursday.—Plentiful supplies, but demand was extremely quiet. Best clover, £5s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 110s; inferior ditto, 80s to 95s; mixture and sainfoin, 95s to 105s; and straw, 30s to 45s per load.

Cumberland, Thursday.—Best selected hay, 110s to 120s; good, 95s to 110s; inferior, 75s to 95s. Prime clover, 100s to 112s 6d; good, 90s to 100s; inferior, 70s to 90s; best mixture, 105s to 112s; good, 95s to 105s. Straw, 28s to 45s per load.

The Cobden Club and the Corn Tax.

A meeting called by the Cobden Club to protest against the corn tax was held in the Free Trade Hall, Manchester, on Thursday evening. Lord Spencer presided, and with him on the platform were Mr. Asquith, M.P.; Mr. C. P. Scott, M.P., Sir Joseph Leigh, M.P., Mr. W. H. Holland, M.P., Mr. George Toulmin, M.P., Mr. George Harwood, M.P., Mr. A. Emmott, M.P., and many others.

Mrs. Unwin, a daughter of Cobden wrote:—"With my father's life-long work clearly in my mind, I appeal to you now, before it is too late, to go forth from the Free Trade Hall to-morrow filled with the spirit of the Anti-Corn Law agitators, and for your watchwords have the motto of the Cobden Club: 'Free Trade, Peace, Goodwill among Nations.' They are the words with which Mr. Bright, my father, and Mr. Gladstone did battle in your name in the past. Do battle, peaceful battle, with them for yourselves now. You have the power, create the will."

Lord Ripon wrote:—"It is fifty years within a few months since, as a young man, I was present at a great meeting in the Free Trade Hall, with Mr. George Wilson in the chair, and Mr. Cobden and Mr. Bright on the platform, to protest against any return to the system of Protection on the part of the Government of Lord Derby, who was then in office. That protest was successful, and I sincerely hope that the resistance to the renewed tax on bread may be so vigorous and general as to prevent the adoption of a measure so unsound in principle, and so fraught with evil."

Lord Spencer, in opening the meeting, said they were met at a great crisis in the political history of the country. For the first time in over sixty years the Government of the day were imposing a tax on the bread of the people. They were doing this, they said, only to raise revenue, but the Liberal party said that this might be the beginning of the reimposition of protection all along the line. It was imperative on all who were Free Traders and those who wished to support the commerce of the country on the basis on which it had prospered for so many years to do what they could to stir up the feeling of the people against the proposals of the Government. The tax was a protective tax; it would enhance the price of grain and flour produced in this country. There would also be considerable profits made by the middleman, and people would have to pay, not the £2,650,000 estimated by the Chancellor of the Exchequer, but he believed the total would reach £4,000,000, and press most seriously on the poorer inhabitants of the country. The Chancellor of the Exchequer might have adopted many other means of raising the requisite sum. He hoped the meeting would very clearly and distinctly pronounce the opinion that they did not wish the great policy of Cobden and Bright, and Villiers and Peel, and, last, but not least, Gladstone—(loud cheers)—reversed, but that they wished to make their voice heard in favour of Free Trade. (Cheers.)

Speech by Mr. Asquith.

Mr. Asquith, who was loudly applauded, moved—"That this meeting of the citizens of Manchester, assembled in the Free Trade Hall, condemns the corn tax." The audience, he said, were animated by a single and united purpose. They were there because, for the first time within the memory of almost every one of them, not only the doctrine, but also the practice of Free Trade had been put into question, not as a matter of abstract dogma or of academic debate, but by a deliberate attack on the part of the Government upon the very foundation of our fiscal system. It was nothing short of a resurrection of the old Corn Law, killed by Cobden and buried by Peel. The agitation against the tax was not artificial, as writers in the London Press had declared, but real, as the new member for Bury would be able to tell them. (Cheers.) If the tax were infinitesimal in its practical consequences it would none the less be our duty to withstand it to the end. (Cheers.) The question was, should they or should they not reinstate Protection in their economic household? (Cries of "Never.") To those who cared for principle when a new departure of this kind was proposed the important matter was, "Is the road we are asked to take the right or the wrong road?" and not "What is the distance which for the time being we are asked to travel upon it?" (Cheers.) They were told that the tax was necessary in order that they might contribute to the cost of the war, but this was not a war tax. If it were, we should have received an assurance that when the war expenditure came to an end it would be dropped, but nothing of the kind was going to take place. It was a tax that was going to be employed in the discharge of normal expenditure, and, amongst other things, in the payment of the annual subvention which the Government had so lavishly granted in its days of prosperity to the privileged classes and interests. The Government appealed to the patriotism of working men to pay their share of the cost of the war in the shape of an increase in the price of their daily bread, and in the next breath they attempted to show that the whole burden of the tax would fall upon the foreigner—(laughter)—who, according to these theorists, was good enough to supply the people of this country with food at a price which would bear no relation at all to the cost of bringing it into the market. Among fallacies in fustian, he awarded the first place to that argument. (Cheers.) It was also said that, apart from the war, it was necessary, in view of the growth of normal expenditure, to widen the basis of taxation, and that in that process the working classes should contribute their share. In answer to that, he might point out that the present sources of indirect taxation, not one of which was protective in its nature, presented very large possibilities of increase. Beer, which now paid 7s. 9d. a barrel, formerly paid 19s. The duty on tobacco was actually 2d. per lb. less than it was before the war broke out. It was idle in the face of these facts to say there was any necessity to resort to a protective duty, and to a duty on any article like corn.

The consumer, Mr. Asquith contended, was the man who would pay the tax. Bread was an article we could not do without, and we were dependent for it on foreign supplies. The importer would pay the duty in the first instance, and it would pass through the hands of the middleman, the wholesale dealer, and retail shopkeeper, who handed it to the consumer, carrying interest on each stage of the process. The consumer would pay, not only on the imported grain, but also on the home-grown grain—(hear, hear)—and this showed that the duty was protective. The tax raised the price for the benefit of one particular class of producers, and if that was done in one case, why not in others? If it was done in the case of corn, why not in the case of bacon? If it was done in favour of the home producer, why should it not be done in the case of the colonial producer? The Canadian might say: "I import into Great Britain for the British market great quantities of wheat and flour. You put a tax on my flour and wheat, but the British farmer, who produces the same commodity, pays no tax at all. Then, are we joint members of a joint Empire? We have contributed to the war that is going on of our blood and our best, and you seize this moment to discriminate against us, your fellow-subjects in the Colonies, and in favour of your fellow-subjects at home." What answer could be made? We had a good answer a year ago. We were a Free Trade country; our fiscal system was a Free Trade system; we could not, much as we valued our comradeship, upset that system, on which the prosperity of Great Britain depended, in order to make a partial exception in favour of a particular portion of the Empire. If that argument of the Canadian were yielded to, what was to be said to the Australian, who sent his wool, and to the New Zealander, who sent frozen mutton? They, too, were citizens of the Empire; they, too, had shared in its glories and its sacrifices; they were not going to be content. Why should they be on a worse footing than their Canadian fellow-subjects? And so we should get into a vicious circle—into a quagmire of differential and preferential duties and artificial discriminations, granted here to be balanced by similar discriminations there, into a morass out of which British industry was lifted by the teachings of Adam Smith and Ricardo, by the agitation of the Anti-Corn Law League, and by the statesmanship of Peel and Gladstone. (Cheers.)

Free Trade had made us the market of the world, by giving us an unrestricted supply of raw material. It had fostered capital, increased the average remuneration of labour, and raised the whole material standard of British life. He for one welcomed the conflict which had been forced upon them. He could not imagine an issue on which they could appeal with more confidence to the intelligence, the judgment, and the conscience of the people of this country. (Cheers.) Some people seemed to think this country adopted Free Trade as an alternative experiment. We adopted it, and we mean to adhere to it, not as doctrinaires, but as practical men; not because Free Trade was good for other people, but because it was good for ourselves. The departure from Free Trade, for which they were now fighting, was a tax on an article of prime necessity, a portion of which fell on those least able to bear it. Free Trade had greatly raised the general level of comfort, but they must be on their guard against the deceitfulness of averages. A large section of people spent their lives hovering on the verge of starvation. Bread was to them, in the literal sense of the phrase, the staff of life. Raise its cost, and many of them were put to a state of actual insufficiency of food, and, as regarded many others, the raising of the price would cut them off from an occasional indulgence in such things as bacon or meat by which their humble diet was diversified. This was what the tax was going to do. An additional penny on the income tax would produce almost precisely the sum attempted to be raised by this tax, and what justification was there for raising what in our swollen national balance-sheet must be regarded as, after all, a relatively paltry item by a tax which had this odious feature, that it pressed with disproportionate and excessive weight on shoulders which were least able to bear the load.

Summarising his points at the close of his speech, Mr. Asquith said the tax was not proposed as a temporary expedient to meet a passing emergency, but it was suggested that it should become a permanent part of our fiscal system. Whatever its amount, be it small or be it great, it must in the long run be protective in its nature, and, therefore, it followed oppressive to the consumer and wasteful to the State. Convenient as it was to collect, it would present an almost irresistible temptation to a Chancellor of the Exchequer of easy virtue—(laughter)—to raise the figure, and so to realise the concealed hopes of militant Protectionists, who, though they had been judiciously muzzled in the House of Commons in last week's debate, hailed its first appearance with a whoop of well-justified triumph. It deprived us of any logical answer to those who, whether at home or in the Colonies, were demanding preferential terms for British produce and a return to the old system of discriminatory and retaliatory tariffs. Worst of all, it was a tax graduated, not according to the ability, but according to the inability, of those able to pay it. (Cheers.) It was a tax on industry, on poverty, on privation; it set at defiance economic principle, fiscal policy, social expediency, and national justice. Let them resist it in its beginning and resist it to the end. (Loud cheers.)

The motion was carried with loud acclamation.

STOCK AND SHOW NOTES.

By Herdsman.

The Plymouth meeting of the Bath and West and Southern Counties' Society, to be held from Tuesday, May 27, to Saturday, May 31, inclusive, will be a most extensive one, the horses, cattle, sheep, pigs, and other live stock and farm products, totalling up to nearly 2,000 entries, whilst the exhibits of implements, machinery, carriages, etc., will be some thousands in number. There will be a working dairy on an elaborate scale, where demonstrations and butter-making contests will be held daily, and among other attractions will be a science and art and art-manufactures exhibition, a poultry show, a flower show, shoeing, shearing and milking competitions, exhibitions of bee-keeping, with explanatory lectures, and daily musical performances by the Royal Marines Band. There will also be parades of the horses and cattle, and driving, trotting, and jumping competitions, in the large ring, overlooking which a grand stand has been erected. Special efforts have been made both by the society and the local committee to render the exhibition noteworthy in the long series which the society has held, whilst the Devon County Agricultural Association has suspended its show for the year in order to co-operate in promoting its success. The prizes amount to no less than £3,500.

A sum of £1,016 16s. is offered in prizes by the Gloucestershire Agricultural Society for their show at Tewkesbury on July 22nd and two following days. In the cattle classes prizes to the amount of £353 6s. is offered; for agricultural horses, £165; hunters, hacks, and ponies, £147; sheep, £122; pigs, £62; cheese, butter, poultry, cider, perry, etc., £73 10s.; whilst £103 10s. will be given in the driving and jumping competitions; also seven silver medals for implements. It will thus be seen that all sections have been liberally catered for, and should receive very large entries. The last day of entry is Monday, June 16th, but post entries at double fees will be received up to Monday, June 23rd. Entry forms may be had on application to the secretary, Mr. J. Townsend, Ashcroft, Cirencester. Applicants should state the number of forms and for which section required.

The Cambs and Isle of Ely Agricultural Society have just issued an attractive schedule of prizes for their show at Chatteris on the 25th of July next. In the Shire and Hackney horse sections the prizes are offered in duplicate, one class being open to all England, and the other, for the same description of animals, being for competition by tenant-farmers only—this is certainly a good idea, and might be more widely adopted by other societies. Champion prizes, challenge cups, and gold and silver medals are also offered. The prizes for harness and saddles, mares, and geldings are numerous, and the classes for hunters include light-weight carrying animals, also brood mares and colt or filly foals. The cattle classes comprise prizes for shorthorns, Channel Islands, and dairy animals; whilst sheep include long-wools, Suffolk, and Hampshire Downs. Prizes for butter and cream cheese also appear in the schedule. Silver medals and certificates of merit are offered for any machine or article exhibited in the implement department considered of sufficient merit. A copy of the schedule can be had gratis on application to the secretary, Mr. R. Peters, 7, Downing Street, Cambridge.

On Thursday a deputation from the National Federation of Meat Traders' Associations Incorporated waited upon the President of the Board of Agriculture, with the object of securing the removal of the present restrictions on the importation of Argentine cattle. Mr. Hanbury informed the deputation that, while fully realising the importance of the Argentine as a source of supply to this country, he could give no definite promise as to when our ports would be reopened to South American cattle. Communications were passing between our Government and the Argentine, and he hoped at no distant date to be able to give a favourable reply.

Vol. 13 of the Hampshire Down Stock Book which has just been issued contains the entries of rams numbered 4174 to 4633. As usual, a full list of members of the Society, of officers, past presidents, etc., is given.

Messrs. Alfred Mansell and Co., of Shrewsbury, recently shipped, per S.S. "Lycia," from Avonmouth, 30 Shropshire sheep, bred by Mr. A. E. Mansell, and purchased by Mr. Robert Miller. These sheep consisted of 14 rams and 16 ewes, which, with the exception of one ram, were too young to include in the famous Harrington Dispersion Sale, so were kept by Mr. Mansell until his Final Farm Sale, at Bishton Hall, last March. These sheep are the last of Mr. Mansell's breeding Canada will obtain, and it is therefore to be hoped they will all arrive safely at their destination.

By the same steamer Messrs. Mansell dispatched four Shorthorn bulls, purchased by Mr. J. Lawrence, of Manitoba, Canada, during his recent visit to England. The bulls were really fine animals, two being bred by Mr. W. J. Hosken, and two by Mr. Roskruge, and should they reach Manitoba safely, should prove of great service in Mr. Lawrence's herd.

On the third of this month the same firm shipped, per S.S. "Tagus," from Liverpool, for Lisbon, a Shropshire ram and ewe, hailing from the noted flocks of Mr. John Harding and T. S. Minton respectively; also a Shropshire wether, bred by Mr. Frank. The sheep were accompanied by a large number of Black and Buff Orpington and Cochin China cockerels and pullets. It is understood that the sheep were required for experimental purposes.

The Board of Agriculture have received information through the Foreign Office that a Government Bill has been introduced into the Spanish Cortes, with the object of temporarily suppressing or reducing the duties on cattle and meat imported into Spain. The unprecedentedly high price of meat prevailing in that country, and the difficulty of procuring sufficient cattle for the slaughterhouses, makes it probable that this Bill will become law without delay.

Barnsley Horse Fair was held on Tuesday, and was about an average one. Business was fairly active, though there was only a moderate show of useful animals. Army remounts were quickly bought up at about £35 each; but heavy horses were rather difficult to sell. Prices reached as high as £60.

Farmer Fined for Cruelty. — Remarkable Practice. — In the Dumfries Sheriff Court, on Wednesday, David L. Crichton, farmer, Limekilns, near Annan, and his son, Robert Alexander Crichton, pleaded guilty to a charge of having burned or branded four cows after service. A veterinary surgeon's report stated that the operation must have caused the animals severe suffering. Mr. A. Cowan, solicitor, Annan, stated that the practice was a common one in Ayrshire, where Mr. Crichton came from. He held that it was necessary, and the best excuse for the experiment was its complete success. Sheriff Campion said it seemed an extraordinary and cruel practice. The full penalty of £5 was imposed, with the alternative of thirty days in gaol, on the farmer, and the boy was discharged with an admonition.

THE SHORTHORN BULL "SILVER MINT," shown above, is the property of Mr. Leopold de Rothschild, Ascott Farm, Leighton Buzzard, and was bred by Mr. W. Duthie, Collynie, Aberdeenshire, being by Silver Plate, 75,633, out of Mistleto 14th. At the Oxfordshire Show at Witney last week "Silver Mint" was winner of the Champion Prize for the best Shorthorn Bull eligible for Coates' Herd Book. He also was awarded First Prize in the class for Bulls calved in 1900.

The Lancashire County Council Agricultural School.—At the recent examination held by the Royal Agricultural Society's Examination Board, for the National Diploma in Agriculture, five pupils attending the classes, held under the auspices of the Lancashire County Council, passed in Part I., and four in Part II. In addition to these, one former student passed in Part I. and two in Part II. Thus twelve successes have been gained by pupils from the above-mentioned school, out of a total of thirty-six passes obtained for the whole of the United Kingdom.

An illustrated catalogue of beekeepers' supplies has come to hand from Mr. E. H. Taylor, of Welwyn, Herts. Mr. Taylor's various manufactures are well known to beekeepers, and have won prizes at various shows during the past few years. In this new catalogue practically everything a beekeeper requires is mentioned, as well as some poultry appliances; whilst the heads on successful bee management given in it may prove serviceable to many keepers. A copy can be had on application to Mr. Taylor.

Lincoln Hiring Fair.—The annual hirings at Lincoln took place on Wednesday. There was a fair attendance of male hands, whilst female servants were more than usual, and a good deal of hiring was done. Wages again had a decidedly upward tendency. Cooks asked £18 to £24; parlourmaids, £18 to £24; housemaids under parlourmaids, £18 to £24; housemaids, £11 to £17; house-parlourmaids, £16 to £20; young generals, £8 to £12; and older girls up to £16; kitchenmaids, £10 to £15; between maids, £8 to £12; and pages, £8 to £14 for the year.

Oxford County Show.

The little Oxfordshire town of Witney—famous for its blankets—was en fête on Tuesday and Wednesday, when the annual show of the County Agricultural Society was again held here, after an interval of twenty-eight years. The weather on the opening day was far from that usually experienced at this time of the year, and the heavy shower which came on about mid-day put a damper upon public enthusiasm and considerably affected the attendance of the general public. Breeders and exhibitors of stock were present in large numbers, friends renewing acquaintance for another show season.

Entries numbered nearly 700, and would have been considerably more but for the fact that owing to the existence of swine fever in the district pigs were not included amongst the exhibits. Cattle and sheep were in excess of last year's exhibits at Thame, but in the horse section the numbers were short by some twenty from the Thame meeting, when that section of the show was one of the, if not the, best ever held by the society.

The implement department was well ahead of the 1892 meeting by some 20 stands, which include many labour-saving machines and novelties

Cattle.

The catalogue commenced with shorthorns, which were represented by eight classes, and some well-known breeders sent some excellent specimens. The champion prize for the best bull was carried off by Mr. L. de Rothschild's Silver Mint, which had not previously been exhibited. The best cow was that belonging to Mr. J. Deane Willis, a Royal winner, while the champion prize for the best animal, the property of a tenant farmer, was awarded to Mr. Robert W. Hobbs, of Kelmscott. Turning to the classes, that for old bulls contained nine entries, and here Messrs. John Little were placed first, with that well-known dark red bull Vain Lord, bred by Mr. T. R. Hulbert, of Worcester. The second prize was awarded to a fine bull, New Year's Gift, exhibited by Mr. James T. Hibbs, Maiseyhampton. This bull was bred by Mr. W. G. Hosken, Cornwall. Mr. J. Deane Willis's Granite Chip, a nice, well-shaped roan, secured third position, leaving reserve for Mr. C. H. Joliffe's Nitrogen. Two-year-olds made a strong class of eleven. The judge placed Mr. L. de Rothschild's Silver Mint, bred by Mr. W. Duthie, before Mr. J. Deane Willis's well-known C.I.V. Mr. J. Thorley had a good look in for third with Prince of Troy, and he was closely followed by Mr. G. Freeman's Chief of Sanquhar, which was given the reserve ticket. Mr. J. Deane Willis's Bapton Florist was the best in the yearling class, while second prize was given to Mr. G. H. Simpson-Hayward's Icomb Pioneer. The best of the cows in calf or in milk, calved before or in 1898, was Mr. J. Deane Willis's White Heather; Sir J. Blundell Maple's May Duchess 25th being second, and Mr. Alexander Henderson's Grace Darling third. The following class was for heifers in milk or in calf, and the contest lay between Mr. J. Colman's Hawthorn Gem III. and Mr. Joseph Thorley's Fairy Queen, which were thus placed first and second respectively. Two-year-old heifers swelled their class out to ten, and here Mr. J. Deane Willis's roan Bapton Jewel was placed first, Mr. J. Colman's Hawthorn Queen was second, and Mr. L. de Rothschild's Ascott Passion Flower third. Yearlings made a still larger class, a dozen entries being catalogued, and here again Mr. J. Deane Willis drew to the front this time with Malmaison.

Herefords made only a small display, and one by no means representative of the breed, there being only seven entries in two classes. In the old bull class Mr. George D. Faber, M.P., with Lord Roberts, won from the Earl of Coventry's Vishnu, whilst in the female class Mr. John Tudge was an easy first with Princess Royal.

Channel Islands cattle, as is invariably the case at this show, were very numerously represented, and the majority of the exhibits were of exceptional merit, both champion prizes for Jerseys being taken for Lord Rothschild, i.e., the best bull and for the best cow. Sir James Blyth's prize for the best Jersey cow or heifer in milk, bred in Great Britain or Ireland, to be judged by inspection, was awarded to Mr. Alexander Miller-Hallett's Regina Sultana VI., bred by Lord Rothschild; the Earl of Cadogan's Beatrice being reserved. There were thirteen Jersey bulls in the senior class, which resulted in a victory for Lord Rothschild's Tudor Boy, the Hon. Mrs. Murray Smith's Mont Orgeuil being second, and Mrs. McIntosh's Brampton third, whilst Lord Sherborne was reserved with Golden Shaw 2nd. The junior class totalled one more, Mrs. W. Barrow's nicely shaped Taplow Rock being selected to fill the premier position, Lord Rothschild's Gay Boy second, and Mr. Arthur Pocock's Hercules third. There were nineteen entries in the cow class, which ended in a win for Lord Rothschild's Beresford Pride. Three-year-old heifers made a small class of eight. Mr. Alexander Miller-Hallett was fortunate with Regina Sultana VI., to beat Mr. C. McIntosh's Forget-me-not and the Bishop of Ipswich's Texture. The two-year-old-class found Lord Rothschild's Orleans Queen to the fore. But the real trial of strength came with the yearling class, in which twenty-five were entered. Mr. W. C. Cooper's Orange of Whittlebury eventually got the first prize, Lord Rothschild's Glitter was second, and Mr. Alexander Miller-Hallett's Crystalbrook Daisy third.

Guernsey made only a small collection, Mr. Frank Hargreaves and Mr. E. A. Hambro sharing the majority of the prizes between them. Kerries and Dexter Kerries, too, did not call for much attention, the principal winners being the Duchess of Devonshire, Mr. B. de Bertodane, Mr. J. Thorley, and Messrs. Robertson. The family class for the best bull, cow, and offspring, or a cow or two of her offspring, belonging to a tenant farmer, found Mr. James T. Hobbs first with shorthorns, Mr. Judge second, with Herefords, and Mr. Sanders Spencer third, with another group of shorthorns.

Horses.

Agricultural horses made only a moderate display, both as regards numbers and quality. There were but four entries of shire stallions foaled previous to 1900. This meant a rather easy win for Mr. Alfred C. Rogers's Premier. In the young stallion class Lord Llangattock took the lead with Hendre Royal Albert, thus beating Lord Rothschild's Harold Heir and Mr. P. A. Muntz's Dunsmore Lieutenant. Only four entries in the mare class, with Mr. John Thomson's Woodperry Watercress as the winner. The championships went as follows: — For the best Shire horse, Messrs. W. and J. Thompson's Desford Stonewall; reserve for same, Lord Llangattock's Hendre Royal Albert. The Shire Horse Society's Gold Medal was won by Woodperry Watercress, Mr. Robert W. Hobbs's Kelmscott June being reserved. Light horses made a fair show, although not so good as last year. The gold medal offered by the Hunters'

The photograph which we reproduce above shows the judging of the Shires for the Champion Prize at the Oxfordshire Show at Witney last week. The animal in the foreground is Desford Stonewall 2nd, bred by Messrs. W and J. Thompson, Desford, near Leicester, being by Stonewall 15,375, out of Brown Bonny 17,909. He won the Champion Prize given by Mr. A. Henderson, M.P., for the best Shire entire of any age; and also won the special for the best Shire horse in the show.

THE OXFORD DOWN RAM which forms the subject of our illustration above was born on 14th of February, and was bred by Mr. J. T. Hobbs, Maiseyhampton, Fairford, Gloucestershire. At the Oxfordshire Show at Witney last week this ram was awarded the Champion Prize for the best shearling ram, also winning First Prize in the Class for the best shearling ram of the Oxford Down breed.

Improvement Society for brood mares fell to Mr. C. Kelway Bamber, of Horley, Surrey, and the silver medal for a hunter filly by a thoroughbred went to Mr. J. W. King, of Whitesfield, Aylesbury. The silver medal for the best hackney or pony mare was carried off by Mr. H. Livesey, of Rotherfield, Sussex.

Sheep.

The sheep section, as was to be expected, found the Oxfordshire Downs in complete ascendancy, it being the best collection of the breed that has ever been seen at a gathering of the society. The chief prize-winners were Mr. Albert Brassey, M.P., who took no fewer than four firsts and two champions, Mr. J. T. Hobbs, and Mr. A. H. Wilsdon.

Hampshire Downs made a very creditable display, but they were not quite so even as usual, the exhibitors who were to the fore being Mr. C. A. Scott Murray, Lord Rothschild, Mr. James Flower, the Earl of Carnarvon, and the executors of Mr. Richard Ovey.

Southdowns were not so numerous, the best specimens being sent by Mr. C. Adeane, Colonel H. L. B. McCalmont, M.P., and Mr. J. Colman.

The Shropshires and Cotswolds were extremely short, the first prizes for the former being shared by Mr. R. B. Cooper, of Ashlyns, Berkhamsted, and Mr. W. F. Inge, of Tamworth, and the latter by Messrs. Russell Swanwick, of the Royal Agricultural College Farm, Cirencester, and Mr. H. Akers, of Blackbourton, Faringdon.

Miscellaneous.

Pigs were not represented in the show yard at all, owing to local swine fever regulations.

Three sections devoted to butter, eggs, dead poultry; honey were well filled, and attracted considerable attention, while the horse shoeing section aroused a good deal of interest.

JUDGES.

CATTLE.—Shorthorn and Family Class: J. P. Terry, Berryfield, Aylesbury. Hereford and Family Class: J. H. Yeomans, Stretton House, Hereford. Jersey: H. C. Webb, Audley End, Saffron Walden. Guernseys and Kerries: G. Titus Barham, Sudbury Park, Wembley.

HORSES.—Agricultural: Thos. B. Freshney, South Somercotes, Lincs.; William Horrell, Thorney, Peterborough. Hunters, Polo Ponies, etc.: W. H. Dunn, Wallingtons, Hungerford; Hon. A. E. Parker, Bangor-on-Dee, Wrexham. Hackneys, etc.: James Hornsby, Laxton Park, Stamford. Remounts: The Right Hon. Viscount Valentia, C.B., M.P., Bletchington Park. Jumping and Driving: The President, W. H. Dunn, James Hornsby, Hon. A. E. Parker.

SHEEP.—Oxford Down: J. P. Case, Binham Abbey, Wighton, Norfolk; W. D. Little, Estate Office, Middleton Park, Bicester, Hampshire: T. A. E. Hayter, Whitchurch, Hants. Southdown: R. Anderson, Cirencester. Shropshire: Charles Coxon, Elford Park, Tamworth. Cotswold and Any Breed: T. P. Hulbert, North Cerney, Cirencester.

Champion and Special Prizes.

CATTLE.

Champion prize, value £5, for the best Shorthorn Bull, eligible for Coates' Herd Book: Mr. L. de Rothschild (Silver Mint); r., Mr. L. de Rothschild (Lord Monmouth).

Champion prize, value £5, for the best Shorthorn Cow or Heifer, eligible for Coates' Herd Book: Mr. J. Deane Willis (White Heather); r., Mr. J. Deane Willis (Bapton Jewel).

Champion prize, value £5, for the best Shorthorn, eligible for Coates' Herd Book, the property of a tenant farmer residing in the County of Oxfordshire: Mr. F. W. P. Matthews (Peacemaker).

Champion prize, value £5, for the best Jersey Bull: Lord Rothschild (Tudor Boy); r., Mrs. W. Barron (Taplow Rock).

Champion prize, value £5, for the best Jersey Cow or Heifer: Lord Rothschild (Orleans' Queen); r., Lord Rothschild (Beresford Pride).

Silver Bowl, weighing 26oz., for the best Jersey Cow or Heifer in milk, bred in Great Britain or Ireland: Mr. Alex. Miller-Hallett (Regina Sultana VI.); r., Earl Cadogan (Beatrice).

HORSES.

The Shire Horse Society's Gold Medal and a Special prize of £5 to the breeder of the best Shire Mare or Filly, open to residents in the County of Oxfordshire: Messrs. W. and J. Thompson (Desford Stonewall 2nd); r., Lord Llangattock (Hendre Royal Albert).

Champion prize, value £10, for the best Hunter Mare or Gelding, the property of a tenant farmer residing within the limits of certain Hunts: Mr. J. W. King (Lack Nothing); r., Mr. J. J. Godwin (Clonmel).

Gold Medal or £5 and a Bronze Medal for the best Hunter Brood Mare in foal or with foal at foot: Mr. C. Kelway-Bamber (Homely Lass).

Silver Medal for the best Hunter Filly not exceeding three years old: Mr. J. W. King (Pale Face).

Silver Medal for the best Hunter Mare or Gelding: Mr. J. W. King (Lack Nothing).

Hackney Horse Society's Silver Medal for the best Hackney or Pony Mare, Filly, or Filly Foal: Mr. H. Livesay (Heresy); r., Mr. F. J. Batchelor (Enid).

SHEEP.

Champion prize, value £5, given by the Oxford Down Sheep Breeders' Association, for the best Shearling Ram: Mr. J. T. Hobbs.

Champion prize, value £5, given by the Oxford Down Sheep Breeders' Association, for the best Ram Lamb: Mr. Albert Brassey.

Champion prize, value £5, for the best pen of Females: Mr. Albert Brassey.

Champion prize, value £10, given by the Hampshire Down Sheep Breeders' Association, for the best pen of Lambs in Classes 75 or 77: Earl of Carnarvon; r., Lord Rothschild.

Silver Medal, given by the Southdown Sheep Society, for the best Male: Mr. C. Adeane; r., Col. H. L. B. McCalmont.

CATTLE.

SHORTHORN.

Bull, calved in 1897, 1898, or 1899: 1, J. Little and Sons (Vain Lord); 2, J. T. Hobbs (New Year's Gift); 3, J. Deane Willis (Granite Chip); r., C. H. Jolliffe (Nitrogen).

Bull, calved in 1900: 1, L. de Rothschild (Silver Mint); 2, J. Deane Willis (C.I.V.); r., G. Freeman (Chief of Sanguhar); c., S. E. Shirley (Crimson Rambler) and J. Thorley (Prince of Troy).

Bull, calved in 1901: 1, J. Deane Willis (Bapton Florist); 2, G. H. Simpson-Hayward (Icomb Pioneer); 3, L. de Rothschild (Lord Monmouth); r., W. C. Cooper (Dusky Prince); h.c., Alex. Henderson, M.P. (Baron Buscot); c., G. Freeman (Pride of the Hills), H. S. Leon (Conservative), D. Maclennan (Highland Chief), and Col. Makins (Ambassador).

Bull (Counties of Oxfordshire and Buckinghamshire), calved in 1901: 1, L. de Rothschild (Lord Monmouth); r., Col. Makins (Ambassador).

Cow, in Milk or in Calf, calved before or in 1898: 1, J. Deane Willis (White Heather); 2, Sir J. B. Maple, Bart., M.P. (May Duchess); 3, Alex. Henderson, M.P. (Grace Darling); r., Alex. Henderson, M.P. (Ringdale Favourite the 2nd); c., Mrs. R. H. Ratcliff (Young Sims) and Sanders Spencer (Star Countess).

Heifer, in Milk or in Calf, calved in 1899: 1, J. Colman (Hawthorn Gem III.); 2, J. Thorley (Fairy Queen); r., Alex. Henderson, M.P. (Moss Rose II.); c., J. Horlick (Coquette 3rd) and H. Oakley (Fairy Ring).

Heifer, calved in 1900: 1, J. Deane Willis (Bapton Jewel); 2, J. Colman (Lady Rose); 3, L. de Rothschild (Ascott Passion Flower); r., J. Colman (Hawthorn Queen); c. (2), W. Hazell (Apple Blossom 9th and Pomegranate 4th).

Heifer, calved in 1901: 1, J. Deane Willis (Malmaison); 2, S. Dennis (Latton Fancy); 3, Col. Makins (Rotherfield Duchess); r., J. Colman (Corona); h.c., D'Arcy Reeve (Rowena); c., Sir J. B. Maple, Bart., M.P. (Childwick Duchess) and G. H. Simpson-Hayward (Tulip Leaf 22nd).

HEREFORD.

Bull, calved in 1901: 1, Mrs. W. Barron (Taplow Rock); M.P. (Lord Roberts); 2, Earl of Coventry (Vishnu) r., J. Tudge (Royal Rupert); h.c., Earl of Coventry (Methodist).

Cow or Heifer, in Milk or in Calf, of any age: 1, J. Tudge (Princess Royal); 2, G. D. Faber, M.P. (Saucebox 5th).

JERSEY.

Bull, calved in 1898, 1899, or 1900: 1, Lord Rothschild (Tudor Boy); 2, Hon. Mrs. Murray Smith (Mont Orgueil); 3, Mrs. McIntosh (Brompton); r., Lord Sherborne (Golden Shaw 2nd); h.c., Col. H. L. B. McCalmont, C.B., M.P. (Chanslor); c., W. C. Cooper (Leylands Oak).

Bull, calved in 1901: 1, Mrs. W. Barron (Taplow Rock); 2, Lord Rothschild (Gay Boy); 3, A. Pocock (Hercules); r., A. Pocock (Golden Summer); c. (2), Lord Rothschild (Shooting Star and Duke of Cartaret) and Hon. Mrs. Murray Smith (Rosy's Record).

Cow in Milk, calved before 1899: 1, Lord Rothschild (Beresford Pride); 2, Mrs. C. McIntosh (Glorissa 3rd); 3, C. W. Armitage (Clementine); r., W. C. Cooper (La Chasse Queen); h.c., Earl Cadogan, K.G. (Beatrice) and Lord Rothschild (Merciful); c., Marquis of Winchester (Guarantee 5th).

Heifer, in Milk or in Calf, calved in 1899: 1, Alex. Miller-Hallett (Regina Sultana VI.); 2, Mrs. C. McIntosh (Forget-Me-Not); 3, Bishop of Ipswich (Texture); r., Mrs. W. Barron (Rosette 5th).

Heifer, in Milk or in Calf, calved in 1900: 1, Lord Rothschild (Orleans' Queen); 2, Mrs. R. H. Ratcliff (Coralic); 3, Col. H. L. B. McCalmont, C.B., M.P. (Adieu); r., Mrs. W. Barron (Rosette 7th).

Heifer, calved in 1901: 1, W. C. Cooper (Orange of Whittlebury); 2, Lord Rothschild (Glitter); 3, Alex. Miller-Hallet (Crystalbrook Daisy); h.c., Col. H. L. B. McCalmont, C.B., M.P. (Winifred) and Lord Rothschild (Crystalbrook Tiny); c., C. W. Armitage (Farineuse 4th) and Mrs. C. McIntosh (Hovering Pearl 2nd).

GUERNSEY.

Bull, calved in 1899, 1900, or 1901: 1, F. Hargreaves (Merton Prince); 2, J. P. Morgan (Masher's Eminent); r., E. A. Hambro (Hayes Westward Ho).

Cow or Heifer, in Milk or in Calf, of any age: 1, E. A. Hambro (Hayes Rosie); 2, F. Hargreaves (Sweet Sultan); 3, F. Hargreaves (Merton Beauty of the Haut Pave); r., E. A. Hambro (Felois); h.c., J. P. Morgan (Elfine of the Vielette III.); c., J. P. Morgan (Charmette's Favourite).

KERRY.

Cow or Heifer, in Milk or in Calf, of any age: 1, Robertson and Sons (La Mancha Vesta); 2, J. Thorley (La Mancha Spring Time); r., Robertson and Sons (La Mancha Sweet Kiss).

DEXTER KERRY.

Bull, calved in 1899, 1900, or 1901: 1, Duchess of Devonshire (Compton Darky); 2, Robertson and Sons (La Mancha Boss); r., Mrs. E. A. Leatham (La Mancha Handy Man); h.c., B. de Bertodano (Cowbridge Jock).

Cow or Heifer, in Milk or in Calf, of any age: 1, B. de Bertodano (Cowbridge Love Lost); 2, B. de Bertodano (Upminster Waif); r., Duchess of Devonshire (Upminster Ruskin); h.c., Robertson and Sons (La Mancha Crown Derby); c., Duchess of Devonshire (Compton Dame).

FAMILY CLASS (ANY BREED).

Bull, Cow, and Offspring, or a Cow and two of her Offspring, the property of a tenant farmer: 1, J. T. Hobbs (Shorthorns) (New Year's Gift, Orange Blossom 13th, and calf); 2, J. Tudge (Herefords) (Royal Rupert, Rustic Maid, and G.V.R.); 3, Sanders Spencer (Shorthorns) (Manor Sebaste, Star Countess, and Star of Holywell).

HORSES.

AGRICULTURAL.

Shire Stallion, foaled previous to 1900, that shall regularly travel in Oxon or within 20 miles of Witney during the whole of this season, fee not to exceed three guineas: 1, A. C. Rogers (Buckingham Premier); 2, Chadlington Shire Horse Company (Buscot Don); r., W. Boddington (Zodiac of Hothfield).

Shire Stallion, foaled in 1900: 1, Lord Llangattock (Hendre Royal Albert); 2, Lord Rothschild (Harold's Heir); 3, P. A. Muntz, M.P. (Dunsmore Lieutenant); r., J. P. Cross (Conqueror's Boy); h.c., Sir J. B. Maple, Bart., M.P. (Childwick Harold); c., O. Faulkner (Willaston Matchless).

Shire Mare, with Foal at foot, or to Foal this season: 1, J. Thomson (Woodperry Watercress); 2, R. W. Hudson (Natchy Aurea); r., P. A. Muntz, M.P. (Dunsmore Golden).

Mare, with Foal at foot, or to foal this seanson, the property of a resident with 20 miles of Witney: 1, A. Henderson, M.P. (Moors Cambria); 2, F. C. Taylor (Bassett Ruby); r., J. T. Hewer (Fancy).

Foal, the property of a tenant farmer, exhibited with Mare in either of above classes: 1, J. T. Hewer; 2, F. C. Taylor; r., F. C. Taylor.

Shire Mare, foaled in 1898: 1, W. and J. Thompson (Desford Flower); 2, P. A. Muntz, M.P. (Buscot Flora); r., F. C. Taylor (Nuneham Blossom).

Gelding, foaled in 1898: 1, Milton Harris.

Shire Filly, foaled in 1899: 1, W. and J. Thompson (Desford Stewardess); 2, R. W. Hudson (Wern Blossom); r., J. Parnell (Sunblossom); h.c., Lord Llangattock (Birdsall Buttercup); c., Sir J. B. Maple, Bart, M.P. (Coton Ladysmith).

Gelding, foaled in 1899: 1, R. W. Hudson (Danesfield Rebel); 2, J. T. Miller (Shutford Duke); r., Lady Wantage (Lockinge Blueheard); h.c., J. Honour.

Shire Filly, foaled in 1900: 1, John Parnell (Yatesbury Flower); 2, A. Henderson, M.P. (Birdsall Stately); 3, P. A. Muntz, M.P. (Rokeby Winifred); r., Lord Llangattock (Hendre Birthright); h.c., Sir J. B. Maple, Bart., M.P. (Victoria's Queen) and Lady Wantage (Childwick Lady Betty).

Gelding, foaled in 1900: 1, Lord Rothschild (Invincible); r., Sir J. B. Maple, Bart., M.P. (Childwick Golden King).

Shire Filly, foaled in 1899 or 1900, open to residents in Oxon, Bucks, or within 20 miles of Witney: 1, R. W. Hudson (Wern Blossom); 2, A. Henderson, M.P. (Birdsall Stately); r., Lady Wantage (Childwick Lady Betty).

Shire Filly, foaled in 1901: 1, A. Henderson, M.P. (Buscot Chloris); 2, J. H. Hughes; 3, P. A. Muntz, M.P. (Dunsmore Mistress); r., Lord Llangattock (Pride Duchess); c., R. W. Hudson (Parkside Princess).

Colt or Gelding, foaled in 1901: 1, W. and J. Thompson (Desford Stonewall 2nd); 2, A. Henderson, M.P. (Buscot Plutus); 3, P. A. Muntz, M.P. (Dunsmore Masterpiece); r., R. W. Hudson (Ware Masterman).

JUMPING.

Mare or Gelding that shall jump in the best hunting form—1, J. Wheeler; 2, A. N. Smith; 3, Mrs. Dudley Smith.

Mare or Gelding, not over 14.3 hands, that shall jump in the best hunting form—1, Mrs. Bessie Brooks; 2, B. Robins.

Mare or Gelding not over 13.2 hands, that shall jump in the best hunting form—1, Ben Sims; 2, A. N. Smith.

Mare or Gelding, that shall jump in the best hunting form, the property of a tenant farmer—1, T. and H. Ward; 2, W. W. Grundy; 3, Joseph Wheeler.

OPEN JUMPING COMPETITION.

Mare or Gelding—1, J. W. Bonham; 2, Wheeler; 3, B Robins.

Mare or Gelding—1, T. Wheeler; 2, T. and H. Ward; 3, B. Robins.

HARNESS.

Pair of harness horses, over 15 hands, to be driven in harness—1, Mrs. Thornton.

Mare or gelding, 15 hands and upwards, to be driven in harness—1, W. S. Cunard; 2, Arthur Cunliffe; 3, F. J. Batchelor.

Mare or gelding, over 14.2 hands, to be driven in harness—1, Mr. R. T. Thornton; 2, Isaac Fletcher.

Mare or gelding, not over 14.2 hands, open to residents in Oxon, or within 20 miles of Witney, to be driven in harness—1, J. A. Galt; 2, P. Round Green.

Mare or gelding, over 13.2 and under 15 hands—1, Arthur Cunliffe; 2, W. S. Cunard; 3, E. Baxter.

Pony Mare or gelding, not over 13.2 hands, to be driven in harness—1, Miss Grace Clarke; 2, William Foster; 3, Miss Cunliffe; r, W S. Cunard; h c, R. Thornton.

OPEN DRIVING.

Mare or gelding—1, W. S. Cunard; 2, Miss Cunliffe; 3, J. Mitchell.

HUNTERS.

Gelding, foaled in 1900, with breeding and substance requisite for a Hunter, the property of a tenant farmer: 1, C. Anstee (Comet) 2, W. Arkell; r., E. H. Pierce (Calcot).

Filly, foaled in 1899, with breeding and substance requisite for a Hunter, the property of a tenant farmer: 1, J. W. King (Pale Face); r., P. Berridge (Rustic Lass).

Gelding, foaled in 1899, with breeding and substance requisite for a Hunter, the property of a tenant farmer: 1, E. H. Pierce (Barnum); 2, R. Hobbs, jun. (Mike).

Mare or Gelding, up to 12 stone, foaled not previously to 1897: 1, J. H. Stokes (Opal); 2, C. M. Prior (His Lordship); 3, H. B. Cory (St. Yvonne); r., J. F. Mason (Myra); c., W. L. Barton ((Coronation), W. Bury (Multum in Parvo), and T. W. Craddock.

Mare or Gelding, foaled not previously to 1896, up to not less than 13 stone: 1, J. H. Stokes (The Laird); 2, H. B. Cory; r., J. Drage (Baronet); h.c., A. E. Eagle (Kitchener).

Mare or Gelding up to 13.7 stone, bred in Oxon or Berks, or within the limits of the Bicester and Warden Hill Hunts: 1, J. W. King (Morning Star); 2, J. W. King (Sweet Face); r., J. Thomson (Mona).

Mare or Gelding, foaled in 1895, or 1896, up to 14 stone, open to residents within the limits of the Old or South Berks, Bicester and Warden Hill, Heythrop, South Oxfordshire, Vale of White Horse, or Cirencester and Cricklade Hunts: 1, J. W. King (Volunteer); 2, R. Haw-Godwin (Clonmel); 3, F. M. Gibbard (Major); r., H. J Fletcher.

Mare or Gelding, foaled in 1898, up to 14 stone, open to residents within the limits of the Old or South Berks, Bicester and Warden Hill, Heythrop, South Oxfordshire, Vale of White Horse, or Cirencester and Cricklade Hunt: 1, J. W. King (Volunteer); 2, R. Hawkins (Kathleen); r., J. Mawle.

Mare or Gelding, 14.2 to 15.2 hands, for general purposes, the property of a tenant farmer or tradesman: 1, F. J. Batchelor (Enid); 2, F. W. Hedderly; r., Hawes and Balding (Utility); h.c., H. J. Fletcher.

Mare or Gelding, not over 15 hands, to carry not less than 15 stone, quality and action to be an essential point: 1, J. T. Mitchell (Extravagance); 2, Hawes and Balding (Safety); r., W. Hays (Pink).

Mare or Gelding, Park Hack: 1, Hawes and Balding (Ringlet); 2, W. S. Cunard (Lady Vanity); r., F. W. Hedderly (Coquette).

SHEEP.

OXFORD DOWN.

Shearling Ram: 1, J. T. Hobbs; 2, R. W. Hobbs; 3, A. Brassey, M.P.; 4, H. W. Stilgoe; r., A. Brassey, M.P.; h.c., A. Brassey, M.P., J. C. Eady, J. T. Hobbs, H. W. Stilgoe, and W. A. Treeweeke (2); c., J. T. Hobbs (2) and G. Roberts.

Three Ram Lambs, born in 1902: 1, A. Brassey, M.P.; 2, J. T. Hobbs; 3, A. H. Wilsdon; 4, W. J. P. Reading; r., R. W. Hobbs; h.c., G. Adams (2) and W. A. Treeweeke; c., H. W. Stilgoe.

Three Shearling Ewes: 1, A. Brassey, M.P.; 2, J. C. Eady; 3, J. T. Hobbs; 4, R. W. Hobbs; r., J. T. Hobbs; h.c., J. C. Eady and W. A. Treeweeke (2).

Three Ewes Lambs, born in 1902: 1, A. Brassey, M.P.; 2, J. T. Hobbs; 3, G. Adams; 4, R. W. Hobbs; r., G. Adams; h.c., W. A. Treeweeke; c., H. W. Stilgoe.

Pen of Three Ewes in the Wool, suckling their own Lambs, and not having been housed: 1, A. Brassey, M.P.; r., A. H. Wilsdon.

Pen of Three Ewe Tegs in the Wool, and not having been housed: 1, A. H. Wilsdon; 2, F. Penson; 3, A. Brassey; 4, A. H. Wilsdon; r., F. Penson.

HAMPSHIRE DOWN.

Shearling Ram: 1, C. A. Scott Murray; 2, J. Flower; 3, Lord Rothschild; r., A. Apperly; h.c., A. Henderson, M.P.; c., Earl of Carnarvon (2) and Sir J. B. Maple, Bart, M.P.

Pen of Three Ram Lambs, born in 1902: 1, Lord Rothschild; 2, Sir J. B. Maple, Bart, M.P.; 3, J. Flower r., C. A. Scott Murray; h.c., A. Apperly and Earl of Carnarvon; c, B. Hanbury, A. Henderson, M.P., R. Ovey's Executors, and J. Thomson (2).

Pen of Three Shearling Ewes: 1, J. Flower; 2, C. A. Scott Murray; r., Sir J. B. Maple, Bart., M.P.; h.c., A.

Pen of Three Ewe Lambs, born in 1902: 1, Earl of Carnarvon; 2, J Flower; 3, Lord Rothschild; r., C. A. Scott Murray; h.c., R. Ovey's Executors and A. Henderson, M.P.; c., A. Apperly, B. Hanbury, Sir J. B. Maple, Bart., M.P., and C. A Scott Murray.

Three Ewes in the Wool, suckling their own Lambs, r., A. Henderson, M.P.

Three Ewe Tegs in the Wool, and not having been and not having been housed: 1, R. Ovey's Executors; housed: 1, Earl of Carnarvon.

SOUTHDOWN.

Shearling Ram: 1, C. Adeane; 2, Col. H. L. B. McCalmont, C.B., M.P.; 3, J. Colman; r., C. Adeane; h.c., Earl Cadogan, K.G., and Col. A. F. Walter; c, Earl Cadogan, K.G., and Col. H. L. B. McCalmont.

Three Ram Lambs, born in 1902: 1, Col. H. L. B. McCalmont; 2, E. Ellis; r., C. Adeane; h.c., Lily, Duchess of Marlborough, and Col. A. F. Walter.

Three Shearling Ewes: 1, J. Colman; 2, Col. A. F. Walter; r., Earl Cadogan, K.G.; h.c., E. Ellis, J. Joicey, and Col. H. L. B. McCalmont.

Three Ewes in the Wool, suckling their own Lambs, and not having been housed: 1, J. Colman; 2, Lily, Duchess of Marlborough; r., E. Ellis; h.c., Col. A. F. Walter.

SHROPSHIRE.

Shearling Ram: 1, R. P. Cooper; 2, W. F. Inge; r., R. P. Cooper; h.c., W. F. Inge.

Three Shearling Ewes: 1, W. F. Inge; 2, R. P. Cooper; r., R. P. Cooper.

COTSWOLD.

Shearling Ram: 1, R. Swanwick; r., R. Swanwick.

Pen of Three Ram Lambs, born in 1902: 1, H. Akers; r., R. Swanwick.

Pen of Three Ewe Lambs, born in 1902: 1, H. Akers; r., R. Swanwick.

ANY BREED.

Pen of Three Wether or Ewe Lambs, born in 1902, the property of a tenant farmer residing in Oxon or within 20 miles of Witney: 1, E. White; 2, Mrs. Middleton; r., Mrs. Middleton.

Three Ewe Tegs in the Wool, not having been housed, the property of a tenant farmer residing in Oxon or within 20 miles of Witney: 1, P. G. Timms; 2, P. G. Timms; r., P. G. Timms.

Somerset County Association's Show.

The Somerset County Agricultural Association held one of the most successful of their annual shows at Wiveliscombe on Wednesday and the two following days. This was in spite of the unfavourable weather which prevailed over the best part of the opening day, and consequently kept many from attending the show who would otherwise put in an appearance. A lovely afternoon was, however, experienced, and the inhabitants of Wiveliscombe and the surrounding country turned up in force, and practically assured the financial success of the meeting. Entries were unusually numerous, and moreover were of good quality throughout. This was doubtless due to the very liberal prize-list offered, more than £1,000 worth of prizes being competed for. The horse and poultry sections were so well supported as to create a record for the Society so far as numbers went. The following figures show the entries of this year as compared with those at Taunton in 1901:—

	1902.	1901.
Horses	231	150
Cattle	103	102
Sheep	56	41
Pigs	27	21
Wool	22	16
Cider	27	33
Cheese	34	34
Butter	31	20
Butter-making	16	20
Horse-shoeing	59	60
Poultry and pigeons	443	303
Totals	1,049	800

The townspeople did their utmost to give the show a welcome, and both by subscribing heartily to the funds of the Local Committee and by decorating the streets of their picturesque town on the days of the show.

To come to the show proper. The horse section, which was the first to claim the judge's attention, was of somewhat uneven merit. Many animals of outstanding merit were entered, especially among the heavy horses, but the rest of the classes were filled with animals without the remotest chance of success in such good company. Sir William Wills was awarded the blue ribbon in the class for mare or gelding foaled in 1899, winning it with his bay Shire filly Rickford Lass from an unusually good lot of rivals. The gainer of the chief award in the class for two-year-olds was full of merit, and should bring its owner much good fortune throughout the season. The young stallions were not as strong as one could wish. Mr. E. A. Hardwick (Worle) and Mr. R. A. Sanders were entrusted with the duty of deciding the merits of the hunters, hacks, and ponies. They were of an average stamp, and although the entries in several classes were very numerous, few other than the prize-takers and those commended call for notice. Riding, driving, and jumping contests, in some instances very keen, drew a crowd of spectators to the grand stand and around the ring.

A regrettable feature of the cattle section was the falling off in the Devon classes. This was somewhat surprising considering the nearness of Wiveliscombe to the home of the Devons. The Shorthorns and Dairy cattle, however, though not very numerous, were of good quality, and gave the judges some little trouble in placing them. The champion bull from Dublin, Lord Bruce, belonging to Mr. G. F. King, succeeded in winning chief honours, some splendid young bulls being pitted against him. Sir W. H. Wills's Royal Scotsman won the chief award amongst the youngsters.

Sheep were exceedingly good, taken as a whole. The Devon longwools and the Exmoors were among the best that have been seen at a county show, and Mr. F. White, of Torweston, was the chief prize-taker with the former. Mr. C. N. Skinner's two-tooth ram, among the Exmoor horned sheep, was the finest that the judges have come across for years. It was nearly perfect. Entries of Somerset and Dorset horned were not full, but the quality all round was very satisfactory. These breeds should be more popular than they appear to be.

Pigs were perhaps dominated in respect of quality by the Berkshires. The boar of Mr. Hudson was splendidly marked. The whites were fine and very true to character, and there were some well-bred animals among the mixed breeds.

Cheese entries were on the whole good, although the Caerphillies were hardly up to the mark. Cheddars, however, made a splendid display. Butter was not quite so good, as might be expected in a county like Somerset, and several indifferent specimens were on show, although a few excellently worked samples of good flavour could be noticed.

In Class 31, for bull calved in 1901, a protest was lodged against the exhibitor to whose animal the first prize and the Bovine special prize were awarded, on the ground that the bull was artificially coloured. The discovery was said to have been aided by the rain. The protest was sustained. The first award was given to the holder of the second, the second to the winner of the third, and the third to the reserve animal. The Bovine prize was given to Mr. Greenway's Last Century.

Judges.

HORSES.—Mr. T. B. Freshney, Louth; and Mr. J. B. Stevens, Marlborough, Wilts.

CATTLE.—Devons: Mr. B. Bucknell, Wellington; Mr. N. Cook, Tiverton. Shorthorns and Dairy Cattle: Mr. J. Peter, Berkeley; and Mr. R. Stratton, Newport. Channel Island Cattle: Mr. T. H. Weetman, Atherstone.

SHEEP.—Devon, Longwools, and Exmoors: Mr A. Lovelace, Dulverton. Somerset, Dorset, Horned, and Hampshires: Mr. J. Creed, Broadwindsor; and Mr. J. Dean, Chitterne.

PIGS.—Mr. J. Watts, Chipping Norton.

CHEESE.—Mr. J. Duder, Taunton; and Mr. W. Dyment, Bridgwater.

BUTTER AND BUTTER-MAKING.—Mr. G. Gibbons.

WOOL.—Mr. F. Ingram, Taunton.

Prize List.

HORSES.

FOR AGRICULTURAL PURPOSES.

Stallion, foaled before 1900: 1 and special, J. Hawkins (Kewstoke Harold); 2 and r. special, F. Jeffery (Duncan III.); r., J. Bucknell (Croston Fashion).

Shire Colt, foaled in 1900: 1 and second r. special, R. W. Hudson (Celtic); 2, G. Cowing; r., R. Pocock (Baymead Masterman).

Mare and Foal, or in foal: 1 and r. special, R. W. Hudson (Markeaton Wild Wave and foal); 2, T. Chapman (Orchard Countess and foal); r., T. Chapman (Orchard Lady and foal).

Mare or gelding, foaled in 1899: 1 and special, Sir W. H. Wills, Bart. (Rickford Lass); 2, W. H. Godding (Savernake Favourite); r., T. Chapman; h.c., R. W. Hudson (Danesfield Negress); c., T. Chapman (Orchard Lady) and T. Wilce (Sowerby Lass).

Filly or Gelding, foaled in 1900: 1, G. Cowing; 2, S. H. Pimm (Primeval); r., H. Chambers.

Colt, foaled in 1901: 1, G. Cowing; 2, E. H. Buncombe (Longforth Ringleader); r., C. Marshall (Lord of the Manor).

Filly, foaled in 1901: 1, R. W. Hudson (Danesfield Resound); 2, G. T. Anstee (Stanton Primrose); r., W. H. Godding (Savernake Elexandra); h.c., G. Cowing; c., Sir W. H. Wills, Bart. (Cynthia).

HUNTERS, HACKS, AND PONIES.

Mare and Foal, or in foal: 1, C. W. Francis (Clonsilla); 2, J. Vicary (Dutch Oven); r., C. L. Fox (Grey Hen).

Mare or Gelding, calculated to carry 14 stone, foaled before Jan. 1, 1899: 1, H. B. Cory; 2, J. B. Gully (Rockville); r., J. S. Pyke-Nott.

Mare or Gelding, to carry under 14 stone, foaled before Jan. 1, 1899: 1, H. B. Cory; 2, J. S. Pyke-Nott (Golden Rule); r., W. Pride Jones (Princess).

Mare or Gelding, to carry not less than 13 stone and upwards, foaled since Jan. 1, 1896, the property of residents in the County of Somerset: 1 and r., J. S. Pyke-Nott (Golden Rule and Schoolmaster) 2, J. A. Moyle (Pioneer).

Mare or Gelding, to carry not less than 13 stone, foaled since Jan. 1, 1898, the property of residents in the County of Somerset: 1, J. White (Limerick); 2, G. L. Cornish (Somerset); 3, J. S. Pyke-Nott (Golden Age).

Hack, Mare, or Gelding, over 14 hands, foaled before Jan. 1, 1899: 1, T. D. John (Quantick); 2, Miss B. Finch; r., W. E. Sellwood (Stylish).

Filly or Colt, foaled in 1900, suitable for Hunter or Hack: 1, J. S. Pyke-Nott (Contest); 2, G. L. Cornish (Sea Breeze).

Filly or Colt, foaled in 1901, suitable for Hunter or Hack: 1, C. M. Wakely; 2, J. S. Pyke-Nott (Box Hill); r., J. Hawkins (Hunting Sire).

Filly or Colt, foaled in 1901, suitable for Hunter or Hack: 1, G. P. Finch; 2, Major-General Jago-Trelawny (Sesostus); r., H. T. Brown (Hypatia).

Cob or pony, mare or gelding, 14 hands and under, foaled before 1st January, 1900—1, Mr G. H. G. Arden; 2, Mrs. A Budd, Wiveliscombe—Bobs; r, Mr W. H. Aplin, Brompton Ralph—Forester.

Hunter mare or gelding, to be ridden over hurdles, not the property of a horse dealer—1, Mrs Ernest Hancock, Wiveliscombe—Anstey; 2, Mr. P. Froude Hancock, Wiveliscombe—Colonel; r, the Rev. W. F. Newman, Wellington.—I.O.U.

CHANNEL ISLANDS.

Bull, any age: 1, A. Gibbs (Perry Farm Clipper); 2, E. Smith (C.I.V.); 3, A. Pocock (Sirdar); r., the Marquess of Winchester (Companion); h.c., Mrs. R. Loader Brown (Rhodes) and A. Gibbs (2) (Golden King and Sir Hubert); c., A. Pocock (Farleigh) and R. F. Wheadon (Omrah).

Cow, calved before 1899: 1, Mrs. R. Loader Brown (Remember); 2, R. P. Wheadon (Hautvilles Surprise); 3, E. Smith (Hatty); r., the Marquess of Winchester (Reticule); v.h.c., the Marquess of Winchester (Margery's Pet) h.c., A. Gibbs (Lass of Jersey).

Heifer, calved on or after Jan. 1, 1899: 1, E. Smith (Magda's Maria); 2, R. P. Wheadon (Rosy 2nd); 3, the Marquess of Winchester (Little May); r., E. Smith (White Rosebud).

DAIRY CATTLE.

Dairy Cow, calved before 1899, calculated for Dairy Purposes: 1, A. Hiscock, jun. (Kirk Levington); 2, Messrs. J. Little and Sons (White Rose); r., Messrs. J Little and Sons (Beauty).

Heifer, calved in 1899, for Dairy Purposes: 1, W. J. Hosken (Wild Duchess 20th); 2, Messrs. J. Little and Sons (Rose Blossom).

SHEEP.

DEVON LONG WOOL.

Yearling Ram: 1, 2, and r., F. White; v.h.c., H. E. Thorne.

Pair Ram Lambs: 1 and 2, F. White; r., W. Greenway.

Three Yearling Ewes: 1 and 2, F. White.

Ten Shearling Ewes: 1 and 2, C. L. Hancock; r., H. B. Bellew; h.c., W. Greenway.

SOMERSET AND DORSET HORN.

Yearling Ram: 1, S. Kidner; 2 and r., F. J. Merson.

Pair Ram Lambs: 1 and 2, F. J. Merson.

Three Yearling Ewes: 1 and 2, F. J. Merson; r., W. J. Culverwell.

EXMOOR HORN.

Yearling Ram: 1 and 2, C. N. Skinner; r. and h.c., J. H. Turner.

Ram, any age: 1 and 2, C. N. Skinner; r., J. N Norman.

Three Yearling Ewes: 1 and 2, C. N. Skinner.

HAMPSHIRE DOWNS.

Yearling Ram: 1, C. A. Scott-Murray; 2, J. Joyce; r., J. Flower.

Pair Ram Lambs: 1, C. A. Scott-Murray; 2 and h.c., J. Joyce; r., J. Flower.

Three Yearling Ewes: 1 and champion, J. Flower; 2, C. A. Scott-Murray; r., J. Joyce.

ANY OTHER PURE BREED.

Pair Ram Lambs: 1, W. O. Meade-King.

Three Yearling Ewes: 1, W. O. Meade-King.

Ten Shearling Ewes of any pure breed other than Devon Longwool: 1 and 2, J. Joyce.

PIGS.

BERKSHIRE.

Boar: 1, R. W. Hudson; 2, J. A. Fricker; r., A. Hiscock, jun.

Sow with her Young: 1, the Hon. C. B. Portman; 2, J. A. Fricker; r., A. Hiscock, jun.; c., R. W. Hudson.

WHITE BREED.

Boar: 1, Sanders Spencer; 2, A. Hiscock, jun.; c., T. Manuell.

Sow with her Young: 1, T. Manuell; 2 and r., Sanders Spencer; c., A. Hiscock, jun.

ANY OTHER PURE BREED.

Boar: 1, C. L. Hancock; 2, J. H. Glover.

Sow in Farrow, or exhibited with her Young: 1, J. H. Glover; 2, C. Marshall; r., Messrs. W. and F. Arscott; c., J. Hayman.

WOOL.

Three Devon Long Wool Fleeces of 1902: 1, H. B. Bellew; 2, F. White; c., C. L. Hancock.

Three Dorset Horn Fleeces of 1902: 1, S. Kidner.

Three Cross-Bred Fleeces of 1902: 1, F. E. Hepper; 2, J. Heywood; c., F. J. Merson.

Three Down Fleeces of 1902: 1 and 2, J. Joyce.

Three Exmoor Fleeces of 1902: 1 and 2, C. N. Skinner.

CIDER.

Cask, made in the Autumn of 1901: 1, D. J. Crofts and Son; 2, Waterman and Son; 3, Mrs. B. Chivers; r., W. T. Allen; v.h.c., A. J. Candy; h.c., Waterman and Son; c., H. J. Davis.

Twelve Bottles Cider, made in the Autumn of 1901: 1, Waterman and Son; 2, Tilley Brothers; 3, D. J. Crofts and Son; r., Mrs. B. Chivers; v.h.c., Waterman and Son; h.c., A. J. Candy; c., H. J. Davis.

CHEESE.

Four Cheeses of not less than 60lb. each, made in 1901, the property of and exhibited by the makers: 1, A. Osborne; 2, A. White; 3, F. W. J. Crocker; r., J. Burfitt.

Four Cheeses of not less than 50lb. each (open to Somerset only): 1, J. Sage; 2, A. White; 3, Mrs. C. Candy.

Eight Loaf or Truckle Cheeses: 1, H. H. Pickford; 2, H. G. Ashman; 3, Mrs. C. Candy; r., W. J. Selway.

Four Caerphilly Cheeses: 1, Miss Spratt; 2, Mrs. W. T. S. Tilley; 3, E. Dibble; r., R. Board.

BUTTER.

Fresh Butter, of not less than 4lb. weight, made from the produce of cows of the Channel Islands breed: 1, C. Hayes; 2, Mrs. L. R. Mildon; 3, Miss M. K. Harris; r., A. F. Somerville; v.h.c., the Hon. Mrs. Portman; c., T. Miles.

Fresh Butter, made from the produce of cows of Any Breed other than Channel Islands: 1, C. Hayes; 2, Mrs. Adlam; 3, Miss M. K. Harris; r., Mrs. J. E. Shepherd; v.h.c., W. Body; h.c., Mrs. L. R. Mildon; c., Miss E. Follett, Mrs. J. F. Hill, B. Read, and Miss M. Vicary.

Design of Fancy Butter: 1, Mrs. M. A. Willis; 2, Miss E. Follett; 3, Mrs. J. F. Hill.

Newark.

The thirty-fifth annual exhibition of the Newark Agricultural Society was held on Wednesday and Thursday on the usual site, the Sconce Hills. Favourable weather prevailed, and the attendance of visitors was good, whilst the entries were quite up to the average in every respect, so that the show was, as it deserves to be, an altogether successful one. Being the first of the Midland shows, it is of keen interest to agriculturists in the district and also in many parts of Lincolnshire and Yorkshire, and success here is often prized more for the prestige that it carries than for the monetary reward. The entries, although not quite so numerous as last year, were up to the average, the total being 480, made up as follows:—Agricultural horses, 83; beasts, 55; pens of sheep, 18; pigs, 40; hunters, cobs, roadsters, and hurdle jumpers, 128; butter, 35; bread, 35; eggs, 28; spring chickens, 13; ducks, 7; sheep clipping, 10; butter making competition, 28. The chief falling off was in agricultural horses and beasts, but the quality in these sections showed no falling off. As usual, an attractive list of prizes had been offered, a total sum of £380 having been set apart for this purpose. In commemoration of the Coronation year the president, Mr. E. Elsey, of Hopwell Hall, Derby, offered a champion cup worth £10 gramme was upon the same lines as previously.

The judges in the chief sections were as follows for the best hunter, but in other respects the prolows:—Horses—agricultural: Mr. John Nix, Alfreton, and Mr. R. C. Cooper, Waltham, Melton Mowbray. Cattle: Mr. Henry Dudding, Riby Grove, Stallingborough, and Mr. H. W. Woods, Scotland Farm, Worksop. Sheep: Mr. W. Roe, The Cottage, Besthorpe, Newark, and Mr. John Cartwright, Pillar Farm, Nocton, Lincoln. Pigs: Mr. John Barron, Borrowash, Derby, and Mr. Thomas Diggle, Ewerby, Sleaford. Roadsters, hurdle jumpers—first day: Mr. W. R. Brockton, Farndon, Newark, and Mr. Colin Campbell, Stapleford, Newark. Hunters, cobs, hacks, roadsters, and hurdle jumpers—second day: Sir Gilbert Greenall, Bart., Walton Hall, Warrington, and Mr. James Hutchinson, Manthorpe Lodge, Grantham.

Horses.

There was a very fine display of agricultural horses, and in some cases the judges had great difficulty in deciding on which to confer the awards. There were far more brood mares than is generally the case, ten having been entered. The winner was selected in Rokeby Petrel, belonging to Mr. Smith-Carington, of Ashby Folville, Melton. She is a bay with beautiful legs, excellent feet and joints, and is of the right type all through. Mr. Avis, of the Nottingham Corporation Farm, Stoke Bardolph, was second with the big bay Nottingham Sunflower, by Nottingham Conqueror. There was a keen contest for third place between Mr. Avis's chestnut, Durdham Lassie, and Wyton Duchess, a bay mare belonging to Mr. Walsh, of Thornton, Poulton-le-Fylde, but eventually the judges decided in favour of the Nottingham mare as being in better bloom than her rival, Wyton Duchess, which had not yet foaled. Mr. Smith-Carrington was again successful in carrying off the premier honours in the class for cart colt or filly foals, a daughter of Rokeby Petrel, by Nailstone Cœur de Lion, being invested with the red ribbon. Mr. Philo L. Mills (Ruddington Hall) was second with a strong-boned filly by Ruddington Premier, which should have a useful career. Mr. Walsh was again third with a chestnut filly by Holdfast. She was the brightest filly of the lot, and is truly built, but she was handicapped by her age, being only four weeks old.

Of the seven barren mares and geldings entered, the pick was the well-known Lily-of-the-Valley, sired by Southgate Honest Tom, and the property of Mr. R. A. Yerburgh, M.P., of Woodfold Park, Blackburn. Dark brown in colour, with white legs, this daughter of the famous Carlton sire is of immense substance, possesses the best of feet and joints, and excellent feather, and moves beautifully both in the walk and the trot. Later in the day she was adjudged the champion, winning the Shire Horse Society's special prize. In the grey gelding, Warren Hazel, Mr. W. Jackson, of Knottingley Hall, provided the second-class winner, the Yorkshire animal being followed by Mr. Smith-Carington's bay mare, Blackmoor Belle. In the tenant farmers' class for barren mares or geldings Mr. Gilbert, of Mickleover, came to the front with his brown four-year-old, Droitwich Fashion, which was the reserve in the preceding class. Mr. Fletcher, of Althorpe, Doncaster, was second with County Lass 2nd, which had not quite the class of bone of the other. Mr. Pennington, of Rossington, Doncaster, was third with a good gelding. The class for three-year-old cart fillies included many superior animals, but the winner was easily discovered in Mr. Jackson's celebrated Ladysmith. She is a brown of great size, standing fully 16.3 hands high, with a beautiful back quarters and a deep middle. She was the reserve to Lily-of-the-Valley for the championship. Durdham Lassie was second, and Mr. Dakin, of Weston, Newark, was third with Northea Whitefoot, a thick, heavy-limbed bay, with a deep body and a lot of substance. She afterwards won Sir Gilbert Greenall's Cup for the best animal owned by a tenant farmer. A better collection of two-year-old fillies can hardly be recalled at Newark. A baker's dozen were worthily headed by a long-made, heavy-limbed grey, belonging to Mr. James Oakes, of Ridding, Alfreton. The second winner, which was also reserve for the silver cup before the winner was a big wide bay, and also hailed from Derbyshire, having been sent by Mr. Joseph Grimes, of Chesterfield. Mr. Arthur Blackwell, of Oughtibridge, Sheffield, was the exhibitor of the third prize-taker. Mr. Avis had matters his own way in the gelding class, in which he took the first and second awards with Nottingham Saint and Nottingham Sinner. Mr. Grimes was first in the tenant farmers' class for two-year-old fillies with the animal with which he was second in the open class. Mr. Saul, of Retford, came next with a big filly of a rare sort, and when she gets in condition she will be heard of in better company. Mr. Park, of Grove, Retford, was third with a sweet little filly, but wanting in size compared with the others.

There was an exceptional lot of yearling colts, and it took the judges some time to come to a decision, but their awards did not meet with general approval. Eventually they selected for premier place Mr. Albert Armitage's Cotgrave Marmion, a wedgy sort of a colt, but not quite so good on his limbs as some of the youngsters behind him, and he might have a little more hair. Many preferred the second prize-winner, a bay of great size, shown by Mr. Adlington, of Carlton. This animal had beautiful limbs, broad legs, excellent feet and joints, and is built on the proper lines. Third honours fell to the Duchess of Newcastle for Clumber Victor, a nice bay by Royal Derby. In ascertaining the merits of the yearling fillies, the presiding authorities had another tough task. Mr. Philo L. Mills was represented by Priscilla Alden whose undeniable merits prevailed. By Moulton Councillor, she is a heavy-boned filly of great size, with beautiful hair, and capital feet. The second prize-taker, the property of Mr. Oakes, is also a massive filly, but not quite so broad in the limbs as the representative of the Ruddington Hall Stud.

The class for harness geldings or mare roadsters, 15 hands and upwards, driven in single harness, was headed by Mr. Charles Fowler (Lincoln) with his chestnut gelding, Lincoln Gentleman; and Mr. G. E. Franklin (Derby) secured the red rosette in the class for ponies, 13.2 hands and under, driven in single harness, with his five-year-old Royal Crown Derby. In the hurdle jumping, which was a great centre of attraction, Lightning, a nice brown belonging to Mr. Addison (Newton-on-Trent), who took his fences in splendid style, was given the verdict.

Many of the hunter classes had secured excellent entries, and the judges had some difficulty in arriving at a decision. The brood mare class, which was the first taken, brought out only three competitors, Mr. F. B. Wilkinson, of Edwinstowe, Newark, winning somewhat easily with an animal of the true type. She had by her side a big colt foal by Squadron Leader. Messrs. Stokes and Son, of Newark, were second with a very good mare and a foal by the hackney sire, Chocolate Junior, whilst Mr. Wilson, of Southwell, was third with Duchess and a foal by Ambletonian. There was a splendid class of yearlings. Mr. Hodgson won with his chestnut colt Kildare by Red Prince II.—a horse of rare quality—which took honours at the spring show of the Hunters' Improvement Society. Mr. Wilkinson was here second with a bay filly by Havoc, another of the produce of Lady Grosvenor. Curiously enough she also took a premier award at Islington in one of the filly classes, and both she and the winner are animals of the highest merit. The filly is rather smaller than the other, but she is possessed of excellent quality. Mr. Smethwaite was third, with a bay colt by Glory Smitten. In the class for two-year-olds a reversal of the decisions come to in London was arrived at. Upon that occasion the stable companions Coronation and Brutus, belonging to Mr. Hodgson, were first and second respectively. On Thursday the judges placed Brutus first and entirely ignored the others. Brutus is a black gelding, and is by Active Hampton. He is of excellent quality. Mr. Wilkinson was second with a fine bay gelding by Havoc, and Mr. Bemrose, of Frieston Green, Caythorpe, was the reserve with Sir Richard, a gelding by Ruddigore. More horses that gained awards at the show of the Hunters' Improvement Society in London were seen out in the class for three-year-olds. One was a gelding belonging to Mr. Brown, of Marr Grange, Doncaster, and he was placed first. He was successful in the Islington charger class, whereas Mr. Hodgson's Toreador, a chestnut gelding by Matador, which was second, took a premium in the hunter section. Mr. Hoyle, of Moorlands, Bacup, was the reserve with Rosebery, a chestnut gelding by Khartoum, which has often been to the fore.

Cattle.

Cattle made hardly such a good display as last year, but still the exhibition was quite of an average standard, and there were several animals present of superior merit. In the class for Shorthorn bulls, two years old and upwards, Mr. T. Potter, of Daybrook House, near Nottingham, won with Roseberry, thus repeating the success he gained with the same animal last year. Roseberry was second at Colwick Park, and took a first prize and the championship at Moor Green, and throughout is evenly made. He is nearly three years old, whilst Mr. Philo L. Mills' Magic Stone, which was second, is three years and four months of age. The latter is not quite such a level bull, but he is of good character. There was little to choose between Carwin Lad, belonging to Mr. Preece, of Drayton, Thrapstone, and What Not, owned by Captain Reeve, of Leadenham House, Lincoln, in the class for bulls under two years. Both were very fine specimens, and Carwin Lad carried a little more flesh than the other. He cost 210 guineas at Birmingham, where he was first in his class last year. For Shorthorn cows, in milk or in calf, there were five entries, but the judges had little difficulty in placing the leader, a taking in-calf roan, the property of Mr. F. Platt, Barnby Manor; Mr. T. Walker, Burton Joyce, being reserved. Milch cows of any breed not over four years and six months' old numbered only four, and Mr. Dakin, of Weston, Newark, carried off the chief award with a very nice dairy cow of good character. Mr. Langham was the only exhibitor in the class for heifers not ever three years of age, and he was awarded the red rosette. Mr. Mills had no difficulty in taking the chief award for heifers not over two years old with Dunmore Lovely, a nice Shorthorn, with a good, straight back, but rather inclined to be leggy. She was first at Newark last year, and she gained two premier prizes at Nottingham, those being the only occasions upon which she has been seen in public. Mr. Freer, of Deeping St. Nicholas, Spalding, was second with a Lincoln red heifer of good type. There was a fine show of Shorthorn bull calves, under twelve months old; in fact, this class was considered one of the best on the ground. There were only seven entries, but each animal was of very good quality, and the judges had by no means a light task in placing their honours. Ultimately Mr. W. J. Atkinson, Western St. Mary, Spalding, was awarded the coveted rosette for a thick, fleshy calf. Mr. G. Freer, Deeping St. Nicholas, was placed second; Mr. A. Stretton, of Sibthorpe, Newark, being highly commended. The heifer calves, too, were a taking lot altogether. Mr. J.S. Reeve, Leadenham, was awarded first prize, and though his animal was two months younger than that shown by Mr. Potter, Daybrook, it was a much bigger calf, and deserved to win. Mr. T. Walker, Burton Joyce, was once more reserved,

this time with Winning Ways, a likely-looking youngster.

Sheep.

Sheep had five classes allotted to them, three for longwools and two for shortwools, and although the entries were not numerous they made a very good show. Messrs. S. E. Dean and Sons, of Dowsby Hall, Bourne, carried off both the first and second prizes for single shearling Lincoln rams with two capital sheep. Mr. H. Smith, jun., of Cropwell Butler, being third with an animal with a fine skin. There was little to choose between Messrs. Dean's and Mr. Smith's pens of Lincoln shearling hoggs, but the former gained the first award, Mr. Smith being second, and Mr. Bayles, of Welton Cliff, Lincoln, third with an excellent pen. The last named won with three Lincoln ewes in a heavy woolled pen. In the shortwool section Mr. Sheldon, of Whisby, Lincoln, was first and second with a strong lot of shortwool or cross-bred hoggs, there being a wide difference between them and those behind them. In the class of ewes Mr. Preece, of Drayton, Trapstone, won with a useful pen, Mr. A. Stretton, Sibthorpe, being placed second with a fair sample of the Shropshire variety, and Mr. R. J. Pratt, East Stoke, Newark, third. The champion prize—£4, given by Mr. J. Dickins, Newark—was carried off by Mr. J. A. Preece, Drayton, Thrapstone, for a striking pen of three ewes with some wonderfully good lambs, the same entry as secured the premier prize in the last-named class.

Pigs.

The display of pigs at this Society's show is generally a capital one, and last week's exhibition proved no exception to the rule. In the class for breeding sows (large variety) Mr. R. M. Knowles, Colston Bassett Hall, had a litter of eight fine youngsters, the mother having good hair and shoulders, with little bone, the offspring being all good in symmetry. Mr. Philo L. Mills, Ruddington Hall, was second, his exhibit having very fine hair, little bone, and good hams and shoulders. Mr. R. Daybell, Bottesford, always a strong competitor here, was a deserving third prize taker. In the next class, that for sows with young pigs at foot, Mr. R. M. Knowles' winners in the class just alluded to was the only entry, and, of course, carried off the pink rosette. Mr. Philo L. Mills came in an easy first in the class for gilts, in pig or not, with a really fine all-round specimen, Mr. D. R. Daybell, Bottesford, being second and reserved with a couple possessing good hair and plenty of flesh. The same exhibitor carried away second honours in the boar class with an animal of good length and with little bone. Mr. A. Armitage, Nottingham, coming in third. Mr. D. R. Daybell, Bottesford, carried off both prizes in the section for breeding sows (local), and he was also awarded the same prizes in the local competition for gilts, Mr. James Dakin, Weston, Newark, being placed third for an animal of useful quality, though somewhat small. In the "any other breed" classes Mr. Charles Beaumont, East Bridgford, secured a couple of seconds and a third with noteworthy Berkshires, whilst Mr. J. Dakin, Weston, Newark, secured a couple of first and a second with typical animals of the like breed.

Prescot.

The annual show of the Prescot Agricultural Society was held on Thursday in Knowsley Park, once more kindly placed at the disposal of the Society by the Earl of Derby. Unfortunately, the weather proved most unfavourable, but this did not interfere with the attendance of visitors to such an extent as one would have thought, and a goodly number of persons passed the turnstiles. The Society has of late years been very fortunate so far as the weather is concerned, so that, although unwelcome, they did not complain very much of the poor specimen the clerk of the weather provided them with last week. As regards the entries, they were a complete success, both in number and quality. The total was 1,116, as compared with 1,174 last year, but that was a record total, and last week's number was well above the average. The slight falling off occurred in the less important classes, and horses and cattle showed a distinct improvement. Local exhibitors held their own well in the classes for heavy horses, and the animals present were generally equal to anything to be found in Lancashire or Cheshire. Among the light horses were some of the principal prize-winners of the North, including the famous Zaverda, owned by Mr. Jones, of Knotty Ash. Among the cattle the Shorthorns generally were of the milking class, and the improvement which is being manifested all over the country in this class of animal was well represented here. The Society caters for all tastes and fancies, and therefore included classes for dogs, poultry, pigeons, rabbits, cats, cavies, butter, eggs, and bread. All were well filled, and received a good amount of attention from the numerous visitors.

Mr. G. H. Tyson, Dalton-in-Furness, judged the cattle; Mr. Thomas Bentley, Driffield, Yorkshire, the light horses; Mr. John Stuart, Tatton Park, Knutsford, the heavy horses; and Mr. J. Stallas, Walton, the pigs. Their awards were as follow: —

Cattle.

Heifer: under one year old: 1, G. G. Marsh; 2, W. A. Krigg; 3, A. Joy. Heifer, over one and under two years old: 1, R. Mercer; 2, Mrs. Greenwood; 3, T. Harrison. Heifer, over two and under three years old: 1, G. G. Marsh; 2, C. Baldwin; 3, Mrs. Garnett. Shorthorn Dairy Cow: 1, W. A. Krigg; 2, T. Abraham; 3, Mrs. Garnett. Bull, under one year old: 1, G. G. Marsh; 2, R. Bennett. Stock bull, over one year and under two years old: 1, T. Miller; 2, G. G. Marsh; 3, T. Harrison. Stock Bull, over two years old: 1, T. Miller; 2, C. Bell; 3, J. Gilmore. Dairy cow, Any Variety: 1 and special: T. Abraham; 2, R. Tunstall; 3, Mrs. Garnett.

HORSES.

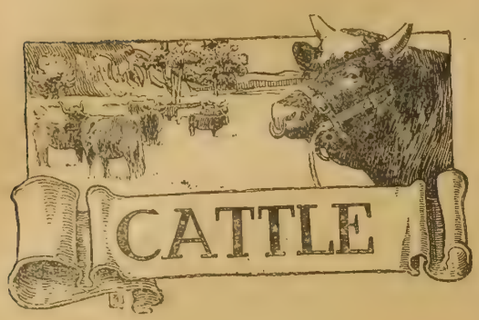
Light Colt, foaled in 1901: 1, A. A. Haley. 2, J. M'Laughlin. Light Gelding or Filly, foaled in 1900: 1, W. Lawson; 2, G. Smith. Light Gelding or Filly, foaled in 1899: 1, W. Lawson; 2, A. A. Haley; 3, J. H. Jones. Hackney Mare, in foal or with foal at foot: 1, A. A. Haley. Hackney Stallion: 1, T. B. Sykes; 2, E. Holmes; 3, J. Gilmore. Mare or Gelding, not exceeding 13.2 hands: 1, G. E. Franklin; 2, T. R. Evans; 3, J. Maskeague. Mare or Gelding, exceeding 13.2 hands, and not exceeding 14.2 hands: 1, J. H. Jones; 2, F. C. M'Kibbin; 3, W. J. Milton. Male or Gelding, over 14.2 hands: 1, Mrs. F. Holmes; 2, F. C. M'Kibbin; 3, T. B. Sykes. Mare or Gelding, not exceeding 13.2 hands: 1, G. E. Franklin; 2, J. R. Evans; 3, A. D. Oates. Harness Mare or Gelding, exceeding 13.2, and not exceeding 14.2 hands: 1, J. H. Jones; 2, F. C. M'Kibbin; 3, G. Ledson. Harness Mare or Gelding, over 14.2 hands: 1, S. and J. Dennis; 2, T. B. Sykes; 3, J. Heap. Harness Mare or Gelding, any height, not having won a first prize at any show: 1, J. H. Jones; 2, Halewood Stud Company; 3, W. J. Milton. Tradesman's Turnout, Mare or Gelding, exceeding 13 and not exceeding 15 hands: 1, I. Garnett; 2, H. Williams; 3, T. Smith. Tradesman's Turnout, Mare or Gelding, 15 hands and over: 1, H. White; 2, S. Reece and Sons; 3, P. Sheldon. Jumpers: 1, F. V. Grange; 2, Dr. A. C. Davies; 3, J. Taylor; 4, J. T. Heap; 5, C. Jerome. Draught Colt, foaled in 1901: 1, T. Charnock; 2, C. Bell; 3, Col. R. Ireland-Blackburn. Draught Filly, foaled in 1900: 1, C. Bell; 2, Col. Ireland Blackburn; 3, R. Jeffs. Draught Filly, foaled in 1899: 1, C. Bell; 2, H. Jagger; 3, J. Milton. Draught Mare, in foal or with foal at foot: 1, J. Dilworth; 2, Col. Ireland-Blackburn; 3, Executors of E. Charnock. Draught Gelding or Mare, four years old and upwards: 1 and 2, T. Edwards; 3, Col. Ireland-Blackburn. Draught Gelding or Mare, confined to the Society's district: 1 and 2, T. Edwards; 3, Col. Ireland-Blackburn. Draught Mare or Gelding, the property of a tenant farmer residing within the Society's district: 1, Executors of E. Charnock; 2, W. Watkin; 3, J. Leather. Shire Stallion: 1, C. Bell; 2, T. Charnock; 3, Liverpool Corporation.

PIGS.

White Boar: 2, J. Walton. White Breeding Sow: 1, J. and W. Birch; 2, T. Smith. Boar, Any other Variety: 1, J. Walton. Sow, Any other Variety: 1, H. S. Dame; 2, J. Walton.

THE HEREFORD BULL "LORD ROBERTS," which forms the subject of the above illustration, was bred by Mr. J. Price, Court House, Pembridge, Herefordshire, and is by Balfour, 18,688, out of Lottie. At the Witney Show of the Oxfordshire Agricultural Society last week, "Lord Roberts" won First Prize in the Class for the best Hereford Bull calved in 1899, 1900, or 1901; and was also being placed reserve for the Champion Prize for the best animal in the cattle classes.

Dumbartonshire.



The Dumbartonshire Agricultural Society's annual show was held at Balloch, on the 3rd inst., and was attended with a gratifying success, the entries being good, both in number and quality, whilst the attendance of visitors was very large, although hardly up to the average of some past years. The entries number 825, or three more than last year, and the representation of stock did great credit to the county, especially in the Ayrshire, Clydesdale, and blackfaced sheep sections, which included several well-known animals. In the Ayrshire cattle section Mr. J. Bauchop (Auchintulloch) was one of the most successful exhibitors, he winning first in aged cows in milk; first in the Derby for three-year-old queys, with Daisy II., a home-bred three-year-old; second in the class for cows bred by exhibitor, in milk or to calve before August 1st; first in aged cows in calf, and three-year-old cows in calf; and first in the class for groups of three. Daisy II. was subsequently awarded the medal for the best cow or quey bred in the district, and was reserve for the female championship. The cup for the best female Ayrshire was won by Mr. J. M'Kean, dam of Aber, with a cow which had previously won a champion award at a Scottish show. On the present occasion she was also awarded the medal for the best cow or quey for commercial purposes. The male classes also brought out some meritorious animals. Mr. James Orr (Mains), won in the aged bull class with Imperial Chief, which was awarded the male championship, and which was first last year at Balloch, third at Glasgow, and second at Ayr. Mr. John M'Kean was second. In the two-year-old bull class, Lieut.-Col. Fergusson-Buchanan was first with The M'Kinlay, the second prize winner at Kilmarnock and Ayr, and he was reserve for the championship. Mr. M'Kean was an outstanding winner in the yearling bull class with a home-bred animal.

There was a nice display of Clydesdales. In the class for brood mares Mr. D. Riddell (Kilboure) was first with an animal of nice quality and action, which was afterwards awarded the medal for the best female. Aged yeld mares were headed by Mr. John Macdonald (Boquhanran) with an animal by Gay Prince, Mr. Bauchop following with a Sir Everard mare. Three-year-old fillies made probably the best class in the female section. Mr. Riddell was awarded first for a Good Gift filly, after a keen contest with a Gold Mine animal shown by Mr. James Robertson (Auchinleck). Yearling fillies formed a large class, Mr. Whitelaw being first with one of his own breeding, Mr. Andrew M'Gown second with a compact animal, and Mr. John Filshie third. The same animals appeared in this order in the yearling filly sweepstake. Mr. Bauchop won the medal for the best yearling bred in the district, whilst the medal for the best filly, one or two years old, entered in the Clydesdale Horse Society's stud-books, went to Mr. Whitelaw's yearling. The medal for the best mare or filly bred by exhibitor went to Mr. Riddell.

Two-year-old entire colts, as a class, were of only moderate merit. The winning horse, however, belonging to Mr. Macdonald, was a good animal, with fine forefeet, and was awarded the medal for the best entire colt. In the yearling colt Derby Mr. Macdonald was first with his second prize winner in the previous class, and also took third prize. Miss Macfarlane (Blawarthill) won the medal for the best yearling colt bred in the district, and got by St. Simon, with the fourth animal in the open class.

Considerable interest was manifested in the light-legged exhibits. Mr. Robert Watkinson (Balloch) was first in the brood mare class, with an eight-year-old chestnut, Mr. W. Watson Murray being second. Mr. Watson also won in the yearling roadster class with a filly bred by himself.

Mr. Andrew Morton (Aitkenbar) won in both the two-year-old and three-year-old roadster classes with home-bred animals, and was also awarded the medal for the best roadster, one, two, or three years old. There were also some well-filled pony and harness classes. The display of sheep was not large, but the quality was fairly good. In the Leicester section Mr. James Caldwell was the champion, while in the blackfaced classes Mr. James Veitch (Milngavie) won the Arden Cup and other two silver cups.

Sale of Lord Crofton's Aberdeen-Angus Herd.

The Right Hon. Lord Crofton's entire herd of Aberdeen-Angus cattle and other stock was dispersed on the 9th inst. at Mote Park, Ballmurry, Roscommon, Mr. Gavin Low, Dublin, being the auctioneer. Since the herd was founded in 1894 by judicious selections it has had a great record of success both in the showyard and otherwise, and the fame achieved by the herd brought together a large gathering of breeders. Bidding was at times brisk, and some fairly good prices were obtained. Seventy-seven guineas was the top figure of the sale, and this sum was paid by Sir Henry Grattan Bellew for Ella II. of Mote, calved May, 1901, sire Estafette 7516. Witch of Benton, who was bred by Mr. C. Stephenson, realised 66 guineas, together with her cow calf, Mr. M'Laren being the purchaser for Mr. Richards, Canada. Two other animals made over 50 guineas —viz., Necklett II. of Drough 28086, calved March, 1899, and her calf, sold to Mr. Barton for 53 guineas, and Gladys II. of Mote, calved April, 1900, purchased by the Marquis of Downshire for 51 guineas. A list of the principal prices is appended:—

COWS AND HEIFERS.

	Gs.
Maggie Murphy 16720, c. Aug., 1888, s. Doonmaynor Black Knight 5303 ..... Mrs. Barton	21
Minnie of Cartachy 18778, c. Feb., 1892, s. Rover of Powrie 4391 ..... Mr. Ruttledge	20
Lisette 20737, c. Nov., 1892, s. Principal 6344 ..... Mr. Anderson	20
Movrone 20740, c. April, 1893, s. Principal ..... Mr. O'Farrell	20
Tierclea Sheila 3rd 26444, c. Mar., 1895, s. Sutlej 16036 ..... Sir Henry Grattan Bellew	23½

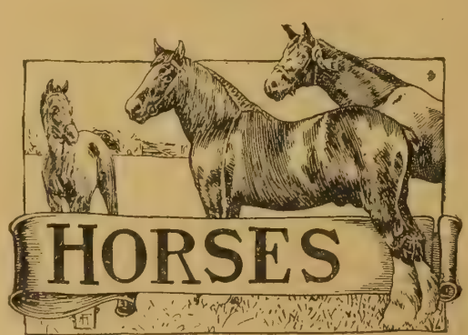
Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)



A large fair, composed chiefly of second-class two and three year old cattle in very poor condition, was held at Tuam co. Galway, on the 10th inst. Buyers were few, and demand slow throughout, a considerable number of rough, thin animals being turned out unsold. Prices:—Calves: Second class, £3 7s. 6d. ti £4; third class, £2 7s. 6d. to £3. Yearlings: Second class, £5 5s. to £6. Two-year-olds: First class £9 17s. 6d. to £11; second class, £7 7s. 6d. to £9 10s. third class, £6 to £6 10s. Three-year-olds: First class, £13 5s. to £13 17s. 6d.; second class, £9 15s. to £12 15s. third class, £8 to £8 10s. Springers: Second class, £10 10s. to £12 15s.; third class, £8 10s. to £10.

At the fair held at Midleton, co. Cork, on Monday, there was a large supply of cattle. Demand was good for those in condition, but a good many thin animals were not sold. There was but a small supply of sheep, and a fair demand prevailed for lambs suitable for shipping. Prices:—Calves: First class, £4 5s. to £5 5s.; second class, £3 10s. to £4. Yearlings: First class, £7 12s. 6d. to £9; second class, £6 to £7 10s. third class, £5 to £5 15s. Two-year-olds: First class, £10 to £12 10s.; second class, £7 15s. to £9 15s.; third class, £6 to £7 7s. 6d. Three-year-olds: First-class, £12 10s. to £13 10s. Springers: First class, £14 10s. to £16 10s.; second class, £11 to 13s.; third class, £9 10s. to £10 5s. Lambs: First class, £1 6s. 6d. to £1 11s. Over 12 and under 24 months old: First class, £1 13s. to £2 5s.; second class, £1 6s. to £1 8s. Two years old and upwards: First class, £2 to £2 5s. Young pigs, eight to ten weeks old, sold at from 18s. to 24s. each.

At Lisburn, co. Antrim, on Monday, there was a small fair, at which demand was slow and chiefly local. Prices:—Calves: Second class, £3 10s. to £4 2s. 6d. Yearlings: Second class, £5 15s. to £7 10s.; third class, £4 5s. to £4 15s. Two-year-olds: Second class, £8 5s. to £9 12s. 6d.; third class, £5 12s. 6d. to £7. Springers: First class, £16 to £17 2s. 6d.; second class, £11 10s. to £14 10s.; third class, £8 5s. to £9 12s. 6d.

Ballycastel (co. Antrim) fair, held on Tuesday, was an average-sized one, but demand was slow for both cattle and sheep. Prices:—Calves: Second class, £3 12s. 6d. to £4 2s. 6d. Yearlings: Second class, £5 13s. 4d. to £6 5s.; third class, £3 10s. to £4 2s. 6d. Two-year-olds: Second class, £7 12s. 6d. to £8 10s.; third class, £5 17s. 6d. to £7. Springers: Second class, £11 5s. to £12 10s.; third class, £7 16s. to £9 7s. 6d. Sheep: Over 12 and under 24 months old, second class, £1 5s. to £1 11s. third class, 15s. to 17s. 6d. Two years old and upwards: Third class, £1 to £1 2s. Young pigs, eight to ten weeks old averaged about 24s. each.

There was a large fair at Arklow, co. Wicklow, on Tuesday, the supply consisting chiefly of one and two year old cattle, the majority of which were in poor condition. They met a very slow demand, and many were not sold. Prices:—Calves: First class, £5. Yearlings, first class, £8 5s. second class, £5 2s. 6d. to £7. Two-year-olds: First class, £11 to £12 5s.; second class, £7 15s to £10 10s. Three-year-olds: Second class, £9 15s. to £11 15s. Springers: Second class, £14 5s. to £15 15s.

Sale at Bury St. Edmunds.

Messrs. Simpson and Sons held a sale of horses at Bury St. Edmunds on Wednesday, and it was well attended. About ninety animals were brought under the hammer, and met a fair trade at the following prices:—Suffolk colt, 2 years old, 21 gns.; a Suffolk filly, 2 years old, 21 gns.; a chestnut filly, 3 years old, 27 gns. Cart horses: Grey gelding, 6 years old, 21 gns.; bay gelding, 4 years old, 30 gns.; another bay gelding of the same age, 25½ gns.; Duke, a bay gelding, 38 gns.; a bay mare, 7 years old, 22½ gns.; a chestnut filly, 3 years old, 18 gns.; a black cart filly, of the same age, 30 gns. Other horses included a bay cob, which sold at 15 gns.; a bay mare, 14 gns.; another bay mare, 18 gns.; a roan gelding, 8 years old, 14.2 h.h., 16 gns.; a bay mare, 4 years old, 13.3 h.h., 21½ gns. Cobs, ponies, etc., included a grey cob, 6 years old, 14 h.h., which made 15 gns.; a brown cob, 16 gns.; a bay cob, 5 years old, 14 h.h., 15½ gns.; a bay pony, 6 years old, 13.1 h.h., 20 gns.

Show and Sale at Wimborne.

The annual spring show and sale of hunters and harness horses, held by Messrs. T. Ensor and Son, at Wimborne, Dorset, took place on the 9th inst., when 160 animals were offered, the number including a few useful heavy horses. Taking into consideration that three unforseen fixtures clashed with this date, a good business company was in attendance, and a capital trade ruled for the best descriptions, secondary kinds being harder to sell. There were a few nice cart horses catalogued, for which trade was particularly keen, at fully £8 apiece in advance of the special spring sale held in March last. The judging was undertaken by Mr. G. H. Bishop, Brislington, and Mr. Legg, jun., Melplash Court, and their decisions were as follows:—

Hunter, Mare or Gelding: 1, F. J. Hunt (a bay gelding, six years, 16 hands); r., T. Smith (grey gelding, six years, 16.1); v.h.c., Mr. Tucker (roan gelding, six years, 16.1).

Pair of Carriage Horses: 1, A. Butler (dark brown geldings, six and seven years, 15.3, which were sold for 78 guineas); r., H. Munro (bay geldings, five and six years, 16.1, undocked, sold for 96 guineas); v.h.c., C. Light (bay mare, seven years, 15.2).

Saddle or Harness Horse, over 15 hands: 1, Hon Mrs. Montgomerie (dark chestnut gelding, white points, six years, 15.3, sold for 50 guineas); r., G. R. Roberts (bay mare, seven years, 16 hands, sold for 41 guineas), v.h.c., Miss Carmichael (sold at 30 guineas).

Saddle or Harness Horse, under 15 hands: 1, F. Bond (brown mare, six years, 14.3); r., J. S. Passmore (brown gelding, six years, 14 hands, sold at 30 guineas) v.h.c., Mr. Dorey (black mare, four years, 14.2).

The prices obtained at the sale for light horses ranged from 28 guineas to 55 guineas; cobs and ponies, 15 guineas to 25 guineas; and heavy horses from 16 to 50 guineas.

Sale of a Dorset Horn Stock.

Mr. George Samways, of the Home Farm, Loders, having given up the farm, his entire stock was disposed of on Monday, by Messrs. Morey and Sons. The principal feature of the sale was the dispersal of Mr. Samways' noted flock of Dorset horn ewes. This was established by the owner about 20 years ago, ewes and lambs being purchased from the leading Dorset horn flockmasters of the neighbourhood, and strains of famous flocks have been drafted into this flock, so that the true breed of the Dorset horn entitles them to be entered in the Flock Book. Mr. Samways' ewes have obtained high figures in the local fairs, and the large company of buyers at the sale were able to judge of their great qualities. They made a remarkably fine show, and sold at satisfactory prices. The first lot offered was a capital pen of 25 off-going Dorset horn ewes, the bidding starting at 35s., and finally secured by Mr. Rolls, Burton Bradstock, at 43s. The remaining lots were sold as follow:—25 horn ewes, 40s 6d., Mr. Giles Frampton, Beaminster; 17 ditto, 32s., Mr. Frampton; six-teeth Dorset horn ewes, 44s., Mr. W. Manfield, Wooth; 42s., Mr. Daubeney; 43s., Mr. R. B. White; 40s., Mr. W. R. Pile; 40s., Mr. Pile; 38s., Mr. Pile; four-teeths, 46s. 6d., Mr. Salway, Milton; 49s. 6d., Mr. Albert Daubeney, Powerstock; 49s., Mr. Salway; 50s., Mr. A. G. Hicks; 43s., Mr. Salway; 42s. 6d., Mr. Salway; 39s. 6d., Mr. Legg, Symondsbury; two-teeths, 47s. 6d., Mr. J. M. Hounsell; 44s., Mr. J. Hansford, Loders; 61s., Mr. R. B. White, Shipton; 56s., Mr. J. Hansford; 50s. 6d., Mr. R. B. White; 45s., Mr. R. B. White; 40s., Mr. Legg, Symondsbury; Dorset horn chilver lambs, 35s., Mr. E. Paul; 35s., Mr. J. M. Hounsell; ten pens of chilver lambs ranged from 27s. 6d. to 42s., and 20 horn wether lambs were knocked down at 24s. apiece.

LITERARY NOTICES.

A monumental work, such as is the "Encyclopædia Britannica," has one great fault, and that is that it becomes out of date in the course of modern progress and discovery. Owing to the vastness of the task it is impossible to make a revised edition of the work, and in order to remove the stigma of "out-of-dateness" from the work, the only course is to issue supplementary volumes, in which are contained records of modern progress since the issue of the original volumes. This is the task that has been undertaken with regard to the "Encyclopædia Britannica." The demand for these supplementary volumes will doubtless be great, as the number of persons who purchased the Encyclopædia during the past four years was 40,000 in the United Kingdom, while in the States 400,000 sets were purchased.

The supplementary volumes will be eleven in number, and will contain 10,000 articles by 1,000 contributors, selected for their special knowledge, 2,500 new maps, plates, portraits, and other illustrations, in all, about 9,000 pages. To these will be added a very detailed index, comprising references to the old as well as the new volumes, and containing more than 600,000 entries. The publishers have sent us a specimen volume of the new issue, and also a very voluminous prospectus of the whole work, containing many specimen pages and illustrations. From these we are able to judge of the wonderfully complete manner in which the scope of the new issue will be carried out, and for which we must express our admiration. To mention one example, the article on agriculture occupies sixty-one pages, and is fully illustrated by a large number of splendidly reproduced pictures of typical animals of the various breeds, of agricultural machinery, etc. The article is from the pens of Dr. W. Fream, Charles W. Dabney, and other experts.

Other articles of interest to agriculturists are "Adulteration," by Mr. Otto Heiner; "Agricultural Machinery," by Mr. F. C. Skinner; "Allotments," and "The Anatomy of Plants," and also one on "Dairy Farming." All the various articles have been entrusted to men who are thoroughly capable of dealing with the various subjects. For instance, that dealing with "Arts and Crafts," is from Mr. Walter Crane; while Mr. Andrew Long is responsible for the article on "Physical Research." "Modern Music" is entrusted to Mr. J. A. Fuller Maitland, who also is the author of the article on "Bayreuth." Messrs. A. and C. Black, the publishers, have again fortunately secured the co-operation of the "Times," which will assure a large number of subscribers. The first volume was issued on May 2nd, and it is hoped that all will be out by the end of this year.

There has been issued the twenty-seventh annual report for the year ending July 31st, 1901, of the Yorkshire College, Leeds. That part of the report dealing with the agricultural section says that "The great advantages offered by the farm at Garforth to our agricultural students have been highly valued is shown by the fact that 49 individual students attended the courses last session, 45 in the two winter terms, and 27 in the summer, of whom 23 had attended the winter course, a result which must be very encouraging to those who assisted in the foundation of the agricultural department of the college. As a mark of their appreciation of the work done on the Manor Farm, as well as in the college classes and laboratories, the Board of Agriculture added £200 to their previous grant of £800 a year in aid of this department. It is encouraging to note that during the year the North Riding County Council made a grant in aid of the internal work of the agricultural department, and to that extent brought itself into line with the other two County Councils of Yorkshire in their support of this branch of the college. It is to be hoped that before long they will take a full share in the maintenance and management of the whole of the operations of the department."

The second number of the "Agricola Club Journal" of the past students of the South-Eastern Agricultural College, Wye, Kent, has come to hand. A capital photograph of Professor T. B. Smith, who is shortly leaving Wye to take up a Government appointment in South Africa, is given. The number includes several useful articles and the usual domestic matters dealing with the Agricola Club, and its members.

SOCIETIES.

Polo Pony.

Sir Patteson Nickalls (president) occupied the chair at a special meeting of the Council of the Polo Pony Society, held on the 9th inst., to consider the question of the title of the Society.

The chairman, in opening the discussion, pointed out that they had on the agenda six distinct propositions, namely:—

"A.—(a) The Polo Pony Society and Native Pony Breeds Association; or,
(b) The Polo Pony Society and Association for Preservation of Native Breeds."
"B.—The Pony Society.—Established to promote the breeding of ponies for polo, riding, and for military purposes."
"C.—The Riding and Polo Pony Society."
"D.—The Polo and Riding Pony Society.—Established to promote the breeding of ponies for polo, riding, and military purposes."
"E.—The British Riding Pony Society."
"F.—The Riding Pony Society."

He proposed to call upon each member of the Council against whose name these proposals stood, to speak to his resolution, invite discussion from other members present, and read letters from members of the Council who were unable to be present. He therefore called upon Colonel E. N. Henriques to move the proposals marked "A."

Colonel Henriques, in moving the alternative titles in his name thought that it would be inexpedient to obscure the original title under which the Society had become known and had made such great advances. He considered the basis for the present name rested upon the preface by Lord Harrington and Mr. John Hill in their first volume, of which most of their members seemed to have lost sight; in fact, he looked upon it as the Society's charter. He thought therefore that it was most important to retain their present title with any additions rendered necessary by their extended operations, and it would be a misfortune to sever themselves from the name under which they had become so well known. The Society was now on a sound basis and ought to reap the benefits from its earlier struggles. The polo pony was a prototype of the highest class of riding pony, and he thought that there was no other word which so well expressed their objects. The title was, moreover, recognised in official despatches, and the polo pony would not now be taken simply to mean the toy of idle and rich people. Lord Kitchener, in his despatch of December 11th last, specially took as his ideal for all mounted troops the well-bred, weight-carrying polo pony, and therefore the term was now well understood, and he would strongly urge that in the future this name should have a prominent place, giving the other objects of the Society in a subsequent paragraph. People would then have Polo Pony Society in their mouths, but the full meaning of the remainder would be in their minds. He hoped that whatever title was decided upon, that it should not be taken by any snatch vote, but that a strong majority should decide as to the most suitable title.

Mr. T. F. Dale, in urging the title of "The Pony Society," said that what he had stated at the last meeting indicated the position he took up, and which he would briefly recapitulate. The name "Polo Pony Society" was in itself an obstacle; from their point of view it was the standard at which they aimed, from the breeder's point of view the word polo stood in the sense of a rich man's game—a name which, in their eyes, condemned itself. The Society required to be known by a title explaining the wider views and scope of its operations, especially as regards the native breeds. Ponies had increased in numbers and value, interest in their breeding and showing was largely increasing, and the Society should make itself the great National Pony Society of the United Kingdom, and not confine itself to one breed of pony. He had purposely omitted the words "General" from their title, but it could be added later on if thought desirable. He thought the use of the word "Polo" would stand in their way when recognition came from the Government, as they would more likely countenance a national rather than a sectional society which their Society had ceased to be. Their present name would lead people to suppose that it still confined its operations to one class of pony. The name he suggested would at once express their present scope and future operations, and would indicate the position that they would in due course take amongst the other great horse-breeding societies. It was not merely a matter of title, the name was bound up with the future history of the Society. He was able to state that Sir Walter Gilbey was entirely in sympathy with his views, though that gentleman would prefer that the sub-section should read—"Established to promote the breeding of ponies for riding, polo, military, and general purposes." They all knew the interest that Sir Walter Gilbey took in horse-breeding, and his opinion must command their respect.

Mr. John Barker, in supporting Mr. Dale's views, said that the word "Polo" during his year of presidency had frightened off many likely members, as the word was to them only synonymous for an expensive game. If they decided to change the name let it be more comprehensive, otherwise the original title would be best left alone.

Professor Cossar Ewart, who was unable to attend, wrote that since the last meeting he had thought much about the proposed name for the Society, and was of opinion that it should indicate that the Society rested on a wide and comprehensive basis, and should be general enough to admit of their successors being free to adapt themselves to the needs of the day without having to again change the title. On the other hand, he deemed it expedient not to break with the past. The most embracing name suggested was undoubtedly "The Pony Society," though against this name was the absence of the word "Polo," but as polo men seemed to think the absence of their taking word was unimportant, and as the usefulness of the Society in connection with remounts and native breeds was likely to be restricted if "Polo" were retained, it might be better to leave it out in the main title and give it a prominent place in the sentence indicating the objects of the Society. Moreover, the demand for Polo ponies was very large, and would so increase that it was no longer essential that a Society should exist solely to foster their breeding. The time would never come when only the ponies bred by the Society, and included in their register, would be used for playing. At the last meeting he thought that the name suggested by Mr. Goodson—"The Riding and Polo Pony Society"—might meet the case. A visit to the Western Islands of Scotland had, however, led him to think otherwise. These islands were large natural pony farms, and from them in the future most breeders who desired to maintain hardiness and bone would find it expedient to resort for fresh blood. In conclusion, Professor Cossar Ewart suggested an addendum to the title of The Pony Society, embodying under three heads the main objects of the Society.

Mr. A. L. Goodson said the Society was primarily instituted for the encouragement of riding ponies, of which the Polo pony was the highest type. They had later on taken under their ægis the mountain and moorland breeds. Whether this was a mistake or not, they had now to name the Society in such a manner as to cover them also; and taking all things into consideration, he thought that the best name was the "Polo and Riding Pony Society." As Professor Cossar Ewart had withdrawn from supporting his original suggestion at the last meeting of the "Riding and Polo Pony Society," he had pleasure in supporting the proposal standing in the names of the Rev. D. B. Montefiore and Mr. G. Norris Midwood.

The Rev. D. B. Montefiore proposed that the Society should be called the "Polo and Riding Pony Society, established to promote the breeding of ponies for polo, riding, and military purposes, and for the encouragement of native breeds." It seemed, he said, that there was a need for change in the title, and so far as possible it needed some further definition, as the word "Polo" did not sufficiently express the wide objects of the Society, as it did not define all the ponies which the Society encouraged, and therefore he suggested the addition of the word "Riding," in order to widen the title, and also to educate the public to comprehend that useful term, "the riding pony." For the name "The Riding and Polo Pony Society" he claimed the following advantagse: It read better It sounded better. It preserved as much as possible the original title under which the Society had made great strides. It provided that the greater should precede the less, as the term "Polo" included riding, but riding did not necessarily include polo. The next reason was that the polo pony being the highest type of a riding pony, and the type that they were aiming to produce, should precede the term riding; while lastly he contended that the title aimed at would meet the views of those members who were specially interested in the development of the mountain pony, for it was acknowledged, he believed, on all hands that the mountain pony connected with their Society should be of a riding type.

Mr. G. Norris Midwood fully supported the views put forward by Mr. Montefiore. They were pleased to have the opinions put forward on behalf of "The Pony Society," but he failed to see how in the pony world, equally as in the cart-horse world, they could have a large society which would include every breed. They found Shires, Clydesdales, and Suffolks in separate Stud Books, as it was impossible to satisfactorily judge them and classify together. The riding pony was the Society's object, and it would be fatal if they should introduce the driving pony. Mr. Dale had pointed out that the word "Polo" would do

the Society no good when the name of the Society came before the Government. In his opinion he was entirely at variance with Colonel Henriques, who quoted to them the despatches from Lord Kitchener. Mr. Dale had suggested that the polo pony could not be bred, that it wanted educating; but he contended that hunter breeding was in exactly the same position, and that a four-year-old hunter would be just as awkward in the hunting field as the unmade polo pony on the polo ground. He strongly urged that the lines the Society was pursuing in the encouragement of the riding pony was the correct one, and that their Stud Book could not include driving ponies. Therefore, it was necessary the title should clearly indicate their aims.

Mr. E. Mucklow, jun., said that the original pony was of the riding type—"riding and pack ponies." One consideration practically swayed the Hackney judges in the judging ring, and that was action, which was most difficult to reproduce in breeding. He gave his vote cordially in favour of Mr. Montefiore's proposal.

Sir R. D. Green-Price, Bart., thought that the words "polo and riding" were putting the cart before the horse. The polo pony must be a riding pony before he could be a polo pony. He pointed out the danger that was likely to ensue by calling the Society "The Pony Society," as the harness pony breeder would have the same claims for consideration as the breeders of the riding pony, discord would be introduced, and they might fall between two stools. At the same time, he felt inclined to throw in his lot with the proposal of Mr. Dale, provided the objects stood as part of the title. Polo might die out, but the pony would exist, and it was essential that they should not narrow the Society, but that it should aim at doing the greatest good for the greatest number.

Lord Arthur Cecil said that there was a very strong feeling throughout England, Scotland, and Wales that their Society had become so strong that if they could abolish the word "Polo" from their main title, they would obtain the support, not only of the smaller breeder and the breeders of the semi-feral ponies of the mountains and moorlands, but also that of many rich and influential people who at present shied at the name "Polo" as representing an expensive game, unnecessary to encourage for their pockets, and most undesirable for the pockets of farmers required to attend to their business rather than breed a pleasure horse. There was also no doubt that as long as they remained the Polo Pony Society they would continue to be looked upon by the military authorities as a society something like Hurlingham and Ranelagh, merely to promote a form of amusement which increased the expenses of officers, which they professed themselves anxious to reduce, and they also might be chary of having much dealing with us. Again, if they persisted in their attempts to call themselves by any name in which "Polo" formed the prominent word, gradually the native breeds would fall away from them and start Stud Books of their own. The greatest enthusiasm prevailed in the Highlands, not only among many polo breeders, but to such an extent among the crofters that the Congested Districts Board had asked him (Lord Arthur Cecil) to accompany one of their representatives through the Western Islands, in order to prepare a report of the ponies. They seemed prepared to offer the Society every assistance in their power, but it was absurd to suppose that they would encourage crofters to breed polo ponies to carry seaweed in panniers and to starve on the mountains in the winter time. The proposed change in the name was sympathetically watched by the Welsh Cob and Pony Society, so that there would be no difficulty in making this Society a grand national movement. Lord Arthur then detailed the arrangements by which the registration of each mountain breed could be regulated by a local editing committee under the control of the central editing committee in London, who would have sole charge of the section for polo ponies. In conclusion, he said that should this scheme prove the success he anticipated, there would be only one book representing the whole pony world

Mr. T. H. Ormston Pease, speaking as a representative of the Dartmoor section, thought that it was absolutely necessary to keep the word "Polo" in front. The title of the Society should be short, and he therefore agreed with the suggested title, "The Polo and Riding Pony Society," with some alteration of the statement of the objects. He wished to impress on them that the Society should be distinctly limited to riding ponies. If the Welsh Pony and Cob Society wanted to come in they must drop the word "cob." He felt that the addition of the word "riding" would convince the farmers in this country that the Society would be useful to them. At the present time there was much confusion in his locality, and the medals offered by the Society for polo ponies and for Dartmoor ponies were often not given as the Council intended.

The Secretary then read letters from Major Kennedy favouring "The Pony Society," and from Rev. A. E. Green-Price, Mr. A. R. Midwood, and Mr. Clervaux Morley Saunders favouring "The Polo and Riding Pony Society."

The chairman, in summing up the discussion, said that the first question for them to decide was, Was it desirable and necessary to change the Society's name? The various views had been put before them in a most admirable manner, and showed that a change was undoubtedly desirable. He deprecated Lord Arthur Cecil's object in getting rid of the word "Polo" from the main title. The word used in connection with their nine years' existence as a society had attracted a large membership, and had enabled them to carry out a lot of good work, and he thought it would be most disastrous to eliminate the word "Polo" from their title. The words "Polo and Riding Pony Society" seemed to him to meet the necessities of the case.

Colonel Henriques then moved his alternative titles, but no seconder being forthcoming, the next resolution was moved by Mr. Dale, seconded by Mr. Barker, "That the Society should be called 'The Pony Society,' established to promote the breeding of ponies for polo, riding, and military purposes." This was defeated by fourteen votes to four.

The Rev. D. B. Montefiore moved and Mr. G. Norris Midwood seconded, "That the name of the Society should be 'The Polo and Riding Pony Society,' established to promote the breeding of ponies for polo, riding, and military purposes, and for the encouragement of native breeds." To this Mr. Barker moved an amendment to leave the title of the Society as it was, namely, "Polo Pony Society." This was seconded by Mr. Dale, and was lost by five votes to twelve. Mr. Pease's amendment of the sub-title and statement of objects was not upheld.

The Rev. D. B. Montefiore's resolution was then submitted, and was carried by sixteen votes to four; and Lord Arthur Cecil, Rev. D. B. Montefiore, and Sir R. D. Green-Price, Bart., were appointed as a sub-committee to make the necessary arrangements for the registration of the Society under its new title.

Annual Report of The Royal Agricultural Society.

The sixty-third anniversary meeting of Governors and Members of the Royal Agricultural Society will be held at 13, Hanover Square, on May 22nd at noon. The report of the Council will be read, and the election of the president, trustees, and vice-president, and 25 members of Council will take place.

The report of the Council, which will be presented, will show that during the year which has elapsed since the last anniversary meeting in May 1901, 8 governors, 2 honorary members, and 244 members have been admitted into the Society, and 13 members have been reinstated under Bye-law 12; whilst the deaths of 7 governors, 2 honorary members, 118 life members, and 141 annual members have been reported. A total of 319 members have resigned; whilst 17 have been struck off the books under Bye-law 10, owing to absence of addresses, and 67 under Bye-law 11, for arrears of subscriptions.

The Society has now entered into complete possession of the freehold land between Willesden and Ealing which, as announced in the last report, has been acquired for the purpose of a permanent showyard in the Metropolis. The work of preparing the site for the Society's show is being actively proceeded with, and the Council have every reason to hope that, with the co-operation of the railway and other authorities, the show of 1903 will be held on the new site at the usual time of holding the Society's meeting, viz., the week after Ascot. The Council are highly gratified to be able to announce that His Royal Highness the Prince of Wales has been graciously pleased to assent to be placed in nomination for the presidency of the Society during the ensuing year; so that the new series of the Society's annual exhibitions will commence under the happiest auspices.

The Permanent Show Fund now stands at £28,209 7s., contributed by 396 subscribers. Efforts, in which the co-operation of the general body of members is invited, are now being made by the Council to obtain further subscriptions for the capital requisite to equip the site with the necessary appliances and buildings, such as permanent stabling and the more substantial structures of a showyard. The balance-sheet to be presented at the meeting shows the total income of the year to have been £9,481 19s. 1d., and the total expenditure £8,792 3s. 9d.; thus leaving a balance of £689 16s. 3d. to be carried to account. The statments of receipts and expenditure for the Cardiff meeting shows that total receipts were £23,314 2s. 8d., while expenditure was £21,315 18s. 4d., thus leaving a profit of £1,998 4s. 4d. on the meeting. In place of the results of some of the Society's previous shows, we think this result will be found very gratifying by the members.

SOCIETY NOTES.

"The Budget as it affects Agriculture" was considered at the last meeting of the Lincolnshire Chamber of Agriculture. The Brigg, Grimsby, and Boston branches of the Chamber had each passed a resolution in favour of the corn and flour tax, but were in favour of the withdrawal of the cheque tax. These views were subsequently found to be those of the Chamber itself, resolutions embodying them being passed nem con. The members were also unanimously of the opinion that the butter regulations were satisfactory. The report of the Departmental Committee appointed to inquire into the conditions under which agricultural seeds are at present sold was also considered. The Brigg Branch Chamber approved of the report, and was of opinion that one seed testing station would be useful and quite sufficient until it was seen what use farmers made of it. The Boston branch also considered the report satisfactory, and suggested that the Government should be urged to install various stations throughout the country for the better inquiry as to the purity of all seeds, cake, manure, and other similar articles dealt with by the agricultural community. The Chamber eventually adopted the Brigg resolution.

The Worcestershire Chamber recently held a meeting to consider the Education Bill, and several resolutions were passed. It was agreed that it was unfair for Voluntary schools to have to compete with those which were supported by the rates, but objection was taken to the extra rates the Bill would impose, and the following resolution was carried without dissent:—"That education is a national service, the whole cost of which should be borne by Imperial taxation, and not by local rates." It was further agreed that the Agricultural Rates Act should apply to any rate under the Bill. Three other resolutions were unanimously passed:—(1) "That a rate upon the area served by each school would effect greater economy." (2) "That wherever a school possesses endowments those should remain the property of the school"; and (3) "That the permissive clauses of the Bill should be withdrawn." It was decided to send copies of the resolutions to the Central Chamber, the local members of Parliament, and the President of the Board of Education.

The members of the Worcestershire Farmers' Association have also discussed the Education Bill and passed a resolution to the effect that the association was strongly of opinion that any increase of taxation for educational purposes should be thrown upon the Imperial exchequer, and that the association would oppose by every means in its power any system which threw the charge upon the local rates. It was decided to send a copy of the resolution to local M.P.'s and the branch associations.

At the monthly meeting of the Berks and Oxon Chamber of Agriculture the first subject discussed was "the proposals of the Budget so far as they effect Agriculture." One member remarked that he thought the corn and flour tax would do a certain amount of good to agriculture, but he regretted that the Chancellor of the Exchequer had not doubled the duty he put on foreign flour. If he had made it 9d. per cwt. it would have practically been 1s. a bag of 140lb. One effect would have been this—they would have had from 70,000 to 75,000 tons more wheat offals to consume in this country, and it would also bring employment to about 20,000 to 25,000 able-bodied men, whose employment had been lost owing to the closing of the local mills. The extent to which the Chancellor of the Exchequer had gone was for the purpose of raising revenue, and it was not Protection. The rise in the price of wheat was, no doubt, solely due to the scarcity of wheat in the country. Whether the duty had been imposed or not, they must have had this rise. It was not a fictitious rise, but would keep on till the harvest. He moved: "That this Chamber thanks the Chancellor of the Exchequer for the help he has given to agriculture by imposing a registration duty on wheat and an import duty on flour, but regrets he did not see his way clear to double the duty on imported corn." This resolution was carried unanimously.

This Chamber also considered the report of the Committee of the Central Chamber on the conditions under which agricultural seeds are sold. Mr. Leonard Sutton said the committee sat nearly two years ago, and he thought the subject had been on the agenda before the present meeting. "He was a member of that committee, and they sat a great many times and examined a large number of witnesses, most of whom were connected with the seed trade. Generally the report would show them that it was understood the farmer did not want anything done. A few seedsmen agitated for an alteration very strongly, and brought much evidence upon the subject, and thought the new

idea would be useful to them, but because they sent seeds to be analysed would not be any guarantee that all the seeds they sold had been analysed. If every farmer, without exception, sent his seed up to a Government Station to be analysed then the scheme would do, but it would not act if only one farmer here and there had his seed examined. Again, if one hundred or possibly a thousand sent their seed to an analysing station they would have to wait a month or six weeks for the result, and therefore the scheme would not work well on that account. The Committee reported, in guarded terms, that something like that might be done, but Sir Wm. Dyer, head of Kew, and himself signed a minority report, calling attention to the fact that few farmers wanted the scheme, and pointing out the little good it would do unless farmers took an active interest in it. Apparently the Minister of Agriculture, Mr. Long, and Mr. Hanbury had taken the same view, that there was no demand by the farmers for it and that it was not probable they would use it, and if they did not use it, it would do more harm than good." The Chamber subsequently passed a resolution to the effect that no change is needed in the conditions under which agricultural seeds are sold.

A committee meeting of the Suffolk Agricultural Association was held at the Town Hall, Ipswich, on Tuesday afternoon, at which the award of premiums for 1902 to labourers, shepherds, and dairy servants were issued. It was stated that there is every prospect of the Society's forthcoming show being a good one, there being a record entry of stock. Horses number 420, cattle 121, sheep 305, and pigs 2111. The appointed judge of the farriery competition (Mr. P. M. Browne) said he thought the the awards should be made by an expert from the Farriers' Association, as being likely to be more satisfactory, while it would certainly be better for the men, who would not otherwise be entitled to the certificate of the Farriers' Association. He proposed a resolution to that effect, and it was carried unanimously.

At Newark Statute Hirings, held on Wednesday, there was a numerous attendance of farmers, but few servants showed a disposition to be hired, and demanded high prices, waggoners asking £16 to £24, and young farm hands from £14 to £18. Some servants who last year were hired for £17 asked as much as £24, and first waggoners declined to accept less than £27. Very few farmers closed yesterday. There was a great scarcity of female servants.

Chard Fair.—At this fair on Wednesday there was an unusually large attendance of buyers, and the stock made good prices, especially cattle. In sheep, prices were also well up. Single couples fetched 50s. to 55s. 6d.; double, 50s. to 56s. 6d.; hogs, 41s. 6d. to 45s. 9d.; rams, 42s. to 55s.; store ewes, 42s. to 44s.; store wethers, 39s. 6d. to 41s.; chilver hogs, 37s.; fat wethers, 52s. to 53s.; fat ewes, 45s. 5d. to 49s.; fat lambs, 25s. to 29s.

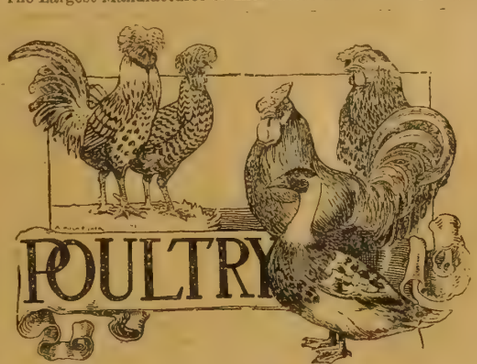
30 ,, ,, ...	2	7	0



TAMLIN'S SELF-SUPPLYING LAMP

Patent No. 20,182.

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.

W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY

The Largest Manufacturer of Incubators in the World

Rearing Turkeys.

Feeding.

(*Continued from page* 605)

As we have said, the young birds should be fed every two hours during the day, and the last thing at night they should have a feed also. The scalded biscuit-meal should be given for the first meal in the morning, then a mixture of ground oats and middlings, mixed nice and crumbly, then a feed of split groats, and then biscuit-meal again, and so on, always giving groats for the last feed. After they are a week old, whole groats should be given instead of split ones, and when they are three weeks old small, best quality wheat may be substituted for the groats. The young birds should be plentifully supplied with green food. They are very fond of onions, and these chopped *very* finely with young blades of grass, make a good mixture for them. The green food for all young birds requires to be perfectly fresh and crisp, and chopped up *very* small indeed. A little roup powder added to their soft food twice a day will prevent colds and help the birds very much. The green food mentioned should be given in between the feeds in the morning, and in the afternoon may be mixed with some fine oatmeal and substituted for one of the feeds of meal. It is very important that young turkeys be kept perfectly dry. If they are allowed to get damp, and particularly before they are seven weeks old, they nearly always fall victims to inflammation of the lungs.

Constructing a Run.

In order that they may be kept quite dry it is a good plan to have a covered run attached to each coop. The run should have a wooden top and a strip of wire netting of fine mesh, six inches wide, let in along the centre of the two sides, but not at the end. The run should be 18 inches high, and 30 inches long, and this will give six inches of board top and bottom of sides, with the wire netting along the centre, so that the birds have fresh air. The coop and run should always be placed back to the wind, and should there be a storm or a little shower a sack should be covered over the side of the run where the wind blows to keep the birds dry; the other side of run will provide them with fresh air. We find it a good plan to put dry road dust or peat moss dust, to the depth of at least two inches, on the floor of the run, so that the birds' feet are kept quite dry. The run should be fastened on to the coop with small hooks, so that the young birds will be quite safe from cats. In the coop where the hen is dry road dust or peat moss dust should also be used. The young birds may be allowed out during the middle of the day with the hen after they are a fortnight old, when it is perfectly dry and sunny. We cannot sufficiently emphasise the importance of keeping the young birds quite dry. If they are protected from damp, and have good food, and a regular supply of sharp, but fine, grit, they will thrive and grow well; but if they are allowed to get a chill they will die from it; or if they are not fed regularly, that is to say, if several meals are missed out, they run down at once; and if not supplied with grit sufficiently sharp to assimilate their food quickly they will die.

Grit.

The question of sharp grit for the feathered tribes is becoming much better understood than it was formerly, and we are very glad of it, as this is a very important matter. When birds have their liberty they search about and pick up all the sharpest small stones they can get, which go into the gizzard for the purpose of grinding their food; and it is necessary that this habit of these birds should show us that it is need for some material sufficiently hard and sharp to answer this purpose for our birds which are cooped. After the turkey chicks are two days old they should have fine flint grit sprinkled on the board on which they are fed —twice a day—at the time of giving soft food, so that it adheres to this, and is eaten with the food. We believe in a supply of fresh water for young turkeys—this being given to them in a perfectly clean saucer, and renewed as often as necessary. Avoid feeding on a lot of hard-boiled egg, which is much too constipating; good, nutritious cereal food is much better for the birds, and the advantage of a good biscuit meal is, it is a perfectly cooked food.

The addition of finely chopped meat after the birds are a fortnight old is advisable, granulated meat being a good substitute where the meat is not to be had.

After the birds are a fortnight old they should have a little meat. Where insect life abounds, and the young turkeys can have their liberty in the day time, after the dew has gone from the grass, they require very little meat, but where they are unable to get insects they should have the substitute. Biscuit meal is the finest food for them, varying it with a mixture of meals, mixed, dry, and crumbly. Ground oats, barley meal, middlings, and buck wheat meal are all good meals, but we strongly advise turkey rearers to carefully pass all their meals of this class through a fine sieve, so that the husks are removed, as, unless very finely ground, they are apt to cause a stoppage, which is a very serious matter.

As we stated in the preceding article, small wheat of the best quality is the most suitable grain for them, but this can be varied by dari, and to advantage. Provided that the young birds are kept dry, it does them good to have a free run on grass, and farmers should arrange to let their birds run out where sheep are grazing, if possible, after they are fairly strong, as the sheep keep the grass down close, and unless there is a very heavy shower, the birds only get their feet damp, and so do not suffer as they would if on longer grass, so that their fluff was wet. We have found hemp-seed and French buckwheat excellent grains for turkeys when they show signs of getting tired of the ordinary corn they are having. It is not necessary to study to provide a variety after the birds are six or eight weeks old, as they are by that time much stronger, and get more exercise, and consequently have more appetite. After they are two months old barley and maize may be given in change with the wheat, and if care is taken to give them plenty of sharp flint grit of a suitable size to their age, no difficulty will be experienced with liver disease, provided that the birds are bred from unrelated parents.

The young birds need feeding frequently until they are seven weeks old, but when they have passed this age, two feeds of meal and two of grain per day will be ample. They should have plenty of fresh green food, as this is most essential to their well-being. Young onions, dandelion leaves, young lettuce, and mustard and cress, all fresh and finely chopped, are excellent things for them. Care should be taken to prepare a small quantity only at a time, then the birds eat it up greedily, and it does them good, which is not the case when a lot of food is thrown down at once, and it gets tough and stringy. The young birds should remain with the hen about eight or nine weeks, if she continues to brood them well, then they should be removed to a roomy, covered shed, with wire netting front, with dry road dust on the floor to the depth of several inches. A flat perch, at least three inches wide, should be provided, not more than fifteen inches from the ground. Round perches should never be used, as they frequently cause crooked breast bones. We know several turkey rearers who bring their young birds up without allowing them to perch at all.

(*To be continued.*)

Can We Grow Our Food Supply?*

Before we can form an opinion on this question we shall have to examine the resources at our disposal, and obtain some idea of the amount of food necessary to support our population. We must also examine the condition of other nations, and it will be well to study closely those countries which are producing food in much larger quantities than we find it possible to produce under present conditions. It is a lamentable fact that we are farther from being a self-supporting country than we ever were. In England large areas are yearly falling out of cultivation; we have accepted a position of dependence on other nations for the bulk of our food; so general has the custom become of exporting our manufactures and of importing our food. Our notion of national economy for a century has been to absorb raw materials from every country, and to work these up into manufactured goods with which to flood the markets of the world. To this end we have used all our energies to produce goods in vast quantities. We have divided labour, and so specialised effort we have employed machinery and utilised invention, always with the object of increasing output. Success in warfare on sea and land, at the beginning of the last century, opened up the markets of the world to English enterprise; we gained command of the sea, and our commerce extends to the ends of the earth. In spite of the heaping up of national wealth, however, the poverty of the masses has become more acute yearly since we turned our backs on agriculture and allowed this oldest and most important of all the arts to fall into decay. Present industrial developments have been a success in creating vast wealth for the capitalists, but this very success has caused many people to lose sight of essential facts in the true economy of the State, and unless something is done to counteract the satisfaction with what is really false economy we shall be exposed to great dangers as a nation. Conditions are changing rapidly. It is quite possible that this system will shortly become crippled by the competition of other nations. It will then cease to be productive of wealth, and the folly of neglecting all our native resources of obtaining the first necessaries of life will be apparent to all men—even to the capitalists.

One danger of depending on foreign food supplies is the danger of starvation in time of warfare. We are constantly seeing discussions on this subject in the press. A blockade of our ports; an agreement on the part of the nations who send us food to boycott us, would cause us to capitulate to the enemy in a very short time. These are eventualities which occur to the military authorities, and several schemes have been put forward to meet such contingencies. Some of us may recollect a letter recently published in the "Morning Post," in which a tax on imported corn and a bounty to English farmers for growing wheat was advocated. Such a solution would be certain at any rate to raise our daily bread to famine price, whether there was peace or war. A home supply of food stuff would be worth many war ships; it would release many vessels which, in time of war, would be detained in defence of our ports and in convoying ships containing supplies; in short, it would be a method of reducing our steadily mounting national expenditure, which is assuming such immense proportions.

Another danger, and a more probable and definite danger, however, confronts us. We, as a nation, have not the control of the capital and enterprise of the world, and we cannot, therefore, maintain a place in the competition of trade ahead of all other civilised people. Knowledge, technical and theoretical, is becoming more generally diffused; it is a possession shared by many nations, and will be inevitably exercised by them more and more. Manufactures will be carried on all over the world in time to come, often near the actual sources of the supply of raw material, as in the cotton factories now springing up, I believe, in Texas, and threatening Manchester goods. In India rapid progress has been made in the manufacture of cotton; this industry in India is carried on under very bad conditions of labour, but still the output is bound to affect Lancashire very largely. Since it is impossible to prevent nations such as Russia, Germany, or Italy manufacturing for themselves, this danger of losing markets is definite, and can be foreseen as bound to come sooner or later. When it comes it must be met, or there will be another industrial revolution, attended with as great miseries as that occasioned by the introduction of machinery, when thousands were left without employment. The only difference is that the misery occasioned by the rapid application of new inventions was difficult to foresee and to cope with, whereas the difficulties which will be occasioned by over production on account of increasing competition can be foreseen, and could be met by wise statesmanship and by proper foresight on the part of employers.

When the time arrives, as it is fast arriving, when the great food exporting nations have also developed their home industries and manufactures, we shall be thrown back on our own resources, there will have to be a return to the land which is our almost sole source of supply—on the part of the workers who now find employment in tens of thousands in our factories and towns. If these busy workers can be gradually transferred back to the land by wise foresight they can be taught the art of agriculture, horticulture, and kindred pursuits; can, in short, be taught to become actually self-supporting in the highest sense of the word: then we shall become independent as a nation. Then shall we indeed attain a position of "splendid isolation"; producing our own food, and, as far as possible, the raw materials needed for our most urgent manufactures. With such conditions we should have no wastefulness of National resources and no land falling out of cultivation in ever-increasing area; but we should have employment for all our population, under healthy conditions, and, without doubt, a plentiful and cheap food supply.

The Question Abroad.

But is it possible for a country containing upwards of 40,000,000 of people, and with a cultivable area of only 33,000,000 acres to produce for so large a population? It is impossible in the light of modern agricultural achievements, to say how much food can be produced from a given area. This is still an unknown quantity; but it is possible to demonstrate, from what is actually produced annually in several countries in Europe, that a very much greater population than 40 millions could be supported by a cultivable area of 33,000,000 acres. The application of science to agricultural industry has given marvellous results, while new results are constantly being obtained from experiments which show clearly that the soil is capable of even greater results than any that have yet become common. Japan, a civilised nation has a population greater than our own, and a total area smaller than that of the United Kingdom, with a larger percentage of uncultivable land and yet Japan still manages to be a self-supporting country, so far as foodstuffs are concerned. The Japanese, however, live largely upon vegetables and fish, a diet which is very much more economical than the diet to which, through many generations, we have accustomed ourselves. We must rather look nearer home, amongst nations where the conditions of life approach our own more nearly.

There are some surprising statistics and many interesting facts given in Prince Kropotkin's book, "Field, Factories, and Workshops." The correctness of this information, acquired with great care, is generally admitted, and from this work we learn much of the condition of agriculture in Europe. France manages to produce 9-10ths of the total food consumed, and at the same time to export £10,000,000 worth of food-produce to this country. The area under wheat crops in France is six times greater than in England thus, while we can only provide for about 125 inhabitants per square mile, France is able to feed 170 inhabitants per square mile. French agriculturists are by no means at the end of their resources, and are applying the latest theories of science to the improvement of agriculture. The development of horticulture in France is even more surprising. The market gardeners who flourish near Paris have overcome the difficulties of soil and climate. They practically make their own soil, and use acres of glass under which to grow early vegetables and fruits which need protection. It may be added that a very high rent is paid by these gardeners, amounting in the suburbs of Paris to as much as £32 per acre. Land near London could probably be rented for about £15 per acre. This kind of culture involves a great expense of labour and a considerable outlay on apparatus for forcing, irrigation, etc. Without such costly aids and with only 36 yards of frames for seedlings, vegetables are grown in the open air to the value of £200 per acre. The Paris gardener defies soil and climate. It has been said, "He has given to Paris two degrees of latitude." If it were necessary to grow all the food, animal and vegetable, of the two departments in which Paris stands, these practical gardeners maintain that it would be possible to do so. That is to admit that they believe they could produce the food of 1,076 people to the square mile. This is not, after all, impossible when we consider that fifty years ago gardening in France was quite primitive, and that all the advance which has even now been made leaves us but at the threshold of this science. Human invention can possibly achieve remarkable results by the adaptation of invention to many laborious manual operations in gardening. It has been suggested that the mixing and blending of mould may be carried on by machinery as well as the heating of the ground by hot-water pipes. There is probably much still that may be learnt by scientific research about the soil which has been called so appropriately "the living earth."

Now let us look at the

Condition of Agriculture in Belgium.

It is by studying operations in this country that we shall find a conclusive answer to our question. In Belgium we find a wheat-growing area five times greater than in England, growing an average crop of 27 8-10th bushels to the acre. In England it is the custom only to grow wheat on certain picked areas, favoured by natural conditions. The farmer then puts most of his manure on that very restricted area, and by this means we have a reputation for growing an average of 28 bushels to the acre. However, in Belgium they are only a fraction below this average, and yet they have a much greater percentage of area under wheat. In Great Britain we find only one million four hundred and seventeen thousand acres growing wheat out of a cultivable area of 33,000,000 acres. In fact, our reputation for wheat-growing rests on the average obtained from only 25 acres out of every thousand; while, in France, they grow wheat on 146 acres in every thousand, and in Belgium the cereals cover almost half the land available for culture. It is to be feared that the actual figures to-day would give a still more glaring difference, for these statistics are based on figures compiled in 1895, and since that time large areas growing cereals have been either laid down in pasture or have fallen out of cultivation in England.

Perhaps a contrast with Belgium gives us the best idea of the possibilities of food supply, because this country and Belgium have certain points in common. For instance, 1st, the population of Belgium is even denser than that of England and Wales. In Belgium there are 544 inhabitants to the square mile against 373. 2nd, Belgium is a manufacturing country, exporting home-made goods to the value of £9 per head of the population. The total exports of this country attain only £6 7s. per head. 3rd, the soil is not so rich as that of England. 4th, rent is high; in fact, of the rent being raised each nine years, many farmers have lately abstained from further improvements. This is unfortunate for our present inquiry, because we do not know the utmost that could be got out of Belgium soil. From these four facts about Belgium we see there are no special circumstances to account for her agricultural superiority over this country and yet the food of 490 inhabitants per square mile is produced, and there yet remains for export to Great Britain £1,000,000 of food.

In West Flanders, a small and naturally unfertile province, they grow the food of 580 inhabitants per square mile, and still export agricultural produce to the value of 25s. per head of the population. There is in the district of Saffelare, in East Flanders, a territory of 37,000 acres containing a population of 30,000 present inhabitants. These people produce all their own food and keep 10,720 horned cattle, 3,800 sheep, 1,815 horses, and 6,550 swine; they also grow flax, and they are still able to export various agricultural produce. When instances such as these are cited, one sometimes hears vague remarks about rich soil or genial climate. These, however, are not the causes of the wealth of produce here described. The fact is that modern methods of agriculture have completely overcome the natural difficulties of soil and climate, intelligence, and indefatigable industry have been the magic keys which have unlocked the treasure house of agricultural wealth.

Agricultural Prosperity in Jersey.

Let us examine the marvellous results obtained in Jersey in proof of this assertion. This small island is noted for the enormous supplies of vegetables it is able to send to the market, and it also nourishes its own population of two people to the acre. These industrious people have produced extraordinary crops of potatoes, and are famous for the early varieties which they have obtained through their excellent methods of selecting the tubers and in choosing suitable ground on which to grow them. The right kind of manure has been arrived at by dint of untiring experiments on the part of the labourers. They are able to obtain for these early varieties as much as £17 to £20 per ton. The potato crop alone is valued at from £250,000 to £500,000, according to the year, and this is obtained from no more than 7,500 acres under potato culture. As soon as the potatoes are out a second crop of mangold or of a quickly-growing wheat is put in; not a day is lost. There are also large areas under glass; enormous crops of tomatoes and early vegetables and salads are also grown in this way. It would be wearisome to enumerate all the wonders of fertility in Jersey; on the average they are able to obtain £50 worth of produce to each acre of land. While in England we grow six tons of potatoes to the acre, in Jersey they nearly double that average. In Jersey as well as in the Saffelare district of East

* A lecture by Miss M. M. A. Ward, M.C.A., delivered at a meeting of the Tunbridge Wells Farmers' Club.

Flanders) they manage to keep one head of horned cattle to each acre, while two or three acres are required in districts of England which are supposed to be under good cultivation.

When we examine the climate and soil of Jersey there is nothing to account for such productivity. There is an absence of sun-heat during the summer, and the cold winds of spring are prevalent until late, retarding vegetation. They also suffer from fogs and damp, which cause mildew and blight. As for the soil, it consists of decomposed granite with no organic matter originally. That which it now possesses has been made by manuring, first with seaweed and afterwards by shipments of manure and the manure from the live-stock kept by the islanders. We must, therefore, discard peculiarities of climate as accounting for the astonishing results obtained. They are more probably to be found (1) in the difference of land tenure and transfer; (2) in the intelligent industry of the people; and (3) in the fact that the people of Jersey have retained certain communal rights and privileges, such as the right to take the seaweeds; (4) in the communal habits of the people. Their methods of cultivation are not isolated; they have found strong habits of mutual help and support. Their experiments and discoveries have benefited all the cultivators, and have been used for the good of all; lastly, the taxation is light, except in the case of alcoholic liquors.

Land Tenure One of the Causes of Success.

The system of land tenure is instructive. Kropotkin gives a short account of it as follows (quoting from Quayle, and also from Ansted, Latham, and Nicolle): "More than one-half of the territory is owned by those who themselves till the soil; there is no landlord to watch the crops and raise the rent because the farmer has reaped the fruit of his improvements; there is nobody to charge so much for each cart-load of seaweeds or sand taken to the fields. Everyone takes the amount he likes, provided he cuts the weeds at a certain season of the year, and digs out the sand at a distance of 60 yards from the high-water mark. Those who buy the land can do so without becoming enslaved to the money-lender. One-fourth part only of the permanent rent which the purchaser undertakes to pay is capitalised and has to be paid down on the purchase (often less than that), the remainder being a perpetual rent in wheat, which is valued in Jersey at 50 to 54 "sous de France" per cabot. To seize property for debt is accompanied with such difficulties that it is seldom resorted to. Conveyances of land are simply acknowledged by both parties on oath, and cost nearly nothing. And the laws of inheritance are such as to preserve the homestead, notwithstanding the debts the father may have run into."

He further quotes: "In no place do we find so happy and contented a country as in the Channel Islands. The system of land tenure has contributed in no small degree to their prosperity. The purchaser becomes the absolute owner of the property, and his position cannot be touched so long as the interest of these (wheat) rents be paid. He cannot be compelled, as in the case of mortgage, to refund the principal." It is only fair, in quoting the extraordinary agricultural success of Jersey, to point out that there are certain conditions prevailing there which gives cultivators opportunities such as they do not enjoy in England. But it is necessary, perhaps, to point out that these advantages are obtained from causes other than natural fertility and genial climate.

It is interesting to note the trend of agriculture in the great

Wheat-producing areas of America.

We have heard much of the enormous areas annually reaped; the methods of organising labour whereby these areas are brought under a kind of rough cultivation the crop is sown and the labourers disbanded, to be brought on the scene again when the crop is ripe. By farming in this way, getting a small crop from each acre, but having vast prairies growing the wheat, it was calculated that the work of 300 men in a single day delivered to the consumer at Chicago the flour required for the yearly food of 250 persons. Twelve hours and a-half of work was thus sufficient to supply one man with his yearly provision of wheat-flour. This sounds an admirable way of proceeding, but it suddenly failed, owing to the fact that under such a system the soil became exhausted and the crop declined. In Iowa, in 1878, owing to the exhaustion of the soil in this way the whole wheat crop was destroyed by a disease which the debilitated wheat plants had no force to resist, and a terrible crisis followed. The system of culture called intensive agriculture, which aims at high crops on a limited area, was then adopted, and this system of high farming is being more and more adopted in America and Canada. America now produces results very little behind France in wheat culture, and they now grow an average of sixteen and a-half bushels per acre, on an area of more than 2,000,000 acres. But the Americans are not going to stop where they are now. They combine together, usually in groups of four, to buy the reaping and binding machines and other new labour-saving machinery. In short, the force of "American competition" does not lie in the possession of hundreds of acres of wheat in one block, in the mammoth farm system of prairie wheat-growing, but it lies in the ownership of the land, and in the widely-developed spirit of association.

In the States and in Canada experimental farms, under the best scientific conditions, are organised. Researches and experiments are made, the results of which are brought to the knowledge of every farmer in the country; farms are visited, advice is given, correspondence is carried on with the farmers; any farmer can get free samples of any variety of cereals sufficient in a year's time to obtain seed in a year's time to sow several acres. There are also lecturers sent out, and in the remotest townships farmers' meetings are held, local agricultural societies are formed, and discussions take place relating to every branch of of agriculture. The great point is that the farmers keenly appreciate these advantages, and take every possible opportunity of benefiting by them.

Causes of Agricultural Decay in England.

Why is it that agriculture is not advancing in England? Why are we told "it does not pay" in a country so populated? It is proved beyond question that agriculture is declining in England at a rapid rate. It certainly does not pay under present conditions, or this would not be the case; we should not have large areas passing out of cultivation if it were possible to farm English soil profitably. Every fact seems to point out that it is getting increasingly difficult to grow profitably foodstuffs for our home markets. It it be true that existing conditions cause this state of affairs, they should be examined closely and remedies should be earnestly sought and vigorously applied. We must conclude from the result of observations that the great factors of soil and climate are not to blame, because we have already seen that countries less favoured in these respects are able to beat us. We are certainly behind the rest of Europe and America in methods of culture, but is that altogether because they are better informed? Supposing agriculture were a profitable art in this country, and the only reason we failed was want of knowledge, do you not think it more than probable that enterprising farmers from abroad would step in and farm the land in England, instead of staying where they were and producing stuff which they have to send to markets here? There seems no ostensible reason to prevent this, except this excellent reason that conditions prevailing in this country are not favourable to agriculture.

The real cause of the decline of this most important art is the faults of the system under which we live. Very largely because of the conditions of land tenure. Land is allowed to become starved and foul; there is nothing to prevent a farmer who pays regular rent from starving the soil, if it suits his pocket to do so. And yet soil which is neglected positively dies; that is to say, it loses to a great extent its power of humifying manurial deposits; it loses its very life; and it can only be brought back to a high state of productivity after years of attention. This letting down of the fertile power of the soil is constantly happening, under the condition of land tenure which is prevalent. Another death-blow to agriculture is

The High Railway Rates.

So long as railway rates prevent the grower in Kent or Essex placing his crop on the market as cheaply as the grower in Belgium or Holland, it seems hopeless to expect a great advance in English horticulture. It is almost impossible for growers in the far counties to attempt to compete with foreign produce. If they could grow the stuff they could not put it on the market. Let us take a few examples in illustration of this assertion. French eggs are carried from the North of France, via Southampton, to London, 78¾ miles of the journey by rail, at the rate of 25s. per ton; from Winchester or Andover, 66½ miles, the same railway carries English eggs at the rate of 45s. per ton. French poultry is carried for 35s.; English, 45s. per ton. French butter for 20s.; English for 45s. per ton. Foreign hops are carried from Southampton to London for 6s.; while English hops for shorter distances are charged 20s. 10d. Foreign apples are 5s.; English, the same quantity, 12s. 11d. These figures are quoted from a work entitled "National Railways," by J. Hole. Such rates as these constitute a bounty on foreign goods, and are a great injustice to English growers.

Decrease of Agricultural Labourers.

Our declining agriculture is also due to the fact that so few people are employed in cultivating the soil. The agricultural labourers in England are decreasing at an alarming rate. In 1861 the agricultural labourers numbered 2,100,000, in 1884 they numbered 1,383,000, in 1891 they numbered 1,311,720. Kropotkin describes a tour he took in several agricultural districts in England. He finds no men at work in the fields and he reflects that while 16,000,000 of our population belong to the unproductive classes only 1,311,720 are farm labourers. It is obviously impossible for 1,300,000 men to properly cultivate 33,000,000 acres. Again, he finds fields round Harrow, close to London, producing only two tons of hay per acre. In France each 1,000 acres would be cultivated by at least 2,000 human beings. In South Devon he finds large areas laid down in permanent pasture; this form of cultivation he speaks of in despair. Weeds and thistles grow abundantly on the land which has been fenced and drained by the industry of our forefathers. On every hand he finds abandoned cottages, and orchards in ruin and at the same time South Devon is remarkable for its fertile soil and genial climate, permitting the production of a potato crop as early as May. He instances a farm of 370 acres, which only employs four labourers; another, of 300 acres, employs two men and two boys; another, of 800 acres, employs five men and five boys. He sums up his observations by the remark that the problem of cultivating the soil seems to have been solved by not cultivating it at all.

Let us, therefore, do all we can to bring about a discontent with the present system. The first step towards getting anything is to want it. Let us learn more about the land, and strive to understand it; let us study nature more intelligently and more reverently, and so find out some of the still hidden secrets of this living earth by which we live. Perhaps by taking some practical interest in cultivation ourselves we might be inculcating and disseminating a national love of the green fields and the fresh air, which will not only benefit us physically, but which will create that divine discontent with things as they are, without which nothing can be changed. We must learn to love the soil, and not despise it, and once we love it we shall want to possess and use it.

Conclusions.

We have very briefly noted some of the achievements of modern agriculture, and the conclusion we may therefore come to, based on the known facts presented, has been summed up by Kropotkin thus: "(1), If the soil of the United Kingdom were cultivated only as it was 35 years ago, 24,000,000 people, instead of 17,000,000, could live on home-grown food; and that culture while giving occupation to an additional 750,000 men, would give nearly 3,000,000 wealthy home customers to the British manufacturers." "(2), If the cultivable area of the United Kingdom were cultivated as the soil is cultivated on the average in Belgium, the United Kingdom would have food for at least 37,000,000 inhabitants; and it might export agricultural produce without ceasing to manufacture so as freely to supply all the needs of a wealthy population." And finally, (3rd), "if the population of this country came to be doubled, all that would be required for producing the food for 80,000,000 inhabitants would be to cultivate the soil as it is cultivated in the best farms of this country, in Lombardy, and in Flanders, and to utilise some meadows, which at present lie almost unproductive, in the same way as the neighbourhoods of the big cities in France are utilised for market gardening. All these are not fancy dreams, but mere realities; nothing but the modest conclusions from what we see round about us, without any allusion to the agriculture of the future."

Can we, therefore, produce our own food on our own island? We can, if we re-organise our methods of dealing with the land, and so make it possible to increase the fertility of the soil in accordance with the principles now recognised by modern agricultural specialists.

Ripon May Cattle Fair.—At this fair, held on Tuesday, there was a fair show of grazing beasts and milk cows, but trade was very slow on account of the continuance of cold weather and the unusually bare condition of pasturage at this time of the year. Anything likely for beef sold well, but grazers had a lower tendency. Useful milk and calving cows made £14 to £20, two-year-old heifers £8 to £12, two-year-old bullocks £9 to £10, yearlings £6 to £7, and three-year-old bullocks £12 to £14 each.

SOCIETIES.

THE NATIONAL ASSOCIATION of ENGLISH HOP GROWERS.
(Founded June 1894.)

PRESIDENT.—COLONEL BROOKFIELD, M.P.
HON. TREASURER.—E. ALBERT WHITE, Esq., Beltring, Kent.
SECRETARY.—THOMAS IRONMONGER.
CENTRAL OFFICE.—61, HOP EXCHANGE, BOROUGH, LONDON.

GENERAL OBJECTS.

To promote united action among English hop growers as a body for the improvement of the industry.

To promote, support, or oppose such legislative and other measures as may affect the industry.

To collect and publish, for the benefit of members, special statistical and other useful information relating to English and foreign hop-culture.

To arrange for arbitrations in cases of dispute between sellers and buyers of hops, for the avoidance of litigation.

ANNUAL SUBSCRIPTIONS.

Ordinary members, 3d. per acre of hops under cultivation; honorary members, £1 1s.; hop factors, £1 1s.

THE PETERBOROUGH AGRICULTURAL SOCIETY, 1902.

Patron: HIS MAJESTY THE KING.
President for the Year:
The Most Hon. The MARQUIS OF EXETER.

The ANNUAL SHOW of HORSES, CATTLE, SHEEP, PIGS, BUTTER, DAIRYING IMPLEMENTS, &c., will take place at PETERBOROUGH, on TUESDAY, WEDNESDAY, and THURSDAY, JULY 8th, 9th and 10th.

About £1,400 Awarded in Prizes.

Entries close on Saturday, June 14th. Late Entries will be received up to June 23rd on payment of double fees.

Schedules, Forms of Entry, and particulars may be had on application to

J. E. LITTLE, Secretary.
Offices, Cowgate, Peterborough.

THE THIRTEENTH ANNUAL
OF THE
THORNEY SHIRE FOAL SOCIETY
JULY 17th, 1902,

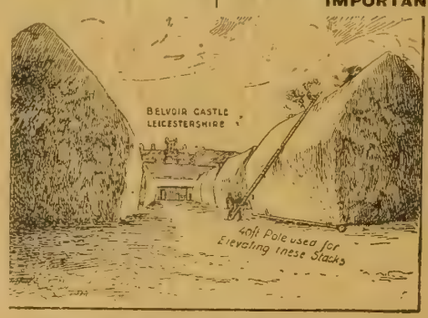
ORWELL WORKS, IPSWICH.

By His Majesty's Royal Letters Patent.



POGSON'S
PATENT HORSE PITCH FORK
OR ELEVATOR,
For Stacking Hay or Loose Corn.

This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

it may be safely said that **Pogson's Patent Pitch Fork** is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Each stack was elevated by one of **Pogson's Patent Forks.** During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied--from this fact alone

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing.

Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.

SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

MR. E. F. POGSON, FARMER, etc.,
REDMILE, NOTTINGHAM.

Simple in design, easy to erect and to work, at about half the cost of anything hitherto introduced doing the same amount of work.

Price Complete, with Recent Improvements, £6 17s. 0d.,
CARRIAGE PAID.

Up-to-Date FIRST PRIZE

DEERING BINDERS

(£10 at least cheaper in the end than any other make, besides saving in horse-flesh all the time).

Highest Grade FIRST PRIZE

DEERING MOWERS, REAPERS, & RAKES

(The First to be fitted with Roller and Ball Bearing), and

DEERING "GOAT BRAND" BINDER TWINE.

Purchasers of Deering "Ideal" Binders will during the life of the machine SAVE MORE THAN £10 IN BINDER TWINE ALONE as compared with the less economical binding mechanism of other machines; and it is well known that owing to the greater proportion of forged steel used in their construction as compared with other makes (instead of cast iron and other inferior material), combined with the perfection and simplicity of the design and construction in all the important parts, THE COST OF REPAIRS IS, DURING THE LIFE OF A DEERING BINDER, MANY POUNDS LESS THAN THAT OF ANY OTHER KIND.

As the Deering Binder is sold for no more than the leading competing machines, there should be no question that at whatever price any other make is offered,

The Deering is the Cheapest.

At the official field trials at Lodi, Italy, July, 1901, lasting several days, the Deering Machines received the very Highest Awards, as follows:—

DEERING IDEAL BINDER ... ... First Prize, Gold Medal.
DEERING IDEAL REAPER ... ... First Prize, Silver Medal.
MANUAL DELIVERY ON DEERING MOWER First Prize, Silver Medal.
(The Deering Ideal Mower could not compete.)

Machines by Messrs. Massey-Harris, Osborne, Plano, and Harrison-McGregor & Co. also competed.

At the field trial at Appingedam, Holland, July, 1901, the Deering Machines were again granted:—

THE HIGHEST AWARD ... ... GREAT GOLD MEDAL.

in competition with Machines by Messrs. McCormick, Aultman-Miller, Osborne and Wood.

Thirty Honours received by Deering at, and in connection with, the Exposition at Paris in 1900, many more than conferred upon any competitor.

The Great DEERING WORKS are easily FIRST IN THE WHOLE WORLD in Magnitude, Output and Equipment.

DUMFRIES

(established 1787), offer

IMPROVED FOSTERTON HYBRID YELLOW TURNIP,

their own growing, extra select stock, at **16s.** per bushel for cash with order. Guaranteed pure. Telegrams: "Monarch."

PARMITER'S Patent 12 ft. and 16 ft. wide TELESCOPE RAKE

Will close without Spanner or Screw in a few minutes, the 12ft. to 8ft. 4in., the 16ft. to 10ft., for passing gateways.

The great merits of this Rake are now well recognised, and reference to sample repeat orders gives a guarantee of the fact. Its substantial construction of the best steel, its lightness in work for boy and horse, the absence of complication, and the labour and time saving advantages of its great width must bring it more to the front.

makes first-rate work by reason of its great flexibility.

Wire from Mr. Elder, of Berwick-on-Tweed, from Show Yard, York, July 16th, 1900.—Dispatch immediately one Expanding Rake identical to one Ritson got through me two years ago, addressed Captain Laycock, Wistone Home Farm, Ranskill Station, G.N.R. Wire if cannot.—ELDER, Stand 149 York.

From John T. Woolley, The Castle Auction Mart, Salisbury, June 22nd, 1900.—Dear Sir,—Please quote me by return of post lowest cash price for one of your large Telescope Horse Rakes, similar to the one which I had last year.

From A. H. Hipkin, Bedhampton, May 25th, 1900.—Dear Sirs,—Will you please forward one of your 12ft. Telescope Rakes to Havant Station as soon as possible. I have had the one you supplied me with in 1887 in constant use during the Haying seasons, and I find it does its work extremely well; the time taken up during unfolding is soon made up by the great width it takes. I have recommended it to several neighbours.

From Mr. Kerr, Estate Office, Cholderton, Salisbury.—The 18ft. wide Telescope Rake made to my order is a great success in every way, a cart horse can walk over about 40 acres of stubble in a day or 25 acres of hay, and it Your tip is also very easy, and I think it the most perfect in the market.

DISEASE ENDANGERMENTS OF LIVESTOCK INTERESTS.

The Shorthorn Society has recently issued a statement which, although of an extremely gratifying nature, will nevertheless excite melancholy feelings on perusal. This is the list of exportation certificates granted from March 4th to May 6th this year. They number 228 altogether, 106 of them being for consignments to South America, 74 for Russia, 44 for Canada, 2 for the United States, and 2 for South Africa. Gratifying indeed is the consideration that the export demand has extended to these dimensions for one breed of cattle, and the fact that Russia has traded to this large extent must be especially pleasing to Shorthorn breeders. But there cannot but be bitter mingled with the sweet in the reflection that so large a proportion of the whole, amounting to nearly one-half, was for a quarter of the globe to which export has ceased altogether since, owing to an unfortunate outbreak of foot-and-mouth-disease—in reality of a trifling nature—in a flock of sheep in Kent, which was stamped out almost as soon as the spark was discovered.

Mortifying is it to think on what slight threads stupendous results sometimes depend. But for this petty foot-and-mouth outbreak, the enormous trading for the Argentine, which commenced so hopefully, would have continued throughout the present year, and our Shorthorn breeders and many other owners of pure-bred stock would have derived considerable emolument therefrom. But all at once, an important enterprise has been shipwrecked, and that, too, by mere alteration of a single word in the Argentine Ordination relating to the importation of British stock into the dominions of the Republic. In the manifesto which threw open the ports it was declared that all animals coming from a "county" in which there had been no contagious disease for twelve months, should be admitted. But since the Kent outbreak, the word "county" has been altered to "country," which of course excludes the whole of British stock. There may be some slight hope that our Board of Agriculture may be able so thoroughly to convince the Government of the Argentine Republic of the harmless nature of the late outbreak and the pre-eminently healthy character of livestock generally throughout the British dominions, that the wording of the ordination may soon be restored to its original phraseology.

But there are wheels within wheels, and there was evidently great disappointment in Argentina that our Government did not show reciprocity, when the South American ports were thrown open, by making our ports again free for the admission of South American live fat cattle and sheep, to be slaughtered on landing, as they used to be. A similar assurance to the one sent hence came from Argentina at the time that their country likewise had a clean bill of health, and no doubt it was thoroughly expected that our Government would have responded to the concession made on that side by at once restoring the free reception of Argentine stock for slaughter. Meantime, the London Meat Traders' Association is agitating for this to be done, and recently went in a deputation to Mr. Hanbury to urge the matter. The supply of American cattle from the States and Canada has fallen off owing to the bad maize crop of last year, and the consequent greater expense of the Trans-Atlantic graziers to feed them. The London butchers evidently desire Deptford to be as fully supplied with foreign meat as possible; hence their demand.

Turning to quite another feature of a very great subject, disease has evidently lessened the numbers of pigs, both at home and abroad, and made pork and bacon dear. In 1899 the breeding sows in Great Britain numbered 375,911, and there were 2,247,902 other pigs. In 1900 the respective numbers had declined to 332,521 and 2,049,411. Last year the census returns were 319,724 and 1,860,201. The total number of pigs in Great Britain decreased from 2,623,813 in 1899 to 2,179,925 last year. The cause was undoubtedly the enormous losses and harrassing difficulties of pig-keeping owing to swine fever outbreaks. In 1898 they had increased to 2,123 from 1,960 in the previous year. In 1899 they numbered 2,064, and with a still further decline to 1,659 in 1900 led to the hope that the Board of Agriculture would eventually be successful in bringing the contagion to a low ebb. But, alas! when the return of 1901 came out, it was found that the outbreaks had increased to 2,898, a larger number than for any year since 1896. Since then the Board of Agriculture has wisely enforced more stringent Orders for regulating the trade of pig-dealers and for disinfection. A special staff of veterinary inspectors has also been appointed, with instructions which give them discretionary powers to order the slaughter of diseased and in-contact pigs. Very much is it to be hoped that this new system is working satisfactorily, as there has certainly been of late a considerable decrease in the number of outbreaks. For instance, in the veterinary report adopted on the 7th inst., at the May Council Meeting of the Royal Agricultural Society, it was declared that the number of outbreaks for the preceding four weeks had been 123, whereas in the corresponding period of 1901 there had been 462, a highly satisfactory decrease surely. But this was not the only portion of the Council's Report just alluded to which had a thorough bearing on the subject being treated on, for it was declared that the existing Swine Fever Orders for Cumberland and Carlisle would absolutely have rendered it to have been impossible for any pigs to have appeared at the coming Carlisle Show, had not the local authority consented to suspend their operations so as to allow the pigs entered for exhibition from healthy districts to appear. So that pig exhibitors may deem it an extremely fortunate

circumstance that by the merest chance the same thing did not happen this year as proved to be a lamentable incidence of the York Show of 1900—a crippled display, devoid of the porcine element.

However damaging the disease itself and the working of the Swine Fever Orders to suppress it may be to porcine interests and the industries connected with them, they do not prevent large gatherings of pedigree pigs at shows that can have them. Thus there are 178 entries of pigs for the Carlisle Show, against 141 last year at Cardiff, and 147 at Maidstone in 1899. At the Plymouth Show of the Bath and West also, to open to-morrow, there will be a satisfactory display of the porcine breeds. The entries number 103; not quite so many as at Croydon last year, where the entries reached 130, but a good average number nevertheless.

TRANSPORT FACILITIES—IMPROVED MEANS OF LOCOMOTION.

Great changes have been witnessed of recent years in the direction of improved transport facilities. The advent of steam and electric power has placed our principal markets in close and easy contact with the grower. Market gardeners and fruit growers near the Metropolis have more especially profited by the increased opportunities they have in getting their perishable produce to the consumer with celerity and despatch. Possibly the greatest step was made when it was found possible to make use of the motor waggon, for it is claimed that this method is not so expensive as using horse haulage for the purpose, while it certainly renders the grower to a great extent independent of the railway companies, and at the same time enables him to dispense with a large stud of horses. As an example of how this traffic has developed, we may mention that a large firm of Kentish fruit growers have recently commenced to despatch daily to the London markets a motor waggon capable of taking a load of five tons. This vehicle successfully negotiates a journey of forty miles each day, and certainly ought to open up a new era in road locomotion, and solve a great many of the transport problems which are now demanding attention. There can be but little doubt that there are vast possibilities in front of road locomotives, more especially for the transportation of heavy loads over considerable distances and at regular intervals.

We regret to announce the death of Mr. George Gregson, a well-known gentleman farmer, who died on Wednesday at Warden Law, East Durham, at the age of 88. He was a solicitor by profession, but did not practice, and farmed his own estate. Mr. Gregson formerly kept greyhounds, and was well known at all the coursing meetings in the North of England. During his sporting career he won the Waterloo Cup. He was a county magistrate. He leaves a widow and a married daughter.

Grain Warehouse Destroyed by Fire.—A fire that soon assumed disastrous proportions broke out at the premises of the Grain and General Warehousing Company, Limited, a huge eight-storey building on Newcastle Quayside, on Wednesday morning. The interior of the building being of wood and full of dry grain, the flames spread with great rapidity. The three top stories were soon completely destroyed, and the burning of the bins liberated great quantities of grain, which, after falling to the lower part of the building, poured through the windows and doors into the street, where it accumulated in great quantities. The extent of the damage cannot at present be estimated, but it must be very considerable. One firm in Newcastle, whose mills were burnt down only a short time ago, had corn stuff to the value of £2,500 stored in the warehouse.

Lancaster Hirings.—The first Whitsuntide hiring at Lancaster was held on the 17th inst. There was a large attendance, but not much business done. The average for first-class males was £18, second-class £16, and youths £5 to £10 5s. There were very few female servants, and they were asking £14 and over.

By a Man of Mark Lane.

It is in the experience of everyone that cold in May is very uncomfortable and trying. There is no evidence, however, says the "Lancet," that the cold of spring has the same unfavourable effect in general upon the public health as has the cold of autumn and winter. According to the weekly vital statistics, the present spell of cold weather does not seem unfavourably to have affected the death-rate. On the contrary, the mortality has been steadily diminishing during the past few weeks. Undoubtedly, the sun in springtime compensates for a good deal, although the warmth of its rays may not be felt. There is no warmth in the chemically active rays of the sun, those rays which stimulate plant and animal life, and yet are so highly destructive to the materies morbi.

It is a significant observation, says the same authority, that in April and May, despite the cold winds that may prevail, the actinic power of the sun's rays reaches a maximum. At no other time of the year, not even in the hot days of July and August, are the health-giving rays of the sun so intense. Certain chemical compounds prove to be more readily decomposed and at a quicker rate in April and May than in any other months of the year. Chloroform, potassium iodide, hydrogen peroxide, and a great number of chemical salts give greater evidences of the disturbing action of light in the spring than in any other season, and Nature herself responds to this quickening power, for growth is greatest and most vigorous when the chemical activity of the sun's rays is highest, and that, of course, is in spring.

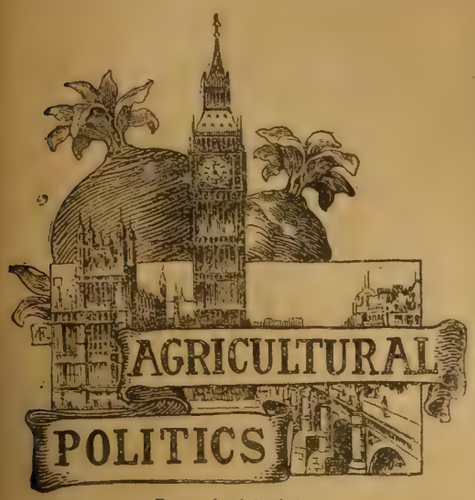
The receipts on account of Revenue from April 1, 1902, when there was a balance of £8,566,947, to May 17, 1902, were £20,063,067, against £17,064,925 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £28,478,482, against £27,928,231 to the same date in the previous year. The Treasury balances on May 17, 1902, amounted to £5,960,342, and at the same date in 1901 to £6,651,493.

Dr. Gatling, of famous gun repute, has, it is said, been turning his attention to ploughshares. He has just invented a plough operated by a gasoline motor. The plough is a gang of discs. It can be operated at the cost of 8s. 4d. per day, and the inventor holds that it will do the work of thirty men and eighty horses. The plough is to be a feature in the coming St. Louis Exposition.

The party of Essex farmers who are making a tour in Hungary arrived at Buda-Pesth on Thursday, and on the following morning went over the Market buildings, and then proceeded to the premises of the Provincial Agricultural Union. The visitors were then received at the Lower House of the Diet by Dr. Daranyi, Minister of Agriculture. Mr. E. H. Fitch, on behalf of the visitors, addressed the Minister, who replied in cordial terms. Subsequently, the party went to the Crown domains and the Royal residence of Gödöllö. Unfortunately, on their return from Gödöllö, one of the carriages was overturned, and Mr. Eady fell so heavily as to break his right leg. He returned to the capital with the party, and is receiving every attention.

On Saturday the visitors thoroughly inspected the new slaughter-house for pigs, the Agricultural Museum, and the Veterinary High School. They afterwards proceeded to visit the biggest steam mill in Hungary. At the banquet given in their honour in the evening, M. Halmos, the Mayor, proposed the health of the guests. M. Kiss, Secretary of State, speaking in the name of Dr. Daranyi, who, he said, greatly regretted that he was unable to be present, thanked the visitors for the keen interest which they displayed in Hungarian institutions. He drank to the prosperity of English agriculture, a toast which was honoured with loud cheers. Several speeches were made by members of the English party in praise of the high standard of Hungarian agriculture.

SOCIETY NOTES.



At the last Council meeting of the Devon Cattle Breeders' Society, the secretary, Mr. J. Risdon, junr., announced that the committee had held several meetings to consider the best means of furthering the interests of Devon cattle at home and abroad, and read the minutes of the meetings. The committee resolved to advertise in certain foreign newspapers, particularly some in South America and South Africa, and had adopted the following suggestions to be placed before the Council:—(a) "That the Council be recommended to have circulars sent to all members asking them to send photographs of animals, with notes, for the purpose of insertion in the foreign papers." (b) "That the Council be requested to take into consideration the question of the confusion which arises, and is likely to arise, through Devon cattle being described as 'North' Devons, or 'Somerset' Devons, and also through their being placed in the same schedule with South Devon cattle."

After a brief discussion, the meeting agreed to the first recommendation, and resolved that the photographs and notes be forwarded to the committee to deal with them as they thought best. As to the question whether living animals only should be so dealt with, or whether past animals should be included, the meeting were unanimously of opinion that only living animals should receive such attention, and resolved accordingly. The chairman, Mr. A. C. Skinner, speaking to the second suggestion, said that some agricultural papers placed the two different Devon herds together. He would suggest that the papers to which he referred be asked to place the breeds under two different headings. This was agreed to, as was also a resolution advising members to describe their cattle merely as Devons. It was resolved to hold a sale of Devon cattle at Exeter towards the end of October.

The accounts presented at the annual meeting of the Gravesend and Rochester Agricultural Society unfortunately showed an adverse balance of £12 1s. 4d., the expenditure having been £202 17s. 10d., whilst receipts only amounted to £194 10s. The Earl of Darnley has been the president for the past year, but owing to ill-health has been unable to discharge the duties of the office. On the suggestion of one of the members, it was unanimously decided to re-elect his lordship, the hope being expressed that his improved health would permit him to carry out the duties. Earl Darnley remarked that nothing would afford him greater pleasure and satisfaction than to assist the Association in every way possible. The annual sheep-shearing match will take place on June 16th at Marsh Gale Farm, Cooling.

At a special meeting of the Blandford Farmers' Club, held to consider the Education Bill, considerable discussion took place, and in the end a resolution, similar to that passed by other agricultural societies, was carried unanimously. It was as follows:—"That in the opinion of this Club the Education Bill (if passed as it at present stands) will seriously increase local taxation, which already bears very heavily upon the agricultural interests, and that, as education is a national matter, such increase should be provided out of national and not out of local funds." It was decided to send a copy of the resolution to the Members for the county and the chief Ministers of the Government.

Cockermouth Hiring Fair.—This, the principle hiring fair for agricultural servants in West Cumberland, was held on Monday, when the attendance of farmers and servants was quite up to the average of previous fairs. Farm work is fairly well forward, and as the servants held out for high wages the hiring was slow. Head men obtained from £13 to £17; second-class men from £10 to £13; lads from £7 to £10; and boys from £4 to £7 for the half-year, with board and lodgings. Women and girls were again scarce—the former secured from £9 to £11; girls, able to milk, from £7 to £9; and younger girls from £3 to £7.

By a Lobbyist.

There is no doubt that Lord Rosebery's speech at the National Liberal Club on Friday night has clearly defined the issue. The question is now declared by his Lordship to be one of Free Trade or Protection. The tax on flour, in the view of his Lordship, means Protection. This is what we have to face, and it is well to comprehend it. The saturnine humour of Mr. James Lowther will not dissipate the situation; neither will the fine heroics of Mr. Chaplin. We are in for a vigorous class fight—a class fight all the more strenuous because it has associated with it the tempered steel of Lord Rosebery's oratory, and the clear-cut cynicism of which he is so great a master. Lord Rosebery has, in a word, ranged himself on the side of the urbans in the fight. He has lent all his influence, his power, and his occasional virility to the men who misrepresent the purpose and the intention of the agricultural interest. Lord Rosebery is a landlord. Assuredly, he knows that Protection does not mean an attempt on the part of landlordism to exploit the workers of the towns.

It is a pity when you see Herod out-Heroding himself. I have myself applauded the Warwickshire Chamber of Agriculture for its excellent policy in advising the reconstruction of the Board of Agriculture. However, I am far from accepting the report which that body has recently propounded in reference to the constitution of the Board. In the opinion of the Chamber, the first duty of the Board—at all events, this is placed first in order of advice—is to be an experimental organisation. All the great necessities of legislation, all the greater necessities of administration, are neglected in favour of agricultural experiments, with their problematical, indefinite and undeciding results. The subsidiary purpose of the Board is apparently to be "a supreme Court of Appeal" for, and national supervisor of, the agricultural community. What, in the name of Cocker, does the phrase "national supervisor of" mean? The Board of Agriculture ought to be the direct personal friend of every farmer in the country, and ought to be a factor in his daily life. But to say that the Board is to be the "national supervisor of"—in a word, to assume the materfamilian role, is to beseech for it a character which it never would and never should assume. Neither the Board of Trade nor the Local Government Board has that character, and, in all sooth, it is well for them that this is so.

The Warwickshire Chamber of Agriculture is, in preferring requests of this character, the enemy of the finer resolves which possess Mr. Hanbury. The Minister for Agriculture is moved by as generous a sentiment towards agriculture as is even the author of these flamboyant ambitions in the Midlands; but if he were to present the Midland desire to the House of Commons—with its "national supervisor of"—he would be laughed at, and very rightly laughed at. The House appreciates Mr. Hanbury; and, I dare aver, sympathises with his purpose. But assuredly it is not prepared to concede him Neroesque powers. It is not inclined to make him or his successor the controller and the director of the destinies of agriculture. Of course, in this reticence, it may offend the excellent opinion which the Midlands entertains of its own abilities; but it will be doing a good thing for agriculture. We want the duties, purpose, and methods of the Board of Agriculture enlarged; but we do not want agriculture molly-coddled. "National supervisor of," forsooth! As well put agriculture in petticoats!

I have spoken more than once in this column of the improvement—I pray I may be forgiven the phrase—of Mr. Henry Chaplin's oratory. Let me say a word of the improvement in the oratorical methods of Mr. George Lambert. "Our Garge" is really going strong. The hon. member had to propose the toast of "Lord Rosebery" at the National Liberal Club, on Friday night, and he did it with a dulcetness of phrase, a directness of point, and an excellence of expression that were one to the delights of the evening. As I listened I kept marvelling to myself—why does Mr. Lambert pretend to give to humanity what is intended for agriculture? If he would bring to his House of Commons advocacy of his own measure half the subtlety of phrase, the excellence of diction, and the generosity of enthusiasm which he revealed on Friday night, he would be a greater force than he is. But, alas! Mr. Lambert is a militia captain, and hence he fancies himself an authority on military subjects. He shows a tendency to survey the imperial world from China to Peru. This omniscience is the rock on which another native-born agricultural authority, Mr. Channing, has been wrecked.

I learn that the Liberal organisers have revived their old idea of running tenant farmers as Liberal candidates. Since they first registered this resolution, they have run two men, Mr. Judd for Andover and Mr. Bolton King for Stratford-on-Avon. They did not win with either, but at least in the case of Mr. Judd they had the Tantalus cup of a possible victory almost within their reach. I doubt that Mr. Bolton King will stand again—in all probability he will be succeeded by Mr. Oscar Bowen—but Mr. Judd will, of course, inevitably re-enter the lists. How many more men do they intend to run? At one time Mr. Ridley, of South Wilts., and Mr. Devereux, of Hampshire, were fancied as party candidates. They are both very capable men—Mr. Ridley, indeed, has something of the philosopher in him. Why, however, has there been a recession of interest as Parliamentary candidates? As a fact, I look upon this revived sympathy with the idea of farmer candidates as simply intended to play off farmers against the Budget. The Liberals want to say, "Look! while the Tories are desirous of cozening the farmers by placing a small tax on flour, we actually run farmers as candidates, who tell you that it will do the agricultural interest no good." 'Tis not a great game.

The annual general meeting of the Somerset County Agricultural Association was held on the second day of the Society's recent show. There was very little business on the agenda, most of the time being taken up with the passing of votes of thanks to various officials, and also to the "Wiveliscombe local committee for their valued services and kind endeavours to make the visit of the association to Wiveliscombe a great success." Mr. S. Kidner once more drew attention to the present mode of election of members of the Council. He said a feeling prevailed outside that the same gentlemen were elected on the Council from year to year. He thought it wise that that idea should be dissipated, and that new material should be added from time to time, although it might not be as good as the old. He suggested the Council should follow the lines of the Smithfield Club, whose plan worked very well indeed. When an election was to take place there was sent to each member a ballot-paper containing double the number of names of gentlemen required to fill vacancies, and members voted for the number requisite and returned their papers, and those gentlemen nominated who received the largest number of votes were made members of the Council. Such a system with the Somerset Association would widen its scope, and members would be brought into closer touch with the Council. He moved that a recommendation such as that he had foreshadowed be considered by the Council. This proposition was carried with but two dissentients.

Encouraging Home Industries.

Sir,—In view of the alleged scarcity of beef in America, the price of that article of food has been, wherever practicable, raised to the consumer. Now, the Irish trade with England and Scotland in store bullocks has grown immensely since 1893, and, with a little more impetus from influential men in Ireland and England, enough cattle might be bred in Ireland—the finest country in the world for rearing cattle—sent to the Eastern and Southern Counties, there to be made ready for the butchers, to almost, if not entirely eliminate American beef.

The Eastern Counties could turn out many a thousand more fat cattle, and grow many a quarter more of wheat, than they do now, and as they used to do not so many years ago, if facilities were granted them. The benefit of thus enlarging the trade between England and Ireland would be immense, not only to the breeders and feeders, but to the people of those countries. The Navy League says, in its Journal for May, 1902:—Agriculture has declined—it might have been said "was deliverately sacrificed" 50 years ago—and now in 1902 England depends upon the foreigner for the greater part of its food. This being the case, what would happen in time of War? First, withdrawal of a large amount of shipping. Secondly, freights of all kinds would be raised. Thirdly, wages paid in merchant service would be considerably increased. These results would quickly put up the price of corn from 10s. to 20s. per quarter. Beef and other food necessaries would follow suit in same proportion.

In these circumstances the position of the working population would be most serious. Mr. Booth has calculated and Mr. Rowntree has agreed that about 30 per cent. of the London population are living in poverty at the present time. It would be hard to imagine the condition of these 30 per cent. in the event of war with a European power. The appreciable results in this country of the American beef trust show conclusively what a serious duty and responsibility rests upon those people in England, Ireland, and Scotland who could, and should, influence the growth of more wheat and more home-fed beef.

The Minister of Agriculture said at the Staffordshire Chamber of Agriculture:—There is no reason why corn should be ground in America which could be ground in this country. Horse feeders and farmers had lost during the last 20 years 25 million pounds' worth of offal which America has received, and our millers might have had 10 million pounds for grinding corn into flour. He hoped this great source of evil would be removed.

An Old Subscriber.

Organisation of the Milk Trade.

Sir,—The rapid increase of dairy farmers and retail milkmen's societies throughout the country has very naturally brought about the further necessity for federation and combined action. Local societies serve a very useful local purpose, but, when such bodies co-operate with others for the attainment of defined objects throughout the kingdom, a far greater interest is created, and a greatly extended influence is brought to bear upon all authorities that have the making of laws or by-laws affecting the trade generally.

A federation of dairy farmers' societies has been formed under the title of The Central Dairy Farmers' Association, and now represents some 20 strong societies. The Liverpool and Manchester retail traders have also formed the Dairymen's and Cowkeepers' Federation, and invited the co-operation of dairy farmers also. Personally, I am convinced that farmers who provide milk and retailers who distribute it should unite to put the trade on a far more satisfactory basis than at present existing. There is no room for rival action or opposing camps in these days of unlimited competition and the survival of the fittest. Our daily bread supply is in the hands of the millers and bakers; neither party is antagonistic to the other, and, by mutual arrangement, certain trade regulations are made, and reasonable prices are fixed.

As long as the general public can, by haggling and playing one tradesman off against another, save a few odd coppers in the way of buying "cheap" commodities, it is surprising what time and trouble large numbers will take to effect their purpose. But when once trades get properly organised, as are the brewers and publicans, the millers and bakers, and tobacco manufacturers and retailers, etc., and fix their own reasonable prices, the public become docile as lambs, and pay such fixed prices for their beer, bread, and 'bacca without a murmur. By such sensible resignation any amount of time, worry, shoe leather, and mental calculation is saved by the public, and the organised trades are daily respected in consequence. Why cannot dairy farmers and milk retailers follow the sensible lead of the traders above referred to? The great object of wholesale and retail milk traders should be to provide the best and safest article possible, and to induce the public to use it far more freely than is now the case. With such thoughts in my mind, I accepted an invitation to attend a conference in London on Wednesday last, held by the Dairymen's and Cowkeepers' Federation, and felt it a privilege to meet earnest men from different parts of the country for the purpose of exchanging views and offering suggestions. It fell to my lot to suggest that the Federation would do well to arrange England into five divisions—North, South, East, West, and Midland counties—and set the ball rolling in five such co-operating centres instead of attempting to organise the trade from one centre only in the North of England. I earnestly hope an exchange of views will take place between both Federations alluded to, and that united and comprehensive action may be mutually agreed upon, to the ting benefit of all engaged in the milk trade. I promised the Conference that I would ask both dairy farmers and milk retailers in the West of England to furnish any information in their power of cases in which loss has resulted in connection with the transit of milk by rail. Loss of milk or cans and neglect in delivery of milk are included in this inquiry, and the facts, dates, etc., of each case should be clearly stated. Such particulars are wanted immediately by the Federation, as a deputation to the President of the Board of Trade is being arranged, and should be sent direct to Mr. W. Scott-Walker, 7, Oldham Street, Liverpool.—Yours, etc.,

JAMES HUNT,
Secretary, Gloucester and Somerset Dairy Farmers' Society,

39, Broad Street, Bristol.

Poultry for Profit.

Sir,—Mr. Robert Brown will, I know, be thanked very much in the minds of many persons, if not by manuscript, for so kindly taking the trouble to give, by his letter in the MARK LANE EXPRESS of the 19th inst., the results, in totals, of the profit from his poultry farm. And he will have the satisfaction of, in union with other to the same end, having done a very considerable service to the community.

Mr. Brown writes "that he could give quantities and sorts of food, as well as the prices, also quantities of eggs and chicken." If not trespassing too much upon his time, it would very much oblige many persons desirous of entering upon the poultry-farming industry if he would kindly give these particulars in the MARK LANE EXPRESS, not to satisfy mere inquisitiveness, but that by being able to compare his prices with those obtainable, each in their own locality, those contemplating starting the industry would then gain a reliable assurance, whether for success or otherwise.

We are sending away to foreign countries at the least £5,000,000 annually for the importation of eggs. Surely this is a reflection upon our thriftiness, and even a scandal to us, that, having land and climate suitable, we neglect to take measures to retain this important amount of money in circulation at home! Denmark, a little country, with a severer climate, and 32 hours steam from our ports, is, by a good organisation, able to send into our markets a great portion of these egg imports. Yet we have many thousand acres of land, the owners, some so wealthy, some so indolent that they allow them to lie derelict. May it not be hoped that personal considerations and the public welfare may lead some to place many thousand heads of poultry on these lands. The outlay compared with that for other farming stock would be small, and, with a skilled manager, able to manage a very large establishment, the result would net, we have the assurance from Mr. Brown's practical experiences in his letter in the MARK LANE EXPRESS of the 28th ultimo, that they will pay more for the time and money invested in them than any other stock on the farm."—Yours truly,

ALFRED WELCH.

Southall, May 18th.

The Colonies and the Corn Tax.

Sir,—Will you permit me through your columns to make an appeal to Free Traders, without distinction of party, to support the Cobden Club in resisting the proposed corn tax?

That the tax is not required for revenue purposes is patent. In the current year, without any addition to last year's taxes, it is estimated by the Chancellor of the Exchequer that there will be a surplus over ordinary expenditure of no less than £23,000,000. This is a larger sum than has been contributed to the cost of the war out of revenue in any previous year. If additional revenue had been required, it could have been raised by increasing the present taxation of beer and tobacco.

The present tax on beer is 7s. 9d. a barrel (or about 2½d. a gallon). For many years during the past century the tax was approximately 19s. a barrel. The consumption of beer in the United Kingdom has increased in the past fifteen years from 27,000,000 barrels to 36,000,000 barrels. The yield of the Beer Tax for the year ending March 31st, 1901, was just under £14,000,000.

The present tax on unmanufactured tobacco is 3s. a pound. It was 3s. 2d. a pound shortly before the war began. The consumption of tobacco within the Kingdom has increased in the past fifteen years from 52,000,000lb. to 80,000,000lb. The yield of the tobacco tax for the year ending March 31st, 1901, was just under £13,000,000.

In the face of these figures it is incredible that the Chancellor of the Exchequer, in order to obtain the small sum of £2,600,000, should have turned aside from these increasing popular luxuries, and placed a tax on the sheer necessaries of daily existence, unless he had some ulterior motive, which it was not convenient at the time to disclose. What that motive was Mr. Chamberlain has now told the country.

The corn tax has been imposed in order to prepare the way for an Imperial Preferential Tariff; or, in simpler language, the food of the people of England, Scotland, and Ireland is to be taxed in order to increase the profits of Canadian corn growers.

Incidentally the effect of the tax is to protect one of our home industries, namely, corn-growing, at the expense of all our other home industries, but apparently this incidental evil was not foreseen by the Ministers who proposed the tax. Their only object was to prepare the way for protecting Colonial industries at the expense of the industries of the Mother Country.

The whole idea underlying this scheme is false. Mutual trading is in no way essential to friendship, and nothing is more certain to destroy friendship than an attempt to compel mutual trading in defiance of pecuniary interest.

Nor is there any reason to connect the question of Imperial Defence with the question of preferential tariffs. There is no preferential tariff between London and Edinburgh, yet each city, according to its means, contributes equally to the defence of the common Empire. If the Colonies are ready to bear their share of the common burdens, it is for them to come forward and say so. It is not for us to do injustice to ourselves in order to bribe them to do what is just.

At present Canada contributes to the cost of the Imperial Navy not one penny. Australasia contributes a small sum which does not even cover the cost of the special squadron locked up in Australasian waters for purely local defence. On the basis of population, Australasia and Canada should together contribute to the cost of the Navy not less than £6,000,000 a year.

But whatever view the Colonies may take of their pecuniary obligations to the Mother Country, it would be a fatal blunder on the part of England to weaken her position as a world power by abandoning the policy of the open door, or to diminish her economic strength by reverting to a system of taxation which plunders a dozen industries in order to add to the profits of one.

Instead, it is her duty to continue to urge upon her Colonies that they will find prosperity, not by robbing Peter to pay Paul, or by limiting their own or England's trade, but by throwing open wide their harbours to the commerce of the world.

I therefore appeal to all who realise the importance of the issues involved to assist the Cobden Club in opposing the reactionary proposals now before the country, on the double ground that they are fraught with injustice to the people of this Kingdom and with danger to the permanent strength and unity of the Empire.

This appeal is directed to the subjects of the King in all parts of the world, for I know that many of those who have crossed the seas have not forgotten their English sense of justice, and will reject with indignation an artificial advantage to themselves offered at the expense of the poorest of the poor in the Old Country.—Yours obediently,

HAROLD COX,
Secretary of the Cobden Club.

6, Raymond Buildings, Gray's Inn, W.C.

Farmers and Motor Waggons.

Sir,—One of the great difficulties which fruit-growers and market gardeners have had to contend with has been a want of early delivery to market centres in London. Those nearest to London have to some extent overcome this difficulty by sending their goods by road, which naturally entails a very heavy expense in horse-flesh. This difficulty would appear to have been successfully overcome by the enterprise of one of our leading fruit-growers in Kent, Messrs. Thomas Wood and Sons, of Swanley, who on Saturday last sent up for the first time to Spitalfields Market, in a Foden steam waggon, five tons of vegetables. It started from Swanley at night, and returned early in the morning, a distance of nearly forty miles, there and back, without a mishap.

The advantages of this new departure to those who do not rely on railway companies for the mode of transit cannot be over-estimated, and it is to be hoped that many others will follow the example.—Yours, etc. E. BALL.

Woodhurst, Lee, Kent.
May 19th, 1902.

The Importation of Flour.

A meeting of the Tendring Hundred Farmers' Club was held at the Colchester Corn Exchange on Saturday, at which an address, on "The Importation of Flour," was delivered by Mr. Thomas G. Read, who said that the import duties of 3d. per cwt. on grain, and 5d. per cwt. on flour, appear to be a step in the right direction. They indicate that the Government are adopting a more sympathetic attitude to the agricultural interest. Up to the present all suggestions by which there might be an increased production of food in the United Kingdom have received but little attention from the Government, as they were afraid of an agitation being promoted by out-of-date anti-Protectionists. These faddists have endeavoured to raise an agitation against, as they call it, "the bread tax." The country has refused to be moved. Thus it appears in the near future a Royal Commission will be appointed to inquire and report concerning our national food supplies in time of war.

Continuing, Mr. Read said, the outlook is very hopeful, that before very long some scheme will be adopted by the Government by which the country will be secured from famine anr surrender, by increasing the production of food in the United Kingdom, as that appears to be the only way by which we can feed the masses during a naval war.

It is a matter for regret that the Chancellor of the Exchequer has not seen his way to place a much higher duty on flour. No case can be made for the importation of flour, but I believe a very strong case can be made against such importations. During the past twenty years we have lost over £35,000,000 by importing flour instead of the equivalent in wheat. We have paid over £10,000,000 more for flour imported than the wheat to produce a corresponding bulk of flour would have cost, and we have left over 125,000,000 cwt. of wheat offals abroad, worth at 4s. per cwt., £25,000,000.

Our country mills have been crushed out of existence. A mill gives employment to so many indirectly besides those actually working there, that to many of our mills having stopped working has driven many able-bodied men into our purely manufacturing districts and industrial centres, there to increase the overcrowding of our slums and the misery which is far too prevalent in many of our cities.

If wheat only were admitted duty free and ground here, the offals, which mostly remain where the flour is produced, would furnish useful stock-feeding food, and the work of our labouring classes would be greatly increased. The chances of adulteration would be reduced, and the flour would be fresher. Flour that for weeks has been in a ship does not make such wholesome bread as when the flour is fresh ground.

I have recently conducted some experiments concerning the action during mastication of roller and stone-made flour, and have discovered that there is an increase of about 40 per cent. during mastication in the acidity of bread produced from roller flour, whereas there is no such increase when the bread is composed of stone-made flour. My investigations have been confirmed by analytical chemists of great experience.

Mr. Hugh Candy, chemist to the London Hospital, has tested bread for me, and reports that he found in the case of the bread composed of stone-milled flour, that the acidity remained stationary, whereas in the case of the bread composed of roller-flour, mastication appears to promote an increase of 45 per cent. in the acidity.

I have received the following report from Mr. Knight, analytical chemist to Messrs. Howard:—"Report on relative acidity in bread made from stone-ground and roller-ground flour. Average of ten tests of each. I find that the acidity in the

bread made from stone-milled flour increases to a very slight extent in the process of mastication, not more than would be accounted for by the acidity of the mouth, but with the bread made from roller-flour there is an increase of 40 per cent. in the acidity after mastication.—J. B. KNIGHT, F.C.S."

This appears to be an important reason why our small country stone mills, which formerly used to grind chiefly English wheat, should be again revived.

The importation of flour should be checked, as it is almost all roller-milled, and such flour, it has been explained, causes a great incerase in acidity. Roller milling having so largely replaced stone milling, appears to be the chief cause of the great increase in indigestion. Swallowing a quantity of acid with the food retards the action of the digestive fluids. By crushing out of existence the old stone mills, which ground chiefly English wheat, and depending so largely on the United States for flour, we have injured the health of the nation.

Owing to so much wheat-offals being left abroad the price of such feeding stuffs is, in this country, very high, and make a considerable difference to our meat producers, our dairy farmers, and even our labourers who keep pigs.

There is a good demand for wheat offals in the States, the Milwaukee and the Minneapolis products being sold at about half the price charged in this country, and used largely round Chicago for stock-feeding. Much of the pork produced in the States from cheap wheat-offals obtained from the flour sent us, competes in this country with pork we have raised on dear wheat-offals. The wealth of Chicago appears largely due to having obtained for years cheap offals by grinding flour for us.

We obtain much flour from France, and but little wheat from that country. The French port millers, on the understanding that the flour produced is exported to other countries, are allowed to import wheat duty free, although there is an import duty of 12s. 3d. per quarter on wheat in that country.

The French Government knows that the more wheat-offals there are produced in the country the greater the number of head of live stock kept, which gives an increase in the home-made manure and thus larger crops.

Were we to produce more flour, there would always be a much larger reserve of wheat and flour in this country, and thus the dangers of famine and surrender during a naval war would be reduced.

The importation of flour should be checked by a higher duty on flour, then we should increase the employment of our workers, cause our stock-rearers to have a more abundant and cheaper supply of wheat offals, keep much money annually in this country that is now going abroad for imported food for our live stock, reduce the possibilities of adulteration of flour, and furnish our people with better bread without any increase in the price.

The Corn Duty.

Mr. Chamberlain's Views.

In the course of a speech at the annual meeting of the Birmingham, Aston, and Handsworth Liberal Unionist Association, at Birmingham, on the 16th inst., Mr. Chamberlain, the Colonial Secretary, referred to the corn tax. He said the cost of the war is estimated at £228,000,000, of which £150,000,000 is to be raised by loan. "I think that we are fighting for posterity at least as much as for ourselves, and I think it is perfectly fair that they should bear their share of the burden. There remains £78,000,000 which we have to find ourselves now to our own loss and sacrifice. O that £40,000,000 is to be found by direct taxation chiefly, almost entirely—thirty-nine millions and odd of it entirely found by one class in the community, the payers of income tax. Less than half—£38,000,000—is to be found by indirect taxation, which falls on all classes of the community, but which presses with greater severity on the working classes and the poorer classes of the community.

"Well, now, taking the broad issue, does not that appear to you, as to me, a fair division of the cost? But it so happens that this thirty-eight millions of indirect taxation includes two-and-a-half millions which are to be raised by a tax of 3d. per cwt. on corn, of which about one-half would have to be found by wheat. The Opposition seeing their opportunity—I give them all credit as partisans—to fasten on this small tax, which amounts, if it is all told, to less than one-eighth of a penny on each four-pound loaf, to fasten on this tax, call it a bread tax, call it a tax on the poor, and they appeal to passion and prejudices, and they recall all the evil traditions of a time when the bread tax was indeed a serious burden, when the bread tax was not 3d. per cwt., but 20s. a quarter and even more, at a time when the wages of the working-classes were, on an average, only half what they are at present, and at a time when they were paying, not only this 20s. a quarter, but they were paying also very much more in many cases, many times more on sugar, tea, and other articles of common consumption. Well, let the tax be considered on its merits, by all means; but it is treated with gross exaggeration, and it is ridiculous and unfair and dishonest to attempt to make any kind of comparison between a tax of this kind and the state of things which existed fifty or sixty years ago, when the Corn Laws pressed so heavily on the working-classes of this country.

"The expert and the economist, who have dealt with this question, tell us that there is grave reason to doubt whether we shall pay it at all, whether it will not fall on the producers of other countries, and they quote as a proof of this that the tax on sugar has not raised the price of sugar, but that has been borne by the growers of beet on the Continent of Europe. I am sure I hope they are true. I confess I think there is a certain humour in the thought that those who have denounced us, who have calumniated us in connection with this war, will have themselves partly to pay for it. But I have not come down here to my own people to defend this tax on the ground that you won't pay any of it. I will assume that you will pay, every one of you, an average of one-eighth of a penny per four-pound loaf more than you paid before. Now, what is the argument in favour of this tax? It is raised for a war. The war is a just war, a necessary war, a righteous war. It is a war which interests every portion of the population; not one class alone—the working-class at least as much as every other class; a war to which the whole nation, rich and poor alike, should each contribute and be proud to contribute in turn."

Mr. Bryce, M.P., Protests against the Tax.

On Tuesday evening a demonstration was held in Aberdeen, to protest against the duty on corn, at which Mr. Bryce, M.P., spoke. He said the new impost, being, as it was, a tax on bread, was not only a shabby tax, but a heartless tax. They were told that the working-man must be made to pay for the war. But this tax would fall not so much on the working-man, who had a vote, as on his wife and children. If the object was to touch the working-man, the Government might have raised the taxes on beer, spirits, and tobacco. They had not done this, nor had they, as they might have done, taxed liquor licenses, or advertisements, or land values, nor had they withdrawn the doles given to the landlords. They were taxing the tea of the women and the sugar and pudding of the children, and the bread to which the poorest of the poor men, women, and children were reduced as the last and indispensable means of supporting a pinched and melancholy life. This tax had every fault a tax could have, and the greatest of its faults was that it pressed with special severity on those who could least bear it; more upon the working-man than upon the comparatively wealthy, and, among the working-men, more upon the poorer than upon the better off, and, among the poorer, more upon the women and children than upon the men. No measure could be more unsound in principle or more disastrous in its working, and he trusted it would receive the indignant condemnation of the nation.

Resolution by the Co-operative Congress.

At the Co-operative Congress, at Exeter, on Tuesday, the following resolution was carried unanimously, and it was decided to send a copy to the Government:—"That this Congress most earnestly protests against any portion of the taxes of the country being raised by a Protective impost upon corn or other breadstuffs, not only because of the effect of such taxation upon the working-class population, but also because it is a departure from the principle and practice of Free Trade, under the influence of which this country has had such remarkable prosperity."

Selkirk Petition in Favour of the Tax.

A petition in favour of the financial resolutions of the Government recently submitted to Parliament has been signed by 205 landlords, farmers, and others resident in the county of Selkirk, and forwarded to Sir Walter Thorburn, M.P., for presentation. In the course of the petition it is stated that "your petitioners approve of the registration duty to be put upon imported cereals which they do not consider calculated to increase the price of food to an appreciable extent, or even if regarded as a protective duty, to be more than sufficient to neutralise the preferential transit rates accorded to foreign importers. Such rates really act as a bounty on foreign corn when competing with corn grown in this country, and your petitioners consider that the agricultural community is entitled to similar protection to that accorded to the sugar-refining industry."

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLERS, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Milk-Blended Butter.

Mr. Hanbury, M.P., President of the Board of Agriculture, has consented to receive a deputation from the Central and Associated Chambers of Agriculture and other agricultural bodies at noon on Monday, June 2, in Committee-room No. 13, House of Commons, for the purpose of protesting against the sale of "milk-blended butter" as butter.

Chester Cheese Fair.

At the cheese fair held at Chester on Wednesday there was a pitch of about 35 tons. The attendance of buyers was good, and a fairly brisk demand was experienced for fine lots. The finest Cheshire made from 55s. to 60s., and medium 48s. to 54s. Most of the lots were speedily disposed of.

British Dairy Farmers' Conference.

The programme has now been issued of the Annual Dairy Conference organised by the British Dairy Farmers' Association, which commences at Reading on Tuesday, June 3rd, and lasts till Friday, June 6th. Those taking part in the proceedings will assemble at Reading on the evening of June 2nd, and there will be a reception by the Mayor and Mayoress at the Town Hall from 8.30 to 10.30 p.m. There will be addresses of welcome by the Mayor on behalf of the town, and Mr. W. Berkeley Monck on behalf of the British Dairy Institute.

On Tuesday there will be an inspection of the British Dairy Institute and a conference in the hall of Reading College. At the latter the Earl of Warwick will preside, and the President of the Board of Agriculture has promised to attend. On the following day Pangbourne will be visited, and on the Thursday a conference will be held at the Assembly Room Municipal Buildings, Oxford, followed by a drive to Blenheim Park. On the last day there will be a conference in Buckingham Town Hall, and afterward sa luncheon at the Home Farm, Tring Park, on the invitation of the Right Hon. Lord Rothschild, and an inspection of the herds of red polls and Jerseys, and also the dairy and farm. This will bring the conference to an end, the members travelling from Tring to London by a special train.

Colonial Butter at the Dairy Show.

In February this year Messrs. Weddel and Co. suggested to the British Dairy Farmers' Association that the British dairy farmer has much to learn from his Colonial brethren, both in the manufacture of butter and its preparation for our markets, and that it would be a good incentive and a profitable example to him if a class were added to the schedule of the Dairy Show at the Agricultural Hall, Islington, next October, at which makers of Colonial butter could compete against each other. The Association has accepted the suggestion and decided to add the following classes to their schedule:—

Colonial butter, salt, in boxes containing not less than 56lbs., with a first prize of £5 and silver medal, and second prize of £3 and bronze medal.

Colonial butter, fresh, ditto.

It is to be hoped that the makers of Colonial butter will take advantage of this opportunity, and produce an attractive exhibit for the British public at the next Dairy Show.

Urban Authorities and the Milk Supply.

Mr. Tollemache, M.P., has asked the President of the Board of Agriculture whether his attention had been drawn to the loss and inconvenience caused to dairy farmers owing to the manner in which urban authorities occasionally used their powers in connection with the milk supply in their respective districts; whether he was aware that a clause enabling a farmer, who could prove unfair treatment by an urban authority, to recover compensation, had been introduced into several local Acts, among others into the Leeds Corporation Act, 1901, and the Brighton Corporation Act, 1901; and, seeing that a similar clause dealing with infectious diseases had been introduced into the London County Council Bill of this session, whether he would, in conjunction with the Local Government Board, endeavour to secure the insertion of similar clauses into all future Bills promoted by local authorities?

Mr. Hanbury replied to both questions in the affirmative.

The Butter Regulations Committee.

The Departmental Committee on Butter Regulations held meetings at the Chemical Society's Rooms, Burlington House, on the 13th inst. and the three following days. The Right Hon. Horace Plunkett presided, and the following members were present:—Sir Charles A. Cameron, C.B., M.D., Dr. T. E. Thorpe, C.B., F.R.S., Major Craigie, Professor J. M. Thomson, F.R.S., Mr. C. Dunn, J.P., Mr. G. Gibbons, Mr. J. Gilchrist, and Mr. P. Hickey. Mr. A. E. Balleine also attended as secretary to the Committee. Evidence was given by a considerable number of witnesses, including representatives of several foreign governments, magistrates, and chemists.

The American Margarine Tax.

It is stated that the President of the United States has signed the Margarine Bill, previously mentioned in these columns, which will come into operation on July 1st. The margarine manufacturers, however, have determined to contest it in the Supreme Court of the United States, and they hope to kill it, as their attorneys advise them the Bill is contrary to the constitution of the United States. The result will be watched with interest in this country.

PRACTICE WITH SCIENCE.

The first general meeting of the members of the West of Scotland Agricultural College was held at Glasgow on the 15th inst., the Rev. Dr. Gillespie (chairman of the governors) presiding. The report of the governors stated that the college was registered under the Companies Acts, 1862-1900, on 17th January of this year. At the date of incorporation the college had been in existence for nearly three years, and no material change had been made in its educational work. Since the date of incorporation the governors had resolved to enter into negotiations for the amalgamation of the Glasgow Veterinary College, provided sufficient funds could be obtained to carry on the Veterinary College without encroaching on any part of the funds at present used for agricultural and dairy instruction. A committee had been appointed to see whether a sufficient grant could be obtained from the Scottish Education Department or from the Treasury, and negotiations to this end were still in progress. The governors had also appointed a committee to consider a new site for a dairy school, and they had secured the offer of a feu at a nominal rate on the farm at Kilmarnock. They had visited dairy schools in England, and prepared plans of buildings, the estimated cost of which was £4,500. The actual income for the year ending 31st March, 1902, would meet the annual expenditure, leaving a balance due the bank of £371, compared with £374 at the end of the previous financial year. The balance of the assets of the college over liabilities was now £1,473 3s. 1d., compared with £1,515 2s. 10d. last year. The report was approved.

Cleaning Up.

Cleaning up, or, as it is better known in some parts of the country, sweeping up, is likely to be earlier in many houses this season than usual. It will certainly not be through undue warmth of the season, for May has had a longer spell of cold days and colder nights than any man under 40 can remember. In fact, the conditions of temperature have been all a maltster could wish for malt-making in most houses.

Nor need the season be shortened for want of barleys to make up, if there was a fair prospect of selling the malt when made. There seems in the minds of many a fear of unduly accumulating large stocks of old malts, and on the whole the fear is a wholesome one. As things stand, it is not wise for many men to make up all they can, trusting to selling it some time or other.

There is a great fear in the minds of many who are competent to form an opinion, that the

reduced amount of malt

used in 1901 was followed by a still greater shrinkage in the quantity brewed in the year ending September 30th, 1902, and even still further in the ensuing six months. For correct particulars of even the first year of this time we shall have to wait nearly another twelve months, but the general impression is the thing that is exercising its influence upon the trade at the present moment, and no one can be surprised it is a depressed one.

On the whole it is safer to follow it than to take an optimistic view.

Of the quantity of malt made during the season, it is difficult to form any opinion, and still harder to say what are the proportions

of Foreign and English barleys

turned into malt. The English market-returns are exceedingly deceptive or delusive upon the point, and although there may be a few dealers who could give an opinion of some value upon the probable proportion of barley imported from other countries bought by maltsters, and, of course, can speak decisively concerning our receipts from some ports, thus far they have not seen fit to say anything about it, and keep their information to themselves. In such a matter the publication of incorrect data is worse than silence.
